Attachment I
Pricing for SHARE

For a digital Career Pathways Platform, Contractor shall quote participating SHARE Entities the rates required for a custom implementation of the services specified by the RFP, based upon the size and needs of each SHARE Entity. Contractor's maximal rates for services are included, below.

Option A: Fixed Cost Model

Unlimited License Model
Annual Contract (e.g. 7/1/2020 – 6/30/2020)
E-Learning Licenses – WIOA-eligible customers residing in Workforce Development Board service area • Unlimited Skillsoft 180-day business/desktop/IT content licenses • Unlimited Amatrol 180-day manufacturing content licenses • Limited Medcom 180-day health care content licenses
Integrated IBM Kenexa ProveIt assessments • Unlimited access to ProveIt skill and technical assessments
Career Pathways Tool • Skill Profile self-assessment • 10 Pathway industries, 200+ Occupations, 300+ Skills • Progressive skill training, skills badging
Consulting & Support • Virtual administrator training • Virtual/onsite consultation • Customer support (phone and email) • Administrator support (phone and email) • Monthly reports
TOTAL: Not to exceed 1% of total WIOA budget

Option B: Licenses by Volume

# Licenses	Cost Per	Total
500	$50	$25,000
750	$45	$33,750
1000	$40	$40,000

If purchasing a set number of licenses, within first 4 months of use, payment can be applied toward upgrading to a fixed cost, unlimited license model (Option A) for a new 12-month period.

Optional Add-Ons
Certifications • The Metrix Learning platform offers training for 130+ industry recognized certifications. Additional funds can be set aside to sponsor individuals deemed qualified candidates to sit for a certification exam. Certifications through Metrix cost around $170-$900 per individual compared to the thousands of dollars other programs may charge. Metrix Price includes access to all training content, practice tests (where available), practice labs (where available), and test voucher.

ProveIt Assessments   • Unlimited access to 900+ ProveIt skill and technical assessments can be added at the cost of $1000 per location/career center.
Essential Education   • Essential Education's GED/HSE/TABE platform is integrated into Metrix. If a workforce board already has a pre-existing contract with Essential Education, integration can be turned on at no additional cost. If a workforce board is interested in purchasing access, we can connect them with Essential Education.

Course Name	Description
Getting Started with Microsoft Windows XP	To describe the basic skills and configurations necessary to start using the Windows XP operating system
4G Communication Systems	To explain the elements of 4G communication systems
4G Implementations	To outline 4G wireless networks and applications
Preparing a Business Case	Why put time and effort into preparing, writing, and presenting a business case for new projects? Why not just talk to the manager and get his approval for the project? The answers to these questions lie in the fact that organizational budgets for new projects are typically very tight and, as such, your project will be competing against other projects for funding. Without a written business case, your chances of persuading decision makers within your organization to implement your new project idea, instead of a competing project, stand little chance. This course prepares learners interested in the development of effective business cases. You will learn what a business case is and when one is used, what research you need to do before you start to write a business case, and what information should be included in your business case. Finally, you will learn how to plan and position your business case to maximize its effectiveness.
Presenting Your Case	Have you ever attended a presentation that failed because the presenter was ill prepared or ineffective in his approach? A successful presenter must possess the proper skills to plan and deliver an effective business case presentation and employ strategies to establish and maintain the audience's attention. This course examines the careful planning and delivery of a business case presentation. It focuses on the use of visual aids and handouts in a presentation, the structure and development of a presentation in light of audience needs, and the elements involved in successfully delivering the presentation to that audience.
Mentoring Certified Information Systems Security Professional (CISSP)	SkillSoft Mentors are available to help students with their studies for the Certified Information Systems Security Professional (CISSP) exam. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Reporting Basics with Crystal Reports XI	To recognize how to create a report in Crystal Reports XI
Writing a Business Case	Which would you rather do: prepare a business case for your latest project or go to the dentist? Given the choice, many of us would tend to choose the latter. Whether you want to invest in product development or reinvent your business processes with new marketing channels, it is now more important than ever to have a business case that is carefully planned, written, and presented, especially when you consider that corporate investments are being subjected to increased scrutiny. Writing a good business case will help you justify resource allocation to key decision makers and secure funding for your project. Otherwise, you may be eaten alive by the competition! In this course, you will learn how to plan, write, and present a business case to persuade key decision makers in your organization that your proposal is a winning initiative. This course will show you the principles for preparing an effective business case, and it will guide you through the writing process, from defining your business need and gathering relevant information, right through to assessing the financial impact of your solution. The course will conclude with practical advice on how to concisely present your business case to connect with your audience and key decision makers.
Mold Awareness	Many businesses and organizations, including government-owned facilities, can experience mold at their facilities at some point in their business life. A mold is a coating or discoloration that develops in a damp atmosphere on the surface of food or fabric. Not everyone is at risk from exposure to molds but certain groups of individuals, including infants and the elderly, are particularly susceptible to mold-induced allergies or infections. Providing information on the hazards associated with mold is an important aspect of the health and safety requirements for businesses and organizations. This course is part of the Safety and Health Series and is aimed at any employee whose normal job activities could result in occupational exposure to mold. This course provides the learner with the basic understanding of mold awareness in the workplace - how mold grows and spreads, how to recognize mold, the routes of human exposure to mold, associated health effects from mold exposure, and methods of mold prevention and clean up.
Lead and Cadmium	Failure to understand the dangers of cadmium and lead, and the correct practices that should be followed when working with them, can leave you exposed to long-term health risks. Lead and cadmium have a number of industrial applications. This course provides an understanding of the basic health effects, routes of entry, methods of compliance and prevention, and regulatory requirements for both cadmium and lead standards applicable to workplaces covered by the general industry standard 29CFR 1910. This course familiarizes the learner with OSHA regulations related to lead and cadmium.
Chlorine Safety	Chlorine is one of the 90 elements essential to daily life, along with oxygen, hydrogen, and carbon. Chlorine is used in many processes, including electronics, water purification, synthetics, and medicines. Around 12 million tons of chlorine are produced for such purposes in North America alone. The Occupational Safety and Health Administration (OSHA) recognizes chlorine as a hazardous material and imposes strict exposure limits in the workplace. This course presents an overview of chlorine, its health risks, how to control and respond to chlorine exposure, and how to protect your workforce from potential harm.
Cryogenic Safety	Cryogenic materials are commonly used in the workplace for a variety of purposes, such as refrigeration, medical applications, and rocket propulsion. Due to their extremely cold temperatures, cryogenic materials can be hazardous if handled and stored incorrectly. Any employees handling cryogenic materials must wear personal protective equipment. If employees are exposed to the extreme cold of cryogenic materials they should receive treatment immediately to prevent permanent injury. In the event that an individual inhales cryogenic materials, he should seek immediate attention to prevent serious injury or death. Cryogenic materials are stored in specially designed containers known as dewars. This course explains how to recognize different types of cryogenic materials in the workplace and identifies the potential dangers of storing and handling these material incorrectly. It identifies recommended equipment and the standard operating procedures for handling and storing cryogenic materials safely. It also describes the most effective course of action if accidents involving cryogenic materials occur, including recommended methods for treating employees injured by cryogenic materials.
Food Safety and Handling	Each year, bacteria in food cause millions of illnesses in the US. According to the Food and Drug Administration, between 2% and 3% of all foodborne illnesses result in secondary long-term illnesses. Some strains of E. coli can cause kidney failure in infants, and salmonella can lead to reactive arthritis and serious infections. In addition to being badly prepared or handled food, there is the potential risk of malicious contamination. Those involved in food preparation must follow safe procedures to ensure that food contamination and its associated illnesses are prevented. This course focuses on the health risks associated with improperly handled food. It highlights the ways in which food can become contaminated and provides guidelines for storing and handling food safely. By applying the procedures recommended in this course, you can minimize the risk of food-related illnesses.
Electrostatic Discharge Safety Training	This course will provide a basic understanding of static electricity, and how to provide protection from static electricity. The information in this course will focus on the identification, assessment, and control of static electricity for purposes of preventing fires and explosions.
Lockout/Tagout for Authorized Persons	This course provides information about control of hazardous energy and work under the protection of a Lockout/Tagout permit. The intent of the course is to provide information on lockout and tagout practices and the significance of lockout and tagout devices.
Non-Ionizing Radiation Safety	This course is designed to familiarize learners with the health implications associated with non-ionizing radiation, specifically radio frequency (RF) radiation and measures to protect workers from exposure.
NFPA 1600 Disaster/Emergency Management	Over the past decade, emergency management and business continuity planning have been recognized as necessary to continued operational success in both the public and private sectors. Key to this was the development and widespread use of the National Fire Protection Association (NFPA) Standard on Disaster/Emergency Management and Business Continuity Programs (NFPA 1600). The NFPA 1600 standard is a description of the basic criteria for a comprehensive program that addresses disaster recovery, emergency management, and business continuity. NFPA 1600 is considered by many to be an excellent benchmark for continuity and emergency planners in both the public and private sectors. The standard addresses methodologies for defining and identifying risks and vulnerabilities and provides planning guidelines that address stabilizing the restoration of the physical infrastructure, protecting the health and safety of personnel, and crisis communications procedures. This course will provide you with an understanding of the basic criteria for developing a comprehensive program that addresses disaster recovery and emergency management in accordance with the NFPA 1600 standard.
NFPA 1600 Business Continuity Programs	Whether it is a natural disaster that sweeps through your city or a computer virus that destroys vital electronic information, businesses need to be able to recover their services and operations as soon as possible if such a disaster does occur. A Business Continuity Program involves planning the recovery of operations when confronted with adverse events such as natural disasters, technological failures, human error, and terrorism. This course provides a basic understanding of the criteria for a comprehensive program that addresses business continuity in accordance with the National Fire Protection Association (NFPA) standard 1600, entitled Disaster/Emergency Management and Business Continuity Programs.
DOT Drug and Alcohol Awareness	Drug and alcohol abuse by employees is a common cause of workplace problems, such as accidents and ineffective work practices, in the US today. These problems can affect profits and expose companies to increased medical and insurance costs, and any related financial loss due to compensation. Several US laws have been enacted to combat drug and alcohol abuse in the workplace. The Department of Transportation (DOT) interprets these laws and provides employers who are responsible for transportation employees with guidelines for setting up effective drug-free programs. These guidelines encourage employees and supervisors in the transportation industry to be vigilant of any coworkers who may display symptoms of substance abuse and provide details for effective drug and alcohol testing procedures. This course identifies the causes, indicators, and resultant problems of substance abuse and substance dependency in the US transportation industry. It describes the US laws that relate to drug and alcohol testing of transportation employees and outlines DOT regulations that enforce compliance among transportation employers.
DOT Security for Shipment of Hazardous Materials	According to the US Department of Transportation (DOT), over 800,000 shipments of hazardous materials are transported in the United States every day. The materials shipped include those of chemical, petroleum, radioactive, explosive, and poisonous natures. Of the 800,000 shipments, almost 769,000 are transported by truck on the nation's roads, with the rest divided among rail, pipeline, water, and air. These hazardous materials â€" or hazmats â€" are classified by the DOT according to the type of hazard they present and must be transported under the proper regulations set out by the DOT. This course examines the DOT's security requirements relative to the shipment and transportation of hazardous materials. In addition, it explains the hazard classes and provides examples of the placards used when transporting hazardous materials. The course also outlines the basic elements of a security plan, defines the employers who require a plan, and explains the training required for employees of companies with plans in place.
Mentoring Using Excel 2007	SkillSoft Mentors are available to help students with their studies for the Using Excel 2007 exam. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Mentoring ITIL V3 Foundation (ITV3F)	SkillSoft Mentors are available to help students with their studies for the ITIL V3 Foundation (ITV3F) exam. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Mentoring Using Word 2007	SkillSoft Mentors are available to help students with their studies for the Using Word 2007 exam. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Programmability and Administration in Access 2007	Microsoft Office Access 2007 makes it easy for you to share and manage data using the collaborative environment of a Microsoft Windows SharePoint site along with the many data management features available within Access 2007. This course explains how SharePoint sites can be used with Access and demonstrates options such as moving data to a SharePoint site, publishing data to a SharePoint site, importing from or linking to a SharePoint list, creating an Access view of a SharePoint list, working offline with SharePoint lists, as well as tracking data versioning in SharePoint. Another feature of Access 2007 is its programmability. Using Access macros and Visual Basic for Applications (VBA) code you can easily add functionality to a database to suit your business needs. In addition to SharePoint integration, this course provides an introduction to programming in Access and explores when to use macros or VBA code to automate processes. It also demonstrates how to create, launch, and modify macros and explains the use of the Visual Basic Editor to create event handlers and set control property values.
Database Administration in Access 2007	Microsoft Office Access 2007 makes it easy for you to share and manage data using the collaborative environment of a Microsoft Windows SharePoint site along with the many data management features available within Access 2007. This course explains how SharePoint sites can be used with Access and demonstrates options such as moving data to a SharePoint site, publishing data to a SharePoint site, importing from or linking to a SharePoint list, creating an Access view of a SharePoint list, working offline with SharePoint lists, as well as tracking data versioning in SharePoint. Another feature of Access 2007 is its programmability. Using Access macros and Visual Basic for Applications (VBA) code you can easily add functionality to a database to suit your business needs. In addition to SharePoint integration, this course provides an introduction to programming in Access and explores when to use macros or VBA code to automate processes. It also demonstrates how to create, launch, and modify macros and explains the use of the Visual Basic Editor to create event handlers and set control property values.
Importing and Exporting Data and Data Presentation in Access 2007	Microsoft Office Access 2007 offers several options for importing and exporting data, and also provides a variety of data presentation strategies. With Access 2007 you can link to, or import data and objects from external sources such as other Access databases, Excel spreadsheets, text files, XML files, and SharePoint lists. You can also export data and objects from an Access 2007 database to external sources. This course explains and demonstrates the various methods of importing, exporting, and linking to external data sources. It also describes how to create and modify PivotTables and PivotCharts as an alternate way to organize and present database data. The options used to apply aggregate functions to a PivotTable, add a calculated field to a PivotTable, and export a PivotTable to an Excel spreadsheet are also discussed in the course.
Advanced Data Management in Access 2007	You can use Microsoft Access 2007 to manage your data efficiently using advanced techniques. There are many advanced methods that can be used for modifying and enhancing tables, reports, queries, and forms in order to meet your business needs. This course explains and demonstrates retrieving and validating data, using subforms and subreports, as well as applying conditional formatting in Access 2007 tables, forms, and reports. Advanced query methods make it easy for an experienced end-user to retrieve the results they desire and to have those results displayed in such a way that the data is easy to interpret and analyze. This course describes the various types of join and parameter queries that can be used in Access 2007 and provides demonstrations on the use of action queries, including update, append, delete, and make table queries. It also explores the use of SQL-specific queries such as data-definition, pass-through, subquery, and union queries.
Advanced Formatting in Excel 2007	Charts and pictures enable you to present data visually, demonstrating data more effectively than rows and columns of data. In Excel 2007, you can customize charts and their individual elements, as well as pictures and clip art, to create professional and appealing documents. Formatting, both custom and condition-based, enables you to display data in formats that best suit your needs. This course explores modifying charts and pictures and creating and editing custom number formats.
Advanced Data Management in Excel 2007	Excel 2007 provides multiple features for organizing and managing data, so you can ensure data is entered correctly and that calculations and formulas are valid. Data organization features enable you to sort, filter, and group and outline data so that you can focus on the key parts of your data. Validation features ensure that data is correct, that it is entered in the proper format, and that formulas are working correctly, all of which are incredibly important for maintaining accurate records. This course explores organizing and subtotaling data in Excel 2007 using the available features. It also covers data validation, including error messages, invalid data, formula auditing, error checking, and the Watch window.
Advanced Customization in Excel 2007	Numerous features and tools in Excel 2007 enable you to customize the look and feel of spreadsheets and workbooks, and also the functionality and efficiency of the program itself. Existing templates, themes, and styles can be altered to meet business needs, or you can create custom templates, themes, and styles to further enhance data presentation. Using macros, you can automate common or repetitive tasks, resulting in time savings and increased efficiency in day-to-day tasks. This course covers creating templates in Excel 2007, as well as customizing workbook properties, themes, and styles. Working with macros, including recording, editing, and running, is also explored.

Course	Description
Customizing Outlook 2007 and Using the Journal	Microsoft Outlook 2007 is highly customizable. You can tailor the interface by selecting views â€" or modifying them â€" to suit your needs. Using a timeline you can track items, such as e-mail or phone conversations, within Outlook itself and also externally. In addition, Outlook allows you to configure and customize multiple e-mail accounts so that you can view e-mail messages from many different accounts within a single Outlook interface. This course demonstrates how to customize Outlook to meet a variety of such requirements, how to track items in Outlook, and how to configure additional e-mail accounts.
Configuring Rules, Alerts, and Junk E-mail Settings in Outlook 2007	Microsoft Outlook 2007 provides you with the tools you need to efficiently manage your e-mail messages. By using predefined or custom rules and alerts, you can organize your messages by moving, deleting, and forwarding them appropriately, and you can even choose to send an automatic reply to incoming e-mail. Outlook 2007 also provides a Junk E-mail Filter to ensure that any spam or unwanted e-mail messages are dealt with by permanently deleting them or moving them to another folder away from your regular e-mail messages. This course demonstrates how to configure rules and alerts to help organize e-mail messages, and how to adjust the Junk E-mail Filter settings to suit your needs.
Working with SharePoint, Calendars, and Forms in Outlook 2007	Microsoft Outlook 2007 enables you to collaborate with others by using a SharePoint site to share information such as contacts and calendars. From within Outlook 2007 you can open, edit, and update SharePoint files, as well as update and add items to calendars on the SharePoint site. With Outlook 2007 you can easily share your calendar either through Outlook itself or online using an Internet Calendar. It also allows you to customize default forms to ensure they meet your needs. This course demonstrates how to use Outlook 2007 to connect to a SharePoint site and open, edit, and update SharePoint files, as well as create calendar items for the SharePoint site. It also explores how to share your Outlook 2007 calendar and customize, test, and publish customized forms in Outlook 2007.
Creating Custom Slide Shows in PowerPoint 2007	With PowerPoint 2007, creating customized slide shows has never been easier. This course shows you how to create custom slide shows that meet your differing audiences' needs. You will learn how to create self-running presentations, how to annotate your presentation while it's running, and how to use Presenter View so that you see one thing while your audience sees another.
Distributing Presentations in PowerPoint 2007	Microsoft Office PowerPoint 2007 provides numerous ways to produce and distribute dynamic, custom presentations. In this course you will be introduced to the process of securing your presentations for distribution by setting up passwords. You will also examine the various ways to distribute your presentations to colleagues and other audiences. You'll explore how to print your slides, save a presentation as a web page, and e-mail your presentations. And you'll learn how to package your slide show to a CD.
Advanced Customization	With Microsoft Office Project 2007, project managers can define how project data is recorded, reported, and displayed, using customizable, built-in templates. They can also customize the interface by adding or removing tools from the application's default toolbars. And before project data is distributed, a project manager can format fields and views to meet particular needs. Additionally, if you need to modify information associated with tasks and resources, create custom tables, or create a work breakdown structure, Project 2007 provides a flexible, all-encompassing solution. This course outlines the basics of customizing Microsoft Office Project 2007, and also provides insights into some of the advanced customization features.
Project Data Management and Performance	Project managers often share Project 2007 data with other applications, such as Microsoft Excel and Microsoft Outlook. When importing and exporting information in this way, the information must first be sorted, filtered, and grouped to customize the information's appearance. Information also needs to be timely â€" actual work performed, actual start and finish dates, and actual costs must all be updated. This course outlines the basics of importing and exporting, sorting, filtering, and grouping information to meet a project's needs. It also discusses creating and sharing resource pools in a multi-project environment, how to manage the efficient use of limited resources to keep multiple projects on schedule, and how to create task dependencies across multiple projects.
Advanced Formatting in Word 2007	Themes, Backgrounds and Borders can be used in Microsoft Office Word 2007 to create engaging and professional looking documents. With Word 2007, these tasks are made easier then ever before, specifically with the use of theme colors, theme fonts and theme effects. This course demonstrates how borders, shading, margins and horizontal lines are used when creating interesting documents and implementing emphasis to various parts of a document. Themes colors, theme fonts and theme effects are explained in detail and background colors and fill effects are explored as well. This course also demonstrates the use footnotes and endnotes.
Advanced Document Navigation and Document Reviews in Word 2007	Microsoft Office Word 2007 has many features that enable you to create robust documents that can be easily navigated, reviewed, and recovered if issues are encountered. This course explains how tables of contents are created, modified and deleted in conjunction with the use of tables of figures and tables of authorities. The insertion, modification, deletion and navigation of hyperlinks, bookmarks, and frames are demonstrated, as well as the creation of indexes and index cross-references. The course also discusses using track changes and comments when reviewing documents, and explores repairing corrupted documents.
Using Tables, Charts, and Graphics in Word 2007	By using the tabular and charting utilities of Microsoft Office Word 2007, you can format, sort, and analyze your data with ease. In Word 2007, you can insert a table by selecting its layout from a list of preformatted tables, or by selecting the number of columns and rows that you require. You can insert a table into your regular document layout, or you can nest it within another table for increased complexity. There may also be times when you need to insert Excel data or charts into a Word document, and Word 2007 enables you to do so with a few simple steps. This course demonstrates how to create, format, and modify Word 2007 tables, including inserting and deleting table elements, resizing tables, merging and splitting cells, sorting data, using simple formulas, as well as converting a table to text. Methods of inserting, linking, and embedding Excel objects in Word documents are explained in this course, in addition to inserting and formatting charts.
Getting Started with Access 2007	With Access 2007, Microsoft introduces some of the most significant changes to Access in years. Most notable is the intuitive new user interface that replaces the traditional menus and toolbars with features like the Ribbon, the Quick Access Toolbar, and the Microsoft Office button. This course provides an introduction to Access 2007 and demonstrates how to navigate within the new user interface. The introductory steps in planning a database, the components and views of an Access database, and database creation methods are also covered.
Basic Access 2007 Tables	Microsoft Office Access 2007 makes it easy for you to create and manipulate database tables. You can choose between a Datasheet view and a Design view to create tables from scratch, or you can base your tables on one of the many pre-defined templates. The introduction of the Ribbon and contextual tabs in Access 2007 makes table creation even more intuitive, and provides you with easier data manipulation techniques. This course explains the use of table templates, Design and Datasheet views, field creation, data types, and modifiable properties, and demonstrates the use of masked input fields and indexing. The course also explores viewing, editing, navigating, sorting, finding, and filtering records, in addition to printing data and implementing and maintaining table relationships.
Basic Access 2007 Forms	Microsoft Office Access 2007 offers several options for creating, customizing, and managing forms. This course describes multiple methods of form creation, including the Form, Split Form, Multiple Items, Blank Form, and Form Design tools and the Form Wizard. This course also explores controls â€" the available types, how they are added to a form, how their properties are set, and how they are resized, moved, grouped, and positioned on a form. The course demonstrates how forms can be customized using autoformat, or by adding the date and time, page numbers, logos, and other decorative controls. The creation and management of records in forms using different navigational methods, sorting and filtering options, and printing forms is also covered.
Queries and Reports in Access 2007	Queries and reports are used in Access 2007 to convert data into useful information and are an essential part of any database application. Access 2007 has a Query Wizard which simplifies the process of formulating a query and provides various methods of creating reports to present summarized information easily and effectively. This course explores the use of the Query Wizard and demonstrates how to create or modify a query in Design view in order to achieve specific results. This course also covers Expression Builder, calculated fields, grouping options for displaying query results, and crosstab, unmatched, and duplicate queries. The use of the Report, Report Wizard, Blank Report, Report Design, and Label options are covered, as well as how to add and bind controls, group and sort data, and modify sections of a report.
Getting Started with Excel 2007	With the introduction of Office Excel 2007, Microsoft has made substantial changes to the user interface of its spreadsheet application. This course will help get you up-to-speed on the new features, and will introduce you to the basic features and functionality of Excel 2007. This will be accomplished through the demonstration of workbook creation and navigation, and worksheet data entry at a user-friendly beginner level.
Manipulating and Formatting Data and Worksheets	Excel 2007 provides a number of improved tools and new features that allow you to visually enhance the appearance of sheets and workbooks. Cells, rows, columns, sheets, and workbooks can be manipulated and customized using various positioning and formatting features. This course explores the processing of copying and moving cells, columns, rows, and sheets, as well as inserting or removing sheets and modifying workbooks. Formatting tables, textual data, and numerical data, as well as conditional formatting, is also covered.
Reviewing and Printing in Excel 2007	Excel 2007 simplifies the reviewing and printing processes by centralizing all related features within the various tabs of the Ribbon. The Review tab enables you to quickly access tools for proofing content and adding comments. Using the Page Layout view, you can preview how your worksheets will look when they are printed, and adjust them as needed to achieve professional results. This course explores Excel 2007 reviewing features, such as spellchecking, translating, and using comments. Configuring entire workbooks, spreadsheets, and spreadsheet selections for printing, using the Page Layout view, and printing using the Office button are also covered.
Excel 2007 Formulas and Functions	Excel 2007 provides numerous functions and formulas for performing simple and complex calculations on workbook data. The Ribbon's Formulas tab provides convenient access to groups of data analysis and calculation tools, such as the Function Library, Named Cells, Formula Auditing, and Calculation groups. This course demonstrates how to create and edit formulas, use references and names, and work with tables in Excel 2007. Basic, logical, financial, and date functions are also covered.
Excel 2007 Charts, Pictures, Themes, and Styles	Enhancements to charting, themes, and styles in Excel 2007 enable you to create attractive and well-organized representations of spreadsheet and workbook data. Charts, themes, styles, and pictures can all be easily inserted and customized from the Ribbon bar. This course demonstrates how to effectively use and customize charts in Excel 2007, and explores available chart types and styles. Using themes and styles to improve presentation, and adding visual elements to workbooks, are also covered.
Getting Started with Outlook 2007	Microsoft Outlook 2007 is an application used to manage your communication needs. It allows people to send and receive e-mail messages, and provides additional functionality to keep tasks, notes, appointments, and daily activities in one convenient location. This course addresses the basic features and functionality of Outlook 2007, including how to create e-mail messages, view and reply to incoming e-mails, and how to find information using Outlook 2007's basic Help features.
Formatting and Managing E-mail in Outlook 2007	Microsoft Outlook 2007 allows you to quickly organize and format e-mail messages using easy management and time-saving tasks. Outlook 2007 provides formatting features that can be applied to an e-mail message as it is being created, and also includes management tools to find and sort messages quickly. This course demonstrates how to use the various formatting features, and also explores such e-mail message options as signatures and voting buttons, and how to use and work with attachments. In addition, the course demonstrates methods of organizing e-mail using an assortment of views and color-coding techniques.
Using the Calendar in Outlook 2007	Microsoft Outlook 2007 provides an easy-to-manage calendar that allows for creation and management of appointments, meetings, and events in a single interface. It also provides a To-Do bar that displays all calendar entries, including tasks and their deadlines, in a customized view that simplifies scheduling. This course demonstrates how to customize the Outlook 2007 calendar using personalized views. It also demonstrates how to create and manage appointments, meetings, and events.
Using Contacts, Tasks, Notes, and Customizing the Interface in Outlook 2007	Microsoft Outlook 2007 allows for easy creation and management of all contacts. It provides an easy to use interface for creating contacts, along with business cards, that can also be used for sending e-mail, making meeting requests and journal entries, as well as assigning tasks. Outlook also offers multiple views to easily manage and track tasks. In addition, it allows you to create and store notes for later reference. This course explores how to create and manage contacts, tasks, and notes. It also demonstrates how to customize the Outlook interface using Outlook Today, shortcuts, Favorite Folders, and the Navigation Pane.
Completing Searches, Printing Items, and Working with RSS Feeds in Outlook 2007	Microsoft Outlook 2007 is a versatile e-mail client application that offers numerous features for interacting and sharing information with others. This course demonstrates the new Outlook 2007 search feature, Instant Search, which is used to locate and manipulate e-mail messages and other Outlook items. It also explores printing options using a variety of print styles. Lastly, RSS feeds will be discussed in depth, explaining how Outlook 2007 users can conveniently view content from multiple sources, such as news outlets or blogs, from a central location.
Getting Started with PowerPoint 2007	Microsoft PowerPoint 2007 is a powerful authoring application that enables you to create high-impact, professional-looking presentations quickly and easily. This course shows how to create a new presentation from scratch, and also how to use layouts and views to make working with your presentation easier. It provides you with a solid introduction to the basic, must-know aspects of PowerPoint, and it shows you how to use PowerPoint's powerful help features.
Adding Graphics to Presentations in PowerPoint 2007	Microsoft PowerPoint 2007 is a useful authoring application tool for creating dynamic slide show presentations. This course demonstrates how to create visually appealing presentations using PowerPoint's design templates and implementing new Microsoft Office 2007 themes. The course also explores the introduction of SmartArt in PowerPoint 2007, a feature that allows you to add some glamour to your presentations by using colors and shapes to emphasize text and data. Also covered are the various ways of incorporating diagrams, tables, and charts to enhance your presentations' appeal.
Adding Multimedia and Animations to Presentations	Microsoft's PowerPoint 2007 is one of the world's most widely used applications for creating presentations. Powerful, high-impact slide shows come to life with the addition of multimedia to your presentations. Engage your audience by keeping things lively and interactive with movie and sound clips, animated slide content, and slide transitions. This course will help you to make the most of all these features.
Creating and Designing a Project	In the corporate world, the project is a fundamental building block. Each project in which a company engages is unique, and fulfills an individual or corporate goal. And each project comprises a series of related tasks that culminate in a project deliverable. Microsoft Office Project 2007 is a comprehensive tool for project managers responsible for the overall design of projects, enabling them to engage in task assignment and management, resource allocation, costs, and budget control in an easy and intuitive way. Microsoft Office Project 2007 also enables the collection and sharing of project progress information with a project's team members and stakeholders. This course outlines the basics of project management, and shows how to create â€" and manage â€" a new project using Microsoft Office Project 2007.
Specifying and Assigning Resources in Project 2007	In Microsoft Office Project 2007, people, equipment, and materials are collectively referred to as resources. A large part of a project manager's responsibilities is managing these resources, whether that be assigning resource work times, leveling resources that are overallocated, and overseeing the budgeting and costs of resources. This course provides an overview of resource management for projects, and will help you get to grips with Microsoft Office Project 2007's robust resource management tools.
Tracking and Reporting Progress	Project stakeholders have a vested interest in the project's progress so information needs to be tracked, recorded, and reported. A project manager needs to decide on the information to be tracked, and how to track it. Microsoft Office Project 2007 helps a project manager by making this process easy. Baselines and interim plans, for example, create benchmarks for a project's progress. Built-in views and reports helps a project manager to assess a project's progress. Project managers also have the option to customize a new view or report. This course explores these features of Microsoft Office Project 2007 and how a project manager can use them to address a project's tracking and reporting needs.
Creating Visio 2007 Diagrams	Microsoft Visio 2007 is a powerful diagramming software that enables you to create different types of diagrams and work environments. This course shows how Visio 2007 has predefined templates and stencils that enable you to create diagrams quickly and efficiently; along with the Visio Help features that allow you to tap into the vast knowledge base both within the help files and online through the Microsoft knowledge base. Once the diagrams have been created, this course demonstrates how to manipulate the shapes and connectors before saving and printing them.

Course	Description
Enhancing and Customizing Diagrams in Visio 2007	Visio 2007 provides the tools to create diagrams by adding shapes and text to create complex networking and business diagrams. This course will show how to position and manipulate shapes, alter views and page orders, and manipulate text and text characteristics within Visio 2007 diagrams.
Collaborating and Using Visio 2007 With Other Programs	Visio 2007 is a powerful collaboration tool that allows the user to show content from other applications and also allows content in Visio to be linked to other types of files. This course will show how to link, embed, import and export content and drawings in order to allow for collaboration with other programs while using Visio 2007.
Getting Started with Word 2007	With Office Word 2007, Microsoft introduces some of the most significant changes to Word in years. Most notable is the new intuitive user interface which replaces the traditional menus and toolbars, featuring the Ribbon , the Quick Access toolbar, and the Mini Toolbar as well as a new Office button which replaces the File menu. This course provides an introduction to Word 2007 and demonstrates how to navigate within the new user interface.
Working with Text and Paragraphs in Word 2007	Word 2007 makes it easy to apply formatting to documents by providing a live visual preview of various formatting options. This enables you to view the formatting change before actually committing to it. This course explains the Font and Paragraph formatting options, as well as the Mini toolbar and live preview features. In addition, the creation and formatting of bulleted, numbered, and multi-level lists and the insertion of symbols or special characters are demonstrated. Setting margins, paragraph indents, tab stops, text alignment, and showing or hiding formatting marks will also be explored in this course.
Structuring, Editing, Saving, and Opening Documents in Word 2007	Word 2007 provides many options for structuring and editing documents which are complemented by a variety of editing tools. There are also options for saving documents which can be customized to suit your word processing needs. This course explains the use of page and section breaks, spacing adjustment, and column insertion, and explores the basic editing tools packaged with Word 2007. A new feature of Word 2007 demonstrated in the course is the ability to save a document in PDF or XPS format, in addition to being able to save as a web page. The course also explains how to save documents so that they can be viewed in previous versions of Word.
Printing, Help, and Automated Formatting in Word 2007	Microsoft Office Word 2007 provides new features called Quick Styles and building blocks which make it easy to create great looking documents quickly. You can select Quick Styles using the new Live Preview feature to view the different styles before committing the changes. This course demonstrates the use of Quick Styles, building blocks, templates and AutoCorrect features in detail. Previewing and printing options, as well as Word 2007's Help and Research options, are also explored and demonstrated.
Working with Documents in Word 2007	Microsoft Office Word 2007 has various design features that can be used to enhance your Word documents. These include Clip Art, SmartArt, WordArt, shapes, curves, lines, and diagrams to name a few. This course explains how to use Word 2007's Drawing Tools, including working with WordArt, AutoShapes, Pictures, Clip Art, and SmartArt. It also demonstrates the use of headers, footers, and page numbers as well as how to use document views available in Word 2007, and how to navigate using line numbers, and multiple windows.
Analyzing Data in Excel 2007	Excel 2007 provides powerful data analysis tools that enable you to explore large amounts of data and to make educated business decisions based on that data. With PivotTable reports you can interactively summarize data, making it easier to analyze and present the results. PivotChart reports provide a graphical view of PivotTable report data. Using Goal Seek and Solver enables you to retrieve required results from formulas by determining the data the formula requires. You can also use additional what-if analysis components, data tables and scenarios, to view how value changes in formulas affect the formula results and to forecast worksheet outcome models respectively. This course covers advanced data analysis features, such as PivotTable and PivotChart reports, Goal Seek, Solver, scenarios, data tables, and OLAP.
Protecting and Sharing Excel 2007 Workbooks	In many organizations, teams and individuals require frequent and possibly simultaneous access to common spreadsheets and workbooks. To meet these demands without affecting efficiency, a number of review, security, and collaboration features are available in Excel 2007. Workbooks, worksheets, and specific data within worksheets, can be protected, enabling only those with access to view or make changes to them. Workbooks can be shared so that multiple people can access required data, and changes made to workbooks can be tracked, accepted or rejected, and merged. The use of Excel Services and Microsoft Windows SharePoint Services adds an additional level of collaboration and security features. This courses covers range, worksheet, and workbook protection, as well as tracking changes and merging workbooks in Excel 2007. Sharing workbooks, using Excel Services for collaboration, and publishing workbooks to SharePoint are also covered.
Exchanging Data with Excel 2007	In Excel 2007, there are a number of options for importing data and sharing data with other applications. Excel 2007 includes built-in functionality for importing text files and creating database queries to retrieve data from a variety of databases. Other applications, such as Access, Word, and Outlook, can also import Excel data. Using XML in conjunction with Excel enables you to further manage and customize workbooks. This course explores creating links, importing text files, and creating database and web queries. Importing Excel 2007 data into other applications and using XML in Excel 2007 are also covered.
Microsoft Office 2007: Collaborating with Groove and Communicator	Collaboration is at the heart of effective teamwork. When operating in traditional work structures, with all team members in one office location having regular face-to-face meetings, this collaboration was relatively easy. But work environments have changed. Offices are no longer confined to a room or a building and teams often comprise members in different countries, working in different time zones. Office 2007 facilitates collaboration with its Office Groove 2007 and Office Communicator 2007 applications. Groove brings small teams together in virtual 'workspaces', stored on each team member's desktop. All the files the team needs for collaboration are stored in these workspaces and are updated after each change whether the team member is online or offline. Office Communicator extends these capabilities by enabling those in different locations and time zones to communicate easily and quickly with a range of unified communication tools, including voice, video, and instant messaging. This course explores Groove 2007 and Communicator 2007 as collaborative software packages. It teaches how to create Groove workspaces, how to invite people to share that workspace, and how to connect with team members using chat or discussion boards. The concept of 'presence', which displays a team member's status, is explained in relation to Groove and Communicator. The course also introduces the benefits of an integrated Office system and demonstrates how to use Communicator for real-time collaboration.
Microsoft Office 2007: Sharing Information with OneNote 2007	With team members working in diverse locations, a central repository in which to store information about customers, projects, and meetings is vital. There's an ever-growing amount of information in a variety of formats and teams must stay in control. Office OneNote 2007 is a note-taking program which enables you to store typed text, handwritten notes, pictures, sketches, audio, and web research in one location. Notepads can be shared among team members so that everyone can store, share, and contribute information in an organized way. Changes to notepad items are merged automatically and are synchronized if a team member has been offline. This course demonstrates how to create shared notepads, how to add files and text, and how to initiate a live session to share notes in real time. It also shows how best to organize notepads and how to search for information using the Office OneNote 2007 tools.
Data Security, Archiving, and Working Offline in Outlook 2007	You can use the enhanced security features included in Microsoft Outlook 2007 to protect your e-mail and computer from malicious attacks that can arrive in the form of incoming e-mail messages. The program also provides you with tools used to archive and manage the size of your mailbox to ensure that you can locally store your e-mail messages for future reference. With Outlook 2007 you can choose to work offline and access your e-mail messages without connecting to a server, and then synchronize Outlook with the server at a more convenient time. You can also connect to the Exchange Server using Outlook Web Access (OWA) at times when you do not have access to the Outlook application. OWA provides you with many of the same features that Outlook 2007 offers, but through a browser interface. This course demonstrates how to configure the security settings, offline access, and synchronization settings for Outlook 2007. The course also shows you how to access Outlook from the Internet, and how to archive data and manage your data file sizes.
Instant, Text, and Unified Messaging in Outlook 2007	You can secure your e-mail in Microsoft Outlook 2007 using Information Rights Management (IRM), a feature that allows you to set access permissions for specific messages. Setting these restrictions secures your sensitive information against forwarding, printing, and copying. In addition, when used with an Exchange Server, Outlook 2007 provides you with a comprehensive messaging approach, including instant and text messaging to mobile devices. It also allows you to receive and listen to voice mail messages in your inbox, and send and receive faxes directly to and from your inbox. This course explains how to configure and implement IRM. It also discusses how to receive and send instant and text messages and faxes from your inbox, and how to configure Outlook for voice mail.
Business Contact Manager with Outlook 2007	Microsoft Outlook 2007 with Business Contact Manager helps to save time and improve sales and marketing to ensure excellent customer service by providing customer and contact management in one central location. It allows you to easily manage all your contacts, customer information, and opportunities in one location making it easier to find and manage. It also allows you to create marketing campaigns and send them to prospective customers, as well as track any communications with your customers and contacts to ensure you stay organized. This course demonstrates how to setup Business Contact Manager with Accounts, Contacts, Opportunities, and Projects. It also demonstrates how to track and link items to records, as well as share and protect your data in the Business Contact Manager database.
Creating Customized Publications with Publisher 2007	Microsoft Office Publisher 2007 helps you expand your creativity by enabling you to customize and share a wide range of personal and business publications to suit both home and office requirements. You can use this application to quickly create and personalize professional-looking publications such as newsletters and flyers. This course explores the wide range of available templates and the creating, editing, printing, and publishing tools at your disposal. It also introduces the new features of Microsoft Publisher 2007, and delves into redesigned and enhanced familiar features.
Extending Publisher 2007 Beyond Publications	You can do more with Office Publisher 2007 than create basic desktop publications. New and enhanced capabilities guide you through the processes of creating and distributing your work either in print, on the Web, or by e-mail. This course explains such Microsoft Office Publisher 2007 features as e-mail and catalog merging capabilities, e-mail templates, and web page creation and customization.
Advanced Data Manipulation Features in Word 2007	Word 2007 enables you to create forms quickly and easily, so that they can be used by other users of Word 2007. Forms contain form fields that you can link to external data sources, and Word 2007 contains security features to protect forms from tampering by other users. Inserting fields has been simplified in Word 2007 by means of built-in commands and content controls. The mail merge feature is also improved and simplified in Word 2007, enabling users to merge content into letters, e-mail messages, envelopes, and labels very easily. The course demonstrates how to add, modify, and update form fields, as well as walking through the mail merge process.
Advanced Document Features in Word 2007	Some of the advanced features of Microsoft Office Word 2007 offer ways in which you can automate and streamline the way you work. You can use macros in Word 2007 to easily automate repetitive, complex tasks. A macro is a set of instructions that can group a series of actions and keystrokes as a single command. You can also simplify the management of your Word 2007 files by using master documents. Master documents divide large files into related subdocuments through a series of links. This course demonstrates how to create, edit, copy and delete macros through the use of the macro recorder. In addition, aspects of master and subordinate documents are explained, including outline levels, rearranging and restructuring subordinate documents in the master, and converting, deleting, merging, and locking subdocuments. Customization of the Quick Access Toolbar is also explored in this course.
Collaborative Features in Word 2007	Microsoft Office Word 2007 offers several options for securing and protecting Word documents as well as providing various collaborative features. This course demonstrates how to use Word 2007's document security, which includes locking document formatting, password protecting a document, marking a document as read-only, using Document Inspector, viewing privacy options, and adding a digital signature. It explains the various workspace collaboration features available using SharePoint in addition to creating a document library. This course also discusses and demonstrates working with HTML to save a document as a web page and creating a web page in Word as well as how to create blogs in Word 2007.
Introduction to Six Sigma	When launching General Electric's quality effort in 1995, Jack Welch, the then chairman and legendary champion for the cause of Six Sigma, strongly encouraged his chief employees to become passionate lunatics about Six Sigma. Welch's adoption of Six Sigma, and General Electric's ensuing success, greatly contributed to Six Sigma's recognition as a powerful method for business improvement in organizations. So, what is Six Sigma and why do so many successful organizations attribute their success to it? This course largely deals with answering these questions. The course traces Six Sigma's roots in traditional quality concepts, but also shows that it is not just about quality; it is also a metric, a philosophy, a balanced scorecard, and a quality management system. This course demonstrates how to estimate Sigma level and how Six Sigma methodologies are strategically applied to a broad array of manufacturing and service organizations. The course also explores Six Sigma business goals and the mission critical role of Champions for achieving these goals.
Six Sigma Process Improvement	In the world of business you cannot expect faulty processes to deliver outstanding organizational results. Six Sigma offers many ways to improve your organization's processes, based on your priorities and business requirements. Whenever you delve into process improvement, you have the option to create new processes altogether or replace old processes with new ones. Six Sigma Champions generally choose to improve upon existing processes. This course is designed to help Champions learn how to use Six Sigma's Define - Measure - Analyze - Improve - Control (DMAIC) methodology to upgrade current processes. It also explores using Six Sigma tools and methods to understand customer requirements, recognize the gaps between current deliverables and customer needs, analyze the root causes of process shortfalls, and finally use Six Sigma tools to improve inefficient processes. This course introduces you to Six Sigma tools and their application in Six Sigma methodology using a keep-it-simple-statistically approach ideal to a Champion's strategic role.
Six Sigma Projects and Project Teams	Managers are people who do things right, while leaders are people who do the right thing, says Warren Bennis, Ph.D. in his book On Becoming a Leader. Champions are leaders. Selecting the right Six Sigma projects and the right people, and leading them to achieve business goals, is vital to the leadership of Champions. This course deals with these important roles of Champions. It also provides Champions with a toolkit to measure and analyze a project thoroughly before it is selected for Six Sigma improvement. The roadmap for selecting Black Belts and other team members needed to build a winning project team is also explored. Champions will learn how to shape and align the dynamics of their sponsored team to the organization's business goals. Finally, the course demonstrates the all-important Champion role of acting as a conduit between project teams and top management.
Leadership	Leadership is fundamental in driving quality in an organization. A good leader's actions and words filter down to all organizational levels to create a quality culture. The concepts of organizational leadership are built on a foundation of core business elements. A clear understanding of these elements is key in developing an organization's strategic plan and vision. These core elements include: organizational structure and culture, roles and responsibilities of managers and leaders, change management, motivation and negotiation, and conflict and empowerment. This course explores the concepts of organizational design and leadership challenges. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.
Team Dynamics	Effective development of teams improves the organization's quality and productivity. Team development encompasses team establishment, assignment of roles and responsibilities, and performance evaluation. Dynamic team goals and objectives must align with the organization's vision and mission. This course explores team building and team dynamics. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.
Developing and Deploying Strategic Plans	Successful organizations are founded on effectively developing and deploying strategic plans. Organizations must identify their primary goals and objectives based on their mission and vision statements. Other success factors include understanding market forces, internal strengths and weaknesses, stakeholders, relevant technology, and legal and regulatory factors. With these considerations, an organization's action plan can be developed and deployed, and its effectiveness evaluated. This course explores the concepts of strategic planning models, business environmental analysis, and strategic plan deployment. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook, and is designed to assist learners in preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.

Managerial Skills and Abilities	Quality management is an important factor in the success of today's organizations. Leading organizational thinkers have gone to the extent of saying that quality in an organization is determined by the quality of its management. In order to bring quality and excellence to an organization, managers need certain skills, tools, and abilities in all their functions. These skills and abilities relate to their understanding of management principles and theories, key organizational functions, and their mutual interrelationships. This course explores basic principles of management, management theories, styles and tools, and interdependence of functional areas in an organization. It identifies tools and techniques used by the HR, Finance, Risk, and Knowledge management functions in an organization. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality / Organizational Excellence certification exam.
Communication Skills and Project Management	An essential element of management is the ability to effectively communicate with people. The capacity to successfully communicate in today's global economy is a pivotal element to the success of any organization. Managers need to be aware of emerging technologies and how these affect international communication. To meet an improvement project's specified goals and objectives, a manager must also effectively plan, estimate, and monitor the progress of the project and know what tools to apply. This course explores how communication takes place, and presents techniques and strategies for enhancing communication. It also examines how various project management tools can be used to analyze project risk, feasibility, and priority. The course is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook, and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.
Quality Systems, Models, and Theories	The implementation of an effective quality system is a vital component of the success of any organization. Personnel at all levels in an organization must be aware of the quality mission, plan, and methodology it employs. A quality mission and plan that is well developed and properly implemented must be aligned to the corporate mission and vision statements and the strategic plan in order to be effective. As an organization evolves, its quality plan must be monitored and revised in order to reflect these changes. This course explores the quality mission, plan, and methodologies and discusses the importance of effective monitoring, documentation, and implementation. It examines various quality models and theories used in corporations today. This course is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook, and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.
Problem-Solving and Process Management Tools	Albert Einstein is reputed to have said, The significant problems we face cannot be solved at the same level of thinking we were at when we created them. To solve quality and process-related problems, managers should continuously enhance their knowledge of organizational processes and quality management tools. These tools help managers find root causes of problems, an important step toward removing them. Success in ensuring quality and organizational excellence depends on how effectively managers apply these tools to solve quality and process-related problems. This course explores basic problem-solving and process management tools used for identifying, analyzing, and solving quality and process-related problems. The course is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook, and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.
Measurement: Assessment and Metrics	Were you ever in a situation where you started a new project and weren't sure of its effectiveness? Is your new process trending toward success or failure? These are questions that should be on the mind of every manager. An effective manager is continuously gathering, monitoring, and analyzing information as it relates to organizational performance. This course explores data analysis techniques used to detect trends of projects and processes. It describes key concepts in statistical analysis and explains how data-gathering affects the people in an organization and vice versa. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality / Organizational Excellence certification exam.
Customer-Focused Management	Sam Walton, founder of Wal-Mart, is reputed to have said, There is only one boss Ã¢‚¬â€œ the customer. And he can fire everybody in the company Ã¢‚¬â€œ from the chairman on down Ã¢‚¬â€œ simply by spending his money somewhere else. Effective quality management processes focus on the customer. In today's global marketplace, customers have more choices than ever before. To achieve success, it is vital for enterprises to accurately identify the wants, needs, and expectations of their customers. This course explores the relationship between the treatment of internal customers and the impact on external customers. It examines techniques used to identify and segment external customers, while anticipating customer priorities, needs, and expectations. Strategies for incorporating customer service principles are also analyzed. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality / Organizational Excellence certification exam.
Supply Chain Management	At what level are your suppliers performing? Are the relationships with your suppliers benefiting the organization? A quality-centered relationship with a supplier can play a vital role in the success of organizations, providing a competitive advantage in today's aggressive global marketplace. Without sound performance measurement and communication strategies, the relationship between you and your supplier can quickly deteriorate. This course explores many aspects of the organization-supplier relationship, including supplier selection and communication strategies. The course also examines approaches to measuring supplier performance as a basis for improvement. It also looks at the importance of certification, partnerships, and alliances as they relate to the supplier relationship. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality / Organizational Excellence certification exam.
Training and Development	The most valued resource of any organization is its people. In today's corporate landscape of technological advancement, employees must be trained to align with the strategic direction of the business. Managers of quality should know that improvements in workplace productivity contribute positively to the overall well-being of the organization. This course explores the importance of investing in human capital as a means of attaining strategic objectives. It delves into all aspects of corporate training, including the front-end needs analysis, and identifying effective design and development strategies. It also examines various ways to deliver training, and provides insight on how to accurately evaluate the impact training programs have on a company's bottom line. It is aligned with the Quality Management Division of the American Society for Quality's Certification Handbook and is designed to assist learners as part of their preparation for the ASQ Certified Manager of Quality/Organizational Excellence certification exam.
Managing a Project	The factors of a successful project almost always end up depending on how much money and time is needed to create a product worthy of the customer. This course will help you manage the constraints of time, money, and schedules, and how they relate to the overall quality of your project and product.
Converting a Call Center to a Profit Center	This Business Impact explores how a call center can play a vital role in the financial success of a company, generating revenue to sustain itself and drive future business.
Managing Your Call Center More Efficiently	This Business Impact explores the benefits of employing a knowledgebase to provide call-center employees with a searchable repository of information and practical experience.
The Importance of Call Tracking and	As the front line in customer contact, call centers rely on proper documentation to track and resolve customer-related issues. This Business Impact explores the five stages of the call-center cycle.
Customer Service Training - The Interview and Beyond	This Business Impact explores the idea that training should begin at its earliest point in a CSA's professional lifecycle - the interview.
Disaster Recovery - Keeping the Lines Open	Planning for disaster is important for all companies. This Business Impact explores the communications aspect of disaster recovery.strategies for holding on to top performers.
Preventing Agent Absenteeism through Better Working Conditions	Excessive agent absenteeism is an issue for many call centers. This Business Impact examines a strategy for minimizing the problem.
Aligning Performance to Key Indicators	Call centers must deliver solid customer service and still meet departmental objectives. This Business Impact focuses on the importance of helping call-center agents identify key performance indicators so they can maintain the balance between the needs of clients and the needs of the company.
Creating an Effective On-hold Message	Ineffective on-hold messages can frustrate and alienate customer callers. This impact explains how to create an effective on-hold message.
Aligning Agent Behaviors with Caller Types	Successful customer service agents know how to recognize the tone of a caller and adapt to it. This Business Impact explores three of the more common caller types and outlines workable coping techniques.
Prioritizing Rewards and Recognition in Call Centers	Incentives can help call centers minimize agent turnover. This Business Impact examines what makes a rewards and recognition program effective.
Outsourcing Financial Activities	Businesses are increasingly outsourcing portions of their accounting. This Business Impact explores the pros and cons of outsourcing financial activities to third party service providers.
Using Audits to Help Prevent Business	Business fraud is a potential issue for any company. This Business Impact stresses the need for employers to protect themselves by using audits to detect fraudulent activities.
Increasing Cash Flow in Times of Need	The life blood of any successful business is the steady and predictable flow of incoming cash. But what steps can be taken when a business experiences acute revenue shortfalls? This Business Impact explores some common options available to business owners when facing a critical need to increase cash flow.
Attracting New Investors - Keeping Presentations Focused	Given the fierce competition for investor capital, it's imperative that companies position themselves as the most profitable and desirable venture available. This Business Impact explores the specific documents and ratios that potential shareholders seek in making investment decisions.
What's Your Gross Profit Margin Really	A company's gross profit margin provides useful information about its financial health. This impact explores the significance of GPMs.
Aligning Recruitment to Job Requirements	Recruiting effectively means aligning recruitment practice to job requirements. Here we discuss why composing comprehensive and accurate job descriptions is such an important part of the recruiting process.
Understanding Workplace Diversity	Differences and similarities of ethnic, cultural, and family background are only part of a comprehensive approach to workplace diversity. Here we consider additional elements that are crucial aspects of the diversity mixture in today's business world.
Guarding Against Interviewing Biases	Bias can lead interviewers to make inaccurate decisions. This Business Impact explores the perils of interviewing bias and strategies for avoiding it.
Fringe Benefits: Maintaining a Competitive Hiring Advantage	This Business Impact explores the changing landscape of employee remuneration and the role that fringe benefits can play in giving your company a competitive edge.
Communicating Properly during Layoffs	Corporate mergers, financial downturns, and outsourcing make for difficult transitions for any company. This impact explores the importance of clear, thorough, and honest communication during such times of change.
Managing Workplace Stress	Workplace stress will remain a reality of modern business for the foreseeable future, but there are strategies to consider when evaluating how best to anticipate and manage work-related pressures.
Reframing Negative Situations	People often react to perceived negative situations based on their perceptions and past experiences. Unfortunately, these assumptions and preconceptions can be faulty. This Business Impact explores the technique of reframing the process of actively questioning our understanding of a situation to uncover other possible meanings and perspectives.
Underperforming Employee - Now What?	Most managers have dealt with underperforming employees at one time or another. This Business Impact examines how to use turnaround agreements effectively.
Communicating a Shared Vision	Communicating a Shared Vision shows how providing a project team with a vision, can help improve team motivation and ensure project success.
Succession Planning	Succession planning provides an organization with an understanding of critical roles and functions. Here we discuss the strategies that allow a manager to maintain personnel in key areas.
Leading Teams through Change	Effective leadership is key to change management. Leading Teams through Change discusses the challenges of change management and how to motivate your team during a period of change.
Building Trust Incrementally	Trust in a manager is not a given. This Business Impact focuses on a new manager's challenge of winning the trust of her team.
Leading Outside the Organization	A leader's public image is just as important as his or her management ability. This Business Impact examines the expanding role of today's business leaders outside of their organizations.
Knowing When to Take Leadership Risks	This Business Impact illustrates why professionals must take care not to allow fear of failure to turn innovative behavior into risk-averse behavior.
Developing the Next Generation	Younger generations require different avenues of career development. This impact examines strategies for training Generation Next employees.
Fostering a Business Execution Culture	Even the best-conceived business strategies can flounder when the philosophies of senior management fail to translate in daily practice. This Business Impact explores the benefits of establishing and encouraging an execution-driven culture within your company.
Inspiring Your Team	This Business Impact explores the challenges leaders face when trying to find unique, appropriate, and effective methods to motivate team members to attain and surpass goals.
Involving Employees in Corporate Change	Given the potentially disruptive impact of change to business organizations, it's imperative that companies strive to find strategies to involve their employees in the transition process. This Business Impact highlights a number of effective approaches.
Wanted-Innovation Leaders	Innovation is important to growth. This impact explores how to nurture innovation leaders.
Managing Communications in a Virtual Team	The manager of a virtual team must master exellent communication and understand the importance of virtual presence technologies. Learn how the manager of a virtual team can improve team communication and collaboration.
Using Conflict to an Organisation's	Using Conflict to an Oranization's Advantage explores how to manage conflict proactively, and turn it to a team's advantage.of a project.
Prioritizing Personal and Professional Responsibilities	In today's business world, employees face significant performance pressures. This Business Impact focuses on the challenges business professionals face when balancing the demands of home and office in today's global economy.
Managing the Stress of Organizational Change	Organizational change has become commonplace in today's business world. This Business Impact examines the challenges an employee faces when his company restructures into a decentralized organization.
Managing an Aging Workforce	Retirement poses a challenge to most organizations. This Business Impact explores strategies for planned succession.
Delegating Appropriate Tasks	Delegating tasks requires careful consideration. This Business Impact explores strategies for delegating tasks to employees.
Preventing High Turnover Rates: How to Keep the Best	While some turnover is unavoidable, companies must take proactive steps minimize its effect. This Business Impact explores retention strategies for holding on to top performers.
Confrontation: What's the Best Approach	Managers often find confronting employees difficult and unpleasant. This Business Impact explores strategies for turning these confrontations into positive, win-win experiences.
Employee Exhaustion: Managing a Well-balanced Workload	The possibility of employee burnout can threaten productivity. This impact examines strategies for balancing workloads.
Managing Expatriates' Career Development	Managing expatriates presents many significant and often unforeseen challenges. This Business Impact focuses on some useful preplanning and reintegration methods for approaching expatriate career development.
Performance Dashboard or Scorecard?	Performance dashboards and scorecards are powerful managerial tools. This impact explains the difference between them.

Title	Description
Developing Adaptable Managers	To meet the challenge of the new economy, businesses must reassess how they train and groom their emerging leaders in order to produce highly flexible and adaptable managers. This Business Impact suggests a five-step strategy for developing tomorrow's managers today.
Understanding the Motives of Millennials	Millennials are entering the workforce in greater numbers. This impact explores how managers can work more effectively with these employees.
Coping with Information Overload	Advancements in communication technology have given us instant access to boundless information, but the gains in efficiency and productivity have come at a cost. This Business Impact explores the causes of information overload and explores some practical ways to cope with it.
Blame Backfires--Conquer Negative	Many employees find accepting criticism difficult. This Business Impact details how to handle workplace criticism professionally and effectively.
Effective Critical Analysis of Business	Effective decision making requires sound analytics. This impact explores the pitfalls of basing decisions on faulty logic.
Playing the Devil's Advocate in Decision	Good decision making lies at the heart of success. This impact explores a strategy for ensuring that business decisions are sound.
Mediating Project Team Conflict	Project team conflict can be extremely disruptive to productivity. This impact explores the conflict resolution strategy of mediation.
The Importance of Flexibility in the	Change happens rapidly in business. As a result, employees must be flexible, adaptive, and ready for new things. This Business Impact examines how employees can develop these traits.
When Too Many Meetings Are Just Too	While meetings are a necessary part of business, their frequency often becomes excessive. This Business Impact details the importance of ensuring that meetings are an effective use of the attendees' time.
What is Emotional Intelligence?	Though business does revolve in great part around facts and figures, emotion plays a significant role in the workplace. This Business Impact explores the aspects of Emotional Intelligence and its importance in light of general IQ.
Support Your Leader	Individuals who seek out ways to better support their leaders often find that personal success is a natural end result. This Business Impact explores some of the ways that team members can assist their leaders in a supporting role.
Disciplines of Organizational Learning: Personal Mastery	The various models of organizational learning enable individuals or groups to systematically enhance abilities to produce a desired outcome. This Business Impact considers the benefits of one specific form of organizational learning: Personal Mastery.
Safe Small Talk	Small talk is a long-standing social convention with understood rules governing which topics are acceptable and which are not. This Business Impact explores the nature of small talk in the business setting.
Effective Body Language in Negotiations	Body language often conveys far more than the spoken word, communicating the speaker's underlying intent. This Business Impact focuses on the crucial role that non-verbal cues serve during the course of business negotiations.
Planning for Interruptions Helps with Procrastination	Wasting time at work is a common problem. This Business Impact examines strategies employees can use to minimize their procrastination.
Facilitating Work-related Conflict	Project team conflict isn't always interpersonal in nature. Sometimes, it's work-related. This impact explores work-related conflict.
Criticism in Context	Receiving criticism is rarely a pleasant experience. Yet, it can provide considerable opportunity for personal growth. This Business Impact explores some possible strategies for processing feedback in a useful manner.
Preparing for Your Performance Appraisal	Many employees find performance appraisals intimidating. This Business Impact shows how proper preparation makes the process less stressful and more beneficial.
Managing Projects without Direct Authority	Managing Projects without Direct Authority is a Business Impact product focusing on how Project Managers of cross-functional teams can maximize team involvement, even if they directly report to another manager.
Ensuring Management Buy-In on a Project	Ensuring Management Buy-In on a Project discusses the importance of executive buy-in at the beginning of a project.
Managing Conflict in Project Teams	This Business Impact discusses some of the options a manager has when resolving conflict in the workplace.
Managing Scope on a Project	Managing projects requires dealing with scope change effectively. Here we examine the types of change request that can impact the triple constraint of time, cost, and quality.
Weighing the Costs of Project Change	Even with an extremely thorough project plan in place, change requests are inevitable. This Business Impact explores how project managers should handle such requests.
Managing Vendor Relationships	Meeting the goals of a project often requires hiring consultants with specific skill sets. This Business Impact details strategies for integrating contract workers into the project team.
Anticipating and Solving Problems as a Project Champion	Every project faces obstacles. This Business Impact details strategies that project champions can use to prevent obstacles from turning into more serious problems.
Addressing Stakeholder Conflicts	Stakeholder conflict is a common occurrence during projects. This Business Impact examines the project manager's role in conducting professional conflict management.
Portfolios, Programs, and Projects: What's the Difference?	When key business terms are perceived as interchangeable, communication breakdown can occur, costing time and money. This Impact Series reviews the significant differences between portfolios, programs, and projects.
Controlling Project Cost	Controlling costs is crucial for the success of any project. This Business Impact examines the need for constant project cost monitoring and analysis.
Selling to Key Players	Every company has its key players in the purchasing chain. However, position and title do not always indicate who has authorization to make purchasing decisions. Here we examine how to maximize sales opportunites by reaching the right audience.
Listening to Your Customers	The key to effective communication is practicing good listening skills. This Business Impact explores the concept of active listening and the crucial difference between hearing and understanding.
Storming: Developing and Leading Your Sales Team	Though easily formed, teams do not readily emerge as a cohesive and functioning group. Instead, they progress through a series of phases as individuals acclimate to each other and the challenges they must face together. This Business Impact focuses on a particularly difficult phase of team development: storming.
Planning for Effective Selling	Selling with a seat-of-the-pants approach is a gamble. This Business Impact details an alternate approach.
Designing Products to Fit the Channel	Though a strong web presence is seen as vital in the success of most businesses, it is equally important that products be shaped to fit the medium and meet the needs of custom-conscious consumers.
Sales Support Roles for Better Customer Interaction	Completing large deal" sales typically requires a team approach. This Business Impact examines the roles involved with such an approach."
Don't Only Go for the Big Fish	Many salespeople concentrate primarily on closing big deals. This Business Impact examines the value of keeping a mix of all size prospects in the sales pipeline.
Sales and Marketing: Two Sides of the Same Coin?	Despite having similiar goals, sales and marketing are often at odds. This impact explores how to improve relationships between the two divisions.
Using Web Analytics to Increase Sales	Website activity can provide valuable sales data. This impact explores how web analytics can increase sales.
Trade Show Marketing - Planning Ahead	Trade shows are great opportunities for salespeople. This Business Impact examines the importance of preparing for shows ahead of time.
The Ethics of Gift Giving	For a sales organization, giving gifts to clients helps strengthen business relationships. But gift giving can create ethical dilemmas if not handled properly. This Business Impact explores the ethical considerations of gift giving.
Are You Listening to Your Customers?	Customer satisfaction is an important part of any business. Are You Listening to your Customers? discusses formal and informal techniques that help you to capture customer requirements.
Quick Wins in Six Sigma Implementation	This Business Impact explores how best to select initiatives that are most beneficial to both the project team and the organization as a whole.
Six Sigma Versus TQM	Six Sigma offers a number of advantages over TQM. This impact examines the benefits of Six Sigma as contrasted with TQM.
Lean Inbound Transportation	Shipping and storage of raw materials can carry exorbitant costs. This impact explores how businesses can reduce such costs.
A Critical-to-quality Tree - What's That?	The Six Sigma critical-to-quality tree translates customer needs to business goals. This impact explores how.
Basic Measurement Concepts in Six Sigma	Decreasing defects is the core function of Six Sigma. But to accomplish this, defects must be quantified. This Business Impact explores the basic measurement concepts that help assure statistical information is properly tracked and gathered.
Recognizing Natural Leaders	Effective leaders embody qualities beyond managerial experience. This challenge examines how to identify the candidates possessing an innate ability to lead.
Motivating Human Behavior	Different needs and values motivate different individuals. This challenge examines how to identify and build upon your employees' varying motivators.
Coping with Accusations in the Workplace	Conflict with coworkers is something we all deal with it at some point, and facing accusations in the workplace can be especially difficult. This Challenge explores some possible ways to address accusers.
Power and Politics in Matrixed Teams	There are many gains to be made by adopting a matrix organizational structure, but the approach itself does not guarantee success. Managers must recognize that authority, power, and internal politics have a significant impact on any team structure.
Employee Engagement	It isn't enough to simply offer competitive salaries and benefits. Employees must be made to feel valued. This challenge focuses on methods for keeping employees engaged in their jobs.
Reacting to Co-workers Who Try Taking Advantage	When a co-worker tries to get you to do their work, it can be an awkward situation. This challenge examines how to handle such a problem.
Office Politics - What Will You Do?	Office politics are often a slippery slope. This Challenge examines options for dealing with them.
Crafting Sales Strategies	Successful sales iniatives often require rapid responses to opportunities. This challenge focuses on strategies for making rapid in-roads into available markets.
Performance Payout Plans	Compensation plans feature various pros and cons. This challenge focuses on selecting the best payout plan for compensating sales representatives.
Does Your Business Really Need Six Sigma?	Though a successful approach to error reduction and process improvement, Six Sigma can be difficult to implement and is not ideally suited to every business or task. This Challenge weighs the benefits of adopting Six Sigma and under what circumstances it is best applied.
Identifying Candidates for Key Six Sigma	Adopting Six Sigma into an organization is an intensive process. This challenge explores the importance of selecting the right people for key Six Sigma implementation roles.
Oracle Database 11g: Using SQL to Query Your Database	To identify the concepts and components of an Oracle Database 11g database, recognize how to retrieve information from it using SQL, and identify the steps for sorting, limiting, modifying, and formatting this information.
The Customer Service Representative (CSR)	It costs a business much more to acquire a new customer than it does to retain an existing one. So it makes sense that a business must do everything it can to support and satisfy existing customers. Handling complaints effectively and efficiently can result in increased customer loyalty. Today's Customer Service Representatives (CSR) and support centers have a vital role to play in ensuring customers' needs are addressed in an effective, efficient manner. This course will familiarize the individual with the basic role of the CSR and the environment in which he performs his duties, including typical roles of the CSR in a support environment, basic tasks accomplished by the CSR, the support center and customer's role in a support environment, how the support center has evolved, and company and support center best practices. This course prepares individuals interested in the CSR certification, which is targeted at individuals wishing to qualify for work in a customer support center or help desk environment.
Support Center Services and Work Environment	This course is intended to introduce the learner to the basic levels of service commitments and attitude expected of customer service representatives. Best practices, personal accountability, enhancing the image of the organization, and the work environment are covered.
Team and Customer Relationships	This course will familiarize the learner with the underlying benefits and skills needed to establish team and customer relationships. Teamwork is a critical component of a support center. This course looks at the individual responsibilities of each team member, as well as the team as a whole. It also addresses the role of strong leadership in building and maintaining successful teams. In a support center, customer relationships are everything â€" and communication is king! Many customer problems are caused by communication breakdowns.
Customer Interactions	Failing to realize the importance of customer service and effective complaint handling leads to increasingly dissatisfied customers. Organizations need to be able to address the needs of customers in an effective and efficient manner. This course is intended to show the proper procedures and processes needed to provide effective customer service: how to properly support a customer, how to overcome communication problems, and how to use active listening. This course helps to prepare learners interested in the Customer Service Representative (CSR) certification, which is targeted at individuals wishing to qualify to work in a customer support center or help desk environment.
Communication Skills	Effective communication is essential to the success of any customer-oriented business. Each customer will have their own style of communication as well as an emotional response to contacting a support center. In order to effectively communicate, the Customer Service Representative (CSR) must understand how to adapt to these different styles and emotions before the customer's problems can be dealt with. This course explains how to adapt to the different communication types and identifies the common emotions that customers experience when contacting the support center. It also explains how to adapt your writing skills to communicate through e-mail and to document incidents. This course helps to prepare learners interested in the CSR Certification, which is targeted to individuals wishing to qualify to work in a customer support center or help desk environment.
Conflict, Stress, and Time Management	Each customer wants her problem to be the most important problem to the Customer Service Representative (CSR). For the CSR, adapting to each customer's communication style, understanding each customer's emotional response, and solving each customer's problem can be an enormously stressful and time-consuming process. This course is intended to show the proper methods needed to resolve conflicts, manage time, and manage stress. It also highlights the importance of a positive approach and attitude in bringing customer interactions to a satisfactory conclusion. This course helps to prepare learners interested in the Customer Service Representative (CSR) certification, which is targeted to individuals wishing to qualify to work in a Customer Support Center/help desk environment.
Customer Service Processes and Procedures	Failing to realize the importance of customer service and effective complaints handling leads to increasingly dissatisfied customers. Organizations need to be able to address the needs of customers in an effective and efficient manner. This course is intended to show the proper procedures and processes needed to provide effective customer service: how to properly support a customer, how to provide accurate documentation, and how to handle difficult customers. This course helps to prepare learners interested in the Customer Service Representative (CSR) Certification, which is targeted to individuals wishing to qualify to work in a customer support center/help desk environment.
Quality in a Support Center	Customers who experience problems with your service represent a significant challenge to your company. If the support center is able to deal with incidents efficiently, your company can benefit enormously. Reputation and customer satisfaction can be restored and procedures can be established to recognize and prevent future incidents. This course examines the processes involved in incident management and how a support center can use them to best effect. The course introduces the concepts behind incident management, demonstrates how to deal with and close incidents correctly, and teaches how to apply Service Level Agreement terms and Quality Assurance principles. The course helps to prepare learners interested in the Customer Service Representative Certification, which is targeted at individuals wishing to qualify to work in a customer support center or help desk environment.

Support Center Tools, Technologies and Metrics	Customers contacting Support Centers expect the same level of professionalism each time they interact with a Customer Service Representative (CSR). To ensure this consistently high level of service, the CSR can draw an array of management tools and processes that both guide and measure his performance. This course is intended to demonstrate the management and measurement tools a professional CSR is expected to use when dealing with individual customers and participating in the overall operation of the Support Center. The skills and knowledge required include how to use tools associated with problem, change, knowledge, and security management. This course helps to prepare learners interested in the Customer Service Representative (CSR) Certification, which is targeted to individuals wishing to qualify to work in a customer support environment.
Dealing with Irrational Customers and Escalating Complaints	Dissatisfied customers can become irrational, irate and even abusive towards Customer Service Representatives. Organizations need to be able to address the needs of such customers in a professional, positive manner, and have processes in place so that Customer Service Representatives know how and when to escalate such a call. This course describes how to properly support an irrational customer, handle emotional and rambling customers, and how and when to escalate customer complaints. This course helps to prepare learners to work in a customer support center/help desk environment.
Environmental Management Systems (EMS)	Historically, companies have managed their own environmental challenges in response to external pressure from government agencies, environmental interest groups, and citizens focusing mainly on regulatory compliance. Today, companies recognize the importance of sound environmental management practices that result in economic gain.
In this course	learners will be introduced to the important concepts of EMS and find out how these apply to their own company's EMS.
SkillSoft Corporation is not affiliated with or sponsored by the ISO and does not have a relationship with the ISO. As such	SkillSoft is not authorized or approved to act on behalf of the ISO
Pandemic Flu (Bird Flu) Awareness	Hong Kong, 1997 â€" Outbreaks of the highly infectious H5N1 influenza (bird flu) were reported in poultry on farms and in live markets. Human infections with bird flu were also reported. Altogether, 18 humans (6 of these fatalities) were reported in the first known instance of human infection with this virus.
At this point	unless people come into direct contact with infected birds
In October 2005	the Centers for Disease Control (CDC) estimated that if pandemic flu was to hit the US
It isn't too early to start planning how you and your organization will respond to the very real threat of a bird flu pandemic. In	there could be a point when it is too late. This course is designed to increase awareness of the pandemic threat the bird flu poses and to provide information that can be used to form the basis of preparedness and prevention for your organization."
Sprains and Strains	Each year thousands of workers are injured in the workplace, costing employers billions of dollars in hidden costs. The most common of these injuries are sprains and strains. Most workplace injuries are caused by manual tasks, such as lifting or carrying loads, working in fixed positions, repetitive tasks, or using heavy, vibrating tools. Manual tasks, if not performed properly, are a leading cause of serious worker injuries such as sprains and strains, as well as permanent spinal damage, and often can debilitate workers who may need to take leave from work for extended periods. The second greatest cause of workplace injuries are slips, trips, and falls at ground level and from heights â€" such as jumping from elevated surfaces â€" which can cause lower limb and back strains. Workplace injuries can be costly to both employees and employers. In addition to being injured, employees may lose time from work, which could result in loss of or less income. And employers may experience lower productivity due to the need to replace the injured worker and train replacements. The course is designed to help you better understand the basics of sprains and strains so you will be more aware of what you are doing and how you are doing it, in an effort to prevent this type of injury from happening to you.
Defensive Driving: Truck Safety	When people think of defensive driving, they think of watching out for the other guy" or defending themselves from other drivers so they won't become involved in an accident. That's definitely important
Benzene Awareness	Benzene is a volatile chemical formed from both natural processes and human activities. Natural sources of benzene include emissions from volcanoes and forest fires. Benzene is also a natural part of crude oil, gasoline, and cigarette smoke.
Privacy and Information Security	Information about individuals is used by businesses to provide customers with a huge array of targeted goods and personalized services that consumers have come to expect. If it lands in the wrong hands, this same information can result in harm to the very individuals it was meant to serve. The protection of an individual's personal information has business implications that extend beyond the privacy of any one individual. Private information relative to certain businesses and industries is protected by various laws. For example the Health Insurance Portability and Accountability Act (HIPAA) laws protect private medical information. Many states have enacted their own laws, and the federal government is regulated by the Privacy Act of 1974. Legislatures are increasingly responding to calls for greater protection of private information, and stories of improper disclosures of large volumes of private information receive prominent media attention. At present, there is no broad, general federal law protecting the privacy of customer information; most protections are aimed at particular types of information (such as medical or student records, for example) or particular types of businesses (such as medical providers, banks, and financial services businesses, for example). Customers and consumers expect their information to be protected and businesses that recognize the need to make privacy part of their business strategy, are ahead of the game. Many companies have gone to great lengths to protect information using technological advances. However, the ability of a business to protect private information it collects as part of its business is only as strong as its weakest link â€" the human factor â€" something that technology just can't overcome. This course is aimed at helping individuals who work with private information understand the ways that this information can be disclosed inadvertently. It will ensure that private information doesn't fall into the
Mentoring 70-640 TS: Windows Server 2008 Active Directory, Configuring	SkillSoft Mentors are available to help students with their studies for exam 70-640 TS: Windows Server 2008 Active Directory, Configuring. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Mentoring 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring	SkillSoft Mentors are available to help students with their studies for exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Mentoring 70-646 PRO: Windows Server 2008, Server Administrator	SkillSoft Mentors are available to help students with their studies for exam 70-646 PRO: Windows Server 2008, Server Administrator. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Lean and Six Sigma	Six Sigma is a data-driven improvement philosophy that views all activities within an organization as processes whose inputs can be controlled to effect significant improvements in process outputs. Six Sigma uses a rigorous and systematic methodology known as DMAIC (define, measure, analyze, improve, and control) and a number of qualitative and quantitative tools for driving process, product, and service improvements aimed at reducing defects and variation. Lean is also an improvement methodology, but with a different focus, aiming to enhance process flow, reduce cycle time, and eliminate waste.
Six Sigma Projects and the Black Belt Role	Six Sigma deployments demand major investments of time, effort, and money on behalf of an organization. Organizations need to exercise due diligence to determine if Six Sigma is the appropriate approach to employ, or if a less demanding quality and process improvement approach is better suited to meeting their needs. Success of these improvement projects largely depends upon the Six Sigma teams that understand the project goals. Six Sigma Black Belts lead these teams and must have the qualities and qualifications required to deliver the expected results.
Six Sigma Leadership and Change Management	The enterprise leaders in an organization play the most critical role in Six Sigma success. These leaders affect the deployment of Six Sigma in terms of providing resources, removing roadblocks, managing change, and communicating Six Sigma vision to all organizational members. Though Black Belts are not necessarily a part of the enterprise leadership, knowledge about leadership roles and perspectives helps Black Belts perform their own roles as Six Sigma leaders, and also in their regular interaction with these leaders.
Critical Requirements and Benchmarking for Six Sigma	The success of Six Sigma deployment in an organization largely depends on the success of individual Six Sigma projects. Organizational stakeholders, including customers, suppliers, and employees, have a strong influence on the implementation of Six Sigma projects. In turn, these projects impact the organizational stakeholders by throwing many opportunities and challenges before them. It is imperative that Six Sigma leaders determine the critical quality, cost, process, and delivery requirements from customers and the organization, and then align projects with these requirements. Benchmarking is used in Six Sigma projects to set measurement goals for the critical requirements against world-class and competitive reference points. Benchmarking may also be used at later stages in the projects to evaluate existing operations, compare them with best-in-class organizations, and incorporate best practices to maximize the success of improvement efforts.
Business Performance and Financial Measures in Six Sigma	Six Sigma improvement begins with assessing the current performance of an organization's processes and products, and comparing it with the desired performance. An important part of this assessment is choosing a set of measures that will provide a comprehensive picture of how the company is achieving its goals of customer satisfaction, organizational learning and improvement, internal process performance, and bottom-line financial growth. This course examines business measures in two categories: business performance measures and purely financial measures, exploring how these measures reveal the current state of the business and point to gains achievable through Six Sigma.
Managing Six Sigma Team Performance	Six Sigma Black Belts have the challenging task of managing the full spectrum of personal dynamics that characterize project teams. Each team member provides the team with unique strengths and weaknesses, and combining individuals into a team produces varied results. Besides providing the basic tools and structure for smooth team operation, and maintaining the integrity of the project schedule by managing limited team time, Black Belts require the skills to minimize maladaptive team behaviors and optimize positive ones. Black Belts must therefore be aware of the challenges of team dynamics and facilitate methods that resolve any conflicts that arise
Developing Project Charters and Tracking Six Sigma Projects	A project charter is the most important document used to initiate and manage a Six Sigma project, and it is treated as an informal contract between an organization and the Six Sigma team. The project charter articulates the problem that the Six Sigma team is going to work on, and the project's scope, goals, and objectives in very clear, specific, and measurable terms. As part of the process of developing a project charter, some performance measures such as cost, revenue, and schedule are identified and developed. Once the project is kicked off, its progress is measured and tracked on a continuous basis using popular project management tools, such as schedules, Gantt charts, and tollgate reviews.This course deals with the key issues in developing project charters and tracking a Six Sigma project. It takes you through some of the key elements of a Six Sigma project charter, including the problem statement and the project's scope, goals, and objectives. It also explains project performance measures and how to review the performance of a Six Sigma project using these measures. In addition, the course introduces common tools for tracking a project's progress and deliverables. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.
Data Collection and Measurement in Six Sigma	An organization's success depends upon how it delivers on its processes. Before Black Belts can begin to improve an organization's processes, they must measure those processes with the appropriate data. The crucial steps of data collection and measurement precede process improvement in any Six Sigma initiative. Successful data collection starts with careful planning; a knowledge of various data types, sampling strategies, and measurement methods; and an ongoing awareness of best practices for ensuring data accuracy and integrity. Only reliable and suitable data will yield dependable analyses that translate into desired process improvements. As Six Sigma team leaders, Black Belts will help to oversee careful data collection efforts during the Measure phase of the Six Sigma DMAIC process. They will determine what should be measured, how data should be collected, and what tools can be employed to gather data as the basis for further improvements.
Basic Statistics and Graphical Methods for Six Sigma	Organizations must ensure that their processes and products are extremely consistent, as variations can lead to rejected orders, lower revenues, and eventually, financial disaster. Basic statistics can provide Black Belts with the tools to summarize and assess collected data in a meaningful way. Black Belts can use descriptive (enumerative) statistics to tabulate and graphically represent sample data through a number of informative charts and diagrams. Using analytical (inferential) statistics, supported by the central limit theorem, Black Belts can confidently make inferences about the larger population based on their sample data, and can test the statistical validity of their inferences. Thus, basic statistics can provide an organization with a view of its performance in graphical format, and the tools for reaching valid conclusions regarding its processes and products.
Correlation and Regression Analysis in Six Sigma	As a Six Sigma team moves into the Analyze stage of the DMAIC process, it looks more closely at the variables and variable interrelationships identified during the Measure stage. As part of the analysis, a scatter diagram of dependent and independent variables is drawn to visualize the form, strength, and direction of their relationships. By determining their correlation coefficient, a linear relationship can be quantified and identified as positive, negative, or neutral. Then, using regression analysis, a model is developed to describe the relationship as a linear equation and then used for predictions and estimations. However, it is essential to analyze the uncertainty in the estimate, to test that the relationship between variables is statistically significant, and that the model is valid.
Common Design for Six Sigma Methodologies, Design for X, and Robust Design	Design for Six Sigma (DFSS) is the methodology associated with the design of a process, product, or service, which results in Six Sigma output that satisfies both the external customer and internal business requirements. DFSS is an innovative strategy for the design or redesign of a process, product, or service from the ground up. This course examines several of the common methodologies utilized in Design for Six Sigma (DFSS), beginning with the two common counterparts to the DMAIC methodology: DMADV and DMADOV. Design for X is emerging as an important knowledge-based multifunctional approach to design that is aimed at particular prioritized process constraints, such as cost, manufacturability, testability, or maintainability. This course explores several constraints in more detail, offering strategies for achieving designs concentrated on the chosen criteria. Another recently developed approach, robust design, uses parameter and tolerance control to produce designs which will be reliable during manufacturing and while in use. This course will address the basic aims of parameter control, tolerance design, and statistical tolerancing. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.
Working for Your Inner Boss: Personal Accountability	Most employees in business organizations must answer to someone else. From the top of the organization chart to the bottom, nearly every manager and employee must look to a supervisor, a director, or even a customer to establish priorities, assign tasks, set deadlines, and evaluate results. Whoever gives this direction is called the boss. On one level, the boss decides how employees will perform their jobs. How well an employee meets requirements set by the boss determines whether that employee succeeds or fails, receives rewards or penalties, and earns praise or criticism. On another level however, the judgment of an external boss isn't enough to make a job personally fulfilling and rewarding. That's something all employees of an organization decide for themselves. Everyone who works must also answer to an inner boss, a personal, internal voice that provides guidance on whether a job is worth doing and whether it is done well. Accepting personal accountability for your work means your inner boss sets demanding standards and that you're willing to commit to meeting those standards and answer for the results of your work. In this course, you'll learn how to listen to your own inner boss, how to identify your internal standards, how to create a plan to meet those standards, and how to apply your inner boss's guidance to gain more control over your work, your goals, and your future.
Managing from Within: Self-empowerment	Have you ever thought that you could be the best boss you've ever had? By developing attitudes and skills that empower you, you can manage from within and become your own best boss. Self-empowerment is the process of taking responsibility for your attitudes, behaviors, and actions at work to maximize your effectiveness. As an empowered employee, you will be driven by ownership, initiative, and performance.

Course	Description
Goals and Setting Goals	Most achievements, great or small, begin with an important first step: setting a goal. A clearly defined, attainable goal embodies a vision of what is possible. It's a guide star for those who navigate a course through obstacles to a desired accomplishment. However, the process of setting appropriate goals is often oversimplified or overlooked entirely. A well-constructed goal is challenging, yet achievable. It takes into account the abilities and resources available and requires the goal seeker to make the best use of both. In this course, you'll examine the types of goals you can use to advance your career and personal life, learn to construct goals that are both challenging and achievable, discover how to embed the seeds of success within your goals, and explore ways to align your goals with your own priorities and the priorities of others who influence the way you use your time.
Creating a Positive Attitude	Oftentimes your success or failure depends not only on the situation you are in, but how you react to that situation. Your reaction to the situations you encounter is significantly influenced by your attitude. Having a positive attitude involves looking for the best in a situation, being realistic about possibilities and consequences, and having the courage to believe that you can succeed. It isn't always easy to be positive. You may feel that the odds are stacked against you, or you may find it hard to cope with the difficult and challenging situations that you find yourself in. Taking action to develop a positive attitude involves examining how you perceive your situation, and how you deal with your perception of the situation. This course will show you that it is possible to change your perspective from negative to positive, and provide you with skills for overcoming the challenges that you face at work. Being successful starts and ends with you, and having a positive attitude will help you achieve your desired success.
Pursuing Successful Lifelong Learning	Today's successful individual understands that the business world is constantly changing the way people work and the way work is accomplished. How often have you heard these terms: lifelong learning, self-directed learning, continuous learning, and knowledge worker? If you wonder what these terms really mean, why they are important, and how you rate as a worker and learner for the 21st century, then this course is for you. Find out how lifelong learning strategies can enable you to develop your work skills and to manage your professional development. Don't wait until your supervisor initiates what you need to learn. It's time to take ownership of your learning needs based on your expectations and your own terms. In this course, you will identify your learning needs and learn how to establish learning objectives, determine learning resources, and evaluate outcomes.
Doing Business Professionally Simulation	Everyday business activities require a determined effort to fulfill. Schedules must be kept; deadlines must be met. To ensure productivity remains on target, business professionals must possess refined skills in setting priorities, managing daily tasks, and maintaining personal accountability.The Doing Business Professionally Simulation is designed to enable participants to develop the skills necessary for increasing personal accountability and business professionalism. Over the course of the simulation, participants will practice personal development skills, encompassing the objectives of taking initiative, collaborating on goals, aligning priorities and goals, demonstrating a positive attitude, reacting positively to criticism and feedback, and being assertive.The Doing Business Professionally Simulation comprises two scenarios and is based on the SkillSoft series Doing Business Professionally." Throughout the simulation.
Fundamentals of Software Testing	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus").Â The authors
Configuration Management, Risks, and Incidents in Software Testing	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors
TestPrep 1Z0-050 Oracle Database 11g: New Features for Administrators	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
The Active Directory Infrastructure in Windows Server 2008	Windows Server 2008 is the most recent server operating system released from Microsoft. With new roles specific to Active Directory, along with notable improvements in security, networking, and performance, Windows Server 2008 is designed to increase reliability and flexibility to any server infrastructure. Read-only domain controllers are introduced and described in this course, with demonstrations on how they can help improve security, generate faster logon times, and create more efficient resource access. Aligning with Microsoft exam 70-640 objectives: TS: Windows Server 2008 Active Directory, Configuring, this course will also cover many of the different types of installations, as well as new deployment features and migration options. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator certifications, since both MCITPs are certifications that require more than one exam.
Additional Active Directory Server Roles in Windows Server 2008	Windows Server 2008 includes several new Active Directory Domain Services roles. These roles are conveniently managed in the Server Manager console, which allows administrators to add, remove, and manage the server roles on any Windows Server 2008 server. This course covers new active directory server roles, such as the Active Directory Federation and Active Directory Rights Management roles, which enhance an organization's ability to safeguard domain resources, extend external network access, and facilitate the use of a single sign-on solution. This course also describes enhancements to Active Directory Certificate Services, which include new Enrollment Agent Templates, Online Responders, and a new enterprise PKI management tool, and is one in a series that covers the objectives for Microsoft exam 70-640: TS: Windows Server 2008 Active Directory, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator certifications, since both MCITPs are certifications that require more than one exam.
Active Directory Objects in Windows Server 2008	Windows Server 2008 includes several new and improved Active Directory features. The most notable change is the renaming of Active Directory Services to Active Directory Domain Services. Further administration and security enhancements make Windows Server 2008 the most complete out of the box version to date. This course explores new account policy and fine-grain password policy features, along with improvements to common Active Directory administration, such as group membership, delegation, and importing data. Mapping to objectives set forth by Microsoft, this course is in a series that prepares learners for Microsoft exam 70-640: TS: Windows Server 2008 Active Directory, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator certifications, since both MCITPs are certifications that require more than one exam.
Group Policy Objects Strategy in Windows Server 2008	New Group Policy features in Windows Server 2008 allow for improved centralized management and configuration of computers in an Active Directory (AD) environment. Group Policy Management Console (GPMC) version 2 is a built-in feature in Windows Server 2008 and includes new templates, new import and export options, and a new Starter Group Policy Object (GPO) container that can be used to store a collection of administrative settings to create a baseline object for future group policy object creation. This course explores group policy deployment along with policy auditing, inheritance, and delegation, and is one in a series that covers the objectives for Microsoft exam 70-640: TS: Windows Server 2008 Active Directory, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Configuring DNS in Windows Server 2008	The Domain Naming System (DNS) is one of the most enhanced features in Windows Server 2008. With full support for the new, longer addresses of the IP version 6 protocol specification, along with continued support for the native IP version 4 specification, DNS in Windows Server 2008 is tailored to organizations of all sizes. New DNS support for Read-Only Domain Controllers provides primary read-only zones that add security and increase network efficiency. This course explores configuring DNS in Windows Server 2008, including Global single names, DNS Lookup features and DNS Zones. The course is one in a series that covers the objectives for Microsoft exam 70-640: TS: Windows Server 2008 Active Directory, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Active Directory Certificate Services in Windows Server 2008	Windows Server 2008 introduces many new enhancements to the already popular certificate management service. This course covers Certificate Services in Windows Server 2008, which can be used to employ cost effective public key technologies into your organization, allowing for secure and efficient communication within your network. It describes new support features that allow network devices such as routers and switches to obtain certificates, and a new console snap-in that allows you to view the health status of distributed enterprise certificates authorities on a network. This course also examines the new Enrollment Agent Templates, the addition of Online Responders, and the key new features that improve overall enrollment capabilities. Aligning with the most current 70-640: TS: Windows Server 2008 Active Directory, Configuring exam objectives, this course is one in a series that prepares the learners for the latest Windows Server certification exam release. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator certifications, since both MCITPs are certifications that require more than one exam.
Communications and Security in Windows Server 2008	Windows Server 2008 introduces Read-Only Domain Controllers (RODCs) which can be deployed by organizations in locations where physical security may be an issue. A RODC will improve security, provide faster login times and more efficient access to network resources, especially over a WAN. This course discusses various policies, such as Group Policies, Default Domain Security Policies, Account Policies, and Password Policies, that are used to implement security in your organization. It also explains how organizational units can be used to apply the Group Policy settings to a specific subset of computers or users, and how Internet Protocol Security (IPSec) can be used to secure Active Directory communications. The course is one in a series that covers the objectives for Microsoft exam 70-640: TS: Windows Server 2008 Active Directory, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Monitoring, Backups, and Recovery in Windows Server 2008	Windows Server 2008 provides the ability to restart Active Directory Domain Services (AD DS) so that offline operations, such as offline defragmentation of Active Directory objects, can be performed. This decreases the time it takes to perform these types of operations and provides resource management benefits for AD DS administrators, AD DS management teams, and security update planners. The AD provides various tools that help manage and control Windows Server 2008. This course discusses the use of Network Monitor, Task Manager, Event Viewer, Windows System Resource Manager, and the Resultant Set of Policy (RSoP), and demonstrates monitoring Active Directory. It also explores offline maintenance and the configuration of backup and recovery strategies including the use of Directory Services Recovery Mode (DSRM) to perform an authoritative or non-authoritative Active Directory restore. The course is one in a series that covers the objectives for Microsoft exam 70-640: TS: Windows Server 2008 Active Directory, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Active Directory, Configuration certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Deploying Windows Server 2008 Servers	Windows Server 2008 is the most recent server operating system released from Microsoft. Windows Server 2008 introduces a new updated and redesigned deployment service, formerly known as Remote Installation Services. Windows Deployment Services (WDS) enables the remote deployment of Windows operating systems, such as Windows Vista and Windows XP. The Key Management Service (KMS) in Windows Server 2008 simplifies client activation and eliminates the need to perform manual activations on each client. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator
Configuring Windows Server 2008 Availability	Windows Server 2008, the most recent Operating System from Microsoft, includes many new functionality and security enhancements. New Failover Clustering and Network Load Balancing technologies are introduced in Windows Server 2008, ensuring critical systems stay interruption free on both Enterprise servers and Server Core installations. This course explains these clustering and load balancing technologies, and also explores the implementation of RAID technologies included in Windows Server 2008, along with improved storage technologies such as Network Attached Storage, and Fiber Channel Storage Area Networks. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.
Configure Terminal Services in Windows 2008	Windows Server 2008, the most complete server release to date, includes many new features and functionalities. New Terminal Services features in Windows Server 2008 enable users to remotely access Windows-based programs that are installed on a terminal server either by corporate network or via the Internet. Terminal Services enables applications to be installed and deployed from a central location, allowing for easier application upgrades and maintenance. New Terminal Services licensing requirements, along with the use of Terminal Services profiles, ensures successful client connections and consistent working environments for each terminal server session. This course examines the Terminal Services management utilities, remote desktop permissions, and Terminal Services group policy options designed to ease administration. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.
Terminal Services Resource Access in Windows 2008	The Terminal Services feature included in Windows Server 2008 enables users to remotely access Windows based programs, installed on a terminal server, by using the Internet or from their own corporate network. New Terminal Server role services allow for greater security, flexibility, and productivity. New features such as Terminal Services RemoteApp and Terminal Services Web Access provide users with the ability to access RemoteApp programs and Remote Desktop connections from a Web browser. This course covers Terminal Services resourcing and application logging, along with new Terminal Services load balancing features available in Windows Server 2008. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.

Course	Description
Configuring Windows Server Hyper-V and Virtual Machines	New functionality and security enhancements make Windows Server 2008 the most complete Microsoft server release to date. New Virtualization technologies reduce the requirement of physical machines on a network, allowing for reduced costs, ease of administration, and a more dynamic infrastructure. With the introduction of Windows Server 2008 Hyper-V, organizations can take advantage Network Load Balancing features, a testing and development platform, and disaster recovery options enabled by Hyper-V. This course covers the Hyper-V MMC Snap-in, along with the configuration and management basics required to implement the Hyper-V role into a new or existing infrastructure. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator
Configuring Web Services and Security in Windows Server 2008	Windows Server 2008 is considered to be the most complete Microsoft server operating system released to date. Windows Server 2008, along with Internet Information Services 7.0, provides an easy-to-manage platform to securely host web applications and services from within an organization. This course explores creating and managing web applications using IIS 7.0 and configuring the Secure Socket Layer protocol. Configuring, importing, and exporting certificates is also discussed. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.
Managing IIS in Windows Server 2008	Windows Server 2008 introduces many new enhancements to Internet Information Services (IIS). New capabilities provide a secure and manageable platform for developing and hosting web applications and services on a network. This course covers IIS migrations, creating and managing new web sites, and configuring virtual directories and virtual directory permissions. Routine maintenance tasks such as backing IIS and monitoring daily activity are also covered. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure Configuration certification and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.
Configuring Web Service Protocols in Windows Server 2008	Windows Server 2008 and IIS 7.0 enable users to upload and download files and to send e-mail via the company web server. These features are made possible by two optional components in Windows Server 2008; the FTP service and the SMTP service. This course covers the configuration of both services, the benefits and requirements of each, along with important security and authentication configurations that ensure a level of security to meet your company standards. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.
Configuring Network Application Services in Windows Server 2008	Windows Server 2008 includes new components to facilitate the processes of hosting, licensing, and delivering audio and video media. This course covers the new Digital Rights Management features that let you assign policies based on who is accessing your media, along with new SharePoint services that allow for the collaboration and content management of your business content, processes and goals. SharePoint e-mail features along with maintenance tasks, such as backups and restores, are also covered. This course is one in a series that covers the objectives for Microsoft exam 70-643: Windows Server 2008 Applications Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Applications Infrastructure, Configuration certification, and counts as credit towards the following exams: Microsoft Certified IT Professional (MCITP): Enterprise Administrator.
Configure IP Addressing and Windows Services in Windows Server 2008	Internet Protocol Version 4, or IPv4, is the current, widely-deployed version of the Internet Protocol and is slowly running out of addresses to assign. Its successor, IPv6, allows greater flexibility in assigning IP addresses due to a deeper address space. Windows Server 2008 installs and enables IPv6 by default, allowing Windows 2008 DHCP by way of DHCPv6. This course provides an overview of networks, hosts, subnet masks, and how subnetting plays a role in efficient network management. It explores some of the more advanced points of network management including IPv4 and IPv6 addresses, static and dynamic DHCP, and the configuration of various DHCP options. This course is one in a series that covers the objectives for Microsoft exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Network Infrastructure, Configuring certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Configure, Manage, and Maintain IP Services in Windows Server 2008	Routing services and protocols are vital for maintaining secure and efficient communication in a network infrastructure. Windows Server 2008 provides key services including routing, remote access, and support for TCP/IP and security protocols. Windows Server 2008 can act as a router providing static IPv4 and IPv6 routing to remote networks and can provide dynamic routing through the support of routing protocols such as Routing Information Protocol (RIP). Another key IP service is the IP security protocol (IPSec), which offers essential security capabilities in Windows Server 2008 by providing improved authentication and cryptographic support, and by being closely integrated with the Windows Firewall and Advanced Security feature, Network Access Protection, and Active Directory Group Policy. This course is one in a series that covers the objectives for Microsoft exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Network Infrastructure, Configuring certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Name Resolution in Windows Server 2008	The Domain Name System (DNS) is a central network infrastructure service and continues to provide enhanced features in Windows Server 2008. With full support for the new, longer addresses of the IP version 6 protocol specification, along with continued support for the native IP version 4 specification, DNS in Windows Server 2008 is tailored to organizations of all sizes. This course explores the Windows Server 2008 DNS Server Role, its configuration, and the administration of DNS using the Server Core installation. It also explores special DNS setups using forwarding servers, conditional forwarding, root hints, and cache-only servers. Also covered is the use of other types of name resolution techniques including WINS, LMHOSTS, and HOSTS files, and the configuration steps necessary to set up clients to use DNS or WINS name resolution. The course is one in a series that covers the objectives for Microsoft exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Network Infrastructure, Configuring certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator.
DNS Zones and Replication in Windows Server 2008	The DNS namespace is subdivided into different DNS zones, which are hosted by a specific authoritative server or group of servers. Zones define the DNS namespace for authoritative servers that resolve client queries. This course explores DNS zone and replication in Windows Server 2008, including stub zones and their use in Microsoft DNS. It also discusses how Primary and Secondary servers of a DNS zone must perform zone transfers to ensure each server has an up-to-date DNS database. In addition, the course describes how Active Directory-integrated DNS zones store their data in the Active Directory application partition, and rely on the AD replication process to update the appropriate servers with zone data. This course is one in a series that covers the objectives for Microsoft exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Network Infrastructure, Configuring certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator.
Configure Network Access in Windows Server 2008	Routing and Remote Access Services in Windows Server 2008 provide remote access to clients through dial-up services and virtual private network (VPN) configuration. Remote and mobile users are continuing to increase in numbers with the wide availability of high-speed and wireless Internet access. This course discusses how Windows Server 2008 provides those clients with VPN access, offering support for security mechanisms including a range of tunneling techniques, network and wireless authentication protocols, and access control using the Network Policy Server (NPS). It also reviews the continued support for the Internet Connection Sharing feature and highlights the Connection Manager tools provided to help set up and manage remote connections. This course is one in a series that covers the objectives for Microsoft exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Network Infrastructure, Configuring certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Network Access Security in Windows Server 2008	Windows Server 2008 provides new services and capabilities for controlling and securing network access. This course discusses the new Network Access Protection application programming interface (API) and how it restricts network clients based on policies and enforces a minimum state of system health. It also introduces the Network Policy Server (NPS), which is responsible for managing and enforcing these policies and connection requirements. It outlines the NPS components involved in the Network Access Protection API, the range of health and network policies available, and the NPS's ability to enforce restrictions on other network services including DHCP, VPN, IPsec, and 802.1X. This course also provides a look at the latest improvements to the Windows Firewall providing advanced security through the use of granular inbound and outbound rules, connection security rules, the use of firewall profiles, and the ability to monitor the configuration.
Configure File and Print Services in Windows Server 2008	The most basic goal of a network infrastructure is to provide the ability to make file and printer services available to network users, and Windows Server 2008 continues to improve the provisioning and management of these types of resources. In this course we discuss file share features including Public Folder Sharing, Client Side Caching of offline files, and network printing resources. The course also explores management features such as disk quotas and file screening, reviews the use of the Distributed File System, and outlines the use of Windows Server Backup for data backup and restoration.
Monitor Network Infrastructure in Windows Server 2008	With the wide array of server roles and services provided in Windows Server 2008, it is more important than ever to adequately fine-tune and monitor the server's configuration and performance. Windows Server 2003 administrators will be familiar with many of the tools included in Windows Server 2008 but will find some key improvements. This course provides a look at the Windows Server Update Services (WSUS) function that has been updated to interoperate with Windows Server 2008, allowing it to act as an update server for network clients. The course also describes the new Windows Reliability and Performance Monitor tool, and the role of data collector sets and reports in monitoring your server. Also covered is the improved Event Viewer, which offers a great new interface, new Applications and Services Logs, and the ability to create custom views based on other event logs. This course is one in a series that covers the objectives for Microsoft exam 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring. Passing this exam completes the requirements for the MCTS: Windows Server 2008 Network Infrastructure, Configuring certification, and counts as credit towards the following certifications: Microsoft Certified IT Professional (MCITP): Enterprise Administrator, and the Microsoft Certified IT Professional (MCITP): Server Administrator, since both MCITPs are certifications that require more than one exam.
Planning Name Resolution and IP Addressing in Microsoft Windows Server 2008	Enterprise administrators are involved in various aspects of infrastructure design. One of these areas includes planning the IP addressing scheme and name resolution strategy. This course covers the key IPv4 and IPv6 characteristics, advantages, and drawbacks, so that administrators are able to plan an appropriate addressing approach. The course outlines the IPv4 and IPv6 technologies needed for IP version coexistence and eventual migration to IPv6 addressing. The course also examines the key characteristics of the DNS server role, namespace design, and zone design that the enterprise administrator should consider in their plan and to determine what backward compatibility must be provided. The course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Network Access in Microsoft Windows Server 2008	When planning the enterprise infrastructure, it is important to consider the needs of external users and clients to access the corporate domain, resources, and services. This course outlines the key technologies to consider when designing the external network access strategy. Included is a look at the remote access abilities provided by Windows Server 2008's Network Policy and Access Services role, which consist of the Routing and Remote Access, Network Policy Server, and Network Access Protection role services. The course discusses recommendations for Virtual Private Network (VPN) connections, such as authentication protocols, tunnel types, and authorization mechanisms. The course also outlines considerations for server or domain isolation and the design of a perimeter network, including the role of the ISA Server in providing secure access to Web server resources and internal network services, such as e-mail and domain name resolution. This course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Application Access and Delivery in Microsoft Windows Server 2008	One of the administrative tasks to consider when making network design and infrastructure plans is the business's requirements for application availability, deployment, and management. This can involve the need to make desktop environments or individual applications available to remote users or clients, deciding on the method to use for distribution of application packages, or determining the need for and type of an application management product to implement. This course covers the Windows Server 2008 Terminal Services role that offers remote desktop and application access, including the capabilities provided by TS Licensing, TS RemoteApp, TS Web Access, TS Gateway, and TS Session Broker role services. It also covers options for deploying application packages to users or computers through AD DS Group Policy and a look at management using specialized System Center products such as System Center Configuration Manager 2007 and System Center Essentials 2007. The course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Server and Application Virtualization in Microsoft Windows Server 2008	Enterprise Administrators must be knowledgeable about the features and benefits virtualization technologies have to offer and how these technologies can help them reduce costs and administrative resources. This course covers key virtualization techniques that can be implemented in the enterprise infrastructure, concentrating on server and application virtualization. This includes virtual server consolidation using Windows Server 2008 Hyper-V functionality, as well as the management products available to configure the virtual servers and centrally manage their performance. The course also provides a look at application virtualization solutions provided by Windows Server 2008, including an overview of the Microsoft SoftGrid Application Virtualization Platform and how it is used to provide a virtual deployment of applications in your enterprise. The course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Designing the Active Directory Infrastructure in Microsoft Windows Server 2008	The enterprise administrator involved in the design or restructuring of a Windows Server 2008 Active Directory infrastructure must have a good understanding of the Active Directory Directory Services (AD DS) â€" both the logical and physical components. This course covers the key logical AD DS design considerations, including the characteristics and number of forests and domains to implement, the choice of functional levels to configure, updating the Active Directory schema, and the options for establishing trust between multiple forests. It also outlines guidelines for designing the site topology composed of Active Directory site, site link, and site link bridge objects, as well as recommendations for the optimal placement of domain controllers and server roles in the enterprise infrastructure. This course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Active Directory Administration in Microsoft Windows Server 2008	Planning and implementing an enterprise administrative structure and an enterprise Group Policy strategy are tasks that are of utmost importance to an Enterprise Administrator. Designing the Active Directory Domain Services (AD DS) administrative model involves creating the organizational structure, delegating administration, using compliance auditing, and using security groups to implement group strategy and to simplify group administration. This course explains the use of directory object auditing and covers the various tasks involved in designing a proper AD DS administrative model based on the specific business requirements of an organization. This course also describes the planning of the Group Policy strategy and provides an explanation of Group Policy and its various components, including the Group Policy Management Console (GPMC), Group Policy Preferences, starter GPOs, administrative templates, and scope filtering options. The implementation of a Group Policy hierarchy, which involves linking GPOs, Group Policy processing order, and using the Resultant Set of Policy (RSoP) are also demonstrated in this course.

Course	Description
Existing Infrastructures and Branch Deployments in Microsoft Windows Server 2008	Many design projects facing an enterprise administrator involve an existing server and network services infrastructure, which need to be evaluated to determine the best options for upgrade or migration. Another common design challenge is the addition of fully functional branch offices, which should be planned carefully to ensure proper Active Directory and network services, while maintaining the necessary level of security. This course explores the considerations and tasks administrators must grasp before embarking on an Active Directory restructure, whether it involves an in-place upgrade to Windows Server 2008 server and functional level, or the addition of new Windows Server 2008 servers and the migration of Active Directory objects using the Active Directory Migration Tool (ADMT). When administrators restructure an enterprise, they must also consider servers, client operating systems, non-Windows services, and applications that may no longer function properly in a Windows Server 2008 environment. The course outlines these concepts, and also delves into information about branch offices including domain controller or Read-only Domain Controller configuration, protecting the physical security of your server, and recommendations for optimizing name resolution services for clients.
The Certificate Services Infrastructure in Microsoft Windows Server 2008	Design projects involving the addition or migration of a Public Key Infrastructure (PKI) and Windows Server 2008 Active Directory Certificate Services (AD CS) can be very challenging for the enterprise administrator and IT support team. A lot of effort is required to evaluate the requirements and policies of the business, as well as plan the most secure and suitable Certification Authority structure and certificate management approach. This course explores the function, components, and design considerations that need to be understood to be able to plan the implementation of Windows Server 2008 AD CS as part of a PKI. It demonstrates the use and maintenance of certificates, and covers the types and hierarchy of Certificate Authorities (CAs) that can be configured. The course also describes key features offered by Windows Server 2008 AD CS that may be deciding factors in a business's decision to migrate or upgrade to AD CS, including Cryptography Next Generation, Web Enrollment, Online Certificate Status Protocol Support, and Network Device Enrollment Services.
Software Updates and Compliance Management in Microsoft Windows Server 2008	One aspect that should not be overlooked when planning an infrastructure is the requirement for patch management and system compliance. Enterprise administrators must be aware of the approaches and tools that are available to them before recommending a software update plan. They also have to understand those tools before designing a strategy for software and system configuration compliance. This course examines the importance of patch management and the use of Windows-incorporated tools, such as Windows Update and Microsoft Update, in keeping client system operating systems and software up to date. Also showcased is Microsoft's Windows Server Update Services product, which enterprise administrators may recommend for the large scale, centralized update management approach required by enterprise networks. The course also addresses the need for enforcing and auditing system configuration and software compliance based on company policies. It covers auditing methods, such as the use of baselines and Microsoft Baseline Security Analyzer (MBSA), and the use of the GPOAccelerator Tool to ensure enforcement of Group Policy settings, as well as an advanced range of software update and configuration compliance features provided by Microsoft's System Center product series. This course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Designing Data Security and High Availability in Microsoft Windows Server 2008	Enterprise administrators should understand the Windows Server 2008 features that they can implement to increase system and data availability. This course explores features that help secure systems and resources, including the ability to use Group Policy to control the use of removable USB media, and the implementation of BitLocker Drive Encryption. Administrators should also consider the use of Active Directory Rights Management Services or the implementation of Encrypting File System to protect file resources. The course describes technologies that make resources more accessible to both internal and external users through the capabilities provided by Microsoft SharePoint technologies and the Distributed File System. It addresses the built-in options for recovery and redundancy, including a look at the new Windows Server Backup utility in recovering directory services, full servers, or individual objects. It also describes how Network Load Balancing and Failover Clustering features increase service availability. This course covers the objectives for Microsoft exam 70-647 PRO: Windows Server 2008, Enterprise Administrator. Passing the prerequisite MCTS exams and this Professional Series exam completes the requirements for the MCITP: Enterprise Administrator certification.
Planning Windows Server 2008 Deployment	Windows Server 2008 includes a number of enhancements to the standard Windows deployment model. This course covers deployment options, BitLocker drive encryption, and network configuration considerations including DNS and IPv6. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Planning Active Directory and Group Policy for Windows Server 2008	Windows Server 2008 includes many enhancements to Active Directory and Group Policy. This course covers new AD roles, such as RODC, new AD functional levels, new Group Policy features, and ADMX files. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Windows Server 2008 Management and Delegation	Many new features have been introduced with Windows Server 2008 that make managing servers easier. The new Server Manager is an MMC console that integrates several management tools into a single intuitive interface and Windows PowerShell is a new command-line tool that helps you automate system administration. This course discusses system administration with Server Manager and PowerShell as well as system optimization using Event Viewer. Also covered are strategies for delegating authority across an enterprise.
Managing File Servers and Data Provisioning in Windows Server 2008	Using Windows Server 2008, you have the ability to share files and folders immediately after deployment without any special configuration. However, to optimize sharing and access more granular file sharing tools, the File Services role should be added. This course discusses planning for and managing servers with the File Services and Print Services role added. Also discussed are planning and deployment considerations for the Distributed File System (DFS), as well as DFS Replication.
Windows Server 2008 Application Server Management and Application Provisioning	Windows Server 2008 builds on previous Windows Server Terminal Services capability and adds an all new and powerful virtualization hypervisor layer – Hyper-V. This course covers Terminal Services Web Access, RemoteApp, Gateway, Session Broker, and Licensing. This course also covers Hyper-V implementation and deployment. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Windows Server 2008 Application Servers and Services	The Windows Server 2008 Application Server role provides an environment for deploying and running server based applications. This course covers installation and configuration of the Application Server role and Microsoft System Center family of products – formerly known as Systems Management Server. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Patch Management and Securing and Monitoring Servers in Windows Server 2008	Developing an effective patch management strategy is critical in situations where there are many different operating systems with varying update requirements. This, along with monitoring the security and performance of business-critical servers, is the key to running an efficient Windows 2008 environment. This course discusses planning patch management strategies using Windows Server Update Services as well as monitoring the performance and security of servers using the Reliability and Performance Monitor tool and Windows System Resource Manager. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Certificate Services, SANs, and High Availability in Windows Server 2008	Active Directory Certificate Services is a built-in Certificate Authority that is included with Windows Server 2008. Certificate Authorities are responsible for issuing certificates that validate the identity of users and can be used to secure e-mail correspondence and for web-based authentication. This course discusses planning considerations for CA deployment as well as considerations for deploying storage area networks. High availability is another key consideration when implementing Windows Server 2008. This course covers planning for availability and scalability through the use of technologies such as Failover Clustering and Network Load Balancing. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Accessing Windows Networks Remotely in Windows Server 2008	One of the toughest challenges for a Network Administrator is protecting the network while accommodating a growing number of users that require remote access network connections. Windows Server 2008 provides numerous methods of connecting to remote networks as well as features used to keep networks secure. Discussed in this course are different types of remote access connectivity, along with the tunneling and authentication protocols available to secure these connections. This course explores planning Network Policy Servers, in addition to Network Access Protection which is used to enforce health policies on clients attempting to access the network. The course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Windows Server 2008 Backup and Recovery	Backing up and recovering data are two of the most important tasks that an administrator performs. A proper backup and recovery plan will ensure that data is not lost in the event of a system failure and applications and services will remain available. In this course you will learn how to back up files, folders, Active Directory, and other services using the Windows Server 2008 backup utility. Configuring Shadow Copies for shared folders is also discussed along with the recovery procedures for bringing data and services back online. This course is one in a series that covers the objectives for Microsoft exam 70-646 PRO: Windows Server 2008, Server Administration. Passing this exam completes the requirements for the MCITPro: Server Administrator certification.
Attending a Microsoft Office 2007 Live Meeting	Microsoft Office Live Meeting 2007 is designed to deliver efficient web-based communication and collaboration. Live Meeting 2007 enables participants in a meeting, who may be widely dispersed, to conduct the meeting as if everyone were in the same room. It does this by enabling participants to use webcams and headsets to communicate with each other through voice and video. Presenters can share content, such as web pages, polls, or presentations, in real time with the attendees of a meeting, and attendees can respond to the presenters and each other. This course provides a detailed overview of the benefits and features of Office Live Meeting 2007, and covers common tasks such as how attendees can join meetings and interact in them. Voice and video configuration options are also explored in this course, as well as how to record a meeting, and how to use meeting playback features.
Introduction to Industrial Hygiene	All employees should expect to work in as safe an environment as possible, whether they work in an office building, a factory, or a nuclear power plant. Since ancient times, medical professionals, social activists, and philosophers have observed and written about the various dangers associated with the work people do. In modern times, governments and industry professionals have stepped up and taken responsibility for creating legislation that protects workers from various types of hazards. The field of study that has emerged out of the need to create safe and healthy work environments is called industrial hygiene. All employees should be aware of the hazards they face, as well as steps they can take to minimize the risk of injury and disease. All supervisors should be aware of the regulations they must follow to ensure workers' exposure to dangerous chemicals and hazards is below legal limits. It is the role of the Occupational Safety and Health Administration (OSHA) to educate both workers and their supervisors in the limits OSHA has set for exposure to various workplace hazards. This course gives a general introduction to the work of the industrial hygienists. It also explains the types of hazards that workers may face, the health effects of such hazards, and measures that are taken to limit exposure.
Leadership Essentials: Building Your Influence as a Leader	Why is it so hard to get people to agree to a good idea? Why are some leaders constantly faced with challenges and objections? Reaching agreement as a leader does not mean you should manipulate or force people to accept your ideas and accomplish your objectives; there are ethical ways for leaders to successfully build influence. Leaders attempting to influence and persuade others are faced with the challenges of navigating through organizational politics. An effective leader recognizes that organizational politics can provide positive ways to influence others in order to accomplish goals.
Leadership Essentials: Communicating Vision	Today's leaders must be able to communicate a vision in such a way that the audience is engaged and everyone understands and internalizes the message. Effective leadership communication gives purpose and meaning to the work that people do. Leaders should strive to communicate vision with a sense of integrity, building trust as an individual and as a leader.
Leadership Essentials: Leading Business Execution	How many times have you and your team decided on new plans to make day-to-day processes more efficient, only to watch months slip by with those plans unexecuted? Why don't certain tasks get executed? Why do things stay the same, even when the change is critical to your team?
Leadership Essentials: Leading Innovation	Creativity and innovation are critical components of just about every organization. But innovation doesn't pertain only to new inventions, products, or reworked designs. It also involves incremental improvements to the way things are done. Knowing how to build and support an innovative culture is an important skill for any leader to master. The impetus for innovation can come from the top of the organization, and it can come from the people engaged in day-to-day production. Building an innovative culture is a responsibility for leaders and employees across organizational hierarchies.
Leadership Essentials: Leading with Emotional Intelligence	Poised, outgoing, cheerful, having empathy for others, being able to express feelings directly but appropriately, and having the capacity for developing relationships. All of these abilities distinguish individuals with high emotional intelligence. Emotional intelligence is a more reliable predictor of success than intellect! Leaders with a strong mixture of emotional awareness, self-management, and social skills navigate relationships more effectively and are more likely to be successful in their personal and professional lives.
Leadership Essentials: Motivating Employees	Imagine what your organization would be like if you and your colleagues were not motivated. Motivation is what drives people to accomplish things, whether it be small tasks or large undertakings. Without motivation, things simply would not get done. The ability to create an environment that encourages motivation takes both practice and skill as it's not a quality inherent in most people. As a leader, your capacity for motivating plays a key element in the success of your organization.
Microsoft Windows 7: First Look for IT Professionals	Windows 7 is the latest evolution in the Windows workstation product line of operating systems. Windows 7 builds on the accomplishments of Windows Vista and adds enhancements to create an increasingly easy environment to manage. This course looks at the SKUs of Windows 7 that will be available and discusses what is appropriate depending on environmental needs. This course also looks at Windows 7's compatibility with Windows Vista and the built-in driver support for Vista-capable hardware, and deployment methods and technologies such as DISM and WAIK. Windows 7 includes troubleshooting technologies such as the Action Center, Problem Steps Recorder, and Device Stage. BitLocker has been made simpler to use and AppLocker is used to control user access to applications. Remote and mobile availability under Windows 7 are also analyzed. This course will prepare IT professionals for the new environment they will manage while working with Windows 7.
Outlook Web Access 2007 Advanced Features	Outlook Web Access (OWA) 2007 offers an improved interface for accessing data, along with improvements to security that make common tasks such as accessing attachments more securely. The new WebReady Document Viewing feature allows users to view attachments as web pages, eliminating the need to have common applications such as Word or Power Point installed to view a specific attachment. LinkAccess features provide a way for users to access internal documents from outside of the company firewall while logged on to OWA. New junk mail and anti-phishing features strengthen OWA 2007, making it the most secure release of Outlook Web Access to date. This course covers the basics involved in everyday data access, along with new security features that both Administrators and Clients should be familiar with.
White-Box Software Testing Techniques	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors
Black-Box Software Testing Techniques	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors

Course	Description
Hosting a Microsoft Office 2007 Live Meeting	Microsoft Office Live Meeting 2007 is a conferencing software solution designed to allow for online meetings, training sessions and events. Live Meeting 2007 enables content to be created and shared between audiences using tools such as common text pages, a whiteboard, or even a poll. This course explores how to start a new meeting in Live Meeting 2007, and provides further coverage on inviting attendees, and configuring attendee permissions. New sharing and collaboration tools including the handouts and Shared Notes features in Live Meeting 2007 are also covered. The handouts feature enables a presenter to upload and make content available to participants for download. The new Shared Notes feature allows all participants to type and edit notes displayed in the Shared Notes window which can then be saved locally by all participants for future reference.
Internet Explorer 8: Advanced Features	This course discusses how you can customize Internet Explorer 8 by installing add-ons and Accelerators. These new features enable you to more quickly perform common tasks on the Internet. You can further customize Internet Explorer 8 by setting one or more web pages as your home page and customizing the browser interface. The course also covers how Internet Explorer 8 makes it easier for you to ensure your security and privacy when on the Internet through two new features – SmartScreen Filter and InPrivate. SmartScreen Filter warns you when you attempt to download a known malware file or visit a known phishing site, and helps you navigate away from these dangers. You can also use SmartScreen Filter to report suspicious sites you may find. InPrivate Browsing enables you to browse the Internet without leaving traces of the sites you've visited. And InPrivate Filtering limits the amount of information third-party sites can gather about you when you're browsing the Internet.
Internet Explorer 8: Basic Features	This course discusses the new and improved navigation features of Internet Explorer 8, including the Smart Address bar, caret browsing, and tab grouping. The search features have also been improved to make it quicker and easier for you to perform a search from the Internet Explorer 8 search box. The Favorites bar now has a wider functionality, and Internet Explorer 8 also introduces a new feature called Web Slices, which let you view snippets of sites without leaving the site you're currently on. The History feature has a wider functionality that makes it easier to manage. Internet Explorer 8 also minimizes the interruption a tab or browser crash may cause you by recovering all tabs and information that may have been entered. And Compatibility View enables you to correctly display sites built for older browsers. This course focuses on the new features of Internet Explorer 8.
Introduction to Program Management	The relationship between program and project management can be thought of in terms of climbing a ladder. Program management is the subsequent rung after project management. For example, project managers regularly balance many projects with varying deadlines and responsibilities – all at the same time. In a similar way, program managers must balance multiple programs, consisting of many different projects. When in a program management environment, there is an entirely new set of skills and knowledge a program manager must possess in order to be successful in this role.
Oracle Database 11g: Configure, Manage, and Use Services in RAC	A service is a grouping of related tasks within a database with common functionality, quality expectations, and priority relative to other services. It provides a single-system image for managing competing applications running within a single instance and across multiple instances and databases. Using standard interfaces, such as the Database Configuration Assistant, Enterprise Manager, and SRVCTL, services can be configured, administered, enabled, disabled, and measured as a single entity.
Oracle Database 11g: Diagnosing Oracle Clusterware and Node Management	Problems that occur with Oracle RAC instances can be difficult to diagnose because they span across two or more nodes in a cluster. Oracle Database 11g provides various methods for diagnosing and debugging Oracle Clusterware and RAC components.
Oracle Database 11g: RAC Performance Tuning	Performance Tuning uses diagnostic tools to gather statistics, statistic rates, and sampled statistics in order to tune the database system to provide the best performance as efficiently as possible. Although there are specific tuning areas for Oracle Database 11g: RAC, such as instance recovery and interconnect traffic, you will get the best performance by tuning your RAC system the same as you would with a single-instance system. The same tuning tools are available for RAC as would be for a single-instance system.
Static Techniques and Test Design in Software Testing	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors
TestPrep 1Z0-052 Oracle Database 11g: Administration I	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 1Z0-053 Oracle Database 11g: Administration II	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
The Role of Ethics in Project Management	Do the right thing but make sure you do it on time, under budget, and within scope, all the while maintaining your professional integrity in a constantly evolving global business environment. How do project managers do it, given that most ethical dilemmas are not black and white and usually require diligent deliberation? Keeping with their vision of establishing project management as a professional industry, the project management community and the Project Management Institute (PMI®) have established standards of ethics to help members to navigate the sometimes murky waters of ethical issues.
Tool Support in Software Testing	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors
Core PMI®,® Values and Ethical Standards	As a project manager, you will inevitably be called upon to address ethical dilemmas. The type and complexity of these dilemmas can vary significantly from balancing the competing interests of stakeholders to adhering to conflicting legal, multi-cultural, and multi-national rules, regulations, and requirements. Addressing these issues is much more complex than simply deciding what is right and what is wrong. In an increasingly global network, project managers must proactively seek to understand cultural diversity, and how to work successfully with multi-national teams. Sensitivity to other groups, their social customs, and their means of doing business is key to success. Often, project managers will need to weigh all competing interests fairly and objectively in order to make the ethical decision that will have the most far-reaching benefits.
Designing and Planning Experiments in Six Sigma	Six Sigma teams concluding the Analyze phase with a well-understood problem strive in the Improve phase to generate a well-designed solution. Design of experiments (DOE) is a controlled approach to experimentation that enables teams to systematically change the level of one or more input factors and observe the effects on the targeted response. If teams exercise care in choosing the right design – including suitable factors, levels, and responses – their experiments can reveal the precise combination of factors that will optimize the response. Later, that combination will be tested, validated, and ultimately implemented to effect the desired process improvement.
Green Business: Implementing Sustainability Strategies	A plan for implementing a sustainability strategy stands a much greater chance of success if the essential players in an organization back it. Implementation of sustainability initiatives varies by organization and by sector, and because no steadfast procedural rules exist, these initiatives must be carefully planned. When implementing sustainability practices, you need to make sure those practices align with corporate strategy, and you need to establish some performance metrics to establish baselines and measure progress. Knowing the type of metrics you'll be collecting can help you plan the methods you'll use to report on your sustainability initiatives. These two considerations are as important as the physical implementation of the plan itself.
Green Business: Planning Sustainability Strategies	Environmental sustainability holds a different meaning for every organization and every individual, and although it's implemented in a multitude of ways across industries, there is little disagreement about the urgency and importance that surrounds it. An organization must be willing to commit a great deal of its resources – human, technological, and economic – in order to plan, implement, and maintain a realistic green business sustainability strategy. Within organizations, the emergence of strong leaders, carefully laid plans, and innovative processes can help facilitate success in achieving sustainability goals.
Introduction to Green Business and Sustainability	While the concepts of green business and sustainable enterprise are not new, they are becoming increasingly vital in today's business climate. Natural resources are being depleted at previously unheard of levels, organizations are faced with new challenges in resource and waste management, and consumers are becoming more curious about the origins and environmental footprint left by the products they consume. Companies willing to accept the challenge of going green and adopting green business practices stand to reap environmental, social, and economic rewards. Many companies currently facing the challenge have survived, and even thrived, to tell about it.
Microsoft Windows 7: First Look for End Users	Windows 7 is the latest evolution in the Windows workstation product line of operating systems. Windows 7 builds on the accomplishments of Windows Vista and adds enhancements to create an increasingly user friendly environment. This course looks at some of the new features of Windows 7 including changes to the taskbar, such as jump lists and quick preview; the new desktop features, such as new theme suites and gadgets; and the enhancements to the Aero framework, such as Aero Shake and Aero Peek. This course also discusses how Windows Live Essentials has been separated from the operating system, Windows Touch enhancements, Windows Media Center enhancements, the Libraries system, and HomeGroup setup and management features in Windows 7. This course will prepare end users for the new environment they will encounter when they log in to Windows 7 for the first time.
Nonstatistical Control Tools and Maintaining Controls in Six Sigma	In the final stages of the Six Sigma DMAIC methodology, once process improvement opportunities are identified and implemented, teams need to control the improved processes in order to sustain improvement gains. Process control includes applying tools to continuously monitor and maintain each improved process, and to prevent it from reverting to its previous state. This course introduces basic nonstatistical control tools as well as tools for maintaining control so that process improvement initiatives continue as they were intended. Specifically, it explores how total productive maintenance (TPM) promotes shared responsibility for maintaining process gains, and how the visual factory provides at-a-glance information about process status, targets, and performance. In addition, this course highlights the need to re-analyze the measurement system after completing an improvement project, and provides guidelines for drawing conclusions from the re-analysis. It tours the key elements of a vital tool for maintaining controls – the control plan – and explores the steps for developing an effective plan. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.
Oracle Database 11g: Architecture, SQL Tuning, and Optimization	The Oracle Database server consists of an Oracle Database and one or more Oracle Database instances. SQL (Structured Query Language) is the language with which all programs and users access an Oracle Database. Monitoring the performance of and tuning database components, as well as the SQL statements used to access and manipulate the database, helps to ensure the Oracle Database server runs efficiently and as expected. This course explores the major architectural components of the Oracle Database server, memory structures, background processes, and physical and logical storage structures. It also examines SQL tuning, identifying the attributes of a SQL statement that can make it perform poorly, SQL tuning tools, and common tuning tasks. The steps involved in the execution of a SQL statement, the optimizer and its phases, and controlling optimizer behavior are also covered.
Oracle Database 11g: Execution Plans and Star Transformations	An execution plan is the output of the optimizer and is presented to the execution engine for implementation. The execution plan instructs the execution engine about the operations it must perform for retrieving the data required by a query most efficiently. This course explores gathering, displaying, and interpreting execution plans. It also covers the EXPLAIN PLAN command and the PLAN_TABLE, using AUTOTRACE, dynamic performance views that contain execution plan information, the Automatic Workload Repository (AWR), and SQL monitoring. The star schema is the simplest data warehouse schema. Defining a star schema and star transformation requirements, as well as star query plans without transformation and after transformation, are also covered.
Oracle Database 11g: High Availability in RAC	In Oracle Database 11g, RAC and Data Guard together provide the benefits of system-level, site-level, and data-level protection, resulting in high levels of availability and disaster recovery without loss of data.
Program Life Cycle and Benefits Management	Regardless of the industry, programs and program management help organizations effectively implement corporate strategies. To achieve the planned benefits and outcomes of your program, you need to manage its benefits across its life cycle. This life cycle will vary, depending on the type of program. However, if you understand the general phases in the program life cycle, you can adapt the life cycle model and program benefits to satisfy the strategic goals that your program aims to meet.
Recruiting Talent	One of the most significant challenges to the growth and survival of any business is finding and retaining qualified employees. It's not enough to offer an appealing or unique product or service to your customers. A company's people are the new competitive advantage. Those responsible for staffing organizations are not only challenged with finding adequate potential employees, but finding the right people for the positions they need to fill.
Retaining Your Talent Pool	Employee retention remains a critical issue that no corporation is immune to. For a company to remain successful and competitive, it must keep its biggest assets – its people – engaged and committed for the long term. It's a known fact that even the most lucrative compensation plan alone is not enough to keep your much-needed employees from moving on, so your organization must utilize successful strategies for retaining employees.
Software Test Management	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors
Testing Throughout the Software Life Cycle	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. Some software failures can even result in personal injury or death. Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. This course introduces software testing methodology and principles. It explores why testing is necessary, the basic testing process, and the psychology behind testing. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the Syllabus"). The authors
Using Outlook Web Access 2007	Outlook Web Access (OWA) 2007 has many improvements over previous web-based mail products set forth by Microsoft. Enhancements start with a redesigned interface, and include new Calendar, Mail, and Document features. Everyday tasks such as composing e-mail and scheduling tasks in the Calendar are simplified using OWA 2007. You can recover deleted e-mails, and the global address list feature allows you to search and locate contacts more efficiently. The OWA Light version is available for users with slow Internet connections, or those using web browsers other than Internet Explorer. OWA Light is designed to be available to most users, but at the cost of a reduced feature set and limited interface.
Oracle Database 11g: Application Tracing and Automatic SQL Tuning	Oracle Database implements tracing by generating a trace file for each server process when you enable the tracing mechanism. This course explores configuring the SQL Trace facility to collect session statistics, using the TRCSESS utility to consolidate SQL trace files, formatting trace files using the tkprof utility, and interpreting the output of the tkprof command. Tuning statements automatically eases the entire SQL tuning process and replaces manual SQL tuning. Statement profiling, and using the SQL Tuning Advisor, the SQL Access Advisor, and Automatic SQL Tuning are also covered in this course.

Course	Description
Oracle Database 11g: Indexes, Access Paths, and Join Operations	Access paths are the ways in which data is retrieved from the database, and there are a number of different access paths which can be used for tables and indexes. This course explores the access paths used for tables, such as full table, rowid, and sample table scan. It also examines the access paths used for indexes, such as unique, range, full, fast full, skip, and index join index scans, as well as bitmap indexes and combining bitmap indexes. Additionally, this course discusses B*-tree, bitmap, composite, and invisible indexes and nullable columns when using indexes. Bitmap operations, guidelines for managing indexes, index usage, clusters, sorting operators, join methods, and other n-array operations are also covered.
Oracle Database 11g: Installation of Clusterware and RAC	Oracle Database 11g: Real Application Clusters (RAC) enable high utilization of a cluster of standard, low-cost modular servers and offers high availability, scalability, and important grid computing features. This course provides an introduction to Oracle Database 11g: Real Application Clusters (RAC) and demonstrates how to fulfill the pre-installation requirements for Oracle Clusterware as well as how to install and configure Clusterware. It also demonstrates the installation of Automatic Storage Management (ASM) and Oracle Database software and then explains how to install the Enterprise Manager agent on each cluster node. The creation of a cluster database including discussion of the cluster database post installation tasks are also topics that are explored.
Oracle Database 11g: Optimizer Statistics, Hints, and Cursor Sharing	Optimizer statistics describe details about the database and the objects in the database and are used by the query optimizer to select the best execution plan for each SQL statement. This course covers gathering optimizer and system statistics, setting statistic preferences, using dynamic sampling, and manipulating optimizer statistics. if you use SQL statements where literal values are provided for the WHERE clause conditions, you get results in many versions of almost identical SQL to be stored in the library cache. If, instead of issuing different statements for each literal, you use a bind variable, then in theory that extra parse activity is eliminated. Listing the benefits of using bind variables, as well as using bind peeking and adaptive cursor sharing are examined in this course. Optimizer hints enable you to influence decisions made by the optimizer and provide a mechanism to direct the optimizer to select a certain query execution plan based on the specific criteria. The use of optimizer hints, including specifying hints for optimizer mode, query transformation, access path, join orders, and join methods is also covered.
Oracle Database 11g: RAC Database and Oracle Clusterware Administration	Oracle Database 11g has many tools available for administering a RAC Database and Oracle Clusterware, including Oracle Enterprise Manager. This course explains how to use Enterprise Manager cluster database pages to administer a RAC database and how to carry out various administration tasks on Oracle Clusterware. It discusses how to manage RAC instances, Oracle Clusterware and resources, voting disks, VIP addresses and the CRS framework, and initialization parameters. This course also demonstrates how to configure backup and recovery in a RAC environment.
QuickBooks Pro 2009: Getting Started	QuickBooks 2009 is a flexible and robust software accounting program designed for use by small businesses to help organize and manage all areas of your company's finances. This course covers the basic aspects of the QuickBooks Pro software. It provides an overview of the QuickBooks interface and explains how to use the interface for basic operations, such as creating a company file, and adding customers, vendors, accounts, and items to a company file. It covers the basic aspects of QuickBooks Help, as well as the key aspects of centers, lists, and forms. In addition, the Customer Center, Vendor Center, and Employee Center and the methods of working with these centers are explored. Creating item lists and forms, such as invoices, sales receipts, and purchase orders are explained, and the course demonstrates methods of protecting and backing up data. The process of managing banking and billing transactions is examined and the concept of payroll is introduced. The process of creating reports and budgets is also covered.
Using E-mail and Instant Messaging Effectively	In today's fast-paced world, information is sent and received more rapidly than ever before. But how do you ensure that the messages you are sending are effective, acceptable, and will be taken seriously? The use of proper e-mail etiquette is the cornerstone for ensuring your message gets across quickly, appropriately, and concisely.
Addressing and Redistributing E-mail	Out of all the e-mails you've received in the past work week, how many have left you scratching your head, wondering why you received it in the first place? How many of those e-mails have you asking what exactly that e-mail has to do with you? With e-mail's prevalence as one of the main forms of communication in business today, it's essential that when sending an e-mail you get the distribution list right. Sending an e-mail to the wrong person, or excluding the right person, is just as ineffective as dialing the wrong number on the phone, leaving a message anyway, and expecting a return call from the right person.
Managing Your E-mail	E-mail has had many positive effects on our lives, but it has also increased dramatically the volume of communication and the amount of information that the average office worker needs to process ever day. To stay on top of things, you must sort, file, respond to, or delete every e-mail that comes to you in the run of a business day. But how do you balance this time-consuming task with the rest of your responsibilities so that it doesn't overwhelm you?
Essential Skills for Professional Telephone Calls	Virtually every single company in the global economy uses the telephone for at least a part of their business. For many organizations, the telephone is the primary form of communication with customers, clients, and colleagues. And with virtual work environments established as a modern business practice, business telephone etiquette is more important than ever to your success as an employee and the success of your organization.
Business Writing: Know Your Readers and Your Purpose	To write effective and appropriate business messages, you need to know your readers. Are you addressing multiple readers or a single reader? How much knowledge do your readers have of your subject, and what issues concern them most? These are just some of the questions to consider before you start writing your message. Closely tied with knowing your readers is knowing your purpose for writing. Do you need to inform customers about a new policy, or do you need to persuade employees to adopt a new business practice? Knowing your purpose will focus your message, making it clear to readers why it is important to them.
Business Writing: How to Write Clearly and Concisely	People who have no problem communicating clearly when they speak sometimes struggle to make themselves understood when they write. That's because the ability to write clearly and concisely is a skill that requires effort to master. Acquiring this skill gives you the tools to create effective business documents for readers who lack the time or the patience to search for essential information buried in long, rambling e-mails or reports.
PPE: Personal Protective Equipment	This course covers types, selection, maintenance, and care of personal protective equipment in the workplace. The types of personal protective equipment (PPE) covered in the course include: hard hat, respiratory protection, hearing protection, and body protection. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Hazardous Material Handling and Storage	This course covers information about drum handling, compressed gas cylinders, flammable materials, slings, safe lifting techniques, and safe handling procedures. The intent of the information is to familiarize the learner with safe work practices necessary to prevent injury while handling materials and equipment in the workplace.
Back Safety and Injury Prevention	This course is designed to bring awareness into the work environment and help eliminate preventable back injuries. It will provide information regarding job-specific hazards, safe work practices, and ergonomics. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Integrity in the Workplace	Whistleblowing and ethics in the workplace have been in the headlines over the past few years because high-profile employees have blown the whistle on large public companies, such as Enron and WorldCom. However, integrity and ethics in the workplace are not just for large, high-profile companies. Almost every employer is subject to state or federal laws and regulations, and if the employer does not promote an ethical culture, individual employees with integrity may choose to blow the whistle on their employer's wrongdoing. Whistleblowing isn't just for accountants or lawyers who uncover widespread evidence of fraud. It's also for average, everyday employees who discover illegal or unethical behavior in the workplace, and decide to report it.
Leadership Essentials: Creating Your Own Leadership Development Plan	Creating your own leadership development plan is a significant part of any successful and valuable leadership-development strategy. Leadership development plans help to ensure that you remain focused on what is required to continually grow and develop as a leader. This includes assessing your own style, values, and requirements, as well as identifying development goals, objectives, and actions.
Oracle Database 11g: Configuring OSB and Security	Oracle Secure Backup or OSB is centralized tape-management software that allows you to backup and restore data using a variety of machine architectures. This course covers how OSB complements the Oracle backup and recovery options, as well as terminology, interface options, and backup management features. Additionally, it explores how to decide on the structure of your administrative domain, perform preinstallation tasks, and install OSB on Linux. Installing OSB on Windows, locating OSB installed files, verifying your installation, and removing OSB are also covered.
Oracle Database 11g: Securing Domain and Data in Oracle Secure Backup	Oracle Secure Backup (OSB) maintains its own catalog of OSB and their rights on the administrative server. You can preauthorize users for the use of the obtool command line, RMAN, or both. You can also associate an OSB user with multiple Windows domain accounts or a single account that applies to all Windows domains. This course explores managing user access control for OSB, adding a user with preauthorized access, host authentication, backup security characteristics, encryption, and host encryption policies.
Oracle Database 11g: RMAN and Oracle Secure Backup	RMAN manages the disk space in the Flash Recovery Area, and by putting RMAN in control of your backup and restore operations, you simplify your availability-related processes. This course describes integrated disk and tape backup, how to register the administrative server in Enterprise Manager, checking RMAN backup and recovery settings, creating database backup storage selectors, and using time-managed and content-managed expiration policies. It also explores performing an OSB-encrypted RMAN backup to tape and restoring a data file from a tape backup. You can also back up file-system data by creating on-demand back jobs and submitting them to the OSB scheduler or by using backup schedules. Creating datasets, scheduling file backups, submitting backup requests, and performing file-system backups are also covered.
Oracle Database 11g: Managing Backups and Infrastructure	Restoring files is easily accomplished using the Oracle Secure Backup catalog. This course demonstrates how to browse the catalog for file-system backup data, create catalog-based restore requests, and perform file-system restoration. In addition, this course explores the Oracle Secure Backup processes, configuring defaults and policies, browsing the primary Oracle Secure Backup catalogs, and performing preconfigured catalog backup. Common tasks such as managing clients, media servers, and volumes are also covered.
Oracle Database 11g: Tape Vaulting, Duplication, and Tuning	Oracle Secure Backup uses a volume rotation policy to track a backup volume as it moves from its originating location to a storage location and is eventually recycled. This process is known as vaulting. This course covers configuring and using tape vaulting and a tape vaulting environment, viewing tape rotation reports, and troubleshooting vaulting. This course also explores the use of tape duplication, differentiating duplication from vaulting and migration, and configuring tape duplication.
Oracle Database 11g: Introduction to Database Security and Solutions	Every business should identify security threats and concerns and develop policies to protect itself. Maintaining the integrity of important data, and protecting data by controlling access to it are also key steps in business security. This course describes business security requirements and defines least privilege, authorization, and authentication. It also covers security policies, the concept of in-depth security, and applies these concepts to prevent SQL injection. Maintaining data integrity, protecting data, and controlling data access are also covered.
Oracle Database 11g: Database Security	Oracle Database server is highly secure, but to fully maximize the security features offered, the database must be well protected as well. This course explores how to configure Oracle Database 11g in a secure manner by adhering to industry standard best security practices for operational database deployments. It covers applying the principle of least privilege to the database, locking and expiring default user accounts, changing default user passwords, creating strong passwords, enforcing password management, and protecting the data dictionary.
Oracle Database 11g: Database Auditing	Monitoring or auditing should be an integral part of your security procedures. Oracle Database 11g includes auditing tools for database, user, and fine-grained auditing. This course explores how to implement basic database auditing, privileged user auditing, DML and DDL auditing, and how to send audit records to the operating system files. Implementing fine-grained auditing (FGA), maintaining FGA policies, implementing an FGA audit event handler, and reading FGA audit events from the FGA audit trail are also covered.
Oracle Database 11g: Basic User and Strong Authentication	A basic security requirement is that you must know your users. You must identify them before you can determine their privileges and access rights, so that you can audit their actions on the data. This course covers creating and auditing database authenticated users and operating-system-authenticated users. It explores authenticating users with passwords or the operating system, and protecting passwords and database link passwords. In addition, this course describes strong authentication that uses certificates, Kerberos, and remote authentication dial-in service (RADIUS), as well as a setup for strong authentication that uses certificates, Kerberos, and key distribution center (KDC). How to implement the secure external password store is also covered.
Telecommuting Basics:Ã‚Â Maximizing Productivity as a Remote Employee	Telecommuting is a widely adopted work arrangement. Globalization, work-life balance, and even green business or environmental concerns have exponentially increased the number of telecommuters and remote workers. Individuals and employers have a number of things to consider when deciding whether working remotely is possible, necessary, or desired. Once the decision is made, the goal is to create and maintain a productive remote work environment.
Telecommuting Basics:Ã‚Â Communication Strategies for the Remote Employee	With the trend toward telecommuting on the rise in many sectors, employees are faced with the growing challenges of working and communicating in virtual offices. Virtual offices can span countries and continents, and effective communication skills are not only important, but are the very key to telecommuters' success and their ability to move forward in their careers.
Being an Effective Team Member	A truly effective team is equal to more than the sum of its parts. And it takes the dedication of every member of the team. Effective team members go beyond themselves and their personal desires and goals. If you want to be an effective team member, your challenge is to put the team first, which means maximizing your contributions to help the team accomplish its purpose.
Establishing Team Goals and Responsibilities	All individuals have strengths that allow them to achieve goals consistently and successfully. In a team setting, those individual strengths can combine to lead the whole team to success, or they can create conflict and tension. To harness individual strengths and personalities, you need solid ground rules for the team. You also need to allocate roles and responsibilities for maximum efficiency.
Elements of a Cohesive Team	Three elements are always present in any effective, cohesive team: open communication, cooperation, and trust. Like the strands of a cord, these elements hold the team together and give it strength. Without these elements, team members will not participate fully in team activities and they won't find true satisfaction in their work. When trust and open communication is present, ideas flow and people find solutions to problems. When there's cooperation, team members feel connected to each other, and morale is high.
Effective Team Communication	Regardless of how talented the individual members of your team are, they can only get your team so far alone. To maximize their potential, teams rely on the participation, input, and opinions of all team members. Learning to speak up and encouraging others to open up are important to a team's success. Effective communication is the fuel that will keep your team going to the finish line.
Using Feedback to Improve Team Performance	A crucial component of optimal team performance is the ability of all team members to openly express their ideas, goals, and needs, as well as share thoughts about each other's performance â€" both positive and negative. The same principle applies when it comes to receiving feedback. It's far better to hear the truth directly than to assume your performance is the best it can be.
Leading Teams: Launching a Successful Team	Leading successful teams is an art, and team leaders can face many challenges when trying to optimize team performance. Whether you're a current team leader or simply someone who would like to develop the skills that would make you a strong candidate, you need to know certain things about how teams function and what it takes to develop a high-performance team. Among the most important things to know: good team development begins on day one. Forming an effective and cohesive team is fundamental to the success of the team later on, and pulling the right team together from the start has benefits far beyond just completing tasks on time.
Leading Teams: Establishing Goals, Roles, and Guidelines	The way in which a team is built is an important factor in determining team success. Leading a team quickly and smoothly into high performance mode requires the groundwork of setting team goals, identifying project tasks and assigning the right people to them, and defining the standards of team behavior to ensure team members work together so that team objectives are met.
Leading Teams: Motivating and Optimizing Performance	As teams mature, they're able to perform more independently. Accordingly, team leaders must shift their role to one of maintaining motivation and optimizing team member performance. This ensures that their teams continue to perform at peak levels. The early stages of team development are about establishing the purpose of the team and its key goals, but once the team is up and running, the leader has a prominent role to play in guiding the team to success.
Administrative Professionals: Common Administrative Support Tasks	When it comes to a typical day at the office for an administrative professional, each day's planned agenda can change on a whim. Whether it be unexpected meeting requests to juggle, a last-minute announcement the boss needs to communicate, or a sudden request from the boss that shifts priorities, the tasks performed in a typical day are varied and ever-changing. But regardless of how much the agenda changes from day to day, there are standard tasks that every administrative professional will perform regularly.

Course	Description
Administrative Professionals: Maximizing Your Relationship with Your Boss	As a good administrative professional, you provide invaluable support to your boss and the business. This support is optimized when the working relationship between you and your boss is a true partnership. Within this partnership, your relationship must be managed and maintained according to the particular management style of your boss to ensure compatibility, dependability, and efficiency as you work toward common goals. Through partnership, you can maximize your relationship with your boss and realize benefits for yourself and your career.
Administrative Professionals: Interacting with Others	Regardless of the industry you work in, the organization you work for, or the boss you have, as an administrative support professional, almost all of the tasks you perform on a daily basis require, in some way, interaction with others. Effectively interacting with others results in trust, improved morale, and respect between you and your colleagues, which in turn results in your ability to get the feedback, information, and help you need to effectively perform in your role.
Administrative Professionals: Putting Your Best Foot Forward	As an administrative professional, there are many skills and competencies you must master, ranging from organizational skills to technical aptitude. In order to be truly successful, though, you must also master other essential skills like the ability to gain the trust, respect, and admiration of your boss and colleagues. You must also remain true to yourself and maintain your dignity, all while expressing yourself to others, making decisions at work, or navigating through office politics.
Liderazgo emocionalmente inteligente	Poner a trabajar la inteligencia emocional es una tendencia incipiente en el liderazgo empresarial. Ahora es fundamental para el éxito corporativo desarrollar los mejores talentos en ejecutivos, gerentes y otros directivos en toda la organización. Como líder, no puede depender de su conocimiento intelectual. Debe contar con la competencia interpersonal que incluye la inteligencia emocional. Este curso le ayudará a desarrollar su inteligencia emocional como líder y le guiará para que posteriormente otros la desarrollen con su ayuda.
Uso efectivo del correo electrónico y la mensajería instantánea	En un mundo tan trepidante como el actual, la información se envía y recibe a una velocidad nunca vista hasta ahora. Pero, ¿cómo se consigue que los mensajes enviados resulten efectivos y adecuados, y se tomen en serio? El uso de unas reglas de etiqueta adecuadas para los correos electrónicos constituye la base para cerciorarse de que su mensaje se envía de un modo ágil, adecuado y conciso.
Business Writing: Editing and Proofreading	When it comes to business writing, most individuals don't really appreciate the importance of editing and proofreading a document before sending it. But have you ever distributed a document or message only to find later that you forgot to include a key point or correct an embarrassing spelling error? Reviewing is a crucial stage in the writing process. It entails editing for clarity, tone, accuracy, and completeness, and also proofreading for spelling mistakes and grammatical errors. Carelessness reflects badly on you, your work, and your organization. Taking the time to edit and proofread your writing will help you produce more focused, polished, and effective business documents.
Business Grammar: Parts of Speech	Do you know what the eight parts of speech are? Such a question probably brings back memories of dull grammar lessons in elementary school, where you first heard the term parts of speech. What's the point of learning these now? Being reminded of the functions of different parts of speech can help you write with more confidence. The parts of speech are the building blocks of sentences, so finding out about them can help you skillfully combine words into meaningful sentences.
Business Grammar: Working with Words	Do you remember what prefixes and suffixes are? Do you know how to form plurals and possessives correctly in your business writing? Are you confident when it comes to spelling?
Business Grammar: The Mechanics of Writing	As you sit down to write your business messages, do you ever find yourself wondering whether a word should be capitalized or abbreviated? Or whether you should spell out a number rather than use a figure? Knowing the correct way to abbreviate, capitalize, and express numbers in your business messages goes a long way in helping you to present yourself as a reputable professional.
Business Grammar: Punctuation	Do you know when to use commas in a sentence? Do you know when it's better to use a semicolon rather than a colon? And what's the difference between parentheses and brackets, or between the hyphen and the dash? Knowing the answers to these questions will ensure that you're using punctuation correctly in your business messages. And by doing so, you'll convey a professional image and inspire confidence in your work and in your company.
Business Grammar: Sentence Construction	People write sentences everyday in business. However, sometimes those sentences are not as well constructed as they could be. A misplaced modifier might get a chuckle out of the reader, but it doesn't help your reputation or that of your company. Nor does a run-on sentence, which can blur the meaning of your message and cause the reader to be confused and even annoyed.
Business Grammar: Common Usage Errors	When do you use who's or whose? And when should you choose less rather than fewer? Understanding the subtle variations in meanings of such words â€" ones that are often misused or confused â€" is important if you want to write clearly and professionally.
Introduction to Business Analysis and Essential Competencies	Often, and usually with the best intentions, organizations hastily overhaul processes or implement new systems in an effort to quickly fix or address a problem, only to discover that it wasn't the right solution after all the time and money wasted, and the problem continues. Business analysis aims to not only properly diagnose an issue, but determine the best solution to fix it permanently. Business analysts, who undertake this work, require a unique combination of skills and knowledge to be successful in this function.
Introduction to Business Analysis Planning	In business analysis, there is no prescribed route to take. Each project, task, or process initiative is different, and every environment you work in is different. It's essential you map out your business analysis approach based on the elements concerning your particular project, environment, and organization. It's equally important to clearly determine who your stakeholders are, who is responsible for what, and how much effort will be required for project deliverables.
Planning Business Analysis Communication and Monitoring	Most business analyst professionals recognize the importance of identifying and performing business analysis activities in order to successfully deliver requirements and meet project goals. But what about planning and managing how these business analysis activities are actually performed? A proposed structure and schedule for communications, a requirements management plan, and a clear plan to ensure business analysis activities are executed as efficiently as possible are all key elements of successful business analysis.
Business Analysis Requirements Elicitation	The first step in creating any solution is to review stakeholder needs and analyze what tools are available to address those needs. Without understanding stakeholder requirements, you may find a solution to the wrong problem. And without understanding the tools and technologies involved, you may aim for impossible goals. It's equally important to ensure you document and confirm requirements so you have a solid plan to address stakeholder needs.
Business Analysis Requirements Management and Communication	Projects rarely go according to plan, and any deviations need to be strictly controlled. Requirements management does this through vigilant tracking techniques, and through consistent and planned communications with stakeholders.
Business Analysis: Enterprise Analysis	Solutions to business problems are implemented every day, in every size and type of company and industry. But way before solutions are implemented, a business need must be identified, a plausible solution must be defined, and the investment required for the solution must be justifiable before implementing it.
Business Analysis: Introduction to Requirements Analysis	When you have a set of dependent tasks to complete, it's not feasible to just randomly pick and choose which tasks to perform and in which order. The same is true for requirements in business analysis. Requirements must be analyzed appropriately to ensure they are prioritized and organized in the most appropriate way to ensure the success of a project or initiative. And mapping out what a process or system will look like with requirements in place provides a detailed view for the team to work towards.
Business Analysis: Verify and Validate Requirements	If you want to build a boat, you need to know what is required. You need to check and make sure you have what you require in order to do the job properly. Instructions on how to build an airplane won't help you build your boat, but knowing that you need a welding torch will. When working on any project, you also need as much information as possible about anything that may influence it. This might include how much money you have to work with, how long before the project needs to be completed, and who can work on the project.
Business Analysis: Solution Assessment and Validation	A business analyst doesn't just come up with a viable solution to address a business need. A business analyst is also responsible for studying the viability of the proposed solution within the organization, identifying what is required within the organization to make the solution work, and validating and evaluating the solution performance.
Comunicación y liderazgo	Ha pedido DOS VECES a un empleado que complete un proyecto tan pronto como sea posible, y aún no ocurre. Ha delegado una tarea a otro empleado, sólo para ver que se ha hecho de manera errada. Ha enviado un correo electrónico pidiendo ayuda adicional para un proyecto que ha recibido varias respuestas negativas. ¿Qué está pasando? Si bien estas situaciones pueden ser el resultado de muchos factores distintos, usted puede eliminar una de las variables, asegurando que su estilo de comunicarse sea positivo, claro, concreto y al grano. Aprenda a coordinar sus mensajes verbales y no verbales para obtener los mejores resultados, y aprenda a escribir de una manera que logre el mayor efecto con la menor cantidad posible de palabras.
Liderazgo y cambio	Tómese un minuto para pensar en personas que considere líderes ejemplares: esas personas que han llevado a sus empresas hacia la grandeza. ¿Qué sucesos o hechos le hacen pensar que estos líderes fueron ejemplares? ¿Fue porque desarrollaron un nuevo producto, porque sacaron a flote una empresa en quiebra o tal vez porque pusieron en marcha un emprendimiento? Las personas que llegan a ser líderes son aquellas que triunfan durante épocas de turbulencia, conflicto y cambio. Buscan formas de cambiar el statu quo, de cuestionar lo que está aceptado y de crear algo nuevo. Usted puede aprender a hacer lo mismo. Saber cómo cuestionar los procesos, darse cuenta de las actitudes y comportamientos que trae aparejado el cambio y la voluntad de hacer el trabajo necesario es todo lo que hace falta. Podrá aprender sobre cada uno de esos temas en este curso, el cual le enseñará cómo ser líder en tiempos de cambios.
El líder modelo	Los líderes... saben bailar al viejo ritmo. Todos nos desarrollamos en organizaciones tradicionales con líderes y modelos convencionales. Ahora la música ha cambiado. No conocemos los pasos nuevos y no hay figuras dibujadas en el piso". Las palabras de Peter R. Schools reflejan con exactitud los desafíos del liderazgo actual. Usted debe ser capaz de desarrollar un equipo variado que pueda lograr un desempeño óptimo. Debe saber cómo motivar a una diversa gama de personas y debe estar dispuesto a deshacerse de las viejas formas de pensar para dejar lugar a las nuevas. Este curso lo encaminará por ese sendero."
Aspectos esenciales del liderazgo: motivar a los empleados	Imagine cómo sería su organización si usted y sus compañeros de trabajo no se sintieran motivados. La motivación lleva a las persona a alcanzar logros, ya se trate de pequeñas tareas o grandes proyectos. Sin motivación, simplemente no se podría conseguir nada. La capacidad para crear un entorno que impulse la motivación requiere práctica y destreza, ya que no es una cualidad inherente en la mayoría de las personas. Como líder, su capacidad de motivación es un elemento clave en el éxito de la organización.
Aspectos esenciales del liderazgo: comunicar la visión	Hoy en día, los líderes deben ser capaces de comunicar la visión de tal manera que la audiencia se implique y el mensaje se entienda y se asimile. La comunicación efectiva del liderazgo otorga finalidad y significado al trabajo que la gente desempeña. Los líderes deben esforzarse por comunicar la visión con un sentido de integridad, consolidando la confianza como persona y como líder.
Aspectos esenciales del liderazgo: establecer su influencia como líder	¿Por qué es tan difícil que las personas acepten una buena idea? ¿Por qué algunos líderes se enfrentan constantemente con desafíos y objeciones? Como líder, llegar a un acuerdo no significa manipular o forzar a las personas para que acepten sus ideas y cumplan sus objetivos; los líderes disponen de formas éticas mediante las que ejercer su influencia con éxito. Los líderes que intentan influir y persuadir a otras personas se enfrentan con el desafío de abrirse paso a través de la política de la organización. Un líder eficaz entiende que la política de la organización puede ofrecer formas positivas de influir en los demás para lograr metas.
Aspectos esenciales del liderazgo: dirigir la ejecución comercial	¿Cuántas veces usted y su equipo han elaborado planes para optimizar los procesos diarios y al final estos planes no se han implementado? ¿Por qué hay ciertas tareas que no se llevan a cabo? ¿Por qué todo sigue igual, incluso cuando el cambio resulta esencial para su equipo?
Maintaining SQL Server 2008 Reporting Services	Administration and maintenance of Microsoft SQL Server 2008 Reporting Services and its components is key in providing customers and clients access to the Business Intelligence information they need. This course outlines the tools used and tasks involved in managing and maintaining access to Reporting Services and corresponding data. It covers the authentication subsystem and role-based authorization model used by Reporting Services, as well as the configuration of system-level and item-level role-based security. SQL Server 2008 also provides the ability to deploy and manage the report server and content using the Report Server Web Service and command-line tools. This course describes how to use these tools to automate administrative tasks and manage reports remotely through the web interface. It also outlines the options for monitoring server performance, report activities, and statistics using performance counters and the use of log files in evaluating server status and performance. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-448 TS: Microsoft SQL Server 2008, Business Intelligence Development and Maintenance. Passing this exam will earn the learner Microsoft Certified Technology Specialist (MCTS): SQL Server 2008, Business Intelligence Development and Maintenance certification.
Installing, Upgrading, and Migrating to Windows 7	Windows 7 is a new desktop operating system from Microsoft. The majority of computer users interact with desktop operating systems more than any other type of computer operating system today. This course will show you how to install Windows 7 in a single and multiboot environment, along with showing the process involved in migrating or upgrading from previous Microsoft operating systems. This course maps to exam 70-680: TS: Windows 7 Configuring. This exam is required for the certification MCTS: Windows 7, Configuration.
Deploying Windows 7	Deploying system images and configuring VHDs are skillsets that system administrators working with Windows 7 must become familiar with. This course examines the methods used to capture, prepare, and deploy system images along with configuring VHDs. This course maps to exam 70-680: TS: Windows 7 Configuring. This exam is required for the certification MCTS: Windows 7, Configuration.
Configuring Hardware and Applications in Windows 7	Configuring device and application support, restrictions, and compatibility is one of the main jobs of desktop administrators. Windows 7 has many features built into it to allow you to perform these actions. This course will examine how to install, configure, and troubleshoot devices drivers ; Applocker will be examined; application compatibility tools will be configured, and IE 8 will be examined to show how administrators can configure it for end user support. This course maps to exam 70-680: TS: Windows 7 Configuring. This exam is required for the certification MCTS: Windows 7, Configuration.
Configuring Network Connectivity in Windows 7	The ability to have two computers, or 2 million computers interoperating and communicating with each other is the foundation of the Internet and of networking environments in general. This course examines the protocols and settings used to accomplish this, along with the technologies and configurations that are used to protect and control computers that exist in these network environments. This course will examine IP configurations, network settings, firewall configurations, and remote management and control using various tools such as Remote Assistance, group policies, and PowerShell scripts. This course maps to exam 70-680: TS: Windows 7 Configuring. This exam is required for the certification MCTS: Windows 7, Configuration.
Configuring Access to Resources in Windows 7	Computer and network access configuration is a major part of a computer administrator's job role. They make sure authentication and authorization schemes, user control, and file access are properly configured on computers in their networks. This course examines authentication and authorization, User Account Control, file access and shared resource management, and HomeGroup and BranchCache configurations. This course maps to exam 70-680: TS: Windows 7 Configuring. This exam is required for the certification MCTS: Windows 7, Configuration.
Oracle Database 11g: Enterprise User Security and Proxy Authentication	Enterprise User Security addresses the user, the administrative, and the security challenges by centralizing storage and management of user-related information in a Lightweight Directory Access Protocol-compliant directory service. This course describes the basic components of Enterprise User Security. It shows the architecture of this feature and describes the installation process. The components required to create and manage an enterprise user are discussed. In addition, the course explains the techniques for using the enterprise user in the context of the database server and integrating the enterprise user with familiar security policies and auditing. How proxy authentication works, how to manage users authenticated by proxy authentication, and how to audit users authenticated by proxy are also covered.
Oracle Database 11g: Privileges, Roles, and Application Contexts	Authorization is the process that determines the privileges that the user is allowed to exercise. In the Oracle database, authorization is determined by the grant of system and object privileges. This course covers implementing roles, enterprise roles, and the securing of objects through procedures. It also describes how secure application roles work and how to manage roles and users by using secure application roles. An application context is a memory container with read-only attributes, which can be used in your application. How an application context is used, the sources of application context values, implementing a local context, and implementing an application context that is accessed globally are also covered.
Oracle Database 11g: Virtual Private Database	A Virtual Private Database (VPD) uses fine-grained access control (FGAC) to limit row and column access and an application context to provide the information that is used to set the policy predicates. This course describes VPD, how to implement VPD, and group policies. It also explores how FGAC is used with VPD, as well as tools, policies, and policy types.

Course	Description
Oracle Database 11g: Oracle Label Security and the Data Masking Pack	Oracle Label Security is a powerful tool for classifying data and mediating access to data based on its classification. It provides an easy-to-implement row-level security solution and is built on the fine-grained access control technology of the virtual private database (VPD). This course describes Oracle Label Security, including label concepts and access mediation, as well as when to use Oracle Label Security. It also explores creating policies, defining data labels, applying policies to tables, and setting up user authorizations.
Oracle Database 11g: Encryption Concepts	All encryption has two parts: an algorithm, which is a procedure or a method of manipulating data, and a key or a secret that allows data to be decrypted. This course discusses the issues and challenges of encryption and describes key management solutions. It also describes the encryption options available with Oracle Database 11g. Using DBMS_CRYPTO to generate random encryption keys and encrypting and decrypting table columns are also covered.
Oracle Database 11g: Transparent Data Encryption	Transparent Data Encryption (TDE) is available with Oracle Advanced Security (ASO) and provides easy-to-use protection for your data without requiring changes to your applications. This course demonstrates how to set up the database master encryption key and implement TDE. It also explores how to encrypt column and tablespace data. Using Recovery Manager (RMAN)-encrypted backups, Oracle Secure Backup (OSB), and Data Pump Export encryption are also covered.
Oracle Database 11g: Oracle Net Services and Listener Security	When considering Oracle security, you must also consider the security of the listener, which is the gateway to the network and the network itself. This course describes the items on the client, listener, and network security checklists. It demonstrates how to secure administration of the network, restrict access by IP address, and encrypt network traffic. Restricting the privileges of the listener, administering the listener securely, and monitoring listener activity are also covered.
Oracle Database 11g: Firewalls, Oracle Connection Manager, and SQL*Plus Security	There is no single best architecture for accommodating Internet requests requiring access to corporate intranets. Instead, trade-offs must be made between two competing goals â€" security of the intranet against an Internet attack and ease of access to services by both Internet and intranet clients. This course describes how firewalls are used to restrict network access and the guidelines for positioning servers within firewalls. It also explores how to configure Oracle Connection Manager to accept or reject connection requests and log connection events, and how to read connection events from the Oracle Connection Manager log. How the PRODUCT_USER_PROFILE (PUP) table is used in SQL*Plus and how to use this table to disable commands or roles in SQL*Plus is also covered.
Generating Creative and Innovative Ideas: Enhancing Your Creativity	What makes a person creative? Do you consider yourself creative? Certain personal characteristics have been linked with creativity â€" for example, a willingness to take risks, the ability to connect diverse ideas, and open-mindedness. And most important, perhaps, is believing that you are creative. Many people get stuck because they think 'I'm not a creative person.' But everyone has creative potential. Understanding the characteristics you possess that boost your creativity and those that inhibit it can help you enhance your creative output in the workplace.
Generating Creative and Innovative Ideas: Maximizing Team Creativity	Is creativity within everyone's grasp? Does creativity come naturally within a team, or is this a skill that some learn and others don't? Like anything, creativity and innovation can flourish when cultivated with the right tools.
Generating Creative and Innovative Ideas: Verifying and Building on Ideas	Generating creative ideas can be a very exciting and stimulating process. This is particularly true during the initial stages of idea generation, when many adopt an 'anything goes' approach. Later, however, the workability of ideas needs to be verified, or checked. Ideas are more likely to be relevant and useful when they have been assessed in the context of organizational needs, strategies, and resources. Some techniques that can help verify ideas are getting the opinions of key people and using simulations. Building on ideas continues the process of verifying ideas by helping to make those ideas more clear, relevant, and business.
Managing Your Career: Creating a Plan	Getting and keeping your career on track takes careful planning. Those who wait for opportunities to come knocking may be left behind. Approaching your career proactively and being able to recognize opportunities to move ahead are key to smart career management. It starts with knowing yourself and what you want to do so that you can align your career moves with your goals.
Managing Your Career: Getting on the Right Track	Is your career on automatic pilot? When was the last time you took a look around to see if the direction in which you are heading is really what you want? It's important to take time out to reflect on your current situation to ensure that you're still on the right path and that the current path is the best one for you.
Managing Your Career: Professional Networking Essentials	Do you have a strong professional network of people who can help you move forward professionally? Does the thought of networking scare you because you feel uncomfortable in situations where you're expected to be outgoing and make conversation with people you don't know? Regardless of your strengths and weaknesses, situation or occupation, a key factor in advancing your career is using good communication skills to build strong professional relationships and maintain an effective business network of contacts.
Managing Your Career: You and Your Boss	Your boss can be the lifeline to your future. Typically, no one has more influence over your immediate and long-term success than the person to whom you report. Not only will you find enjoyment and reward in your current position, but you want your boss to be a source of support when the day comes that you are ready to move ahead with your career.
Overview of SAP Solutions	SAP provides software systems to automate and integrate business operations across a wide range of activities from the front office to the back office, the field, and the factory floor. Large, integrated systems like SAP are commonly known as ERP (Enterprise Resource Planning) solutions. SAP has a range of ERP solutions which will help to integrate your business processes according to your specific business needs. This course identifies the features and benefits of ERP, and provides an overview of SAP solutions and scenarios for application that will help you identify the SAP solution that's best for your business.
Financial Accounting with SAP	The SAP Financial modules are at core of any integrated SAP System. All module transactions with a monetary impact flow through to the Finance module, usually in real time and automatically through the SAP configuration. In order to work with the Finance Module or any module, you must have an understanding of the concepts behind mySAP ERP and be familiar with the steps for executing tasks using SAP's interface. This course discusses these underlying concepts, and introduces the SAP R/3 GUI. It also identifies the data required to align your business processes with the Financial Accounting and Controlling modules in order to complete financial transactions and create reports.
SAP Logistics Modules	The SAP Logistics modules help enable automation of supply chain operations related to logistics. Logistics refers to all the tasks a business performs in order to get a product or service to its desired location or state. This course discusses how the SAP Logistics modules enable Materials Management, Production Planning and Control and ultimately Sales and Distribution transactions to be performed in the organization. It provides scenarios for aligning your business processes with these three modules, and generating the reports provided within each module.
SAP ERP Architecture	The SAP ERP architecture has evolved and been refined over a number of decades. This course primarily discusses the SAP R/3 client-server architecture in the context of work processes, SAP R/3 instances, and system landscapes as well as the NetWeaver components that have been introduced to extend SAP R/3 capabilities. It explores how the various SAP systems can be configured to fit your business needs and budget.
SAP Administration	SAP administration tasks are essential to ensuring optimum performance and security in an SAP system. This course introduces the most common tasks for System Administrators in SAP, including work process configuration, error investigation, and system monitoring, as well as user management, role assignment, and other tasks necessary to ensure the security of information within in the system.
SAP Project Planning and Implementation	SAP provides tools to help businesses quickly and efficiently implement SAP through the Accelerated SAP (ASAP) Roadmap, and to configure SAP to fit the requirements of your business. This course surveys the key activities and tasks that make up the five phases of SAP implementation using ASAP methodology: Project Preparation, Business Blueprint, Realization, Final Preparation, and Go Live & Support. It also shows you how to use SAP's Implementation Guide (IMG) to customize business process activities to fit the needs of your business.
SAP NetWeaver Platform	SAP NetWeaver is an integration and application platform that aligns and integrates people, information, and business processes spread across different technological platforms. This course introduces SAP NetWeaver architecture components and tools and discusses how they serve and function as an integration or application platform for SAP solutions. NetWeaver's support of open standards to implement web services and enterprise services in SAP is also discussed.
Leading Teams: Dealing with Conflict	Successful teams are characterized by having a clear direction, trust among team members, effective communication, and the ability to quickly resolve conflict. In the early stages of team development, leaders must set up structures and processes that support the development of these team characteristics. Effective leadership is particularly required during the Storming stage of team development when conflict tends to be at its highest. The survival of the team depends on a team leader who can quickly recognize conflict, diagnose its cause, and use strategies to resolve the issue. In doing so, the leader restores trust and positive working relationships among team members.
Recognizing the Value of Intangible Assets	We operate in an information economy, but current accounting methods are still grounded in the transaction-based economic system of past decades. This Business Impact explores the value of intangible assets in determining a company's worth.
Recession: How it Affects Business	Recession changes the playing field for business. This Business Impact examines its key factors that companies need to take into consideration.
Managing Top Performers Is Always	Top performers aren't always the easiest employees to manage. This impact explores how to deal effectively with top-performing, high maintenance employees.
Returning to Core Competencies	Every successful company is built on the merit of a product or service. And getting that product or service out into the market requires many interdependent processes some of which are outside the company's central strengths. This Business Impact weighs the benefits of returning to core competencies in light of a planned move into the global market.
Influencing Key Decision Makers	Even the best business proposals need the support of stakeholders. This Business Impact takes a look at three proven ways to gaining the support of key decision makers.
Executing Innovation	Each innovation lifecycle is unique, but there are certain elements that successful innovations have in common. This Business Impact explores four critical components of executing innovation.
Turning Problems Around with Reverse Brainstorming	This Business Impact explores the technique of reverse brainstorming - a process that helps teams to think obliquely and explore problems in an unconventional manner.
Making Meetings Work	Too often meetings are not a productive use of time. This Business Impact examines how to run meetings that are useful and efficient.
The Etiquette of Cross-cultural Gift Giving	Despite the seeming familiarity of the global community we live in, there are still strong cultural identities that need to be recognized. This Business Impact explores how sales professionals who deal with foreign clients must be culturally savvy when giving gifts.
Developing a Business Execution Culture	A corporate initiative require more than just a managerial mandate. Employee buy-in is absolutely essential to ensure success. This challenge focuses on methods for developing a business execution culture.
Managing Performance	In order to best address performance of individuals and groups, managers must apply a comprehensive approach. This challenge focuses on methods for managing performance.
Uncovering the Root Problem	This Challenge exercise focuses on an individual's ability to assess facts and work through the first step in problem solving and decision making: defining the problem.
Leading Change	Although often a force of progress, change can be disruptive to employees. This challenge focuses on methods for successfully managing change.
Ethics, Integrity, and Trust	Managers often face complex ethical dilemmas. This Challenge examines a situation that requires taking obligations, duties, and responsibilities into consideration.
Giving Appropriate Feedback	Effective feedback requires consideration and forethought. This challenge focuses on methods for giving appropriate feedback.
Demonstrating Accountability in a Crisis Situation	In business, accountability can apply to the individual, the team, and the organization, and assigning responsibility under normal circumstances is a straightforward proposition. But deciding issues of ownership in a crisis situation poses a unique challenge.
Leader as Motivator	Motivating employees isn't easy. This Challenge examines what leaders can do to create workplace environments where people feel motivated.
Managing Conflict	While often considered destructive, conflict can prove beneficial if properly managed. This challenge focuses on methods for managing conflict.
Leading Innovation	Ideas don't come from thin air. This Challenge focuses on the on-going process for brainstorming and developing innovative advances.
Hiring Strategic Thinkers	Business strategy requires long-range planning. And to think strategically, effective business leaders must possess both logical and creative insight to be able to plot the future course of their company. This Challenge Series exercise focuses on how to identify and select truly strategic thinkers.
Using Financial Analysis for Credit Decisions	Potential new customers often ask for credit lines as a condition to signing on the dotted line. This Challenge examines the financial analysis involved with making effective credit decisions in such situations.
Developing People	All companies need to develop their employees. This Challenge examines how organizational restructuring can provide development opportunities.
The Emotionally Intelligent Leader	Effective emotional competence requires focused self-development. This challenge examines the skills and attitudes necessary for mastering emotions in the workplace.
Managing Diversity	Leveraging diversity is a key for all organizations. This Challenge examines how diversity elements relate to business strategy.
Influence and Persuasion	Influencing and persuading others requires careful planning. This challenge explores focused methods of verbal influence and persuasion.
Developing Employees through Delegation	Skillful delegation creates a true win-win situation: It allows managers to leverage their strengths and focus on strategy while giving team members opportunity to learn and grow. This Challenge Series exercise focuses on how to best develop employees through the practice of delegation.
Setting and Managing Priorities	Prioritizing is an essential skill for any manager. This challenge considers methods for selecting and setting goals.
Evaluating Globalization Opportunities	Worldwide markets provide access to increasing numbers of consumers and offer potential for production efficiencies. This Challenge looks at the requirements for an effective globalization strategy.
Creating a Customer-focused Organization	This Challenge Series exercise considers the many ways that business organizations can serve their customers - internal and external.
Succession Planning and Management	Every company should have a succession plan. This Challenge examines common organizational succession planning strategies.
Dispute Resolution in International Contracts	Complex business arrangements require complex contracts. And signing agreements with international companies adds further complication. This is especially true when conflicts arise and no pre-arranged method for dispute resolution has been selected. In this Challenge Series exercise, learners must assess the facts of an international dispute and recommend how their company should address the problem: litigate, arbitrate, or mediate.
Increasing Competitiveness through Collaboration	Most companies are constantly striving to boost their competitiveness. This challenge examines collaborative strategies that companies can use to increase competitive edge.
Surviving the Talent Crunch	Attracting new talent and reserving knowledge capital are crucial to the survival of any organization. This challenge explores avenues for getting ahead of a talent crunch.
Choosing the Right Team Culture	Every company has its own unique corporate culture, and work groups have their own cultural norms, too. This Challenge highlights three of the more common organizational culture types and allows learners to explore which is the most suitable under prescribed personal conditions.
Interpersonal Communication: Communicating with Confidence	Are you reluctant to voice your opinions to your colleagues for fear they'll be judged negatively? Do you find yourself avoiding awkward communication situations? Confident interpersonal communication skills are essential for healthy and successful relationships, whether personal or professional. Once you've learned how to apply them, these skills enhance your influence and help you achieve your goals. Communicators have an enormous advantage if their relationships are based on rapport-building trust and credibility. But trust and credibility are not the only essentials. You also need to use specific communication behaviors to project confidence in all your verbal and nonverbal interactions.

Course	Description
Interpersonal Communication: Targeting Your Message	Author and communication expert Anthony Robbins once said, 'To effectively communicate, we must realize that we are all different in the way we perceive the world and use this understanding as a guide to our communication with others.' In other words, understanding who you're talking to is as important as understanding what you're trying to communicate. Additionally, it is important to understand the role the medium, context, and other variables have on the communication process so you can optimize factors that are under your control. To confirm that your message got through, the final step in the communication process is asking for and reviewing feedback from your audience.
Interpersonal Communication: Listening Essentials	Sir Winston Churchill said 'Courage is what it takes to stand up and speak; courage is also what it takes to sit down and listen.' Effective listening takes more than just courage; it also takes constant learning and practice. To prepare for effective listening, you need to identify and overcome the barriers that stand in the way of effective listening. You also need to be an attentive, empathetic, and active listener. When you engage in the technique of active listening, you focus your attention completely on the speaker, listen carefully for meaning, then use feedback to verify that you've correctly understood the communication.
Interpersonal Communication: Being Approachable	Walking into a meeting surrounded by unknown faces, going to conferences, attending work events, starting a new job, and even going to social gatherings can be daunting, especially if you don't know anybody who will be there. Perhaps you worry about being ignored or not connecting with anyone and dread that awkward feeling of standing alone, off to the side. Do you wonder why people seem to be drawn to certain individuals in the room? Those individuals probably faced the same feelings of uncertainty entering the room as you did, but the difference may be that they appear to be more approachable than you do. Approachability involves conveying your willingness to reach out and invite others in by initiating contact, making yourself available, and building rapport.
Working with Difficult People: How to Work with Aggressive People	Aggressive people are arguably the most difficult type of people to work with. Hostile-aggressives are openly pushy and can easily intimidate people; passive-aggressives work behind the scenes with hidden agendas. No matter which type of aggressive behavior you have to deal with, aggressive co-workers can easily ruin your day or ruin a project with their behavior. In order to limit the negative impact aggressive people can have, you need a set of tools and techniques at your disposal suited to the particular type of aggressive person you may be dealing with.
Negotiation Essentials: Planning for Negotiation	It's true that negotiating can sometimes seem a daunting task. But if you're properly prepared, you'll likely reach an outcome that benefits both you and the other party without too much stress. If you've ever gone into a negotiation without preparing, it's likely that you were reactive and unfocused, and you may have ended up with a less than desirable outcome. Proper planning would have given you the direction needed to do effective problem solving at the negotiation table. Thinking carefully about what you want to achieve, as well as what the other party wants, will pave the way for a smooth and successful negotiation. You will know which terms are acceptable to you and which are not, and you will be ready for objections from the other party. This course describes key considerations when preparing for a negotiation. It also covers how to prepare for likely compromises you'll need to make, and how having alternatives to a negotiated agreement and knowing your 'walk away' point can make negotiations go smoother.
Negotiation Essentials: Communicating	If you want to achieve a successful outcome in a negotiation, you need to communicate well. And this means not only being clear in how you deliver your message but also ensuring the other party feels understood. You need to actively and skillfully create a connection with the person you're negotiating with. Otherwise, you won't ever reach an agreement.
Negotiation Essentials: Persuading	Successful negotiators have the ability to persuade others that their interests are important. But they don't achieve this by ignoring the interests of the other party. Instead, they frame and adapt their interests to reflect the other side's viewpoint.
Customer Service Fundamentals: Building Rapport in Customer Relationships	Good customer service and strong customer relationships begin with building rapport. Building rapport requires knowing your customer, understanding their situation, and providing an empathetic ear for them to voice their concerns. Building rapport can lead to great customer relationships between individuals as well as the company they represent.
Customer Service in the Field	How do you make a good impression when providing customer service in the field? When you meet customers on their turf, your initial meeting forms the basis for their overall impression of you, your abilities, and your company. You can enhance the impressions you make in the field by using a few tried-and-true techniques, including being prepared, practicing customer recognition, and employing active listening so the customer feels reassured by your presence. To kick off your face-to-face service meeting, you should try to start on a positive note, clearly set the expectations for resolution time and scope, and help customers fully understand your products and services, as well as your intentions. This skill-building course takes your customer service proficiency up a notch toward excellent customer assistance.
Customer Service over the Phone	Can you hear a smile over the phone? When you're providing customer service over the phone â€" without the benefits of face-to-face interaction with your customer â€" it can be challenging to establish the right relationship for excellent service. Just like for face-to-face customer service, there are many techniques for service over the phone that can help you to consistently deliver the best customer service.
Internal Customer Service	Do you know who your customers are? In a customer-focused company, everyone knows they are responsible for excellent external customer service, but who meets the needs of internal customers? Whether you realize it or not, when you do things to help other people within your company do their jobs better, you are providing internal customer service. Internal customer service occurs every time you or a colleague requires information or a service from someone else within the company, and the quality of that service often has a huge impact on the overall quality of service delivered to external customers.
Sarbanes-Oxley: What You Need to Know	Sparked by a wave of dramatic corporate and accounting scandals, the Sarbanes-Oxley Act was signed into law on July 30, 2002. The law is intended to protect investors by improving the accuracy and reliability of corporate disclosures required by law, and to enforce compliance by making both corporations and individuals accountable for their actions via administrative, civil, and criminal enforcement mechanisms. Sarbanes Oxley provides the most forceful protections to date for corporate whistleblowers: it prohibits retaliation against whistleblowers, reinforces the act of whistleblowing, and requires public companies to adopt a code of business ethics and protocols for receiving and reviewing reports of fraudulent activities.
I-9 Compliance: Verifying Employment Eligibility of US and Non-US Citizens	Many people come to the United States in search of employment opportunities. While many of these people enter the country legally and have authorization to work here, there are many others who reside in the US illegally. Section 274A of the Immigration and Nationality Act (INA) requires employers to hire only individuals who are legally eligible to work here. The I-9 form is the key to compliance with this requirement. It protects employers from knowingly hiring employees who are not authorized to work in this country. The law requires employers to verify the individualâ€™s eligibility for employment by requiring the employee to produce documentation that verifies who they are, and that they are authorized to work in the US. This requirement applies to all employees â€" US and non-US citizens alike. Therefore, it's important to understand the requirements to be able to comply with the law. This course provides an introduction to I-9 compliance, focusing on the purpose of the form, who must complete it, when to complete it, how to use it to verify employment, and the legal compliance requirements associated with the law. It also provides a brief discussion about employing non-US citizens.
Managing Change: Understanding Change	'To exist is to change, to change is to mature, to mature is to go on creating oneself endlessly.' This is a quote by Henri Bergson, a nineteenth century French philosopher. Since the nineteenth century, the pace of change in all aspects of our lives has become faster and faster and responding to change well is a necessity in today's competitive business environment. Leaders and managers, regardless of industry or organization, require a clear understanding of how important organizational change is in order to propel their organizations forward.
Managing Change: Building Positive Support for Change	It's often said that people don't like change. But when it comes to organizational change, employees are genuinely interested in making things better â€" an improvement in processes, systems, functions, or services most likely translates into direct improvements for the employee too. But employees cannot support change and recognize its benefits without first understanding how it impacts their tasks, processes, or roles. Employees â€" and people in general â€" empowered with knowledge, understanding, and a clear vision of the future state will not only welcome change, but embrace it.
Managing Change: Dealing with Resistance to Change	Change is inevitable in an organization, but, the process of adapting can be painful. Organizational change can cause anxiety and upheaval, and when it does, it's no surprise that employees show resistance. Resistance behaviors can vary from individual to individual and they are often unproductive. While managers may be tempted to deal with behaviors directly, rather than tackling symptoms of resistance to change, managers must deal with the source of those symptoms. They must first understand the mixture of emotions and thoughts that come with change, identify the underlying causes of employee resistance, and then use techniques to address those root causes. When the root causes are addressed, behaviors that show resistance to change will fade.
Managing Change: Sustaining Organizational Change	Decisions to transform an organization are vital to the health of the business, and organizational change efforts are often made to improve service, streamline operations, and of course improve the bottom line. After such a transformation in your organization, how do you engage, excite, and support the biggest driver for success in your organization - your people? How do you manage your people after organizational change so that, as a team, they support and maintain the benefits of change initiatives?
Business Coaching: Building the Coaching Relationship	Establishing a positive and respectful coaching relationship is integral to the success of your coaching efforts. It lays the groundwork for accomplishing the goals you and your coachee set.
Configuring Mobile Computing in Windows 7	Remote access and remote security are fundamental aspects of IT environments. From small remote telecommuter offices, to enterprise networks, remote access and the security to make them viable are everyday concerns in modern networks. This course examines BitLocker, offline file support, caching servers, DirectAccess, VPNs, and Network Access Protection. This course maps to exam 70-680: TS: Windows 7 Configuring. This exam is required for the certification MCTS: Windows 7, Configuration.
Monitoring, Backing Up, and Restoring Windows 7 Systems	System management and configuration are major tasks in the IT world. Making sure that computers are up to date, running smoothly, and configured properly are daily activities of IT staff members. This course examines how updates, performance settings, power and processor options, disks, and backup and recovery are configured, managed, and monitored in Windows 7. This exam is required for the certification MCTS: Windows 7, Configuration.
Getting Started with Windows 7	The latest Microsoft operating system, Windows 7, is efficient, fast, and available in a variety of editions to suit different business and personal computer needs. This course introduces the main features of Windows 7 and provides an overview of the desktop, including the taskbar and the Start menu. It also demonstrates how to manage files and folders using Windows Explorer and how to use Windows Search to locate files and folders on your computer.
Setting up and Securing Windows 7	Windows 7 provides tools that enable users to easily manage and maintain the operating system, programs, printers, and system and personal files. This course demonstrates how to use the Control Panel to install and manage programs and printers, and it shows the role User Account Control plays in security. This course also demonstrates how to use Backup and Restore, system protection, power plans, and the Action Center to ensure the computer is properly maintained.
Customizing Windows 7	Windows 7, Microsoft's newest operating system, enables users to customize their Windows experience by modifying and adjusting many of the features that Windows 7 provides. Using Windows 7, you can change the programs that appear on the Start menu and taskbar, and how they appear, which ensures quicker access to features and programs you use most. Windows 7 also provides different desktop themes and gadgets to personalize and enhance the Windows 7 interface. This course introduces customization in Windows 7 and provides detailed instructions that enables you to customize the desktop, Start menu and taskbar. So instead of working with the generic Windows 7 interface, you can work in a customized way that improves your productivity and user experience.
Optimizing Your Work/Life Balance: Maintaining Your Life Balance	You have the knowledge to assess current work/life balance and overcome internal and external obstacles to achieving balance. You know where you are and where you want to be, but now what? How do you achieve and maintain that balance? How will it be affected by external factors and behaviors?
Optimizing Your Work/Life Balance: Taking Control of Your Stress	In 'Occupational Stress,' Stephen Palmer wrote 'Stress is the psychological, physiological and behavioral response by an individual when they perceive a lack of equilibrium between the demands placed upon them and their ability to meet those demands, which, over a period of time, leads to ill-health.' Are you constantly adding items to your to-do list and it seems like your list never shrinks? Are you feeling overwhelmed at work and at home? Are you afraid that stress is starting to negatively impact your health and relationships? Stress is produced by your own feelings and reactions to certain external events, rather than by the events themselves. And while you may not always be able to control the external events that are causing you stress, you can control your reactions to them and how you handle them.
Diversity on the Job: The Importance of Diversity and the Changing Workplace	Imagine for a minute that you work in a place where everyone is the same. All of your coworkers are of the same ethnicity, gender, educational background, and socioeconomic standing. You work with a group of people essentially cut from the same cloth, so where will new ideas come from? How will the group have the ability to understand things from a different point of view? Without diversity in the workplace, organizations run the risk of becoming monocultural and only viewing things from a very limited perspective. The organization provides the structure for operation of the business and often defines the culture, but it's the individuals interacting within the organization who carry out the mission of the organization.
Diversity on the Job: Diversity and You	Just as organizations must respond to demographic and social changes that introduce new languages, cultures, values, and attitudes to the workplace, so must you as an individual. To understand and appreciate diversity, you must develop an understanding of yourself and the ways in which you and others view the world. Your ability to use a variety of strategies to effectively deal with diverse situations in and out of the workplace is very important. Equally important is the ability to share these effective strategies openly, to leverage the diversity that exists within the organization.
Managing Your Career: Leveraging the Performance Appraisal	The performance appraisal process just may be the most valuable tool you have to advance your career. Unfortunately, employees often don't recognize the opportunities they have to benefit from their performance appraisals. Instead, they regard the whole process as something to dread and avoid. They frequently misunderstand the feedback they're given and refuse to see the appraisal as a career enhancement tool.
Time Management: Analyzing Your Use of Time	Do you have too much time on your hands? With all of the pressures of modern life, so few people today do. In order to preserve your time, you have to know how to manage it. And the first step in learning how to manage time well is to understand how you make use of it now. This will help you determine where can you be more efficient.
Time Management: Planning and Prioritizing Your Time	Managing time effectively entails analyzing your goals, breaking those goals into tasks, and then prioritizing those tasks. This isn't always easy or clear cut, given the number of tasks you may need to complete. But if you set clear and measurable goals and then develop an effective to-do list, you'll find prioritizing your many tasks is easier. And, in the end, you'll manage your time better.
Time Management: Avoiding Time Stealers	Time is a precious, non-renewable resource â€" how effectively you use it will determine success in both your career and personal life. The greatest squanders of this valuable commodity are time stealers â€" that multitude of annoyances, trivial tasks, and administrative duties that can easily consume your days. Moreover, you may find that some of your own behaviors affect how well you manage time. For example, you may be a procrastinator, or you may find it difficult to say no to requests to take on more work. Such behaviors can reduce your efficiency, as well as create unnecessary stress for you.
Problem Solving: The Fundamentals	'The problem,' says author and psychiatrist Theodore Rubin, 'is not that there are problems. The problem is expecting otherwise and thinking that having problems is a problem.' A problem is a question or situation that presents doubt, perplexity, or difficulty. It's an issue that needs to be corrected or overcome in order to achieve a desired state. Problem solving involves goal-oriented thinking and action in situations for which no ready-made solutions exist.
Problem Solving: Determining and Building Your Strengths	Achieving your problem-solving goals typically involves applying problem-solving skills and tools through various steps in an established problem-solving process. Whatever you think of your current problem-solving skills, it is always possible to improve upon them, and even to develop new skills. To improve, you first need to assess your existing problem-solving style, identify your strengths and weaknesses, and develop an ongoing strategy for sharpening and building your skills. You also need to recognize the key barriers that lie in the way of effective problem solving â€" your biases â€" and develop techniques for reducing their impact on your ability to solve problems.

Title	Description
Problem Solving: Digging Deeper	Norman Vincent Peale, who stressed the need for analyzing a problem at a granular level, once said, 'When a problem comes along, study it until you are completely knowledgeable. Then find that weak spot, break the problem apart, and the rest will be easy.' A fact-based, honest analysis happens at two key steps in the problem-solving process: first when you analyze problems to identify the root causes, and then, when you evaluate and analyze potential solutions to determine the one that has the maximum chance of success. Several tools are used for analysis and evaluation at each of these steps. Examples of tools that help find the root causes of the problem are the cause-and-effect diagram and five-why analysis. Cost-benefit and force-field analysis help in choosing the best solution.
Decision Making: The Fundamentals	To emphasize the need of a formal decision-making process, C. Wright Mills, an American sociologist and author, once said, 'Freedom is not merely the opportunity to do as one pleases; neither is it merely the opportunity to choose between set alternatives. Freedom is, first of all, the chance to formulate the available choices, to argue over them â€" and then the opportunity to choose.' It's been estimated that most human beings make thousands of decisions in the course of an average day, many of which are unconscious decisions. It is important for your personal and professional success that you become an effective decision maker. This involves following an established decision-making process and adapting your decision-making style to suit different situations.
Decision Making: Tools and Techniques	Napoleon Bonaparte once said, 'Nothing is more difficult, and therefore more precious, than to be able to decide.' Good decision making means choosing the course of action that optimizes the return on your investment of resources. But before you can make a good decision, you need to first identify and evaluate your alternatives. Fortunately, a number of tools and techniques are available that can help you to formalize the process of identifying alternatives, carefully evaluating them, and finally making the best decision possible with the information available to you. These tools multiply the power of your most important assets in good decision making: your intelligence and common sense.
Decision Making: Making Tough Decisions	Making decisions in your personal and professional life is not always easy, especially when you're dealing with an uncertain or unknown future. And there are many situations that can make decision making particularly challenging, such as when you have to weigh very similar or very disparate alternatives then make compromises and trade-offs between them. Another situation is when you have to determine whether to trust logic, intuition, or some combination of the two.
Web Development Fundamentals	This course will provide an overview of the concepts and skills necessary to design and publish a web site. It will cover how to use HTML and CSS to develop web site content. It will also provide an overview of the role of languages such as DHTML, XHTML, XML, and JavaScript in web site implementation. It also introduces the user to advanced web techniques such as developing for mobile devices, client and server scripting, and how to manage and connect to databases. This course is part of a series in the designing, developing, and hosting a web site path.
Internet Site Development	Planning and designing sites based on customer requirements is an essential aspect of web development. This course covers the key aspects of planning and designing sites for users, ensuring that sites have gone through site functionality testing, and also explores the use of active content and multimedia in site development. This course is part of a series in the designing, developing, and hosting a web site path.
Web 2.0 Fundamentals	Web 2.0 technologies including RSS feeds, blogs, and wikis provide powerful ways to access site information and enable users to participate and collaborate in the creation of site content, rather than being passive users of a web site. This course provides an overview of what Web 2.0 is and the role that the Web 2.0 technologies play. Specific topics covered include an introduction to Web 2.0, the impact of social networking, and Web 2.0 development technologies including HTML, XML, JavaScript, Ajax, mashups, SOAP, web services, and Representational State Transfer (REST) services. This course is part of a series in designing, developing, and hosting a web site path.
Giving Feedback	The performance of any organization depends upon the performance of every individual. Giving feedback is a necessary skill and can involve anyone in an organization, whether it is manager-to-report, peer-to-peer, or report-to-manager. There are generally two types of feedback: positive feedback for reinforcing positive behavior, and corrective feedback for correcting negative behavior. The purpose of this course is to help you improve your skills in giving both types of feedback. The course starts by exploring the importance and purpose of feedback in general, and then discusses both positive and corrective feedback. You will also learn a three-step process for giving feedback, and will have a chance to practice giving feedback using this three-step process.
Giving Constructive Criticism	Feedback is an essential element of successful businesses. Everyone benefits from the exchange of meaningful, constructive criticism. But giving criticism that is constructive rather than destructive can be one of the most important and difficult skills to learn. Given thoughtlessly, without proper preparation and consideration, it's likely to be ignored by the recipient, or worse yet, give offense. On the other hand, when given properly, constructive criticism given by a manager to an employee, or from a team leader to a team member, is a powerful tool for improving performance and increasing productivity. This course starts by exploring the key differences, the effects, and the importance of giving constructive criticism as opposed to destructive criticism. You will then learn a three-step process for giving constructive criticism effectively and have a chance to practice using it in a RolePlay that simulates a realistic work scenario.
Receiving Feedback and Criticism	We all need feedback so that we can learn and improve. Sometimes feedback is on target, and its usefulness is apparent. Other times it may not be as easy to receive. Being able to receive feedback and criticism appropriately without getting your emotions involved is an essential skill for success in the business world. People in an organization need to be able to receive corrective feedback effectively, whether from someone in authority, a direct report, or a peer. Doing so allows you to better understand your colleagues' concerns, calm potentially heated exchanges, and solve issues efficiently.
What is Emotional Intelligence?	Do you pay attention to your emotions and the feelings of those around you? The answer to this question can help you discover how in tune you are with your emotions and help determine your emotional intelligence quotient, or your EQ. Your emotional intelligence quotient is your capacity to reason and analyze emotional information. Becoming aware of your emotions can help you become attuned to your own needs and the needs of others, and can help you make better decisions and develop better relationships.
Improving Your Emotional Intelligence Skills: Self-awareness and Self-management	Emotional intelligence is the ability to recognize and deal with emotions in a healthy and productive manner. Many people don't realize that their emotions are determined by what they think, and that concrete self-management techniques exist for gaining control of feelings. Emotional intelligence involves being aware of and managing emotions within your relationships with others. But before you can recognize others' emotions and manage your relationships, you must have a firm sense and control of your own feelings.
Using Emotional Intelligence on the Job	Putting emotional intelligence to work is an emerging trend in the corporate world. Developing the best talents in executives, managers, and employees throughout the organization has become vital to workplace success. Intellectual knowledge is no longer enough; you must also have the interpersonal competence that comes with emotional intelligence.
Culture and Its Effect on Communication	Effective communication is always a challenge, and when diverse cultures are introduced, good communication can become even more challenging. In todayâ€™s global economy, understanding how context, style, beliefs, and value systems influence the way we communicate and decode others' messages is more important than ever.
Communicating Across Cultures	Communicating effectively across cultures can be very difficult. Not only must you pay attention to the cultural distinctions of your audience and adjust your style to them, but you also need to adjust your style to different forms of communication.
Improving Communication in Cross-cultural Relationships	Cross-cultural communication has assumed even greater significance in the current global business context where people from diverse cultures share common business goals and working spaces on a day-to-day basis. It is essential for a skilled communicator to recognize and deal with cross-cultural differences and other barriers in the way of communication across cultures. To this end, building positive relationships can go far in making cross-cultural communication more effective.
Working with Difficult People: Identifying Difficult People	Inevitably, we all encounter difficult people in the workplace. Dealing with difficult people can lead to feelings of frustration or even intimidation. If you know the right techniques, though, dealing with even the most difficult person is possible. In order to deal with difficult people, first you need to know what kind of difficult person you're dealing with so you can use the right technique for the right 'difficult' type.
Working with Difficult People: How to Work with Procrastinators	Nobody likes it when they have to take up someone else's slack. Perhaps you've been in this situation: a coworker said something would get done, but when the deadline was up, it turned out this person somehow never managed to get around to it. There are a variety of reasons for procrastinators behaving the way they do, but whatever the reason, having procrastinators in the workplace is frustrating and can end up causing even more work for you. To limit the negative impact procrastinators can have in the workplace, you need a set of tools and techniques at your disposal suited to the particular type of procrastinator you may be dealing with.
Working with Difficult People: How to Work with Manipulative People	Have you ever dealt with someone at work who tried to get you to agree to something you really didn't want to do? Some people just seem to want things their way, even if it is not the best for the team or organization. During your career, it is likely that you'll come across coworkers who use manipulation to get what they want, and it may be difficult to avoid them. To ensure you don't get caught up in their games, you need to be able to recognize when you're being manipulated and to have the necessary skills to deal with the manipulative behavior.
Working with Difficult People: How to Work with Self-serving People	Have you ever worked with someone who seems to have an ego the size of a car? Do you ever find yourself having to listen to someone else gossip about other office mates? Self-serving people try to make themselves the center of attention at the expense of others and their habits can be quite destructive. If you work with self-serving people, you need to have the skills required to cope successfully with these individuals.
Working with Difficult People: Dealing with Micromanagers	Every office seems to have one â€" a person who seems to control every aspect and every detail of any situation or project they're involved with. Whether the motivation comes from a desire to ensure success or simply a need to be the center of attention, micromanagers generally do more harm than good.
Getting Results without Authority: Persuasive Communication	Communicating persuasively is key when you want to get results in situations where you don't have direct authority. To communicate persuasively, it's important to think from the other person's perspective. How and what you ask, and the sincerity of your concern for addressing the other person's interests, will smooth the way to getting the results you need.
Getting Results without Direct Authority: Reciprocity	One way to get results without authority is to leverage the law of reciprocity. For example, you help someone with a difficult analysis and that person in turn helps you put together a presentation. Or you support a colleague in a meeting, and later you get a key role in that colleague's project. For any trade to be successful, though, you need to know what others need and what resources you have to offer them that match those needs. Then the trade will be a valuable one. This course describes how to develop an effective give-and-take strategy so you can influence others to get the results you need. It also covers some possible objects of trades valued by others and available for you to offer. In addition, it discusses some of the different trading approaches you can take in different situations.
Getting Results without Direct Authority: Influencing Your Boss	The idea that you can influence your boss may seem at odds with a traditional view of the boss-employee relationship. But you know best how you want to be managed to reach your goals, and if you focus on building a partnership with your boss, you will find that you have more influence than you think. In this course, you'll learn how to build influence with your boss by understanding his or her situation, and knowing what you can offer that benefits both your boss and you. You'll also find out how to influence your boss to get more responsibility or more direction when you need it.
Listening Essentials: The Basics of Listening	Do you feel the need to better understand the basic meaning of a conversation, or a presentation given at the workplace? What about the need to identify what is being said to you in a more effective manner? Although relatively straightforward in theory, the process that transforms effective listening into successful communication requires great skill, awareness, and practice.
Listening Essentials: Improving Your Listening Skills	There are many factors and variables that influence the way we listen. Listening to understand and being able to truly identify what is being said to you is often easier said than done. Internal and external roadblocks can interfere with how we listen and interpret the information communicated to us.
Negotiation Essentials: What Is Negotiation?	Everyone has to negotiate at some point in his or her life. Strong negotiations skills can be survival skills, both in and out of the workplace. But being able to negotiate successfully requires that you understand some of the basic concepts of negotiation. Negotiation has been described in many ways â€" getting what you want, reaching an agreement, influencing others, and bargaining. However you think of it, though, negotiation is a process in which two or more parties with different needs and goals work together to find a solution that is acceptable to all. This course defines negotiation and describes actions that can help you negotiate successfully. It also discusses two types of negotiation â€" distributive and integrative â€" that you will typically encounter in business. And finally, this course covers styles of negotiating.
Negotiation Essentials: Avoiding Pitfalls in Negotiations	Negotiations can be tough. But keeping your wits through pressure and problems can lead to breakthroughs and success. Negotiations commonly fail because poor approaches and tactical blunders create additional stumbling blocks to overcome. Negotiators need to be aware of the kinds of actions or attitudes that can hinder the achievement of an agreement. But they also need to understand tactics the other side may use to create a negotiating advantage. This course describes how to overcome common errors in negotiating. It also covers strategies for dealing with difficult negotiating tactics from the other side. Finally, it outlines how to diagnose barriers to agreement.
Customer Service Confrontation and Conflict	How do you handle angry and confrontational customers? One of the most challenging, and potentially uncomfortable responsibilities of a customer service person is dealing with angry customers. By following a few simple techniques such as letting the customer vent, and expressing empathy towards the customer's situation, you can usually defuse tense situations without incident.
Shaping the Direction of Customer Service in Your Organization	There are several defining moments or moments of truth that can make or break every service transaction. To successfully navigate these moments of truth, it's important for service organizations â€" and specifically customer service leaders â€" to add value to a customer's experience by creating and implementing strong, clearly-defined service standards. To implement effective standards and strategies, it's crucial that you stay attuned to customer needs and expectations, building a dynamic, adaptive service strategy based on input such as market research and customer feedback.
Basic Accounting Principles and Framework	Accounting and finance are the universal languages of business, and their functions form the core of most organizations. The accounting function sets up the bookkeeping system, monitors it, prepares and presents the financial statements to management, and interprets them as needed. Bookkeeping is a part of the accounting function and involves the mechanical aspect of recording, classifying, and summarizing transactions in account books and posting them to respective financial statements. Apart from the statutory importance, accounting data is very critical to any organization's decision and control system. Managers, decision makers, external stakeholders, and interest groups take the basic accounting data, mix them with other external and supplementary information, and produce meaningful information used for decision making and control purposes.
The Accounting Cycle and Accrual Accounting	Accounting involves recording, summarizing, and presenting financial transactions. You need to analyze transactions before recording them in daily journals. Organizations use a variety of accounts, called general ledgers collectively, to record transactions in a number of business areas. A chart of accounts lists all these accounts in the general ledger. All individual accounts are then compiled, totaled and verified for correctness, and then presented as financial statements to the organization's internal and external users. As in most other things, timing is of prime importance in accounting, specifically in recording transactions. Most organizations record revenue or expense transactions when they actually take place â€" known as accrual accounting. Others do it when money actually changes hands â€" known as cash accounting.
Accounting Transactions and Books of Account	Bookkeeping is a critical accounting activity that provides the solid foundation on which an organization stands. The correctness and integrity of the financial statements that an organization produces largely depend on the correctness and integrity of its bookkeeping activities. Journalization and posting to ledgers are the two core bookkeeping activities. The journals are where all transactions are first recorded on a daily basis. Information from a journal is then posted to the ledgers to update each account. Various accounts in the ledgers are then summarized, tested, and validated, and used for producing financial statements at the end of an accounting period.
The Income Statement	Financial statements show the financial performance of an organization. They are comprised of the Income Statement, the Cash Flow Statement, and the Balance Sheet, and are used both internally and externally by a variety of users. The Income Statement can also be referred to as profit and loss statement or statement of operations, and is one of the most important financial statements. It shows the profitability of a company during a specified accounting period.

Course	Description
Principles of Accounting and Finance for Non-financial Professionals	Finance and accounting are at the heart of every business. These functions deal with recording, summarizing, and analyzing financial information across all departments for decision making, directing, and controlling their resources and activities. Every activity or non-activity in an organization has financial implications and financial acumen is expected at every organizational level. Professionals and functional managers in every department and functional area should have a certain amount of comfort and familiarity with the basic accounting and financial concepts, processes and practices so that they can use it to better manage and control their activities and make decisions that support organization's larger goals.
Cash Flow Management Essentials for Non-financial Professionals	Cash flow management involves monitoring, analyzing, and adjusting your business's cash flows to maintain a steady flow of cash available for your activities when needed. Sustaining working capital while managing the flow of cash is often a challenge with many businesses. Sale of goods and services results in cash coming in, while paying bills, taxes, dividends, and the repayment of loans result in cash going out.
The Time Value of Money and Investment Decisions for Non-financial Professionals	The notion of Time Value of Money is at the foundation of many financial decisions and activities in an organization. Regardless of your functional or departmental role, you may be required to choose between investment options in assets, plants and equipments, new businesses, advertising campaigns, employee training, or technology, based on their future cash flow expectations. It is important for you to make sound financial decisions to allocate your organization's resources most effectively and ensure the best return possible on them.
The Essentials of Budgeting for Non‑financial Professionals	Professionals and functional managers in every department deal with budgets one way or another for providing targets and direction in their day-to-day decision making and control activities. The budget is a formal expression of the plans, goals, and objectives of an organization and familiarity with the essentials of the budget is expected at every level within that organization.
Analyzing Financial Statements for Non-financial Professionals	Financial statements of an organization often conceal more than they reveal. Being able to analyze them and extract meaningful information is an essential skill that financial as well as non-financial professionals should have. Ratio analysis can be used to determine relationships between two elements of the same financial statement or between one element of one financial statement and another element of a different financial statement. This type of analysis can also be used to compare your company's performance to a number or key indicators, including your competitors, industry averages and benchmarks.
The Telecommunications Industry Overview: Version 3	The Telecommunications Industry is to the modern world what the central nervous system is to the human body. Made of a complex set of sectors and subsectors and a variety of stakeholders, this industry builds, maintains, and operates networks to supply an essential service to customers globally. The industry players produce communication equipment and deliver a set of voice, data, and broadband services using wire line or wired infrastructure of cables, networks, servers, computers, and satellites. This industry is highly sensitive to the slightest change in regulatory, technological, and economic factors and has its own share of challenges largely stemming from these factors. With wireless and broadband providing the needed momentum to their growth, the industry players adopt unique strategies to overcome these challenges and move forward to connect people to people and organizations.
The Health Care Industry Overview: Version 3	The health care industry is one of the largest industries in the world, and it has a direct effect on the quality of life of people in each country. The industry is under constant pressure to improve the quality of its delivery, streamline operations, and cut costs, while providing safe, affordable, and cost-effective care. Operating in a highly sensitive and regulated environment, industry players need to constantly adjust their strategies and processes to meet the ever-increasing demand and compliance requirements. As a result, they are constantly looking at ways to eliminate inefficiencies in the value chain, to address issues of access, to improve quality, and to reduce cost.
The Insurance Industry Overview: Version 3	Comprised of a variety of stakeholders, the Insurance industry provides products and services that are designed to protect businesses and individuals from risks. The industry players deliver risk coverage, while attempting to manage their own risks in an environment that is subject to regulatory requirements, competitive forces, margin pressures, and changing customer demands. Insurance companies adopt unique strategies to overcome these challenges and to propel growth and market share in a global environment.
The Banking Industry Overview: Version 3	The banking industry is a vital component to individual, business, national, and global financial well-being. This industry builds and maintains financial relationships with customers of all sizes to supply financial products and services that stimulates economic growth. The industry players produce an assortment of services from savings accounts to home and business loans and mortgages, and from check cashing to underwriting. This industry is sensitive to regulatory, technological, and economic factors and has its own share of challenges largely stemming from these factors. With emerging markets changing the landscape of global economic wealth and new generations of customers demanding faster and more innovative products, the industry players adopt unique strategies to overcome these challenges and move forward to deliver financial objectives to people and organizations.
The Oil and Gas Industry Overview: Version 3	The oil and gas industry is a key player in supplying the world's energy, transportation, petrochemical, and fertilizer needs. Comprised of both national and independent oil and gas companies, the oil and gas industry supplies the products needed to heat homes, provide transportation by running engines in motorized vehicles, increase food production through fertilization, and create plastics for countless uses. The industry uses a supply chain to provide oil and natural gas products from locations around the world and deliver them to consumers throughout the world. Industry players adopt unique strategies to overcome the challenges of supplying a non-renewable resource by finding new resources with improved technological, business, and diversification strategies.
The Retail Industry Overview: Version 3	The retail industry provides consumers with goods and services for their everyday needs. Comprised of a variety of stakeholders, this industry offers customers the flexibility to buy products from around the world, which requires industry players to have a global supply chain that ensures their products can be cost-effectively sourced from various locations and delivered to individual customers no matter where they live. Industry players adopt unique strategies to overcome these global challenges in order to offer customers the right products at the right time for the right price.
Essentials of Interviewing and Hiring: Screening Applicants for Interviewing	Finding the right person for the job takes a lot of work, and much of this work is done prior to the actual interview. Before you can even start looking for candidates, you need to create a description of the job you want to fill. How would you interview someone if you didn't know the responsibilities required for the job? A good job description, based on a thorough job analysis, will help you evaluate applicants' resumes effectively. You'll be able to compare the resumes against the requirements in the description and make effective decisions about who should be interviewed. This course describes the key components of job descriptions and how to use them to screen resumes. You'll also learn how to identify red-flag issues in the resumes you are screening.
Essentials of Interviewing and Hiring: Preparing to Interview	Conducting effective interviews is as much an art as it is a science. You need to use your instinct and discernment, but solid preparation is equally important. Preparing properly helps you evaluate candidates accurately and fairly, helps to create a positive impression, and shows that you are professional. It can also help you avoid common errors such as talking too much, or asking close-ended questions that tell you little about the candidate. Proper preparation can help you avoid legal troubles as well.
Essentials of Interviewing and Hiring: Conducting an Effective Interview	Proper preparation is crucial to ensure a good interview. But all your preparation will be useless if you don't follow some important guidelines when conducting the employment interview. Opening the interview properly and establishing a sound format are key. You must also be mindful of the functions of different question types and styles so you can use them effectively during an interview. Finally, you will want to close the interview on a positive note. This course describes how to proceed with a face-to-face to interview. It covers how to open an interview well, what types of questions to ask, and how to close the interview.
Essentials of Interviewing and Hiring: Behavioral Interview Techniques	Behavioral-based interviewing is becoming the norm as people realize its effectiveness in predicting what a candidate's behavior and performance are likely to be in the position for which they are interviewing. In behavioral interviews, you ask questions that get the candidates to describe how they handled real situations in the past. This enables you to find out not just what the candidates did but how they did it. Candidates can then be assessed based on actual behaviors that are related to the competencies for the job, rather than on possible or potential behaviors or performance. This course describes the characteristics of behavioral-based interviewing, how to develop behavioral-based questions, and then how to ask those questions effectively in an interview.
Essentials of Interviewing and Hiring: Selecting the Right Candidate	Selecting the final candidate for a job requires careful attention. Even though you're getting close to the end of the hiring process, you can't simply coast now. You need to manage the decision-making process in a disciplined and intelligent way. It's important to remain objective when assessing candidates, drawing on job-related data, rather than letting personal biases steer you away from your hiring criteria. Following a logical system in making your decision will mean you find the candidate who will make a strong contribution to your organization. This course describes how to evaluate candidates using a structured and objective process. It also explains how to effectively check references and make an offer.
Management Essentials: Directing Others	As a manager, your role is not only to supervise, but also to lead, develop, and direct your employees both individually and collectively to accomplish organizational goals. Understanding the essential responsibilities you have when directing others, and the practices you should employ in order to meet those responsibilities, will lead to you fulfilling your duties and realizing the potential of your entire team.
Management Essentials: Developing Your Direct Reports	A main goal of managing is developing your direct reports. This involves not only coordinating their work in a way so your organization's business objectives are met, but also empowering them and providing opportunities for them to meet their own professional development objectives.
Management Essentials: Confronting Difficult Employee Behavior	As a manager, you will inevitably encounter direct reports who exhibit difficult behavior, which can disrupt entire teams and departments. It's your job to confront difficult behavior as early as possible to minimize the disruption. Whether they are blatant or less obvious, behavioral problems need to be addressed before they affect morale and productivity. If you ignore them, they will eventually affect your team, your company, and possibly even your career. Confronting behavioral problems as they arise can quickly get things back on track and can lead to a more positive work environment for all. This course introduces best practices for confronting your direct reports about their difficult behavior.
Management Essentials: Managing a Diverse Team	The population as a whole is becoming ever more diverse. Naturally, these societal changes are mirrored in the workplace. The most forward-looking organizations recognize the importance of managing a diverse workforce effectively. In turn, those managers who have the skills to lead a diverse team successfully are highly valued. This course describes what diversity is, including its benefits. It also covers how to prepare to manage a diverse team by understanding key diversity issues and setting ground rules. Finally, it delineates techniques for managing a diverse team.
Management Essentials: Treating Your Direct Reports Fairly	Most of us are taught from a very young age to treat everyone fairly, but what does fairness mean in the business environment? Specifically, what role does fairness play when managing people? To be a fair manager, one must be committed to the principles of justice and responsibility, and maintain accountability in the exercise of authority and power.
Management Essentials: Caring about Your Direct Reports	To manage well, you need to develop many different skills, among which is the ability to show care and appreciation for your employees. It's important to remember that the people who work for you have hopes, goals, and aspirations as well as fears, anxieties, and doubts. To have good relationships with your direct reports, you need to recognize their humanity and care about them as people, not just as employees.
Talent Management: Basics	Would you be able to define talent management if someone asked you what it was? And would you be able to explain why it should be a top priority for organizations? Talent management focuses on recruiting, hiring, developing, and retaining the right talent to drive an organization's performance. This course helps clarify talent management's key role in helping an organization perform at its peak. It introduces and defines talent management, describing key concepts related to it. It also points to why effectively managing talent is so important. In addition, this course identifies the key activities associated with talent management and describes the roles played by managers in implementing a talent management strategy.
Talent Management: Planning	Have you ever asked yourself how well your department or division manages talent? To determine this, you need to have a clear understanding of how your organization defines its workforce requirements and what processes are in place for attracting, developing, and retaining the right people. Then you can create a plan for meeting your talent needs that align with the overall goals of the organization. This course describes some of the challenges of managing talent, which you should keep in mind as you create your talent plan. It discusses how your talent needs are impacted by various factors in the organization. The course also describes the components of a talent plan â€" the road map for attracting and keeping the types of people your organization desires.
Talent Management: Acquiring Talent	Attracting and selecting talented individuals is key to the success of any organization. Once you've defined what the 'right' talent is for your particular area, you need strategies and tactics for attracting, recruiting, and selecting talented people. Talented people are drawn to an organization for numerous reasons, including the organization's image or brand, effective recruitment and selection strategies, and career advancement opportunities. This course describes two approaches to talent acquisition â€" hiring internally and hiring from outside â€" and explains the best situations in which to use each. It provides examples of how to implement an effective talent recruiting strategy and outlines how to conduct interviews that result in the selection of talented individuals who fit in the organization.
Talent Management: Developing and Engaging Talent	Organizations depend on talented employees to help them achieve their goals. But without a talent management strategy focused on keeping these employees engaged, they may be sending out resumes rather than working to achieve those goals. Employee engagement and commitment are key success factors for any organization. This course describes how to begin building employee commitment with an effective onboarding process that creates a positive first impression. It also covers how to create individual development plans that prepare employees for higher levels of responsibility and keep them challenged. In addition, the course outlines ways to engage employees so they continue to deliver superior performance.
Talent Management: Retaining Talent	Retaining talented employees is a constant challenge for any organization. The costs of turnover can be high. That's why talent retention is a strategic issue requiring focus, time, and resources. This course highlights the importance and benefits of putting effort into retaining talented individuals. It also covers ways to determine the causes of talent departure and effectively manage talent retention by using strategies that foster job satisfaction.
Transitioning from Technical Professional to Management	Moving from being a technical professional to being a manager is a career change requiring a shift in focus. Technical professionals are largely self-directed, whereas managers work through other people. These and other role differences require that technical professionals who are transitioning into management prepare effectively for the change in career. This course outlines steps a technical professional can take to make the transition into management smoother. It also describes the qualities that successful technical professionals typically possess and how these qualities are useful in a management role. Finally, the course introduces key competencies that people moving into a management role may need to develop.
Strategies for Transitioning to Technical Management	As you transition from being a technical professional to being a manager, your relationships with coworkers inevitably change. Before you were promoted, you were their colleague, but now you're expected to manage and lead them. How do you make the switch? This course describes strategies for establishing new relationships with former peers â€" a key part of making the transition into management. It also describes leadership styles you'll use in your role as manager and explains how understanding these different styles helps you deal with the many different kinds of situations and people you'll be expected to manage.
Managing Technical Professionals	Managing a team of technical professionals presents some unique challenges for even the most talented manager. Whether you have a technical background or not, you'll need to apply organizational, motivational, and leadership skills to address those challenges successfully. You'll also need to build a foundation of mutual respect and trust. In this course, you'll learn about the challenges of managing technical professionals, how to build trust with your technical team, and how to motivate technical professionals.
Introduction to Lean for Service and Manufacturing Organizations	Lean has its origin in the Japanese manufacturing industry in the 1980s as a waste reduction and improvement methodology. However, as it turned out, methods and principles of lean thinking spread to logistics, and from there on to the military and construction industries. Lean methods and principles have since been applied successfully across many other industries. Service and transactional industries that use Lean include healthcare, insurance, financial services and banking, call centers, government, IT, retail, and transportation.
Understanding Organizational Change	Change can be disruptive. A change in your life, whether good or bad, can create a period of uncertainty, stress, and anxiety while you adjust. And change at work is no different. You may question what's going on and feel like you have no control over the situation. But eventually, ideally, you'll see that the change brings a positive result for your own job, and your organization. A clear understanding of what organizational change is, and what to expect when dealing with it, can shorten the period of adjustment so you can get back on track sooner.

Embracing Organizational Change	It is normal to struggle when changes occur, but the proper coping methods can help you not only survive organizational change, but empower you to take control of your career, recognize new opportunities that come with the change, and propel your career forward.
Overview of Project Management (PRINCE2: 2009-aligned)	Project-based operations have become a key factor in today's business world. The importance of choosing a well planned and proven method for managing projects is a challenge for organizations across the board. If you think about it, almost every work effort is a project, from constructing a new building within a university campus to designing and delivering a new line of technology products. As projects become the primary method for getting things done and effecting organizational change, it is crucial to follow a recognized, accepted methodology for managing projects.
TestPrep PRINCE2: Foundation	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Project Organization, Planning and Risk (PRINCE2: 2009-aligned)	An effective project management methodology requires a foundation of core themes that allow Project Managers, Project Boards and project team members to organize and control the project management process. These themes are the building blocks of good project management. The project management methodology advocated by PRINCE2 includes seven themes: Business Case, Organization, Quality, Plans, Risk, Change and Progress. These methodologies are recognized as an international standard for process-based project management and are the accepted methods for project management in the UK.They include the best practices in project management and provide a flexible and adaptable approach to suit all projects. PRINCE2 is a project management method designed to provide a framework for a wide variety of disciplines and activities required within a project.
Controlling, Managing and Closing a Project (PRINCE2: 2009-aligned)	In a project management system, processes are the foundation upon which every other aspect of the system stands. Processes provide a controlling structure for establishing what to do and when to do it. The bulk of the project work is done during the stage-related processes, when Stage Plans are implemented and product creation and delivery is monitored, controlled and reported. Once the final product is signed off and delivered to the customer, there are also specific processes around ensuring the project comes to a complete and controlled close.
Tailoring PRINCE2 to a Project Environment (PRINCE2: 2009-aligned)	By definition, not all projects are the same. One of the defining characteristics of a project is that it is unique. Each project has a different team, a different customer, and a different location. And typically each product is unique in some way as well. Projects differ in terms of scale, complexity and culture. They can be a stand-alone entity or part of a programme of related projects. The key point is that there is a multitude of factors that affect how your project should be managed. As a result, there is no such thing as 'one size fits all' project management. The good news is that PRINCE2 can be tailored to suit any project environment you might work in. PRINCE2 is a flexible framework that can be tailored to any type or size of project.
Mentoring PRINCE2: Foundation	SkillSoft Mentors are available to help students with their studies for the PRINCE2: Foundation exam. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Assessing Nonrecurring Items in Income Statements	Understanding the nuances of income statements is critical for business analysts and investors. And of all the components of a balance sheet, nonrecurring items require special attention because of their temporal significance. This Business Impact explores two types of nonrecurring items: Unusual or Infrequent Items and Extraordinary Items.
Deconstructing the Balance Sheet	Balance sheets provide an overview of a business's financial standing. This impact explores the primary elements of a balance sheet.
The Art of Effective Coaching	Successful organizations employ coaching as means to improve performance. This impact explores the five steps of effective coaching.
Managing Fairly	Managing fairly does not necessarily equate to managing equally. This impact explores the difference between treating employees fairly as opposed to equally.
Communicating with a Cross-cultural	Cultural differences affect how people communicate in business. This impact examines pitfalls to avoid when communicating with a cross-cultural audience.
Conquering Career Stagnation	Many employees experience career stagnation. This impact examines strategies to overcome it.
The Angry Caller: What's Your Plan?	Dealing with angry callers is something every customer service representative and salesperson will face at one time or another. This Business Impact explores a four-step approach for making encounters with irate customers a productive experience.
Attracting and Retaining Talent	Even in a strong employer's market, it's critical that companies position themselves as employers of choice. This Challenge Series exercise explores how organizations can address retention and attraction issues in a crisis situation.
Competitive Awareness and Strategy	Maintaining a competitive edge is an on-going process. This Challenge product focuses on Competitive Awareness and Strategy.
Building and Leading Teams	Leading a team requires facilitating effective interaction between team members. This Challenge examines the importance of maintaining team participation and commitment in order to overcome obstacles collectively.
Coaching	Successful organizations employ coaching to develop individuals and teams. This Challenge Series product explores different approaches for coaching.
Project Management Essentials	Managing projects is a key function of leadership. This challenge examines methods for overseeing project teams and managing stakeholder expectations.
The Accounting Equation and Financial Statements	Business owners and managers, regardless of form and size of their organizations, put their best efforts in generating enough assets to pay for business's liabilities and build adequate stockholders' equity. The basic accounting equation offers us a simple way to understand how these three elements â€" assets, liabilities, and stockholders' equity â€" relate to each other. Every economic activity, or transaction, in an organization affects two or more of these elements. It is therefore important to understand how these elements, and the underlying transactions, appear in financial statements that provide a summary of a business's performance over a period of time.
Developing Workplace Diversity Awareness Simulation	You're employed as an account manager for NGF Integrated Products - a US-based circuit board manufacturer. As a result of expansion into new sales territories, your company has been broadening its workforce, and employee diversity is starting to be addressed more formally. As a participant in the new training initiative, you've been sent to a diversity training seminar. This simulation is based on the SkillSoft series Diversity on the Job" and contains links to the following courses: pd_07_a01_bs_enus and pd_07_a02_bs_enus"
Balancing Your Responsibilities Simulation	Brackens East Seafood, Inc. is a wholesale seafood distributor that's serviced the food industry for over thirty years. Its customers include restaurants, grocery stores, and institutional cafeterias.You're the company's webmaster responsible for maintaining and updating its B2B web site. As a majority of customers now use the site to place orders, it's crucial for it to operate smoothly and reliably at all times.Recently a member of your team, Senior Corporate Marketing Manager Geoffrey Dent, left the company. Your boss, Gwen Phillips, has not hired a replacement. Instead, she's asked you to assume many of Geoff's former responsibilities. As a result, your workload is very heavy and you're finding your job increasingly stressful.Your personal life is also stressful due to an elder care issue. Your mother, who has numerous health problems, relies on you to take her to medical appointments. Balancing this responsibility with your professional ones has become very difficult.This simulation is based on the SkillSoft series Optimizing Your Work/Life Balance" and contains links to the following courses: pd_06_a01_bs_enus.
Word 2010, Excel 2010, and the New Office 2010 Interface	Within the two Microsoft Office Suite releases available since Office 2003, Microsoft has implemented a number of functionality and interface changes and introduced several new features. The overall Office interface has been changed substantially with the introduction of the Ribbon in Microsoft Office 2007, and collaboration and anywhere access to Office files is a major theme in the Microsoft Office 2010 release.
Outlook 2010 and Collaboration in Office 2010	The new and enhanced collaboration features of Office 2010 enable users to work in unison to create content, regardless of their location. Enhancements to many of the Office products enable users to work more efficiently, using a combination of their local computer, a browser, a mobile phone or other Web-enabled device, and a phone integrated with Microsoft Office Communications Server. This course explores the new features of Outlook 2010, including changes to the interface, the introduction of the Conversation view and QuickSteps, as well as Outlook Social Connector. It also explores new features and enhancements to OneNote 2010, including linked notes, improved integration with other Office products, and enhanced collaboration features. The new features and enhancements of SharePoint Workspace 2010, formerly known as Groove, are also discussed. The course also introduces Office Web Apps, which are online extensions of Word, PowerPoint, Excel, and OneNote that allow you to view and edit files stored in Windows Live SkyDrive, on your organizationâ€™s SharePoint implementation, or on SharePoint Online. The Office Web Apps can also be used to create documents, presentations, workbooks, and notebooks within a browser. Finally the course introduces Office Mobile, which allows you to use your phone to access several of the Office applications, and to access and edit documents, presentations, and workbooks.
New Features for PowerPoint, Publisher, and Access in Office 2010	Since the release of the Microsoft Office 2003 suite of products, PowerPoint, Publisher, and Access have all undergone significant changes â€" both to the interface and the range of available features. The Fluent User Interface (UI), now available in all products in Office 2010, gives a consistent look and feel across applications. PowerPoint 2010 aims to make presentation creation more efficient and presentations themselves more visually impressive. Publisher has undergone similar changes, enhancing the creation of high-quality publications. Access 2010 simplifies database creation, makes data accessible from any location, and provides enhanced navigation controls for accessing data.
Getting Started with Word 2010	Word 2010 is the newest version of Microsoft's dynamic word processing tool and it offers features that allow you to create attractive and engaging documents. The Ribbon menu, which is unique to Microsoft Office, organizes Wordâ€™s many features into related tabs and makes it easier to quickly access those you need. The new Backstage view provides a single streamlined 'stage' for all file-level tools, such as those used for saving, printing, and sharing your files. This course explores these topics and many other basics of using Word 2010, including opening the application, creating new documents, and an introduction to the many tools that will help you create and edit your documents.
Office 2010 New Core Features	With the release of Microsoft Office 2010, Microsoft has focused its suite of products to meet the ever-changing needs of its end users â€" both corporate and individual. Using Office 2010, you can share information seamlessly with an individual in the office next door or around the world, and access information anywhere, anytime using mobile devices. Office 2010 includes new graphic and video editing and creation tools to enable you to create visually stunning presentations and documents. Office 2010 provides increased flexibility for analyzing and storing data, managing e-mail messages and contacts, and customizing the interface the way you want it. This course explores key new features and enhancements in the Office 2010 suite of products. It also introduces product-specific new features and enhancements in the 2010 releases of Word, Excel, PowerPoint, and Access. These new and enhanced features include Office Backstage, Live Preview Paste, Sparklines, Slicers, graphic and video creation and editing tools, PowerPoint Broadcast Service, screenshot capture and clipping tools, Web Apps and Office Mobile.
New Messaging and Collaboration Features in Office 2010	The new and enhanced collaboration features of Office 2010 enable users to work in unison to create content, regardless of their location. Enhancements to many of the Office products enable users to work more efficiently, using a combination of their local computer, a browser, a mobile phone or other Web-enabled device, and a phone integrated with Microsoft Office Communications Server. Users can also collaborate in real-time and authors can easily identify content changes by other contributors. This course explores the new features of Outlook 2010, including changes to the interface, the introduction of the People Pane and the Schedule Pane, and enhancements to Unified Messaging. The new features and enhancements of OneNote 2010, including linked notes, improved integration with other Office products, and language features are also covered. The new features and enhancements of SharePoint Workspace 2010, formerly known as Groove, are also discussed. In addition, this course examines new Office 2010 collaboration features, including co-authoring, real-time communication, and unified messaging.
Office 2010 Web Apps and New Features in Publisher and Mobile	Office 2010 enables you to access your files from anywhere using a phone, or a Web-enabled computer or device. Office Web Apps and Office Mobile are two of the features that help to provide this access. Office Web Apps are online extensions of Word, PowerPoint, Excel, and OneNote that allow you to view and edit files stored in Windows Live SkyDrive, on your organization's SharePoint implementation, or on SharePoint Online. The Office Web Apps can also be used to create documents, presentations, workbooks, and notebooks within a browser. Office Mobile allows you to use your phone to access several of the Office applications, and allows you to access and edit documents, presentations, and workbooks. Office Mobile also provides additional support for common mobile phone features, such as touching and flicking. Publisher 2010 allows you to create high-quality publication materials, such as brochures and newsletters. This course introduces the new Web Apps for Word, PowerPoint, Excel, and OneNote. It also explores the new features and enhancements to the Office Mobile products, such as enhanced editing, increased font support, PowerPointâ€™s new Presentation Companion, and Outlook conversations, as well as the introduction of SharePoint Mobile. In addition, this course covers the new features and enhancements in the interface and workspace, image editing, text formatting, printing, and sharing in Publisher 2010.
Getting Started with SharePoint 2010	SharePoint 2010 makes it easier for people to collaborate. You can use SharePoint's intuitive design to share, check in/check out, and manage your files in structural components known as lists and document libraries. You can also use SharePoint's dynamic search feature to locate files. This course explores the SharePoint interface, how to navigate and search on a SharePoint site, and how to work with lists and document libraries.
Using SharePoint 2010 with Office 2010	SharePoint 2010 offers a wide variety of exciting Office integration, file synchronization, collaboration, and social computing features. This course explores the ways in which Office 2010 and SharePoint are integrated with one another. It also explores working with Office Web Apps so you can view and edit Office files in a browser window. In addition, SharePoint Workspace 2010, part of the Office 2010 suite, enables you to create workspaces that allow you to store offline copies of entire SharePoint sites and sync them with the main SharePoint site. This course explores all of these features, and also discusses collaboration and social computing aspects of SharePoint 2010 including My Site and wikis.
SharePoint 2010 New Features for End Users	Microsoft SharePoint Server 2010 contains a number of new features and enhancements specifically geared at improving the end user experience. These include enhanced remote file-editing capabilities using Web Apps and mobile devices, improvements to team sites, and enhancements in social computing. This course explores the SharePoint Server 2010 interface, including the introduction of the Ribbon, already available in Office, as well as changes to team sites and common interface elements. In addition, this course examines enhancements in social computing via My Sites, expertise sharing, tagging, and notes. Collaboration using the Office Web Apps, mobile devices, SharePoint Workspace, and enterprise wikis, as well as improvements to the calendar, are also covered.
Access to Employee Medical and Exposure Records	This course contains information regarding employee rights of access to medical and exposure records in order to promote the recognition of workplace hazards and subsequently reduce occupational disease. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
CompTIA Server+ (2009) System Hardware	Being a good server administrator means that you understand your systems from the ground up â€" both the software and the hardware. Today's server hardware is sophisticated and specialized to support multiple users, applications and processors, as well as provide fault tolerant, highly available services. This course begins the look at server hardware architecture, starting with server system boards, chassis, memory, and the brain of the server â€" the CPU. The course also describes the various types of expansion cards and the supporting architectures and explains when and why you would upgrade and configure your system's firmware.
CompTIA Server+ 2009: System Software	To take full advantage of expensive server hardware, a full featured network operating system (NOS) should be employed. Network operating systems provide vital services, such as e-mail, file sharing, DHCP, DNS, and other necessary components of a functional enterprise network. This course covers the different types of network operating systems, including Windows NOS and UNIX/Linux flavors. It also describes the basic and advanced configurations to make the NOS useable. One of the most important aspects of NOS software â€" security â€" is also covered in this course along with user and resource management tasks.

Course	Description
CompTIA Server+ 2009: Server Functions and Network Essentials	A network may have many servers on it, each playing a unique role. In order for a server to do its job properly, it must have the proper hardware and software installed. A server may be performing a network service, such as DNS or DHCP, serving applications such as e-mail, or providing network security as in the case of a firewall or authentication server. The administrator must be familiar with each of the potential roles and how they will impact each other and the users they serve. This course introduces the various server roles and discusses the possible benefits of using virtualization. The course also explains the technologies used to add servers to your network.
CompTIA Server+ 2009: Storage	Because so much work is done electronically, businesses and governments generate vast amounts of information, most of which needs to be kept available and safe. Storage technologies have improved with the growth of data requirements. This course introduces the technologies involved in storing and protecting this data and the different types of storage media, such as optical media, and describes the increased reliance on hard disks for permanent, secure data storage. As well, it discusses the technology behind RAID arrays and the various types of storage architectures.
CompTIA Server+ 2009: IT Environment	A well managed network relies on accurate documentation, well designed policies, and efficient procedures. Understanding how to create good documentation, policies, and procedures can help ensure that a network is well run and that it can withstand the occasional crisis. Implementing these concepts at the server level is an excellent place to begin. This course covers the documentation, policies, and procedures that are the most necessary to server architecture. It provides a description of what each one is and how to go about creating the various elements. Along with good documentation, a well planned design of server space is key to a well managed network. The proper physical environment for optimal operation along with the physical security measures that should be put in place are also described in this course.
CompTIA Server+ 2009: Disaster Recovery	Without a well thought out plan in place, all the best equipment and well trained personnel in the world will be useless in the event of a disaster. Disasters can be manmade or natural, and both types can cause short delays or major business disruptions. This course covers backup strategies and archiving data, so that there are copies available in the case of a major breakdown of your information infrastructure. It also explains procedures for restoring data and discusses various types of backup, such as full, incremental, and differential along with the common media used for backup, such as hard disks and optical media. In addition, disaster planning and the implementation of a disaster recovery plan are both described.
CompTIA Server+ 2009: Troubleshooting	Troubleshooting skills are something that everyone, from the server or network administrator to the everyday user, should possess. Administrators, though, need to be able to thoroughly troubleshoot not only desktop computers, their hardware and operating systems, but also more complex and intricate issues that occur on sophisticated server hardware and network infrastructures. This course introduces hardware and software troubleshooting. It covers some of the common issues that can occur along with their fixes and some of the useful tools that can be employed in the troubleshooting process. This course also describes troubleshooting theory and recommended procedures.
CompTIA Server+ 2009: Network and Storage Troubleshooting	Almost everywhere you go, from large businesses to people's homes, networks are in place to facilitate the movement of data between computers and other devices, such as printers or the Internet. In addition to that, the vast amounts of data generated in today's computing environments means that storage issues are something that every business and server administrator needs to deal with sooner or later. The hardware and software involved in networking and storage management can be complicated, which can make troubleshooting issues that arise complicated as well. It is important that server administrators are comfortable with the troubleshooting process and familiar with the various problems that can arise related to networks and storage systems. They need to know how to correctly define problems as they arise and how to fix them. This course covers many networking and storage issues that can crop up and describes the process for determining causes and implementing solutions.
Mentoring 70-680 TS: Windows 7, Configuring	SkillSoft Mentors are available to help students with their studies for exam 70-680 TS: Windows 7, Configuring. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
TestPrep 70-680 TS: Windows 7, Configuring	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Mentoring 70-685 PRO: Windows 7, Enterprise Desktop Support Technician	SkillSoft Mentors are available to help students with their studies for exam 70-685 PRO: Windows 7, Enterprise Desktop Support Technician. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Mentoring 70-686 PRO: Windows 7, Enterprise Desktop Administrator	SkillSoft Mentors are available to help students with their studies for exam 70-686 PRO: Windows 7, Enterprise Desktop Administrator. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Planning for Windows 7 Deployment	Windows 7 is Microsoft's latest client operating system for IT infrastructure environments. Microsoft has improved and added new tools to help deploy Windows 7 throughout networks using images. Administrators can use tools provided by Microsoft to analyze their IT networks to determine the best deployment strategy. This course discuss the deployment tools and methods, Windows 7 editions and requirements, and licensing. It also demonstrates how to analyze the current client computers for hardware and compatibility issues. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
TestPrep 70-686 PRO: Windows 7, Enterprise Desktop Administrator	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Determining Application Compatibility for Windows 7	One of the main issues with upgrading client machines to a new operating system is ensuring that applications will still run without issues for the users. Microsoft enables administrators to use the Application Compatibility Toolkit to collect information about the applications and then test and mitigate any issues that may have been detected. This course discusses ACT and how to use it to collect data, analyze issues, and test and mitigate them using development tools. It also discusses when to use shims for compatibility mitigation. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Creating a Standard Image to Deploy Windows 7	Microsoft provides various solutions for deploying Windows 7 to client machines in an enterprise environment. Each solution provides advantages and disadvantages and depends on the company's requirements. One solution is Windows Automated Installation Kit for Windows 7. It contains documentation and tools â€" including Windows System Image Manager, ImageX, Windows Preinstallation Environment, and Deployment Image Servicing and Management â€" to deploy Windows 7 using images. These tools enable IT professionals to create Windows images and answer files and to apply and service the images. This course demonstrates how to create a standard image using SIM, to then apply the image to the client machines using Windows PE and ImageX, and finally to service it using DISM. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Deploying Windows 7 Using WDS and USMT	Microsoft offers many deployment tools for deploying Windows 7 throughout entire networks. Deciding which tool to use depends on many factors, including network configuration, cost, and down-time. Windows Deployment Services, one of the tools available, can be used to install Windows 7 directly over the network, without using the installation media directly at each client machine. When deploying Windows 7 throughout the network, administrators need to consider how they will preserve the user files and settings on each client computer. Microsoft offers user state migration tools that enable the administrator to store the user data in a specified location until Windows 7 is deployed, when that user data can be restored. This course demonstrates how to deploy Windows 7 over the network using Windows Deployment Services. It also demonstrates how to use Windows Easy Transfer and the User State Migration Tool to migrate user state data and then restore it after Windows 7 is deployed. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Deploying Windows 7 Using Lite-Touch Installation	Microsoft provides many different deployment strategies for deploying Windows operating systems and applications. Recently Microsoft released the Microsoft Deployment Toolkit 2010, which provides faster deployment times using standardized desktop and server images to client machines within a network. Deployment Administrators can perform Lite-Touch Installations or Zero-Touch Installations for four deployment scenarios using MDT 2010 using deployment shares. This course demonstrates how to plan for and use LTI to deploy Windows 7 to client machines in a network. This includes creating a reference computer to capture the installation image and then deploying the image using bootable media to the target clients. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Deploying Windows 7 using Zero-Touch Installation	Microsoft offers different deployment tools to deploy Windows operating systems. The most recent addition is Microsoft Deployment Toolkit 2010, which can be used in conjunction with System Center Configuration Manager 2007 to perform Zero-Touch Installations. Zero-Touch Installations enable deployment administrators to deploy Windows 7 over a network with little interaction once the task sequences are created that contain all the information required for the installation. This includes different packages that contain all the software required, including drivers, applications, user state, and operating system files. The course demonstrates performing ZTI using MDT 2010 and System Center Configuration Manager 2007 by creating the different task sequences required to deploy and capture an image on a reference computer and for deploying the captured image to target computers throughout the network. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686, Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator Certification.
Designing Windows 7 Client Configuration	Microsoft Windows 7 can be a standalone client machine or part of a domain. Either way, users and administrators should ensure that computers are secure and are configured properly to mitigate any issues. In a domain environment, client computers should have standardized settings to help reduce costs and desktop support issues. This ensures the users and computers all have the same settings, which a user may or may not be able to change, including desktop, security, and Internet Explorer. This course demonstrates how to configure Group Policy settings to apply standard configurations and security settings to computers and users throughout a domain. It also demonstrates how to configure Windows 7 security features, such as Windows Defender, Windows Firewall, BitLocker, and AppLocker to secure client computers. It also outlines how to configure Internet Explorer. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Troubleshooting Windows 7 Client Configuration	Microsoft Windows 7 provides features and tools to help troubleshoot and resolve issues that may occasionally arise on the client machines. Some problems may arise for Group Policy settings, authorization and authentication, networking, and Internet Explorer. Windows 7 provides specific tools to help resolve issues with these features. This course demonstrates how to troubleshoot and resolve issues with Group Policy settings by using the Group Policy Results Wizard; authentication and authorization, such as logon issues and permissions; networking issues for wired and wireless networks and VPNs; and Internet Explorer. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686 Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Designing Application and Update Deployments for Windows 7	Microsoft provides many technologies and tools to enable administrators to reduce time and cost associated with maintaining clients computers, specifically for making applications available to users and ensuring that client computers are automatically updated to minimize security vulnerabilities. This course demonstrates how to deploy and distribute applications to Windows 7 client machines in an Active Directory environment using Group Policy settings and System Center Configuration Manager. It discusses how administrators can make applications available to users through virtualization technologies, such as App-V, Med-V, RemoteApp, and Virtual Desktop Infrastructure (VDI). It also shows how to apply updates automatically to client machines using Windows Server Update Services (WSUS) and how to ensure client compliancy using Microsoft Baseline Security Analyzer (MBSA). This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-686. Pro: Windows 7, Enterprise Desktop Administrator. Passing this exam will earn the learner Microsoft Certified IT Professional: Windows 7, Enterprise Desktop Administrator certification.
Oracle Database 11g Release 2: Installation and Oracle Restart	Oracle Database 11g Release 2 offers a unique scale-out technology with a single database instance, lower server and storage costs, and increased availability and scalability. It also provides customers with improved user service levels, reduced down-time, and more efficient use of IT resources as well as an increased level of performance and security. In addition it provides business intelligence and data warehousing.
Oracle Database 11g Release 2: ASM, Storage and Partitioning Enhancements	Oracle Database 11g Release 2 provides many improvements from its previous releases. This includes enhancements to ASM and storage to improve performance and to reduce server maintenance down time. This course identifies the enhancements in each of these areas. It also demonstrates how to use ASM fast mirror resync, manage ASM users, disk groups, ACLs, and Intelligent Data Placement, as well as table compression, SQL Access Advisor, and segment creation.
Oracle Database 11g Release 2: Oracle Partitioning and Security Features	Oracle Database 11g Release 2 offers more advanced data warehouse, partitioning, security and network feature enhancements to allow the DBA to provide a more efficient way for users to access data in a secure environment. This course covers the enhanced data warehouse and partition enhancements, which includes support for loading data stored in compressed files, new parameters for simplified parallelism implementation, and new partitioning methods. It also covers the security and networking enhancements, including how to use SecureFiles, the password file, default auditing, and tablespace encryption, as well as network support for IPv6 and configuring fine-grained access.
Oracle Database 11g Release 2: Using Change Management Solutions	Oracle Database 11g Release 2 is designed for data center environments that are rapidly evolving and changing to keep up with business demands, enabling DBAs to manage change effectively and efficiently. Oracle Database 11g Release 2 offers significant advances in the areas of automatic diagnostics, supportability, and change management. It can be expensive for organizations to evaluate and implement changes to their data center infrastructure, and Oracle addresses this issue with a collection of solutions under the umbrella of Change Management. These consist of SQL Performance Analyzer, SQL Plan Management, and Database Replay. This course identifies each of these change management solutions and demonstrates how to use them to analyze SQL statements, test upgrades, and capture and analyze workloads.
Oracle Database 11g Release 2: Intelligent Infrastructure Enhancements	Oracle Database 11g Release 2 offers new intelligent infrastructure features to aid DBAs by automatically gathering performance metrics for problem detection and self-tuning purposes. The information gathered can be viewed by the DBA using either reports or views, as well as the alert log. Oracle Database 11g has expanded features for automatic SQL tuning and the Automatic Workload Repository, which allows the DBA to ensure the database is running efficiently, and by using the Enhanced Resource Manager the DBA has the ability to optimize resource allocation among many different database sessions to prevent excessive overhead. This course identifies how to automatically tune SQL statements using Automatic SQL Tuning, use Automatic Workload Repository baselines to gather performance metrics, control maintenance tasks, determine I/O metrics using I/O Calibration tool, and use Resource Manager.

Course	Description
Oracle Database 11g Release 2: Diagnosability Enhancements	Oracle Database 11g Release 2 offers new diagnosability enhancements to help DBAs in diagnosing, resolving, and preventing problems. These new features include enhancements to problem and incident identification, running health checks, and performing repairs on SQL statements. These features enables the DBA to quickly and efficiently diagnose issues and report problems to Oracle Support, as well as reducing damage and interruptions. This course discusses using Automatic Diagnostic Repository, creating and submitting Incident Packages to Oracle Support, running health checks and viewing the reports. It also demonstrates how to use SQL Repair Advisor and SQL Test Case Builder.
Oracle Database 11g Release 2: Application Performance Enhancements	Oracle Database 11g Release 2 offers improved and new features to provide better application performance. It offers online table redefinition, which allows tables to be modified without affecting the availability of the table to users and does not affect any of its dependencies. This allows for easier application changes and improved query and DML performance. Application performance in Oracle Database 11g Release 2 is also improved by the use of adaptive cursor sharing, which allows for intelligent cursor sharing and the use of invisible indexes. It provides two different caches. The first cache includes SQL Query Result Cache used to cache query results or query blocks for future use, which reduces memory use and provides scalability. The second cache is the PL/SQL cross-section function result caching mechanism, which provides a language-supported and system-managed means for storing the results of PL/SQL functions in the SGA, so that they are available to all the application sessions that are running. This course identifies the new online redefinition enhancements for tables, invisible indexes, adaptive cursor sharing, and using SQL Query Result, Client Query, and PL/SQL Function Caches.
Oracle Database 11g Release 2: Backup, Recover, Archive, and Repair Data	Oracle Database 11g Release 2 offers new and improved features to ensure for continuous data access, even during unplanned failures and scheduled maintenance tasks. New RMAN features make it easier to backup, recover and duplicate databases in a timely manner while minimizing data loss. It also offers Flashback technology, giving DBAs additional protection against data loss, as well as the Data Recovery Advisor which automatically diagnoses data failures and offers suggestions on how to correct the issues. This course demonstrates how to backup and recover database, archive backups, using TSPITR, and manage the recovery catalogs. It also demonstrates of to use the Flashback Data Archive, Flashback Transaction Backup, LogMiner, and Data Pump as well as use the Data Recovery Advisor.
Oracle Database 11g Release 2: Oracle Scheduler and Secure Backup	Oracle Database 11g Release 2 offers improvements to Oracle Scheduler that increases efficiency and usability. These include allowing users to get specific email notifications about job activities, triggering jobs to automatically execute when the specified file is received, enabling jobs to run on multiple nodes while managing it from a central location, and running PL/SQL on a remote database as a job. Oracle Database 11g Release 2 also offers backup to Amazon S3 through the Oracle Secure Backup module, this offers a low-cost database backup Web services storage option rather than maintaining a local backup infrastructure. This course demonstrates how to use Oracle Schedule to create email notifications, create file watchers and create and manage remote database and multiple destination jobs. It also discusses the Oracle Secure Backup Cloud module.
Writing for Technical Professionals: Preparation and Planning	Being technically knowledgeable is a good start for anyone wishing to write about a particular technology. However, it is not a guarantee that what is written will achieve its ultimate goal. In fact, some of the greatest technical experts find it very challenging to write effectively on technical matters. While it is important to understand the subject matter, it is equally important to understand the audience and its needs. There are steps that all technical writers should follow before putting pen to paper, including defining scope, determining the objectives of the project, understanding the target audience, and planning the overall structure of the document. This course explores steps writers should take when embarking on a new writing project.
Writing for Technical Professionals: Effective Writing Techniques	Once you have planned the structure of a writing project, you need to plan your writing approach based on your target audience. You must take a different approach, for example, if instructing technical students how to implement a technology from the approach you would use to describe a technology's benefits to the general population. A different approach again will be appropriate if you want to explain the unique nuances of your invention to a group of peers. When you've clarified your audience, you begin writing in earnest, carefully avoiding common pitfalls such as using jargon inappropriately.
Active Directory Domain Services in Windows Server 2008 R2	Windows Server 2008 R2 is the 2009 refresh of Microsoft's Windows Server product. This R2 release introduces improvements to existing features as well as the addition of new functionality. This course introduces the changes to Active Directory Domain Services administration including a review of key considerations when installing a new Windows Server 2008 R2 domain controller to your AD DS infrastructure and the new Active Directory Administrative Center (ADAC) provided for easier Active Directory object management. The course also introduces the new Active Directory Recycle Bin and demonstrates how to enable it and use it to restore a deleted Active Directory object. Another popular new feature highlighted is the ability to perform offline domain joins; discussed are the conditions surrounding an offline join and the steps involved in joining a computer while offline.
Management Improvements in Windows Server 2008 R2	Windows Server 2008 R2 offers a number of improved as well as new features, especially in the area of management, virtualization, and server availability. This course begins with a focus on new management capabilities provided by Server Manager including the new Server Manager cmdlets and the ability to administer remote servers. PowerShell was introduced in Windows Server 2008 but has been more closely integrated and improved in R2, making this simplified command-line utility a timesaver for key administrative tasks. Also to note are the changes in power consumption management, with a series of technologies that allow datacenters to reduce their processor power needs. Windows Server 2008 R2 also revises its Network Load Balancing, Failover Cluster, and Backup functionality providing more flexibility for individual business needs.
Improvements to Role Services in Windows Server 2008 R2	Windows Server 2008 introduced the compartmentalization of server functions into server roles and role services and presented Server Manager as a convenient, central location for installation and administration of those roles. In the R2 release, there are improvements to many server role services as well as some new additions. This course focuses on the advancements made to the increasingly popular Hyper-V server role, which now closely integrates with a number of other roles services. It also presents the recent changes to the Terminal Services role, which is now referred to as Remote Desktop Services and introduces the new remote connectivity technologies including virtualized corporate desktops using Virtual Desktop Infrastructures (VDI), DirectAccess, VPN Reconnect (or Agile VPN), and BranchCache. The course also provides an overview of the File Classification Infrastructure provided in Windows Server 2008 R2 and highlights the improved Web Application Platform, which includes an update to IIS 7.5.
Access Control in Windows Server 2008 R2	Windows Server 2008 R2 has improved on a number of access control features introduced in Windows Server 2008 and also provides some new functionality. This course examines the advancements in access control, including the introduction of AppLocker, BitLocker To Go, the new principle of authentication method assurance, and enhancements to Network Access Protection.
Microsoft .NET Framework 4: Debugging, Tracing and Monitoring Web Applications with VB 2010	Visual Studio 2010 and ASP.NET 4.0 give developers the tools needed to effectively debug, trace, and monitor web applications to minimize errors. This course covers the various ways you can troubleshoot web applications using Visual Studio and discusses how to use ASP.NET 4.0 code to help to accomplish this. Specific topics covered include debugging web applications both locally and remotely, debugging ASP.NET AJAX applications, and using the tracing and monitoring features to promote good application health. This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Microsoft .NET Framework 4.0, ASP.NET Application Development 70-562. Passing this exam will earn the learner the MCTS: .NET Framework 4.0, ASP.NET Applications certification.
Introducing Agile Software Development	Agile software development is an iterative, incremental approach to developing and releasing software. Agile principles include commitment to timely and ongoing software deliveries, changing requirements, simplicity in approach, and sustainable development cycles. The Agile method also promotes self-organizing, self-empowered, self-monitoring teams and individuals who work collaboratively with face-to-face communication. Agile development practices include frequent releases, ongoing testing, customer and stakeholder participation throughout the development process, co-ownership of code and pair-programming. A range of agile methodologies have emerged. All embrace the general principles of agile development but can differ in focus and level of formality. In this course you will be introduced to the principles of agile software development, and you will be provided with an overview of some of the principle agile methodologies such as Extreme Programming(XP) and Scrum. You will also consider the issues involved in applying an agile methodology in an organization.
Planning an Agile Software Development Project	Agile software development is an iterative, incremental approach to developing and releasing software. Agile principles include commitment to timely and ongoing software deliveries, changing requirements, simplicity in approach, and sustainable development cycles. The Agile method also promotes self-organizing, self-empowered, self-monitoring teams who work collaboratively with face-to-face communication. Agile development practices include frequent releases, ongoing testing, customer and stakeholder participation throughout the development process, co-ownership of code and pair-programming. In this course you will be introduced to the practices of agile project planning. You will become familiar with project planning tasks such as creating and estimating user stories, release and iteration planning, and agile modeling.
Managing Agile Software Development	Agile software development is an iterative, incremental approach to developing and releasing software. Agile principles include commitment to timely and ongoing software deliveries, changing requirements, simplicity in approach, and sustainable development cycles. The Agile method also promotes self-organizing, self-empowered, self-monitoring teams and individuals who work collaboratively with face-to-face communication. Agile development practices include frequent releases, ongoing testing, customer and stakeholder participation throughout the development process, co-ownership of code and pair-programming. In this course you will be introduced to the principles of agile project management during software development iterations. You will become familiar with agile practices in relation to project management tasks such as work scheduling, team meetings, change and risk management, progress monitoring, reports and reviews, and project scaling.
Ajax Basics	Rather than a singular technology, Ajax, or Asynchronous JavaScript and XML, is a collection of technologies that enables web pages to make server requests without having to reload the page. This course will introduce the history of Ajax and outline how it is commonly used in the development of dynamic web sites. Beginning with the fundamentals of Ajax, the course will examine JavaScript's role in Ajax development, including objects, the Document Object Model, and events. It will also explore the specific techniques used by Ajax in web applications, including the XMLHttpRequest object, hidden frames, and dynamic script loading. This course is one of a series providing an introduction to Ajax development.
Ajax API Essentials	This course will explore the various technologies that are employed in Ajax applications. It will begin by examining the important role that XML and CSS play in developing Ajax applications that interact with data sent from the server. Then it will discuss common troubleshooting issues that may arise in Ajax applications. Finally, it will explore how web services and APIs can work together to add complex degrees of functionality to an application with minimal effort. This course is one of a series providing an introduction to Ajax development.
Ajax Applications and Server Communication	This course explores the technologies that are used to enable Ajax applications to interact with a server's external data. It will begin by examining the important role that ASP.NET, PHP, Java, and Ajax play in developing Ajax applications, and then explore how Ajax can access and utilize external data sent from a variety of sources. The course will move on to discuss JavaScript Object Notation (JSON), and how frameworks and libraries can add complex degrees of functionality to an application with minimal effort. This course is one of a series providing an introduction to Ajax development.
HIPAA Privacy Essentials	This course presents an overview of HIPAA (the Health Insurance Portability and Accountability Act), outlining the main components and identifying who is covered by the Act. It examines the privacy provisions under HIPAA as they relate to protected health information (PHI). This course helps employees and business associates of covered entities recognize the key provisions of HIPAA, how their organizations are affected by HIPAA, and how the privacy rules impact them.
Foreign Corrupt Practices Act	US firms seeking to do business in foreign markets must be familiar with the Foreign Corrupt Practices Act (FCPA). The Act prohibits corrupt payments to foreign officials for the purpose of obtaining or keeping business. This course provides an overview of the FCPA. It illustrates how the Act can impact your business and gives advice on the steps you can take to make sure that your business adheres to the provisions of the Act.
Anger Management Essentials: Understanding Anger	Anger is a normal and even healthy emotion, rooted in the instinct for self-preservation. It provides important information about our relationships with others and can help us face trouble and overcome obstacles. But if it's not managed properly, this powerful emotion can be very destructive. And the consequences of poorly managed anger in the workplace may be much greater than in other contexts. Yet, its potential benefits may also be greater. This course explores the different ways that people express anger and the common causes of anger in the workplace. It also describes how you can use anger positively in the workplace, and the resulting benefits when you do.
Anger Management Essentials: Managing and Controlling Anger	Anger is a subject that affects everyone. Some individuals need help in controlling their anger, whereas others need help to positively express feelings of anger that are buried. It's important to find healthy ways of owning and expressing your anger. Otherwise, it may find some expression that is inappropriate, unhealthy, or counterproductive. The key to managing anger is creating conditions in which anger can be expressed appropriately and productively. In this course, you'll learn how to handle your anger in a healthier, more balanced way. You'll also find out how to engage with angry people appropriately and effectively.
Basic Presentation Skills: Planning a Presentation	Even the most seasoned public speakers can experience nerves before a major presentation. The successful ones, however, have learned how to make those nerves work for them. Positive concern about the impact of a presentation can spur presenters to raise their game, enabling them to get the desired results. For example, a presentation can be immeasurably improved if you devote sufficient time and attention to three key steps - analyzing your audience, organizing your ideas, and selecting an appropriate presentation method. This course describes how to plan effectively for a presentation by carrying out these steps.
Basic Presentation Skills: Creating a Presentation	Among the fears that people have about giving a presentation is that they will get mixed up, forget to make a key point, or repeat themselves. One way to avoid this is to have a sound structure. Once you have identified the purpose and audience for the presentation, and come up with some ideas for what to say, you can transform those ideas into a script or notes that will guide you through the presentation. You should start with an introduction, where you grab the attention of the audience and tell what you are going to do. Next, you need to support each of your key points and, at the same time, not lose the attention of the audience. At the end of your presentation, you need to give your audience a clear understanding of what happens next. You also must make your ending compelling. After all, this is how the audience will remember you.
Basic Presentation Skills: Delivering a Presentation	Excellence in presentation can be achieved when the standard of your delivery matches the quality of your content. You may have carefully planned and structured what you want to say, but if you deliver your message in a monotone while standing stiffly, you're probably not going to captivate the audience. Having diligently prepared for your presentation, you need to make sure that your delivery is engaging. You need to communicate your enthusiasm to the audience if you want them to be enthusiastic about your ideas. At the same time, you must appear composed and confident. This course describes how to make your delivery successful and memorable. It covers techniques for managing stage fright — the biggest problem most speakers have. It also explains how to set the right environment for your presentation by making the right choices about room layout and by preparing the room, including the equipment, lighting, and temperature. You'll also find out how to use your voice and body language to deliver your message clearly and effectively. Finally, the course outlines guidelines for handling audience questions — an area most speakers are also very concerned about. After all, how credible the audience finds you can be swayed by how effectively you answer the difficult questions that come up.
Preparing to Communicate Effectively at the C Level ""	Does your job require you to communicate mission-critical data with senior executives? Perhaps you have opportunities to influence executive decision-making, but don't know how best to deliver your message. In order to make the most of your communication with the 'C' level, you need to be prepared. This course helps you shape and clarify your message, outlines the principles you should follow when approaching communications with senior executives, and provides important tips on how to build credibility with the 'C' level. It also offers detailed guidance on how to approach and plan meetings with senior executives in order to ensure you are positioned for success.

Course Title	Description
Techniques for Communicating Effectively with Senior Executives	Understanding how to communicate effectively with senior executives is a valuable skill for any professional. How else will you pitch your great idea to your CEO or report on key successes or failures? What if you've got only a few minutes to get your message across? This course provides direction on how to carry out executive-level communications in both formal and informal settings. It also explores different communications media and how they might be used to convey your message to senior executives. Finally, the course recognizes the different reasons why you might communicate with the C" Level. It offers specific guidance on furnishing reports
Trial Balance & Adjusting Entries	A typical accounting cycle begins with the analysis of business transactions and ends with a post-closing trial balance. Trial balances are prepared at several times in an accounting cycle. A trial balance lists all of the ledger accounts and checks if debit and credit totals for all accounts match. Trial balances provide an opportunity to correct any calculation, recording, or posting errors in the account books. Adjusting entries are then made to record accrued or deferred amounts followed by another trial balance to check equality of debits and credits. Financial statements are also prepared at this stage in the cycle. Finally, all temporary accounts are closed and a post-closing trial balance is prepared.
The Balance Sheet	The Balance Sheet is arguably the most important of all financial statements. It is a financial snapshot of a company's health at a specific point in time as measured in terms of assets, liabilities, and owners' or shareholders' equity. It allows you to see what a company owns as well as what it owes to other parties. People who might be interested in the Balance Sheet include creditors, investors, company management, suppliers, customers, competitors, government agencies, and analysts. The Balance Sheet is closely connected to the other key financial statements â€" the Income Statement and Cash Flow Statement.
The Cash Flow Statement	As the popular saying goes â€" revenue is vanity, margin is sanity, and cash is king. While it is very important for an organization to keep earning revenue and maintaining a good profit margin, a positive cash flow is equally important for its survival. Cash flowing in to the organization must meet or exceed the cash flowing out to enable the organization to pay its debts and liabilities and meet its growth and day-to-day cash requirements. The Cash Flow Statement is a key financial statement that reports cash receipts, payments, and net change in cash resulting from operating, investing, and financing activities during a reporting period.
Accounting for Companies' Stock Transactions and Dividends	A publicly or privately held company, also known as a corporation, is an entity separate and distinct from its stockholders. When an investor puts money in a company in return for part ownership, the company issues stocks to the investor. Stock is the evidence of the ownership interest of the stockholder. Sometimes a company also reacquires some of its outstanding stocks from its stockholders for retiring, holding, or reselling purposes. Stocks reacquired and held with the company are called treasury stocks. Companies often decide to share part of their net income, called dividends, with stockholders as reward for stockholders' investment risk in the company. Implications of issuing common and preferred stocks, treasury stocks, and dividends are very significant for companies' accounts.
HR as Business Partner: From Cost Center to Strategic Partner	Tactics or strategy â€" which would you invest in? Which creates more value for the organization? Every organization strives to be more effective and efficient in reaching its goals and objectives. In an ideal world, your strategy is well defined and aligned with the goals of the organization. HR has a seat at the executive table, helping to set and implement strategy throughout the organization, and all the day-to-day administrative HR activities efficiently support the organizational strategy. This is transformational HR.
HR as Business Partner: Linking HR Functions with Organizational Goals	Fulfilling business and organizational goals is at the heart of transformational HR. Where transformational HR is in place, the HR function is directly involved in developing, refining, and implementing an organization's strategic goals. An organization can measure its success only if its end goals are well defined. To define these goals, you must understand your organization and its needs. You can then mobilize the leadership and organizational capabilities to achieve the final result, and ensure all processes are aligned with these goals.
HR as Business Partner: Managing Talent for Organizational Success	An organization's talent is the key to its success, and HR is perfectly positioned to contribute to that success by optimizing the workforce and engaging employees to use their knowledge, skills, and abilities to support the organization's goals and objectives.
The Manufacturing Industry Overview: Version 3	The manufacturing industry produces a broad range of products for its customers in a fast-paced, consumer-driven environment. Comprised of a wide variety of industry players and stakeholders, this industry develops the fastest methods available to produce and deliver products to meet customer demands. Manufacturers produce vehicles, building materials, household products, textiles, pharmaceutical drugs, toys, and a wide range of other products that customers require. They are dependent on finding the materials, workforce and best methods to manufacture products quickly, at a competitive price, to meet the constant changes in consumer demand.
The Pharmaceutical Industry Overview: Version 3	The pharmaceutical industry provides an extensive range of medications to consumers throughout the world. Comprised of a variety of stakeholders, this industry is dependent on discovering and developing medicines, manufacturing these products commercially and marketing them to health officials or consumers. Industry players adopt unique strategies to overcome the many challenges they face in addressing the prevalent health issues of our times.
The Information Technology Industry Overview: Version 3	The information technology industry plays a unique role in helping companies conduct their businesses in the modern era. Industry participants must be highly competitive to provide the latest technological advances. It provides value to customers by embracing new trends, such as cloud computing, virtualization, and mobile application solutions to keep their customers ahead of the competition. It must also be sensitive to changing customer needs and be driven by new business opportunities as they emerge. Although the industry is continually challenged by intense competition, cost pressures, emerging markets, and security threats, industry players provide solutions through innovation, outsourcing, and strategic mergers and acquisitions to enhance their businesses, while improving the way people access and use information throughout their professional and personal lives.
The Federal Government Industry Overview: Version 3	The federal government industry is the world's largest service provider with primary responsibility to provide essential services to its citizens funded through its collection of taxes. A federal government is usually comprised of a host of governmental departments and various stakeholders, which can include, but are not limited to, individual states, provinces, and territories. A federal government delivers services, creates and enforces laws, maintains highways, collects taxes, defends national sovereignty, encourages investment, provides education, oversees environmental issues, and performs a host of other services to its citizens. Different nations, and their respective federal governments, all adopt strategies to overcome the challenges they face that can stagnate services, overextend budgets, cause intradepartmental barriers, and impede hiring the best employees. Federal governments are continually driven to find solutions through improving service delivery, reducing costs, opening departmental barriers, and attracting a talented workforce.
The Education Industry Overview: Version 1	The education industry provides its students with the knowledge and skills to adapt to a continually changing working world. The industry consists of an expanding array of organizations that seek to provide lifelong learning to its customers. These organizations include traditional colleges and universities as well as companies focused on training and development for clients that range from an individual learner to global corporations. As a whole, the industry is responsible for training individuals of all ages to learn new skills, obtain employment, and spur economic growth, by delivering education in traditional classroom settings or via distance training over the Internet. The education industry must adapt to the challenges of containing costs, differing views on standardized learning, competing for students, and adapting to changing economic needs. Industry players adopt unique strategies to overcome these challenges by forming education partnerships, adapting to new technologies, and developing customized and personalized learning programs.
The Utilities Industry Overview: Version 1	The utilities industry is essential to modern living and the modern economy. It provides safe sources of drinking water, proper sewage disposal, and reliable heat sources for homes and businesses. It also provides a reliable source of electrical energy to operate the machinery, equipment, and appliances that are vital to a region's prosperity and growth. This traditional industry is undergoing major changes, and its leaders must adapt to a changing regulatory environment and embrace new technologies to succeed. The utilities industry must also meet growing customer demands for its services, find sustainable sources of green energy, and control its business costs, while, at the same time, funding major projects for the future. Utilities companies are dedicated to solving these challenges by incorporating technological advances, using renewable resources, preserving capital, and utilizing risk management procedures.
The Chemicals Industry Overview: Version 1	The chemicals industry is comprised of thousands of companies throughout the world that use basic raw materials to produce chemicals that have commercial value to consumers and other industries. These chemicals are used to produce plastics, synthetic fibers, lightweight automobile parts, fertilizers, cosmetics, household materials, computers, and many more products. High energy consumption, high prices of raw materials, diminishing returns, and sustainability are among the challenges that companies in this industry face. They are addressing these challenges by improving existing processes, applying new supply chain management techniques, expanding the specialty chemicals business, and developing industrial biotechnology.
The Broadcasting & Entertainment Industry Overview: Version 1	The Broadcasting & Entertainment Industry is tasked with engaging its consumers with new and traditional forms of entertainment. The industry players deliver films, television programs, music, radio programs, electronic media, books, news, and an ever expanding array of entertainment products. It provides its customers throughout the world with access to these activities through an expanding number of media devices and channels. This industry has to adapt to new ways to create, distribute, and access its content according to consumer demands. The industry is challenged by decreasing advertising revenue from traditional sources, new media platforms, content piracy, and access to emerging markets. They address these issues by utilizing digital advertising, new business models, mergers and acquisitions, lobbying, litigation, and encryption techniques.
The Capital Markets Industry Overview: Version 1	The capital markets industry is an exciting, fast-paced, and volatile industry. Comprised of investment banks, securities firms, and a variety of other stakeholders, the industry helps companies and governments raise long-term funds on the capital markets. The industry participants deliver various services to their clients, such as underwriting and acting as agents in the issuance of securities (stocks and bonds); assisting and advising companies involved in mergers and acquisition; as well as providing ancillary services including market making and securities trading. With a complex playing field dominated by large, vertically-integrated banks, the capital markets industry suffered a tremendous blow from the global financial crisis of 2007-2009. Since then, the industry has been faced with a more stringent regulatory environment, stronger global competition and an increased need for risk management among other challenges. By consolidating and reorganizing their corporate structures, improving existing risk management processes, deploying new technologies, and by expanding their operations in developing markets, industry players are adopting unique strategies to succeed in the aftermath of the financial crisis.
The Consumer Electronics Industry Overview: Version 1	The Consumer Electronics industry is made up of companies from around the world that manufacture electronic audio and video equipment for individual consumers and businesses. In this fast-moving industry, where some products are lucky to have a shelf life of more than a year, companies need to be able to adapt quickly. In addition, they face challenges related to increased regulation, and the need to continually lower prices to move their products off the shelves. But top industry players are able to adopt effective strategies to remain successful. For example, they might focus on improving their business and manufacturing processes in order to reduce their costs and thereby absorb the lower prices demanded by the market. Or they might increase their investment in research and development to address rapid technological change. This course is designed to help learners understand these challenges and some of the common strategies used to overcome them, as well as some of the other key concepts and terminology associated with the consumer electronics industry.
The Aerospace & Defense Industry Overview: Version 1	The aerospace and defense sector is an international multi-billion dollar industry. Key stakeholders include aircraft and aircraft component manufacturers, civil and military avionics service providers, governments, and privately funded research and development organizations. These organizations deliver aircraft and their components, as well as software and systems, such as modeling and simulation software, and data management, navigation, and surveillance systems. This industry is subject to a high level of government regulation, particularly the defense sector. As it adapts to the entrance of new global companies, the industry is moving towards a highly globalized supply chain.
The Biotechnology Industry Overview: Version 1	Unlocking the potential of biotechnology entails turning scientific knowledge into products that can enhance, and even transform, the conditions of life. A relatively new but growing, global industry, biotechnology involves engineering biological molecules and microbes with desirable new properties. This re-engineering of natural organisms can lead to the development of new and better drugs, medical treatments customized for an individual's biological makeup, disease-resistant crops, and new industrial processes. Some of biotechnology's promises have been delivered, but many have not. False starts are common in an industry where the development of new products is uncertain, time consuming, and expensive. Companies in the industry face other obstacles as well Ã¢‚¬Â€ pricing pressures and a decline in funding, for example. To address such challenges, industry players can adopt new cost-cutting and efficiency measures or partner with other biotechnology or pharmaceutical firms. They also need to deal with increased regulation and strong moral opposition to their activities Ã¢‚¬Â€ particularly in the field of genetic engineering. In response, biotechnology companies seek to educate the wider community about their activities and justify the benefits and safety of those activities to the public, the government, and investors. In this course, you'll find out more about these and other strategies, as well as about key areas of the biotechnology industry, including its main sectors, what drives it, current trends, and top competitors.
The Automotive Industry Overview: Version 3	Historically, the automotive industry has been a driver of economic activity in many economies. However, the industry has gone through some dramatic changes in the last few years as major manufacturers and suppliers have had to reorganize themselves to meet changing needs and expectations. In the unrelenting push for lower costs and operational efficiency, automotive companies are finding themselves in a fiercely competitive global marketplace. The industry continues to reinvent itself by improving manufacturing processes, introducing new vehicles, and incorporating green technology into its latest products. Understanding the industry structure and its constantly changing dynamics is vital to anyone who has an interest in the automotive industry.
The Food and Beverage Industry Overview: Version 3	The Food and Beverage Industry encompasses the production, processing, distribution, and sale of food and beverages to consumers. The industry is made up of a wide range of organizations Ã¢‚¬Â€ from farmers who produce the raw material, to companies who process and package branded products, to retailers who supply food and beverages to their customers. The industry is very competitive and participants are continually under pressure to contain costs. To remain competitive, many companies seek to exploit the economies of scale that result from mergers and acquisitions. At the same time health and safety is a paramount concern, and strict standards are legally enforced. The industry is monitored both by national governments and international bodies like the World Health Organization.
The Benefits and Challenges of Engaging Employees	Creating an engaged and motivated workforce can help make an organization more innovative, productive, and profitable. This course reviews the benefits of having an engaged workforce and defines the attributes and actions of engaged employees. It also explores employee motivation and commitment challenges and examines how employee engagement links to the bottom line.
Maintaining an Engaging Organization	An engaging organization depends on an engaged workforce â€" but different employees are motivated in different ways. However, with the proper tools, understanding, and strategies, managers can foster a motivational environment that helps employees become more engaged with the organization, so that they perform more effectively and positively. This course explains how to identify what does and does not motivate employees and introduces tools you can use to assess levels of motivation. It also shows how you can drive engagement within your organization to create a place where people want to work and provides strategies to help you become a motivating and engaging manager.
First Time Manager: Understanding a Manager's Role	Most new managers don't realize how much their new role differs from that of an individual contributor. Often, they have misconceptions about what managing entails, and they may be surprised to learn that the skills and methods required for success as an individual contributor and those needed for success as a manager are very different. This course describes some of the myths about management and their corresponding truths in order to clarify what managers really do. It also points to the typical demands and constraints of a manager's job. Finally, it describes strategies for dealing with common mistakes of first-time managers.
First Time Manager: Challenges	High expectations are often placed on first-time managers. Along with these expectations comes the pressure to succeed and the need to prove you belong in a management position. Establishing credibility early and building new working relationships can go a long way in helping a first-time manager succeed in adjusting to his or her new responsibilities. This course describes ways to establish credibility and manage former colleagues effectively.

Course	Description
First Time Manager: Meeting Expectations	One of the most exciting and challenging changes that comes with moving into a management role, is the need to take a more strategic view of the work you are doing. As a first-time manager, you have to develop a greater awareness of how your own work, and the work of those in your department, fits in with the organizational vision. You need to know what the organization expects of you as a manager. You also need to understand the different expectations that your direct reports, your peers, and your boss have of you, and how to balance these effectively. It's also vital to build a strong relationship with your manager so you get the support you need to meet expectations. This course covers how to meet organizational expectations as a first-time manager, as well as how to balance conflicting expectations of peers, direct reports, and management. It also describes how to establish a productive relationships with your new boss.
Meeting the Needs of Your Experts	As a manager, you'll often find yourself managing people with knowledge, skills, and expertise you don't have, in areas you're unfamiliar with. The amount of information that managers process on a daily basis requires them to know a little about a lot. However, they have to rely heavily on their experts for the in-depth knowledge needed to meet goals and get the job done. Along with unique subject-matter expertise, these experts have unique needs in the workplace. Learning to meet these needs can help you increase the productivity, retention, and quality of work of your experts.
Overcoming Challenges When Managing Experts	Getting the most out of your experts can sometimes be difficult. They might display characteristics that on the surface seem unmanageable. You have to carefully plan how you interact with such challenging experts if you want them to help you in a productive way.
Performance Appraisal Essentials: Planning for Appraisals	The key to successful performance appraisals is a clear understanding between manager and employee of what is expected. Chances are if there is no such understanding, the manager will assess performance on the basis of what he or she expects of the employee, and this may be very different from what the employee understood to be the job duties and responsibilities. To avoid this problem, a manager needs to plan for appraisals by clearly laying out the expectations for employee performance and by providing ongoing feedback during the appraisal period. This course explains why performance appraisals are important, describes how to develop an Employee Performance Plan, and outlines ways to monitor ongoing employee performance.
Performance Appraisal Essentials: Conducting Traditional Appraisals	If you were to poll a group of managers about how comfortable they feel conducting appraisals, you would probably find few saying they feel completely comfortable. Conducting appraisals isn't easy but it's an important part of a manager's job. Regularly appraising your employees' job performance can reinforce outstanding performance, as well as help your direct reports improve below average performance. This increases productivity and helps you build better relationships with your team. To increase your comfort level with conducting appraisals, you should try to become familiar with the areas to be covered during the actual meeting and with skills and techniques for addressing the appraisee. This course describes ways to prepare for appraisal meetings, as well as how to carry out those meetings effectively by following certain steps and guidelines. In particular, it demonstrates what to do when an employee becomes emotional during an appraisal.
Performance Appraisal Essentials: 360-degree Appraisals	By gathering information from many different people, a 360-degree appraisal gives a complete portrait of behavior on the job â€" one that looks at people from multiple perspectives. This type of appraisal incorporates feedback from peers, managers, customers, and direct reports, as well as from the appraisee. And when feedback from all these sources is presented in a way that enables people to plan for improvement, it can bring about real, measurable changes in people's behavior. This course provides an overview of the steps involved in carrying out a 360-degree appraisal. It then focuses on two key steps: gathering feedback and delivering the feedback.
Managing Workforce Generations: Introduction to Cross-generational Employees	More than ever, managers appreciate how diversity brings value to an organization. Managed correctly, a diverse workforce, including members from different generations, enhances performance and productivity. The generation in which you grow up is a key influence on your adult behavior, and the different characteristics of each generation can strengthen an organization if properly managed. But stereotypes are pervasive and divert attention from the positive roles that different generations bring to the workforce. Understanding people from different generations prepares managers for the challenges of generational diversity and is a crucial first step in creating a positive work environment. This course describes the common characteristics of the four main generations in the workforce â€" the Traditionals, Baby Boomers, Generation X, and the Millennial Generation. It also introduces the benefits of cross-generational teams.
Managing Workforce Generations: Working with a Multigenerational Team	Managing a multigenerational team requires a clear understanding of the diversity of your employees and the strategies needed to help your team benefit from their differences. A generationally diverse workplace has the potential for conflict between younger and older workers, but if you tap into the potential of this diversity and view differences as strengths, you will create a more productive, collaborative, and innovative work environment. This course reviews the potential sources of conflict within a generationally diverse team, including differences in approaches to work and communication. It also covers strategies for managing a multigenerational team in a way that ensures your team members â€" regardless of differences in approach â€" feel included, respected, and supported. This course also describes how to implement a mentoring program that takes advantage of the varying experiences and perspectives of multiple generations.
Managing Workforce Generations: Working with the 21st-century Generation Mix	Many of the same influences have shaped the lives and work experiences of the newer generations â€" the Millennials and the Generation Xers. Widespread Internet usage, for example, means that, typically, these generations are adept in technology. Globalization is another shaping influence, with the result that both generations value diversity. At the same time, however, each generation has its own distinct attitudes, priorities, and work habits. By using strategies that recognize the differences, managers can get the best from each generation. This course describes best practices and successful techniques for managing Millennial and Generation X employees.
Marketing Essentials: Introduction to Marketing	How do you know what consumers really want? How do you know which consumers to go after and how to get them interested in your products and services? You need to develop an effective marketing strategy.
Marketing Essentials: Planning and People	The four Ps of the traditional marketing mix (Product, Price, Place, and Promotion) are important strategic cornerstones of any marketing activity. However, this traditional view of the Marketing Mix fails to address two very important aspects of marketing: planning and people.
Marketing Essentials: Product and Price	How do you know what kind of products and services you should be marketing? How do you develop successful products and services? How do you promote and sell them? In todayâ€™s highly competitive marketplace, these considerations are more important than ever.
Marketing Essentials: Place	Getting your products and services into your customers' hands is not a simple task; a multitude of factors must be considered. How do you select the most effective distribution channels? Should you be targeting your distributors to help promote and sell your products, or should you market directly to consumers? How do you build strong relationships with distributors? Place, which focuses on the distribution of products and services, is an important component of any marketing initiative and requires careful integration with all other aspects of the modern marketing mix.
Marketing Essentials: Promotion	How do you get customers interested in your products and services? What kinds of sales and advertising strategies will you use? How will public relations support your promotional strategies, if at all? Promotion, a key aspect of the marketing mix, focuses on raising awareness about your product and service offerings among key customer target groups. This course will provide insight into how to design promotional strategies and campaigns that help expand existing markets and develop new customer relationships. You will learn about the key characteristics of different forms of advertising and promotional vehicles, including the reach, benefits and cost of both traditional and more modern approaches such as social media networking and other forms of online marketing. This course will also discuss the concept of return on investment (ROI) in promotion, how to approach ROI for both traditional and online promotional efforts, and how this type of evaluation can help you plan and execute your promotional efforts more effectively.
Marketing Essentials: Marketing and Ethics	What role does ethics play in marketing? What is corporate responsibility and how is it linked to marketing? In order to develop strong and lasting customer relationships, organizations must ensure their marketing practices are fair, honest, and accurate about their product and service offerings. While marketing is a key business function, it also has an important societal component that cannot be overlooked. This course introduces the concept of ethics in marketing and its close connection to corporate responsibility. It also provides insight into how to ensure marketing practices are ethical, and outlines the benefits ethical marketing can generate for an organization and its corporate culture. You'll learn about societal marketing, the dangers associated with unethical and deceptive marketing practices, and how to build and sustain strong ethical marketing standards and practices within an organization. The course also addresses the growth of new communication technologies and how they have affected the way marketers reach their audiences. Finally, it looks at and how organizations can apply ethical marketing standards to e-marketing, as well as more traditional efforts.
Using Lean for Perfection and Quality	Lean methodology comprises a powerful set of tools designed to optimize perfection and quality in a manufacturing or service organization. 5S is a tool for organizing and creating a productive work environment. Hoshin Kanri deals with strategic direction and management to ensure creation of value in products and processes. Jidoka helps identify and solve errors in a production or service delivery process. Standard Work aims at establishing the best procedures for each process to ensure efficient work methods and help eliminate waste.
Lean Tools and Techniques for Flow and Pull	The Lean approach is to eliminate waste from an organization's production and fulfillment processes and to maximize every opportunity to improve efficiencies and customer satisfaction. By applying Lean tools and techniques, organizations can become more competitive and responsive to customer demands. For example, the Visual Workplace is a Lean tool that uses clear visuals such as signs, labels, and color-coded markings to keep workers from wasting time and effort searching for materials. Another tool â€" just-in-time management â€" ensures there is a continuous supply of components, parts, and supplies so that workers have what they need, where they need it, when they need it.
Reducing Waste and Streamlining Value Flow Using Lean	Eliminating waste is one of the most effective ways to increase the profitability of any organization. Processes either add value or waste to the production of a product or service. The seven wastes originated in Japan, where waste is known as muda. Seven types of waste were originally identified by Toyota's Chief Engineer Taiichi Ohno. Identifying and eliminating these wastes is one of the core principles of Lean Manufacturing. In order to eliminate waste, one must know what waste is, where it exists, and what causes it. There are practical and simple strategies for dealing with each type of waste, thereby reducing harmful effects on a company and improving overall performance and quality.
Value Stream Mapping in Lean Business	Processes are a part of every business. It is important to graphically depict these processes so areas of waste can be identified and eliminated, creating a more efficient, profitable, and lean organization.
Applying Lean in Service and Manufacturing Organizations	Experts say that becoming a Lean enterprise is largely culture-related. An organization's culture dictates how people work, their attitudes toward work and change, their relationships with each other and management, and the way change is introduced and implemented. Any company that wants to make sustainable improvements can benefit from a Lean culture. Effective Lean enterprises successfully turn knowledge into action. Continuous improvement â€" or kaizen â€" is key to this ability. The timely and productive application of kaizen methods allows an organization to eliminate waste, create a healthy and Lean culture, and change the behaviors and attitudes that create waste.
Operations Management and the Organization	Operations management plays a vital role in producing and delivering goods and services to customers. It involves designing, planning, directing, and controlling the organization's resources and processes required to transform capital, skills, and materials into products and services. It is important that any operations strategy be aligned with the overall organizational business strategy for its success.
Operations Management: Product and Service Management	Product and service management is the process of designing, creating, and maintaining a product or service through all stages of its lifecycle. It involves a wide range of operations, marketing, and sales related activities. These activities encompass the entire range of product life cycle â€" from the conception of a new product or service idea, to its design and launch, and later through its growth, maturity, and decline stages. Operations aspects of product management are very vital to the success of new and existing products and services. Every organization conducts product management activities, whether knowingly or unknowingly, that integrate operations, marketing, and sales functions to deliver desired products and services to customers.
Operations and Supply Chain Management	The supply chain is a network of operations running across an organization, which are needed to design, make, deliver, and service products or services for customers. Production, inventory, location, transportation, and information are performance drivers that can be managed to produce the capabilities for a given supply chain. As a part of their overall strategy, organizations also employ many supply chain strategies to survive and compete in a dynamic and competitive marketplace. However, it is also essential from an organization's point of view to use effective performance measures to ensure continuous improvement of the supply chain and also to set directions of its current supply chain strategies.
Operations Management: Inventory Management	Inventories include an organization's raw materials, work in process, supplies used in operations, and finished goods. A major part of organization's capital and costs are involved in maintaining and managing inventories. Consequently, organizations work to achieve an ideal size of inventory to reduce costs and improve the bottom line while ensuring their ability to make products and services available to their customers. Although inventory management is commonly associated with the manufacturing sector, many of its concepts and tools can also be applied to the service industry.
Operations Management: Forecasting and Capacity Planning	Customer demand for products and services changes constantly. Forecasting and capacity planning ensure that resource are managed so that customer demand is met in the right amount, at the right time, with the right quality. Demand forecasting helps companies determine the supply of products and services needed to meet customer demand. When the supply requirements are known, an organization can focus on ensuring the availability of appropriate levels of material, workforce, facilities, and financial resources to produce the desired products and services. Any adjustments to the overall capacity of operations are made based on long-range customer demand forecasts and the organization's current capacity to meet them.
Operations Management: Operations Scheduling	Operations scheduling involves the distribution and use of an organizationâ€™s resources â€" in other words, its human resources, equipment, and facilities â€" to produce the goods and services needed to meet forecasted customer demand. Two important activities within the scheduling function are loading and sequencing. Loading means assigning production-related work to appropriate organizational resources. Sequencing establishes the order for performing the work needed to meet production priorities and targets. These scheduling activities enable operations managers to optimize the use of organizational resources during production.
Operations Management: Management of Quality	Quality means different things to different people, organizations, and industries. However, according to quality guru Joseph Juran, quality means fitness for use
This course helps learners gain a basic understanding of quality and its management in a service or manufacturing organization. The course introduces key quality performance objectives and their measures and identifies some quality management principles and how they help organizations achieve their quality-related	the course discusses quality management activities that are typically carried out at each phase in an organization's operations."
Operations Management: Facilities Planning and Management	Managing facilities plays an important role in integrating employees, work processes, and work locations with an organization's production system. This integration is essential to productivity and customer-focused production. Decisions about facility location must consider access to customers, resources, and utilities. Layout of facilities is determined by the nature of the organization, its production system, and the processes used for creating its products or services. When choosing the location and layout of a facility, service facility managers must be mindful of how products or services are delivered, so that customers leave with a great experience.
Rebuilding Trust	Trust is an important component in any workplace. When colleagues know they can count on each other, morale and productivity levels tend to increase. But what if trust is betrayed? How will this impact your ability to perform your job effectively? This course will provide key insight into the cost of lost trust including its negative impacts on performance, morale, and ultimately the bottom line. How to rebuild trust once it's lost and maintain trust over time will also be addressed.

Course	Description
Introduction to Workplace Ethics	Ethics don't just apply to senior executives. While upper management does have a responsibility to set the ethical tone for an organization, employees at every level also have a responsibility to conduct themselves in an ethical manner. This course will prepare you to approach your job with an awareness of the importance of ethics in the work setting and an understanding of what constitutes ethical behavior. You will learn the thinking behind ethical behavior and be able to recognize some of the common myths about business ethics.
Developing a Code of Ethical Conduct	Become a better employee by understanding that honoring shared values and beliefs will gain you a reputation for being responsible, fair, honest, and respectful. These are essential qualities for both personal and professional success. Following a personal code of ethics is a good way to apply ethical principles and to ensure your reputation and integrity in the workplace are uncompromised. Many companies provide their employees with a formal code of conduct, but you can also develop your own code by clarifying your ethical principles and applying guidelines for behaviors that align with your code. This course explains common values, offers a process for developing your own ethical code of conduct, and presents several scenarios in which you get to exercise your ethical muscles. With the guidance provided in this course, you will be able to develop your own code of conduct, apply core values at work, and approach common ethical problems with confidence.
Ethical Decision-making in the Workplace	How do you go about making the best ethical decision possible? Sometimes there are gray areas between what is right and what is wrong. Do you have the tools necessary to ethically lead you in your work practices? When you are able to recognize areas in which ethical problems occur in the workplace and are aware of the various arguments and justifications that become obstacles to ethical behavior, it is easier to successfully apply ethical standards. This course aids you in identifying ethical problems, helps you avoid the obstacles that may tempt you to act improperly, and gives you the tools necessary to guide you toward the right decisions.
Critical Thinking Essentials: What Is Critical Thinking?	Critical thinking is something everyone does — to some degree or another — in their professional and personal lives. Almost all of your everyday activities require you to seek information, analyze alternatives, assess the alternatives, and reach some conclusion. And all of these processes are part of critical thinking. Thinking plays a powerful role in your life — it determines how you feel, what you do, and what you want. Improving the quality of your thinking, then, improves your life — helping you to achieve your goals, make better decisions, and take charge of what you do. This course defines critical thinking, describes the elements of critical thought, and outlines strategies for improving the quality of your thinking.
American Work Culture and Values	Most American workplaces appear similar in many ways, particularly from the perspective of people from outside the United States. When you understand the values underlying the American workplace, you'll know better what to expect. And this, in turn, may help you develop positive approaches to the cultural differences you encounter. Adjusting to a new work environment and understanding the cultural and behavioral characteristics of your new colleagues are two key challenges for someone coming from abroad to work in the United States. This course describes the main values in American culture that influence behavior in the workplace. It explains the typical stages you go through when adjusting to a new culture — in this case, American work culture. And it provides guidelines that can help you respond constructively to the challenges you may face when working abroad in the United States.
Key Aspects of the American Work Environment	Relocating abroad to the United States can be a rewarding and exciting experience. However, going into an unfamiliar workplace environment can also raise a myriad of questions. Do I relate to my coworkers in a particular way now that I'm in a different culture? Do I manage my career in the same way as I would in my own country? Who do I turn to for support? This course addresses these questions by describing key aspects of the American workplace that you may be unfamiliar with. It covers how to deal effectively with the diversity you'll likely encounter in an American setting, what the expectations are for being a boss or subordinate in an American workplace, and how you can manage your career in a new environment. The course also explains the types of orientation and support programs you should take advantage of as you adjust to your role in an American organization.
Communicating Successfully in the American Workplace	When you start working in an American workplace, you may be surprised by some of the differences in the communication style there, compared to your own. Culture influences how people send and interpret messages. To work effectively with people from another culture, it is beneficial to understand their communication style. This course describes the typical characteristics of the American communication style. It also explains some nonverbal communication behavior you may encounter in an American work context, and it presents general guidelines for communicating effectively both verbally and nonverbally in a US work environment.
Succeeding in the American Workplace	Efficiency, achievement, and action are important workplace values in the United States. And being successful in an American workplace can depend on how well you adopt practices that reflect these values. For example, do you actively look for ways to make things better in your organization? Do you know how to conduct meetings efficiently? Are you able to make decisions quickly and effectively when working in time-sensitive situations? This course describes effective workplace practices and behaviors related to these and other areas that can help you succeed in the American workplace.
IT Project Management Essentials: Introduction to IT Project Management	The successful delivery of information technology (IT) projects requires managers to adapt project management processes and tools to account for the specific characteristics of the IT environment. By applying these processes and tools in a way that suits the project type and complexity, managers can significantly improve project success rates. This course describes how IT projects differ from other project types and points to the benefits of applying project management principles to IT projects. It provides an overview of the activities you carry out in each of the phases of an IT project and describes key project management tools.
IT Project Management Essentials: Initiating and Planning IT Projects	If you want your IT project to complete successfully, you need to get it off to a good start. During the early stages of a project — the initiating and planning phases — a project manager should clarify objectives and requirements and create a project plan that delineates, among other things, what needs to be done, when it needs to be done, and how much it will likely cost. Although the plan may change as the project progresses, it's important to get down as much detail as you can at the very beginning. This course describes how to initiate an IT project effectively. It then focuses on three key areas of planning — developing a work breakdown structure, schedule planning, and cost planning.
IT Project Management Essentials: Executing IT Projects	The execution phase in an IT project is when the work gets going and the plan is transformed into action and results. From the start of this phase, it's important for the project manager to establish regular communications with project stakeholders — management, the development team, sponsors, and others — to keep them informed on how the project is progressing. In addition to communicating regularly with stakeholders, a project manager should ensure that the team works well together and that the deliverables are meeting the quality standards, as well as other objectives, set in the project plan. This course describes strategies for maintaining a cohesive project team, outlines ways to communicate project information to different stakeholders, and describes how to keep quality on track during the execution phase of a project.
IT Project Management Essentials: Monitoring and Controlling IT Projects	The aim of project monitoring and control is to compare actual progress and performance against the project plan. An IT project manager must analyze any variances from the plan and identify what actions may need to be taken. If project managers don't monitor their projects on a regular basis, they won't know which tasks are behind schedule or over budget, or what the issues or risks are. IT projects can be complex, with many variables, and it's important that project managers know, at all times, how the project is progressing and what is causing any slippages. This course describes how to monitor the progress of an IT project, analyze variances from the project plan, and control changes that may be requested during a project's life cycle.
IT Project Management Essentials: Managing Risks in an IT Project	IT project managers deal with risks every day, including potential cost overruns, schedule delays, design constraints, hardware defects, and software bugs. Without a plan or process in place to address the possibility of unpredictable and unwanted loss during a project, managers may be dealing with risks reactively, rather than proactively. Potential trouble areas need to be identified early and dealt with quickly and appropriately so a project doesn't go over budget, miss deadlines, or negatively affect an organization's reputation. IT project managers can plan effectively for handling the possibility of negative outcomes by following a risk management process. Such a process can help them monitor and control risks throughout a project's life cycle. This course describes the steps in a risk management process for IT projects — from identifying the risks and documenting them, to analyzing and developing appropriate and effective responses.
IT Project Management Essentials: Testing Deliverables and Closing IT Projects	Because it's a significant point in an IT project, the closing phase has its own set of processes and activities. When a project manager carries out those activities and processes, he or she can demonstrate that the project goal has been met and provide the team with a sense of accomplishment. In addition, carrying out the final tasks of a project, particularly the task of archiving documentation, ensures that lessons learned are gathered and stored for the future. An orderly conclusion also helps guarantee that end users' needs and expectations have been met and that stakeholders are satisfied. This course describes the closing activities for IT projects, covering how to test IT project deliverables to make sure they meet requirements, which activities help close an IT project effectively, and how to set up maintenance and support.
Introduction to Sales	Sales is arguably the most important function in any business, yet it's one of the most difficult areas to master and manage successfully. There are several common questions people ask about sales. What is the difference between sales and marketing? Why do consumers and organizations buy, and what drives their purchase decisions? What are the key competencies required for effective sales? This course highlights the important role that the sales function plays and describes how marketing and sales relate to each other. It outlines the roles and responsibilities of the Sales Department, what makes for effective sales, and the trends affecting sales today. The course also provides insight into the importance of the sales cycle and how it affects sales planning and business development.
Strategic Sales Planning	Who are your target customers? What value propositions are you offering them and why? How do you plan effectively in order to maximize revenues and develop strong customer relationships? The use of strategic sales planning is one way to answer these important questions. Defining and developing an effective sales strategy is an essential part of any sales function and has a significant impact on the success or failure of sales initiatives. This course explores the importance of strategic sales planning, including the benefits associated with developing sales strategies. It provides insight into how to approach and develop sales strategies, including the key steps in strategy development such as competitor analysis, segmentation, value proposition development, and sales process development.
Preparing for Successful Sales	Selling can be a demanding, even daunting task. How do you develop a persuasive sales pitch? What makes for an effective sales presentation? What do you do when customers raise objections during a sales pitch? How do you close a sale? This course provides insight into the answers to these questions while it teaches you how to prepare for and deliver effective sales presentations that will resonate with your target audience. You will learn techniques for negotiating during a sale, handling objections, and successfully closing a sale.
Developing Strong Customer Relationships	Developing strong customer relationships is essential for sustained sales success. Understanding your customers' needs and what they value is arguably the most important aspect of successfully developing and nurturing these relationships. Building customer relationships, however, is not a simple task—it requires strong communication skills and an in-depth knowledge about how your customers operate, their strategic direction, and how you can help them get there. This course provides insight into how you can better understand your customers, build credibility, and position yourself for long-term success by building lasting and valuable business relationships.
Working within the Sales Culture of Your Organization	How is your sales team organized? Do you know the goals, principles, and culture that drive your sales efforts? To succeed in sales, you must understand the importance of your sales culture and how it influences your overall sales effectiveness. This course provides an introduction to sales cultures and highlights their importance in today's competitive marketplace. It also examines the role of the salesperson in a winning sales culture, the attributes of an outstanding salesperson, and how to excel in virtually any sales culture. In addition, the course explores sales management styles. It also provides advice on how to avoid some common sales mistakes.
Developing a Customer-focused Sales Approach	Many organizations base their sales approaches on their own products and services, the duration and scope of their sales cycle, and other internal considerations that do not effectively meet the needs of their customers. But wouldn't placing the customer at the center of the equation generate better results? The short answer is yes. A customer-focused sales approach is structured around the customer's decision-making process and unique needs. But how do you know what these really are? What keeps customers up at night and drives their key purchasing decisions? This course provides invaluable insight into how to better understand your customer's real needs and outlines the benefits and potential barriers to implementing customer-focused sales approaches. The course also examines the impact of technology and its role in supporting and enhancing customer-focused sales by helping to develop and sustain long-term, mutually beneficial customer relationships.
The Fundamentals of Globalization: The Global Context	Globalization has been defined in many ways, but a common theme is the freer movement of people, goods, services, and ideas around the world. In a globalized world, national borders become porous, as connections between people and organizations are transformed by ever-changing cultural and economic forces. This course focuses on the significance of the global context for business organizations. You'll find out how the social, economic, and political dimensions of globalization affect how organizations work. You'll also learn what's causing the acceleration of globalization, what implications this has for your organization, and the different ways that companies can globalize. Finally, the course highlights the strengths that are important for a company to have in the global context.
Fundamentals of Globalization: Analyzing the Global Environment	A global organization needs to be sensitive to the environmental factors that shape national and global markets. Awareness of conditions at national and global levels enables managers to respond appropriately to the constantly changing social, political, economic, and technological forces they will have to navigate. Similarly, an accurate understanding of the competition faced in international contexts allows managers to identify and develop the key skills and resources that are a prerequisite to success in specific territories. This course deals with the global environmental factors influencing an organization's strategies and management. It explains how to analyze these factors and also describes a framework for analyzing the industries and markets that make up the competitive environment in which a global organization operates.
Fundamentals of Globalization: Managing in a Global Environment	Global managers work in a complex, constantly changing environment. They have to consider different economic, political, legal, and cultural factors as they plan, make decisions, and lead others in different international contexts. What worked in the role of a domestic manager may not be effective in the international market. This course describes some strategies and techniques for managing successfully in a global business. It explains the importance of having a global mindset and how to cultivate one so that you can carry out your responsibilities effectively — even with the added complexity of different cultures. The course also describes which managerial styles and techniques work best for different cultural contexts and outlines some strategies for managing a global team.
Emotional Intelligence at Work Simulation	Success in the corporate world ultimately requires more than practical business or technical skills and knowledge. Effective working relationships and reputation are just as vital, and the key to these elements is emotional intelligence. Only with an understanding your own emotions and the emotions of those around you can you begin to develop interpersonal competence and build better relationships.The simulation Emotional Intelligence at Work is designed to provide participants with the opportunity to practice emotional intelligence skills in a secure, virtual environment. Over the course of the simulation, participants will be tested on the objectives of demonstrating emotional intelligence in the workplace, being self-aware, using self-management techniques, managing the emotions of others, and communicating with empathy.The simulation Emotional Intelligence at Work comprises three scenarios and is based on the SkillSoft Series Emotional Intelligence at Work." Throughout the simulation
Effective Listening	Being well informed is crucial to leading and managing. But how well do you listen to the information you're exposed to? This Challenge Series exercise explores how developing listening skills can help you achieve your business goals, prevent misunderstandings and unnecessary work, facilitate problem solving, improve client and coworker relationships, and foster self-development.
Vendor Negotiations: Choosing the Best Approach	Negotiation is a complex process that requires thorough preparation, clear communication, and keen perception. And the most successful negotiators are those who strive to achieve win-win results. This Challenge Series exercise explores various negotiation styles and processes and focuses on how to reach a collaborative, win-win solution.
Managing Meetings for Productivity and Effectiveness	Effective meetings require careful planning and management. This challenge focuses on scheduling and preparing productive meetings.
The Time Value of Money: Possible Pitfalls	The time value of money is a fundamental financial principal. It can be used to assess the worth of an investment, calculate the risks and benefits of debt, and determine projected savings needed to reach a financial goal. This Business Impact explores three common pitfalls that should be avoided when assessing the true time value of money.
Conducting Interviews: Asking the Right Questions	Most organizations rely on the job interview as the primary tool for selecting which employees to hire. This impact explores how to use four common interview questioning techniques.

Title	Description
Creating a Compelling Job Description	Job descriptions serve as an essential tool for recruiting potential employees. This Impact examines the criteria for drafting a compelling job description.
Hiring a New Employee	An effective hiring process is the key to matching employees to their jobs successfully. This Challenge Series product deals with the process, factors, and decisions associated with hiring the best candidate for an open position.
Communicating Organizational Change	Change can make people uncomfortable, and fear of the unknown creates anxiety. This Business Impact explores the three key components of effectively communicating organizational change: the when, the what, and the how.
Delivering Bad News Effectively	Delivering bad news effectively requires strong leadership. This Challenge Series product examines the process for communicating such news with skill, tact, and candor.
Making the Move Into Management	Transitioning into a management position can be both exciting and potentially overwhelming. The shift from individual contributor to leader requires confidence, solid communication, and a clearly defined plan of action. This Challenge Series exercise explores the benefits of drafting a transition strategy.
Employee Dismissal	Dismissing an employee is a serious matter that demands forethought and thoroughness. This Challenge Series product addresses the three primary reasons for dismissing an employee and the process involved with taking action.
Perseverance and Flexibility in Times of Crisis	Strong leaders need to demonstrate a careful balance of perseverance and flexibility. They must know when to press on despite obstacles and opposition. And they must also know when to alter course. This Challenge Series exercise explores the various aspects of perseverance and flexibility that leaders need to consider when faced with an apparent setback.
Five Steps to Perfection: Implementing Lean	All types of organizations can use lean to become more efficient. This impact explores lean implementation in both manufacturing and non-manufacturing settings.
Value Stream Maps for Non-manufacturing Processes	Value Stream Maps are designed to yield efficiency improvements. This impact explores how they can be applied to a non-manufacturing process.
Managing Goals	Goal setting provides opportunity for both personal and professional development. This challenge focuses on creating effective goals for both managers and their employees.
Developing Your Career	Career development requires foresight and proactive management. This Challenge explores methods of planning and executing an effective career development path.
Creating Work/Life Balance	For working professionals, keeping up with the competing demands of office and home takes more than good time-management skills. It requires an ability to prioritize and set a healthy work/life balance. This Challenge Series exercise explores the ways that work/life balance can be created to minimize stress and maximize productivity.
Using Persuasion Techniques to Boost Sales	Sales is a highly competitive field, and success relies on far more than the product or service being offered. This Business Impact focuses on five persuasion techniques that can put savvy salespeople on the leading edge.
Building Profitable Customer Relationships	Building profitable relationships with customers requires effort and dedication. This impact explores techniques for creating positive customer experiences.
Mentoring 77-881 Word 2010	SkillSoft Mentors are available to help students with their studies for exam 77-881 Word 2010. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
TestPrep 77-881 Word 2010	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Mentoring 77-882 Excel 2010	SkillSoft Mentors are available to help students with their studies for exam 77-882 Excel 2010. You can reach them by entering a Mentored Chat Room or by using the E-mail My Mentor service.
Advanced Importing and Exporting with Access 2010	Microsoft Office Access 2010 offers several advanced options for importing and exporting data. With Access 2010 you can link to, or import data and objects from external sources, such as other Access databases, SQL Server databases, Excel spreadsheets, Microsoft Word files, and XML files. You can also export data and objects from an Access 2010 database to a variety of external sources. This course explains and demonstrates the various methods of importing, exporting, and linking to external data sources in Access 2010.
PivotTables and PivotCharts in Access 2010	This course demonstrates how to create and manipulate PivotTables and PivotCharts as an effective way to organize and display Access 2010 database data, such as showing and hiding data, sorting and filtering data, performing basic and complex calculations, and exporting to an Excel spreadsheet.
Retrieving, Validating, and Attaching Data in Access 2010	You can use Microsoft Access 2010 to manage your data efficiently using advanced techniques. There are many methods that can be used for modifying and enhancing tables, reports, queries, and forms in order to meet your business needs. This course explains and demonstrates advanced techniques for retrieving and validating data in Access 2010. These include such features as lookup fields and using the Expression Builder to aid in the validation of controls. How to attach files to tables and forms, and edit them, is also demonstrated.
Subforms, Subreports, and Conditional Formatting in Access 2010	Subforms and subreports allow you to display related data from separate sources in a single interface in Access 2010. This course will demonstrate how to use Access 2010 to create and use subforms and subreports. It also explores how to apply conditional formatting to tables, forms, and reports using the streamlined conditional Formatting Rules Manager.
Joins, SQL, and Action Queries in Access 2010	Advanced query methods in Access 2010 make it easy for an experienced end-user to retrieve the results they desire and to have those results displayed in such a way that the data is easy to interpret and analyze. This course describes the various types of join and parameter queries that can be used in Access 2010 and provides demonstrations on the use of action queries, including update, append, delete, and make table queries. It also explores the use of SQL-specific queries such as data-definition, pass-through, subquery, and union queries.
Using Access 2010 with SharePoint and Access Services	Access 2010 and Windows SharePoint Services provide a tightly integrated solution for making Access databases web capable. This course details the primary features that allow for the seamless integration of Access and SharePoint so that data can be shared across corporate networks or the Internet. It demonstrates how to share Access and SharePoint data, and how Access and SharePoint work together with a new feature called Access Services to make entire applications available through SharePoint.
Access 2010 Macros and VBA	Using Access macros and Visual Basic for Applications (VBA) code, you can easily add functionality to a database to suit your business needs. This course provides an introduction to programming in Access 2010 and explores when to use macros or VBA code to automate processes. It demonstrates how to create and modify different types of macros as well as how to specify actions, conditions, and event handlers.
Optimizing, Securing, and Sharing Access 2010 Databases	Access 2010 provides a variety of tools to assist you in optimizing, securing, and sharing a database application. This course demonstrates how to assess a database's performance and improve its efficiency. Also covered are the ways that you can secure a database for users and the common methods employed to share a completed database application.
Customizing Visual Elements in Excel 2010	Adding visual elements to Excel worksheets can help to enhance what can sometimes be dry facts and figures, making it easier to hold the attention of the intended audience. A balance needs to be struck, however, between enhancing and overwhelming when it comes to adding graphics and colors to your Excel workbooks. Excel 2010 provides you with a number of basic and advanced techniques for customizing common elements such as charts, themes, cell styles, and graphics. This course describes many of these techniques and shows you how to implement them to their best effect.
Customizing Workbook Settings, Conditional Formatting, and Number Formats	You can customize the look and feel of workbooks and the program's functionality and efficiency using Excel 2010's numerous features and tools. You can modify existing themes and styles to meet business needs, or you can create custom themes and styles to further enhance data presentation. Custom number formats allow you even more control over the presentation and usefulness of your workbooks and conditional formatting gives you the power to apply individual formatting based on custom rules that meet your specific needs. This course explores some of the more advanced ways that you can enhance your workbooks and data using Excel 2010's powerful customization features.
Organizing Data and Objects in Excel 2010	Excel 2010 provides multiple features for organizing and managing data, including sorting and filtering tools that are integral to data analysis. Using data organization features, you can sort, filter, and group and outline data so that you can focus on its key parts. Properly arranged data using the commands in the Arrange group allows you to present your data in a logical and easy to understand manner. This course explores organizing data in Excel 2010. It also covers arranging objects for better viewing as well as the use of hyperlinks to organize data.
Ensuring Excel 2010 Data and Formulas are Right	Formulas are an integral and important feature of Excel 2010. So ensuring they are correct can save you time and a lot of headaches. Excel 2010 provides you with the tools you need to audit formulas and correct errors that may be found. In addition, using Excel's data validation tools you can restrict the types of data that can be input to your workbooks â€" preventing data entry errors that could otherwise occur. This course describes Excel 2010's auditing and formula correction features and shows you how to use data validation to avoid worksheet errors.
Automating Excel Tasks using Macros	To automate repetitive tasks, Excel 2010 provides a time saving feature known as a macro. These small programs, created using either a simple macro recorder or by using the more complex VBA language, allow you to record the numerous steps involved in accomplishing a task so that they can be played back automatically when the macro is run. This results in time savings and increased efficiency in day-to-day tasks. This course will introduce you to macros in Excel and show you how to leverage their power to make you work with Excel easier.
Analyzing Data with What-if Analysis	Excel 2010 provides powerful data-analysis tools that enable you to explore large amounts of data and to make educated business decisions based on that data. Using Goal Seek and Solver enables you to retrieve required results from formulas by determining the data the formula requires. And you can use additional what-if analysis components, data tables and scenarios, to forecast worksheet outcome models and to see how changing values in formulas affect the formula results.
PivotTables and PivotCharts in Excel 2010	One of the most powerful tools that Excel 2010 provides is a PivotTable that allows you to dynamically reorganize and display your data. PivotTables can summarize huge amounts of data by category without the need to input complex formulas or spend long hours manually reorganizing your spreadsheet. PivotTables also allow you to choose and change what you want to summarize, quickly and easily. This course will introduce you to PivotTables and show you the many benefits they provide.
PivotTable Filters, Calculations, and PowerPivot	PivotTables are a handy tool for summarizing large amounts of data efficiently and making it more manageable. Sometimes, though, it's useful to be able to filter the data in a PivotTable, and Excel 2010 provides filtering functionality for this specific purpose. For those people who require a more visual representation of data, Excel 2010 provides a new feature called a Slicer, which is basically a graphical representation of a PivotTable filter. Excel also provides a number of ways in which you can apply calculations to the data in PivotTables in the form of summary functions and custom calculations. All of these useful features of Excel 2010 are introduced and described in this course.
Formatting E-mail and Configuring Message Options in Outlook 2010	The default installation of Outlook 2010 allows you to easily send and receive messages among colleagues and friends. There are, however, many options that help you make creative, more visually appealing messages, as well as options that change how messages are sent. This course discusses sending e-mail in different message formats as well as formatting options that can be applied to the text and background of an e-mail. Also covered are how to check your message's spelling and grammar, how to track outgoing messages, how to add voting buttons, and how to set importance and sensitivity options.
Customizing Outlook 2010 and Managing Accounts	Outlook 2010 has now adopted a Ribbon, similar to the other products in the Office suite, which provides an intuitive interface with most commands readily available. The Outlook interface is highly customizable as well. This course discusses how to modify the Ribbon to suit your preferences, as well as ways that views and panes can be customized. Configuring Exchange e-mail accounts are also discussed.
Managing E-mail with Rules, Automatic Replies, and Alerts in Outlook 2010	Outlook 2010 contains numerous features to help manage the large volume of e-mail that many users receive on a daily basis. Options can be configured to automatically move incoming e-mail into specified folders and Desktop Alerts can be set to notify you of incoming e-mail. This course discusses managing e-mail messages with rules as well as configuring automatic replies and Desktop Alerts for incoming messages.
Working with File Transfer and Folders, Searching, and RSS Feeds Outlook 2010	Outlook 2010 provides default folders such as the Inbox, Deleted Items, and Sent Items to assist users in managing and organizing their e-mail messages. Sometimes these folders do not meet all of a userâ€™s needs and additional folders need to be created. This course discusses the creation and management of additional folders in Outlook, as well as the creation of Search folders, which is a type of virtual folder used to automatically organize messages. The course covers how to use the Instant Search feature, which allows you to instantly find e-mail messages, and how to refine your searches. Importing and exporting files are demonstrated. RSS feeds and how they can be used in Outlook 2010 are also discussed.
Data Files, Archiving, and Send/Receive Groups in Outlook 2010	Items created in Outlook 2010 are stored in data files on your computer. Proper management of these files is important in organizing Outlook items and managing space on your hard drive. This course discusses PST and OST files and how they can help you while working with Outlook 2010. Archiving data also plays an important role in Outlook 2010, and this courses covers how to manage AutoArchive settings and how to manually archive items. Also discussed in this course is the creation and management of Send/Receive groups, which enable you to control how often Outlook folders are updated.
Implementing Security with Outlook 2010	Outlook 2010 provides a number of security options that should be enabled to protect you from viruses, unwanted junk mail, and other malicious attacks directed at computer users. This course explains how to protect yourself from spam, junk mail, and phishing attacks as well as how to safely open suspicious messages and attachments. To ensure that no unwanted users can read messages that are not directed towards them, digital signatures can be used. This course discusses how to obtain and apply digital signatures to messages.
Accessing Exchange Remotely and Using Forms in Outlook 2010	Whether it is to stay in touch with friends and family or to message colleagues from the office, people depend on e-mail communication more than ever before. When away from the office, Outlook 2010 offers two options for people to access their Exchange e-mail accounts â€" Outlook Web App and Outlook Anywhere. This course discusses how to access and sign on to Outlook Web App using a web browser and how to configure Outlook 2010 with Outlook Anywhere so that users can send and receive messages. This course also covers the role that forms play in Outlook 2010 and how forms can be customized to meet your needs.
Using Advanced Slide Show Tools in PowerPoint 2010	PowerPoint 2010 provides you with all the tools necessary to create and present engaging and effective presentations. As an advanced user, you can take advantage of features that allow you to customize your animations to create just the right effect. PowerPoint has tools for getting your animations to move at the right speed and in the right order. There are also built-in tools, such as the animation painter, that allow you to easily apply an animation scheme to the entire presentation in one easy step. Once you have perfected your presentation, you can set and rehearse timings, create mouse-over actions for elements on a slide, and record your presentation for automatic delivery. There are also many tools that make the presentation of your slide show easy and effective, such as highlighters and laser pointers. These tools and features are all covered in this course.
Collaborating and Sharing Presentations in PowerPoint 2010	Today people can collaborate on the development of PowerPoint presentations in new and exciting ways. With the proper technological infrastructure in place, PowerPoint has the capability of allowing multiple people to work on the single presentation at the same time. An alternative to co-authoring a presentation with other team members is to send the presentation as an e-mail attachment, save it to a web site, burn it on a CD, or broadcast it live over the Internet. To simplify the process of reviewing and accepting or rejecting changes, you can now merge the reviewed version with your original version into one presentation. This course explores these topics and many other collaboration features available in PowerPoint 2010. Also covered are proofing, language, and research tools, along with options for printing and protecting a presentation.
Advanced Customizing with Project 2010	A well set up project file is essential to the success of a project. The advanced project file customizations available in Project 2010 can simplify many project management tasks, saving you time, and increasing the effectiveness of project analysis and reporting tools throughout the life of your project. This course covers how to customize default options, add new tabs and groups to the Ribbon, and add new buttons to the Quick Access Toolbar. You will also learn how to import or export a customized Ribbon and Quick Access Toolbar so that project team members can share and enjoy consistent user interface customizations. This course also covers how to create custom fields that contain specially formatted task and resource data, such as formulas, graphical indicators, and outline codes that meet the unique needs of your project.

Course	Description
Advanced Tools for Managing Multiple Projects with Project 2010	Most project managers in today's workplace are required to juggle many projects at the same time. The ability to efficiently monitor and adjust resources and task assignments is critical for the successful management of multiple projects. This course covers tools for managing multiple, related project files so that you can see the big picture relationships between your projects. Consolidating resources and task assignments allows you to prevent over-allocation or under-allocation, view cumulative resource costs across multiple projects, and integrate schedules so that dependent tasks across projects flow smoothly. This course covers the process for creating a master project that consolidates related projects into single project file, how to create and update a resource pool, and how to create a cross-project dependencies between tasks.
Advanced Resource Management with Project 2010	An important ingredient in managing projects is the ability to easily identify potential resource issues and the impact they could have on the overall project schedule. This course covers advanced resource and scheduling adjustments, such as how to delay task start dates and apply predetermined work contours to manage assignments. You will also become familiar with Team Planner, a graphical view that allows you to view and adjust work assignments with drag-and-drop action. This course also includes several methods for leveling resources and correcting overallocation issues, including Project's built-in resource leveling tool.
Advanced Scheduling Management with Project 2010	Ongoing inspection and adjustment of the project plan is vital to address impacts to the project schedule and address scope and budget changes. This course covers how to easily identify warnings, solutions, and drivers for tasks using Task Inspector, how to address repetitive tasks by creating a recurring task, and how to inactivate tasks that are no longer necessary to the project. This course also covers ways to inspect a project plan by grouping, filtering, and displaying the critical path.
Advanced Reporting and Management Tools in Project 2010	Project 2010 comes with many enhanced features and tools that help project managers report on project status and carry out project management tasks with ease and efficiency. This course covers several of the advanced tools you will use to communicate project status and streamline your tasks, such as the visual reports, enhanced copy and paste, and the Compare Projects feature, which allows you to compare project files and produce an informative comparison report. This course also covers the procedure for recording macros, which will allow you to save time on repetitive tasks.
Using Themes, Backgrounds, Watermarks, and Quick Parts in Word 2010	Office Word 2010 offers a variety of layout tools and features that allow you to enhance the visual appearance of your documents. This course shows you how to apply themes, including theme colors, fonts and effects, to create polished, professional-looking documents. It also guides you through using the Quick Parts Gallery to save commonly-used text and images as reusable items, and also apply AutoText, Document Properties and other building blocks to a page quickly and easily. In addition, the course explores tools that help protect your intellectual property by enabling you to add watermarks and backgrounds.
Adding Tables of Contents, Footnotes, Hyperlinks, and Bookmarks in Word 2010	Word 2010 offers you a variety of tools that allow you to insert navigation and reference materials into a document. With heading styles applied to your document, you can easily construct a table of contents; you can also insert footnotes and endnotes, and you can quickly link to web pages, shared files, or other sections of a document using bookmarks. This course explores all of these topics, and discusses how to use each feature to improve the readability of your documents.
Forms, Fields, and Mail Merge in Word 2010	Word 2010 enables you to create forms quickly and easily, so that they can be used by other users of Word 2010. Forms contain editable form controls that you can link to external data sources, and Word 2010 contains security features to protect forms from tampering by other users. Another method of capturing document information is by using fields. You can use fields to add information about a file into the document. For example, you can insert an Author field to insert the author's name, or use a LastSavedBy field to enter the name of the person who last saved the document.
Managing, Inspecting, and Recovering Word 2010 Documents	Microsoft Word 2010 offers several options for securing and protecting Word documents as well as providing various features you can use to recover and repair documents. This course demonstrates how to use Word 2010 document security, which includes viewing document properties such as presence information on author contact cards, locking document formatting, password protecting documents, using the Document Inspector, and working with digital signatures. The course also explores recovering unsaved drafts and damaged Word 2010 documents.
Creating and Formatting Tables in Word 2010	Word 2010 has a robust set of tools that allow you to create, style, and format tables in your documents. This course explores the various methods of inserting tables in Word documents, including selecting a layout from a list of preformatted tables, choosing a table size by selecting a layout from a dynamic grid, and by configuring table settings to match the number of columns and rows that you require. It also discusses using table styles to enhance the appearance of tables and changing the layout of tables.
Manipulating Tables in Word 2010	You can use Word 2010's features for both designing tables and manipulating your table data. A variety of layout tools allow you to merge and split cells, split tables, autofit cell sizes to match the size of contents, and insert and delete cells. You can also easily insert columns and rows, and then adjust their layouts and distribution. This course explores these methods of altering a table's layout and also walks you through using data tools that allow you to easily sort your data, making critical information easier to locate. The course also covers using formulas in Word 2010 tables, so you can quickly perform calculations or insert other pre-built mathematical functions.
Embedding Charts and Tables into Word 2010	Word 2010 offers a wide variety of table and charting tools that let you manipulate and display your data in an attractive, understandable manner. This course shows you that by following a few simple steps you can easily paste Excel data into Word 2010 and either embed the values directly in the Word document or link back to the original Excel workbook. The course also discusses the role of Excel 2010 in Word 2010 table creation and manipulation. And it explores methods of inserting and then designing and altering the layout of many types of charts, including bar charts, pie charts, bubble charts and more.
Getting Started with Access 2010	Access 2010 is the newest version of Microsoft's dynamic database management tool and it offers features that allow you to create and modify a variety of database types. The ribbon is unique to Microsoft Office and stacks the many features of Access into related tabs, making it easy to quickly access the ones you need. Backstage view is a streamlined gathering of all database file-level tools, such as those used for saving, creating databases and tables, and working with external data. This course explores the fundamentals of databases and the many tools that will help you create and modify databases in Access 2010.
Creating Basic Tables in Access 2010	Microsoft Office Access 2010 makes it easy for you to create and modify database tables. This course discusses how basic tables are built, including creating fields and defining data types and properties, and how to modify them. It also demonstrates the use of primary keys, masked input fields, and indexing, as well as creating validation rules for the data.
Data Manipulation and Simple Relationships in Access 2010	The ability to manipulate data, records, and relationships in Access 2010 is a valuable asset to any database administrator. Access 2010 provides you with the data manipulation and table relationship techniques necessary for reliable databases. This course demonstrates how to perform basic data manipulation tasks, how to import and export data, and how to implement and edit table relationships.
Introduction to Forms in Access 2010	Microsoft Office Access 2010 offers several options for creating and managing forms and controls. This course describes how to create forms in Access 2010 and also explores controls - the available types, how they are added to a form, how their properties are set, and how they are resized, moved, grouped, and positioned on a form. It also demonstrates how to configure the Web Browser Control, which is a new feature of Access 2010.
Modifying Basic Forms in Access 2010	Access 2010 allows you to make a variety of changes to the look and feel of a form. These changes range from resizing columns and controls to applying Office 2010 themes and managing records in a form. Access 2010 also introduces a new form type, the navigation form, which you can use as a switchboard to navigate the various objects in a database. This course covers how to use these methods to customize and format forms in Access 2010 as well as how to create and modify navigation forms.
Introduction to Queries in Access 2010	Queries are used in Access 2010 to convert data into useful information and are an essential part of any database application. This course demonstrates how to create and modify a query in order to achieve specific results. It covers creating basic select queries, using Expression Builder, calculated fields, and grouping options for displaying query results. This course also demonstrates how to create crosstab, unmatched, and find duplicates queries.
Introduction to Reports in Access 2010	Reports are used in Access 2010 to convert data into useful information and are an essential part of any database application. Access 2010 provides various methods of creating reports to present summarized information easily and effectively. This course demonstrates the use of the Report Wizard, Blank Report, Report Design, and Labels. Also covered is how to add and bind controls, group and sort data, and perform calculations.
Getting Started with Excel 2010	Excel 2010 is the newest version of Microsoft's comprehensive spreadsheet tool that offers features that support a wide range of functions. The Ribbon menu is unique to Microsoft Office and stacks the many features of Excel into related tabs, making it easy to quickly access the ones you need. Backstage view is a streamlined gathering of all file-level tools, such as those used for saving, printing, and sharing your files. This course explores these topics and many other basics of Excel 2010, including opening the application, creating new spreadsheets, entering data and, AutoFill features. It also provides an introduction to the many tools that will help you create and use your spreadsheets productively.
Applying Basic Data Formatting in Excel 2010	Excel 2010 provides a number of tools and features that allow you to visually enhance the appearance of worksheets and workbooks. Data and cells can be manipulated and customized using various positioning and formatting features. This course explores the processing of formatting cells and text, using tools such as the format painter and changing the way text is presented in order for it to be more visually appealing. This course also explains the various options for formatting numbers in Excel 2010.
Moving and Getting Around in Excel 2010	While it can look complicated and daunting, navigating the Excel interface isn't as difficult as it first appears. This course will show you how to move around the Excel interface using the various keys on the keyboard, such as the Home and End keys, and Ribbon commands. The course also covers the ways in which you can view and arrange workbooks and worksheets to be the most useful and shows you how you can access Excel's many Help features.
Moving Data and Modifying Worksheets in Excel 2010	The ability to easily manipulate data is probably the biggest benefit of using productivity applications, such as Excel 2010. For instance, if you have to copy the same data multiple times or move large amounts of data from one place to another within a worksheet or between workbooks, you can see this is much more easily accomplished through software than through the use of pen and paper. For example, Excel 2010 features such as Live Preview let you see how copied data will look before you copy it, even if it's copied between Office applications, and the Paste Special option allows you to further define how your data is copied or moved. This course is designed to show you many of the ways that Excel 2010 allows you to manipulate data and the worksheets that contain them and describes features that let you do this quickly and efficiently.
Saving, Sending, and Printing Excel 2010 Workbooks	Excel 2010 makes it easy for you to save, print, and share workbooks and worksheets. When you create an Excel workbook, you will most likely want to save it, and in many instances, print it to save a hard copy or share with someone else. New features of Excel 2010 also allow you to easily collaborate with others by using the Sharing option in Backstage view. All of these options â€" saving, printing, and sharing â€" are grouped together on the File tab for convenience. This course describes these Excel features and explains how to use them to increase your efficiency and productivity.
Using Conditional Formatting, Tables, and Sparklines in Excel 2010	Excel 2010 provides tools that enable you to efficiently present your data and that can also make your data easier to understand. Tables can be used to logically present data in an easy to read fashion and table styles provide a way to make your workbooks more attractive and professional looking. Conditional formatting allows you to highlight trends and exceptions in cells or ranges of cells by presenting the identified data in a number of unique ways to make it stand out. Sparklines, a new feature of Excel 2010 are small charts within a cell that provide a visual representation of data and can be used to show trends in an appealing manner. These features â€" tables, styles, conditional formatting, and sparklines â€" how to access them and how to use them, are covered in this course.
Reviewing and Protecting Content in Excel 2010	Excel 2010 provides easy to use and access tools that allow you to review, proof, and protect the workbooks you create and share. The tools for performing these tasks are grouped conveniently on the Ribbon and include the Spelling, Research, and Thesaurus tools; a Translate tool; tools to insert, edit, and review Comments in a worksheet; and tools for tracking changes and protecting workbooks. The various tasks you can perform with these features are covered in this course, along with how and when you would use these tools.
Using Basic Formulas in Excel 2010	Excel 2010 provides you with the tools that allow you to perform calculations on your workbook data. Being able to use formulas to do complicated calculations not only simplifies your work but also helps to reduce the number of errors that can arise in such complex tasks. This course introduces the concepts and terminology associated with formulas, and demonstrates how to create and edit them, copy and paste them, and how to check for errors that can arise.
Using Basic Functions with Excel 2010	One of the great features of Excel 2010 is its ability to perform a wide variety of functions to make your use of Excel 2010 easier and more fun. Functions are inbuilt formulas that save you time by allowing you to chose one that suits your needs rather than having to create a complex formula from scratch. This course introduces you to the changes made to functions in Excel 2010, including improved function accuracy and consistency as well as the changes made to some function names that make them more intuitive. It describes the useful feature of Excel's status bar that automatically displays basic calculations as well as the Function Library, which groups useful functions. The most common use of functions, calculating basic financial, logical, date and time data is also covered.
Inserting Basic Charts in Excel 2010	Using the charts feature in Excel 2010, you can create attractive and well-organized representations of worksheet and workbook data. Charts can be easily inserted and customized from the Charts group on the Insert tab of the Ribbon. This course demonstrates how to effectively use and customize charts in Excel 2010; it explores available chart types and the best use of each type; and shows how to change the different elements of a chart to provide an effective visualization of your data.
Adding Visuals, Themes, and Styles to Excel Workbooks	Excel has more than just charts to offer in the way of visual presentation. Nonchart-related graphic tools such as Shapes, SmartArt, WordArt, ClipArt, and Screenshots are all ways to enhance the visual impact of documents that tend to be dominated by dry numbers and text. This course focuses on these and other graphic elements that can be added to Excel 2010 spreadsheets. This course also introduces ways to change the themes and styles offered by Excel 2010.
Getting Started with Outlook 2010	Outlook 2010 is the latest release of Microsoftâ€™s primary messaging client. Outlook provides all of the tools necessary to manage e-mail, scheduling , tasks, and communication. The Outlook 2010 interface has been updated and now uses the ribbon instead of menus, which makes it easier to locate the commands you need. This course addresses the basic features and functionality of Outlook 2010, including an introduction to the redesigned interface, how to create e-mail messages, and view and reply to incoming e-mails.
Managing Conversations and Organizing E-mail in Outlook 2010	Microsoft Outlook 2010 provides you with the tools you need to efficiently manage and organize your e-mail messages. Included in Outlook 2010 is a new Conversation view that automatically groups all of your messages by subject, greatly reducing the number of items in your Inbox. This feature along with options that allow you to categorize and flag messages are discussed in the course. Also, covered are the ways you can organize messages in the Inbox.
Managing Attachments, Graphics, Signatures, and Autoreplies in Outlook 2010	Using Outlook 2010 you can now create e-mail messages that include compelling visuals and graphics that capture the readerâ€™s attention. You can also attach and format screenshots from your computer to better convey ideas in your message. This course discusses working with attachments in Outlook 2010 as well as including graphics, tables, symbols, and links in your messages. How to add signatures to e-mail and auto replying to messages that you receive are also covered.
Using the Calendar for Appointments, Events, and Meetings in Outlook 2010	The Outlook 2010 Calendar allows you to create appointments and events, as well as schedule meetings. The Calendar is fully integrated with the other components of Microsoft Outlook 2010 allowing you to easily incorporate your contacts and e-mail functionality with the Calendar. This course introduces the major components of the Calendar as well as providing a tour of the interface. Also discussed are how to create appointments and events, and how to schedule meetings with other Outlook users.
Managing Meetings and Customizing the Calendar in Outlook 2010	The main functions of the Calendar in Outlook 2010 have remain largely unchanged from previous versions of Outlook. However, many tasks have been streamlined. It is now easier to create and view additional calendars in Outlook 2010 and viewing group calendars has been integrated into the Calendar view. This course demonstrates the available options when replying to meeting requests and managing meeting requests. It covers how to create and view additional calendars, view another person's calendar, and create a calendar group. Also covered are ways to customize the Outlook 2010 calendar.

Course	Description
Outlook 2010 Social Connector and Messaging	With Outlook 2010 it is now easier than ever to keep track of your friends and colleagues as well as communicate with them using a variety of methods. With the rise in popularity of social networking sites, Outlook 2010 now includes the ability to track updates of your friends from within Outlook. This course discusses the Outlook Social Connector and how to configure Outlook to connect to social networking sites. How to configure and use both instant and text messaging from within Outlook is also discussed.
Working with Contacts in Outlook 2010	By taking the time to create contacts in Outlook 2010, you can save yourself from having to type out full e-mail addresses every time you send a message, assign a task or send out meeting requests. You can further arrange contacts by creating contact groups that allow you to e-mail multiple contacts at once by only typing the group name. This course covers the multiple ways that contacts can be created, as well as how to modify existing contacts, and import and export contacts between Microsoft Outlook 2010 and Google Gmail.
Using the Tasks, Notes, and Journal Features in Outlook 2010	To assist you with the various tasks and information that you need to process on a daily basis, Microsoft Outlook 2010 provides the Tasks, Notes, and Journal features to help keep you organized. You can create tasks for yourself or assign tasks to other users. You can create notes for yourself as small reminders, and manage your activities and information using the Journal. This course discusses how the Tasks, Notes, and Journal features can help you to manage your time and stay organized, and it demonstrates how to use them.
Getting Started with PowerPoint 2010	PowerPoint 2010 is a presentation program that allows you to create professional-looking slide-show presentations. This course provides an introduction to the main components of the PowerPoint 2010 interface. It covers opening and saving a presentation, working with slides, formatting text and text boxes, and using templates and themes to create professional looking presentations.
Visually Enhancing PowerPoint 2010 Presentations	PowerPoint 2010 enables you to create visually appealing presentations through the use of graphics. Adding simple enhancements through the use of themes, tables, charts, and SmartArt allows you to create more engaging and interesting presentations. This course introduces the various themes and SmartArt features that allow you to add flair to your presentations by using colors and shapes to emphasize text and data. Also covered are the various ways of incorporating diagrams, tables, and charts to create a professional and effective presentation.
Adding Images to Presentations in PowerPoint 2010	Inserting images, such as photographs, clip art, and shapes, into your PowerPoint 2010 presentation can help to capture and keep the attention of your audience. This course will show you how to insert, format, and apply special effects to your images so that they provide the maximum impact for your presentation. You will learn how to create a photo album and create a presentation that effectively displays your favorite photos. In addition, you will be shown how to use the new built-in screen capture tool that enables you to capture and embed screenshots of other programs into your slides.
Using Multimedia and Animations in PowerPoint 2010	PowerPoint 2010 can help you make presentations more dynamic by adding audio and video clips to any slide. You can directly insert, edit, and play video in your presentation, as well as add audio clips to create attention-grabbing sound effects. PowerPoint 2010 also has new animation tools and slide transitions which make slide shows more fluid and interesting. All of these features are discussed in this course.
Introduction to Project Management using Project 2010	The role of Project Manager is an important position in virtually any organization. The move from traditional project management to using project management software can help any project manager become more efficient and successful. This course provides an overview of project management fundamentals, including the stages of a project lifecycle, the basic project management processes, and how Microsoft Project 2010 project management software benefits both the manager and the project itself.
Introduction to Project 2010	Microsoft Project 2010 includes a variety of straightforward and easily accessible features to simplify the process of managing projects, all located and organized within the Project 2010 layout. This course provides an overview of the Project 2010 interface, including the Ribbon interface, Project 2010 Backstage, and how to navigate within the Microsoft Project 2010 application.
Initializing a Project with Project 2010	Before your project can get going, you need to have tools in place that will allow you to control tasks and organize the resources you'll use to complete your project. This course covers the steps for setting up a new project from a template, from an existing project, or from SharePoint Task Lists. The course also covers project calendars, including how to edit working days and create exceptions.
Defining Project Properties in Project 2010	Your project file is probably the most important tool you will use to manage your project throughout its entire project lifecycle. In order to be effective though, it's important you understand how the file works, and how vital project information is for keeping the file relevant to your specific project. This course covers the six steps for defining a new project's properties, including setting your project start date, the project working schedule, and options unique to your particular project.
Building a Schedule with Project 2010	A project is made up of tasks, and the job of a project manager essentially boils down to one thing: making sure tasks are properly defined, organized, planned, and carried out. Good scheduling leads to timely completion of the project, and that relies on the ability to order and link tasks, and set appropriate durations and constraints. This course covers the steps for entering and editing tasks within Microsoft Project 2010, setting milestones, organizing tasks into phases, and identifying task dependencies. The course also introduces methods for applying constraints and deadlines to your project tasks to keep them on schedule.
Creating Resources in Project 2010	The people who do the work, the materials and equipment you require to perform the work, and the money you need to fund the work are all vital project resources. As a project manager, you should understand how to work with resource information in Project 2010 so you can efficiently plan and manage your resources. This course covers entering and configuring resource information, including people, generic resources, materials, and cost resources. This course also covers how to sort and organize items in a resource sheet.
Managing Resource Assignments with Project 2010	Good project management requires the ability to organize resources based on their availability, cost and consumption rates, and how many are required to complete each task. This course lays a foundation for understanding effort-driven scheduling and how Project 2010 uses resource assignment information to perform scheduling calculations. It also covers how to assign various types of resources to tasks in your project, and how to modify cost rate tables for your resources in order to accurately capture and report project costs.
Monitoring Schedule Performance with Project 2010	Once project planning is complete, the actual project work begins. Your job as a project manager is to diligently track the progress of this work so that if schedule slippage occurs, you can make adjustments and manage the remaining work effectively. This course covers setting and maintaining project baselines, which are used to compare the planned work with actual work. This course also covers the procedure for updating project progress at the task level in order to track variance, as well as rescheduling incomplete work when an unanticipated work interruption occurs.
Communicating Project Information with Project 2010	It's been said that communication is the single most important factor in the success or failure of a project. And it's not only what you communicate, but how you format your communications to ensure they are clear, concise, and targeted to your audience. This course introduces the different reporting options you have within Project 2010, including how to create and print standard reports and how to report project information using the Timeline view. This course also introduces techniques for adding graphics to reports.
Getting Started with Visio 2010	Microsoft Visio 2010 is a powerful diagramming program that provides users with a diverse set of pre-drawn stencils, shapes, sample drawings and templates for illustrating complex ideas visually. In this course the various features of the Visio interface will be explored. You will also be shown how to access and use templates, shapes and stencils for creating contemporary looking diagrams. Once the diagrams have been created, this course will also demonstrate how to manipulate, align and connect shapes to achieve professional looking results.
Working with Diagrams in Visio 2010	Visio 2010 provides a wide range of formatting and design options for creating vibrant diagrams using pre-drawn shapes and themes. Whether itâ€™s an organizational chart, a floor plan or a network diagram Visio 2010 comes equipped with such tools. This course explores these features and demonstrates how to add apply and manipulate text, work with themes and backgrounds and how to design and format decorative elements of a diagram page.
Collaboration, Evaluation and Printing in Visio 2010	Visio 2010 is a powerful collaboration tool that allows the user to review and share Visio diagrams, link content from other Microsoft applications, and save and send directly from inside Visio 2010. This course will show how to review, markup and make comments on a diagram. Also covered are how to embed shapes and graphics from Microsoft applications and finally how to preview, print and save Visio in different file formats.
Formatting and Working with Text in Word 2010	Word 2010 makes it easy to apply formatting to documents by providing a live visual preview of various formatting options. This allows you to view a variety of formatting changes before actually committing to them. This course explains the Font formatting options, as well as the Mini toolbar and Live Preview features. In addition, the creation and formatting of bulleted, numbered, and multilevel lists are demonstrated.
Organizing and Arranging Text in Word 2010	To create an attractive, coherent Word 2010 document, it's important to understand the application's basic paragraph-formatting features. This course explores formatting paragraphs in Word 2010, along with a variety of other useful formatting tools such as margins and indents. The course demonstrates how to set margins, paragraph indenting and alignment, tab stops, and how to show or hide formatting marks than can help guide your formatting decisions.
Moving Around in Word 2010	Word 2010 offers a variety of intuitive navigation features that help you move around and find your way through documents, whether they're a few pages or hundreds of pages long! This course explores basic navigation features such as scrollbars and keyboard keys, along with built-in tools such as the new Navigation Pane. This pane combines features of the Document Map, thumbnails, and Search features found in earlier versions of Word into one, easy-to-use interface. The course also demonstrates how to use Word's Full Screen Reading view to page through a file as if it were a printed document, and how to use Word's Outline view to organize your document.
Structuring Word 2010 Documents	Word 2010 provides many options for structuring your documents quickly and easily. This course demonstrates how to use headings to restructure the outline of a document using the Navigation Pane. If you're creating large documents with many pages, you might want to add page numbers to make your information easy to locate. The course explores how to add page numbers along with other structural components, such as page and sections breaks, headers, and footers.
Reviewing Documents in Word 2010	No one wants to be embarrassed by glaring grammatical mistakes and misspellings in a document. To help you catch these errors, Word 2010 includes editing tools that enable you to spot and fix your typos as you work. It also enables you to use other proofing features such as a thesaurus, research options, and word count statistics to help you proof your work. In addition, you can make changes while reviewing your work using a feature that tracks all of your edits, and you can also leave comments during your review. This course explores all of these proofing features, from spelling and grammar correction to tracking changes. The course also demonstrates how to use the Help feature in Word 2010.
Saving, Sharing, and Printing in Word 2010	Once you've created an attractive, well-structured document, how do you save it for future use? Word 2010 enables you to save your documents in many formats, including the standard .docx file extension, along with the well-recognized .doc extension. You can also save your documents as PDF or XPS files to make them uneditable and give them standardized appearances for sharing. In addition, you can choose to save and send your document using e-mail, Microsoft SkyDrive, upload your document as a blog post, or save it on SharePoint. If you want to print your document, you can use Word 2010's new streamlined Print interface which presents print options, such as orientation and duplex printing, on the same page as a preview of your document. This course explores Word 2010's features for saving and printing your documents.
Customizing the Behavior and Appearance of Word 2010	Word 2010 enables you to efficiently create attractive and organized documents using a variety of automated and pre-built features. You can quickly and easily use any of the Word 2010 styles to give your document a polished appearance, or you can create your own styles so you can use a custom appearance over and over. In addition, Word 2010 enables you to create documents using pre-built templates that are bundled with Word, saving you time and effort in choosing a layout and color scheme for your files. This course introduces Quick Styles and templates, and also explores an editing feature â€“ AutoCorrect â€“ that automatically corrects common errors such as not capitalizing the first letter of a sentence, or accidental usage of the Caps Lock key. The course also demonstrates how you can customize the Ribbon.
Drawing and Inserting Graphics in Word 2010	We all know that to create an effective Word document, your text must be clear and organized, but we sometimes neglect the overall attractiveness of our documents. This course demonstrates powerful drawing and graphic features of Word 2010 - features that can boost the appeal of virtually any document! The course focuses on the processes and tools that allow you to add pictures, Clip Art, screenshots, and SmartArt to your documents. It also explores drawing components such as shapes, WordArt, and text boxes.
Sharing Excel 2010 Workbooks Online and on a Network	As both business and home users move toward working in more electronically collaborative environments, the need to share Excel workbooks and to have multiple users edit them simultaneously has increased. Excel 2010 allows you to share workbooks over a network, distribute them by e-mail, and share them online. You can make use of Information Rights Management (IRM) to ensure that users cannot copy or forward workbook content, as well as to expire files and enforce corporate information dissemination policies. You can also specify that users can only edit specific ranges in a shared workbook. This course covers sharing Excel 2010 workbooks on a network with advanced sharing options, the limitations of shared workbooks, and the uses and limitations of IRM. It also covers how to limit users' editing to specific cell ranges in a worksheet, and how to apply the AutoRepublish feature when saving workbooks for use on the Web.
Using Excel 2010 to Collaborate Online and with Other Office Applications	Being able to collaborate with other users to efficiently disseminate information and complete projects is crucial in today's business environment. Excel 2010 provides numerous tools geared specifically toward collaboration, including Excel Web App and integration with SharePoint that allows for data to be easily exported. Excel 2010 data can also be linked to or embedded in other Office 2010 files, and other Office 2010 data can be linked to or embedded into Excel 2010 to create robust and professional content. This course explores the new Excel Web App, including information on the Web App interface, its limitations, and how to access the full version of Excel 2010 from within it. In addition, this course covers exporting data from a SharePoint list to Excel, and exporting data from Excel into a SharePoint list. Linking Office 2010 content to and embedding Office 2010 content in Excel workbooks is also covered.
Using Lookup, Reference, Math, and Text Functions in Excel 2010	The Excel 2010 function library includes a number of functions in Lookup & Reference, Math & Trig, and Text categories that enable you to quickly complete tasks and analyze data. Lookup and reference functions allow you to perform table lookups to return required information about specific worksheet cells. This course covers lookup and reference functions such as LOOKUP, VLOOKUP, HLOOKUP, INDEX, ROW, and COLUMNS. Math & Trig functions provide multiple methods of working with numbers and triangles. This course explores rounding functions, INT, TRUNC, AGGREGATE, COS, SIN, and TAN. Excel 2010 also provides a number of functions to make working with text easier. Text functions, such as TRIM, CLEAN, PROPER, SEARCH, and MID, as well as string concatenation, are covered.
Manipulating Formulas and Using Forms in Excel 2010	Excel 2010 provides a large variety of statistical functions that allow you to perform data analysis on worksheet data, several cube functions that allow you to return information from cubes, and the means of working with arrays. In addition, using the Developer tab, you can further customize an Excel workbook to increase its functionality with form and ActiveX Controls. This courses discusses various statistical functions, include those designed to work with averages, determine the median, pinpoint rank and percentages, and sample populations. In addition, this course explores the available cube functions, such as CUBEMEMBER, CUBESET, and CUBEVALUE. Summarizing data using conditional functions such as SUMIF and COUNTIFS are also covered. This course also examines the methods Excel 2010 provides for working with arrays, including one-dimensional and two-dimensional arrays. Adding form and ActiveX Controls to Excel worksheets is also covered.
Using Excel 2010 Data Connections: Web Queries, XML, and Databases	There are a number of methods for accessing and using external data with Excel 2010. Creating new or using existing data connections, you can access data from the Internet, Access and SQL Server databases, and Analysis Services. You can also import and export XML data, use Microsoft Query and the Query Wizard to create your own queries, and work from text files. This course explores the concept of data connections, including how to use existing connections to access data and how to create your own. In addition, this course covers how to create a web query to access online data and use it within Excel. Importing XML data is covered, and the course also describes the process of using the Query Wizard to create and edit queries.
Managing SharePoint 2010 Sites, Lists, and Libraries	Microsoft SharePoint 2010 offers a complete platform for collaboration, data management, and online information publishing. SharePoint sites provide the basis for these tasks, and are broken down further into objects like lists and libraries. Creating, managing, and customizing these sites, lists, and libraries are common tasks and responsibilities for SharePoint power users. This course examines the various types of SharePoint sites, as well as creating sites and subsites, changing site details, and using the recycle bin. In addition, this course explores the various types of SharePoint lists, and covers creating custom lists, customizing existing lists, and managing list properties. SharePoint library types, creating document libraries, and managing and customizing library settings are also covered.

Managing SharePoint 2010 Pages and Components	To enhance your SharePoint implementation beyond the default home page, you can use the available publishing pages and web part pages. SharePoint 2010 also offers a new page type, referred to simply as a page. Organizations store and organize documents on SharePoint in a number of ways, and the management of this document storage is a common power user task. Workflows enable you to streamline the execution of existing business processes using SharePoint, and Web Parts provide additional functionality in how to display SharePoint information. This course examines the creation and customization of publishing pages, web part pages, and pages. In addition, this course explores the challenges of document management, and the role that SharePoint plays in this process. It also covers managing documents using document IDs, ratings, notes, tagging, document sets, and document retention, and provides document management tips. Managing and customizing workflows and accessing site usage reports are also covered.
SharePoint 2010 Security and Business Intelligence	Microsoft SharePoint 2010 provides several security options for ensuring that only users or groups who should be able to access specific contents can do so. Security can be configured at the item level, and can be managed for individual users or groups. This course examines SharePoint securing, and describes managing SharePoint groups, changing the inheritance for a site, managing permission levels, and configuring item-level security. It also discusses the concept of sandbox solutions.
Microsoft SharePoint 2010: New Features for Power Users	SharePoint Server 2010 offers a number of new features and enhancements that help to ease the day-to-day tasks of power users. There are a number of changes to the SharePoint 2010 interface, as well as changes and enhancements in the method and location of accessing specific options. This course explores the enhanced SharePoint 2010 UI, the Getting Started area of home pages, and the changed Site Actions menu. It also discusses the new site creation templates, changes to workflows, enhancements to record and content management, web content management, and the new document sets. Managing site settings is also covered.
SAP Business One - Introduction for End Users	SAP Business One is a comprehensive set of integrated business management applications. Business One provides an entire set of core modules, including financials, sales, operations, customer management, and logistics, which enable a small-sized to medium-sized enterprise to manage all aspects of the business.
SAP Enterprise Resource Planning (ERP)	The SAP Enterprise Resource Planning (ERP) module is SAP's core product for managing the fundamental accounting information common to every-day business practice. Fundamental accounting information includes financial transaction data, human resource-specific data, inventory, planning, and sales data. This data comprises what is known as the General Ledger, Accounts Receivable, and Accounts Payable. Understanding how to navigate SAP's menu structure to accomplish the entry of this data is central to one's ability to effectively use SAP ERP in an organization. This course introduces the SAP ERP menu system relating to the required screens for managing data. This course also introduces SAP's transaction code process and specifically the transaction codes which may be used to access the same required screens.
SAP Customer Relationship Management (CRM)	The SAP CRM module provides an organization with the tools to obtain, retain, and grow profitable customer relationships. An organization can use this module to effectively plan and manage marketing, sales, and service campaigns as well as analyze related processes. SAP CRM supports the entire customer relationship cycle, beginning with customer contact, through to order fulfillment, customer service, and reporting.
SAP Product Lifecycle Management	SAP Product Lifecycle Management (PLM) provides a comprehensive solution for managing all product-related information required in support of processes including planning, innovation, design, quality management, and engineering. As an integrated solution to SAP's enterprise resource planning (ERP) system, all information stored and maintained using the PLM solution is available across the enterprise to all other modules where required.
SAP Supply Chain Management	SAP Supply Chain Management (SCM) is comprised of a collection of applications under the SAP system that enable advanced planning. Tightly integrated with SAP Enterprise Resource Planning (ERP), the SAP SCM system is used to streamline and optimize the supply chain by enabling automated decision making and providing improved analytical components.
SAP Supplier Relationship Management	Supplier relationship management (SRM) involves collaboration with suppliers that are crucial to the success of an enterprise. The goal of SRM is to maximize the value of the collaborative relationships with suppliers. SAP SRM represents a strategic approach to procurement and supply that is tightly integrated with other components of the SAP Business Suite.
SAP BusinessObjects: Overview	One of the most valuable assets an enterprise can possess is data - information acquired and stored in the process of carrying out everyday business activities. This includes data regarding customers and potential customers, employee-related information, data gathered concerning competitors, and information pertaining to products.
SAP BusinessObjects: Crystal Reports	Business data comes from a variety of sources and is stored in various formats. The volume and variety of business data presents immense potential for understanding and responding to customer requirements and business process optimization. In order to realize this potential, SAP provides the Crystal Reports reporting tool. Crystal Reports has supplanted the BusinessExplorer report designer as SAP's standard enterprise reporting tool. Crystal Reports provides the interface to allow business users to extract and present formatted, layout-centric reports from business data. Crystal Reports provides a very user-friendly interface to various data sources, including data sources outside of the SAP realm.
SAP BusinessObjects: Web Intelligence	Data may be an enterprise's most valuable proprietary asset. Each enterprise possesses unique data that, when used strategically, provides a competitive advantage. Data can reveal significant information about customer behavior and preferences, and provide insight into business processes that may ultimately influence what a company sells, how products are made, and how they are sold. Getting the most out of this data will determine the ultimate value it provides to the enterprise.
SAP BusinessObjects: Dashboards and Analytics	The typical enterprise generates hundreds of management reports on a weekly basis. As companies grow and continue to add new channels, benchmarking and weekly reporting are key to helping top management keep a finger on the pulse of the business. With all those reports to wade through, business executives need a reporting format that provides the information they need at a glance. The corporate dashboard report does just that. It contains a series of dials in a corporate cockpit that reflect the key performance metrics from each department. Dashboarding involves the presentation of key business data in a very concise visual manner.
SAP BusinessObjects: InfoView	SAP BusinessObjects provides various tools for enterprise reporting purposes. InfoView is a web-based application that provides an interface for users to perform common activities, such as viewing or modifying reports, without having to install any additional software on their systems. InfoView can work with Xcelsius, Crystal, and Web Intelligence documents. It allows you to publish reports to common formats, such as PDF or MS Word, as well as alter a report's underlying data.
SAP BusinessObjects: Business Intelligence	Businesses generate a large amount of data in the everyday operation. This data is extremely valuable and may be used by employees at every level of an organization. Before it can be utilized optimally, it must be formatted in such a way that an enterprise can capitalize on the vast amounts of data in its possession.
Confined Spaces	This course covers information about confined spaces, hazardous atmospheres, necessary equipment, and permits. The intent of the course is to provide the learner with information about the hazards and hazard control methods that will permit safe work in enclosed work areas or confined spaces.
Scaffolding and Ladder Safety	This course is designed to train employees to recognize the hazards associated with ladders, stairways, and the type of scaffold being used at the work site and to understand the procedures to control or minimize those hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Hazardous Waste Generator (RCRA)	This course provides basic information on hazardous waste determination and characterization. In addition, this course describes the three types of generator status (Conditionally Exempt Small Quantity Generator, Small Quantity Generator, and Large Quantity Generator) along with applicable requirements. Generators must manage their hazardous waste per the Resource Conservation and Recovery Act (RCRA) regulations. Thus, accumulation, labeling, and other management requirements are described for both satellite accumulation areas and 90-day accumulation areas. Lastly, the importance of, and methods for, waste minimization and spill prevention and response are defined. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to identify and characterize all wastes, properly label and manage waste containers, use a manifest when RCRA waste is transported, properly dispose of hazardous waste, prepare waste generation reports, and maintain compliance records.
Hazardous Materials in the Workplace	This course discusses proper handling of chemicals in the workplace and actions that can be taken to protect the workers, the public, and the environment. It also covers the roles and responsibilities of those responding to events involving hazardous materials. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Asbestos	This course will provide you with information about the serious health hazards associated with exposure to asbestos. It will also address where asbestos is commonly found, how it can potentially affect you, and what you need to do to protect yourself and others from exposure. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Heat Stress Recognition and Prevention	Each year more people in the United States die from extreme heat than from hurricanes, lightning, tornados, floods, and earthquakes combined. This course will discuss the effects of heat on your body, outline the risk factors for heat-related illnesses, and describe the associated treatments for each. This training will also explain several control measure techniques and safe work practices that you can use to prevent heat-related stresses. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Workplace Inspections	Employers have a responsibility to maintain safe working conditions for their employees and to comply with the government health and safety standards that applicable to their establishments. They must also ensure that employees have and use personal protective equipment when required for safety and health as they do their jobs. When employees stay whole and healthy, businesses also benefit. They experience lower workers' compensation insurance costs, decreased payout for return-to-work programs, fewer faulty products, and increased productivity. One of the key ways that employers can maintain safe and compliant working conditions is to conduct regular and thorough workplace inspections.
TestPrep 70-646 PRO: Windows Server 2008, Server Administrator	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 70-685 PRO: Windows 7, Enterprise Desktop Support Technician	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 70-640 TS: Windows Server 2008 Active Directory, Configuring	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 70-642 TS: Windows Server 2008 Network Infrastructure, Configuring	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Oracle Database 11g Release 2: Database Architecture and Installation	To understand how an Oracle Database functions, it is important to gain a basic understanding of its major components. This course identifies the major architectural components of the Oracle Database 11g Release 2, explains memory structures, describes background processes, and explores the logical and physical storage structures. In addition, this course describes the role of a database administrator (DBA) and the tasks and tools required for this role. This course also covers how to plan for the Oracle Grid Infrastructure and Oracle Database 11g software installations, as well as how to do the installation using the Oracle Universal Installer.
Oracle Database 11g Release 2: Database Creation and Instance Management	As an Oracle Database administrator, it is important to plan the database to ensure that the database software is installed properly. Planning involves the logical storage structure, the overall design, and a backup strategy. It is also important to manage the database instance after the installation to ensure that it runs properly, and is started and shut down correctly to avoid problems. This course describes the DBA tasks to plan a database installation and how to use the Database Configuration Assistant (DBCA) to install the Oracle Database 11g software. It demonstrates how to manage the instance, including setting initialization parameters, accessing the database and Enterprise Manager, viewing information about the instance, startup and shutdown stages, and viewing the alert log to ensure that there are no issues with the instance. This course also demonstrates how to use Oracle Restart to manage components.
Oracle Database 11g Release 2: The ASM Instance and Network Connectivity	Oracle Database 11g Release 2 offers Automatic Storage Management (ASM), which eliminates the need for many tasks that are required on a non-ASM storage environment by the DBA. Some of these tasks include I/O performance tuning, file system, cluster file system, and raw device management, and data file movements and reorganizations. When ASM is used, an ASM instance is also used. The ASM instance allocates memory and uses the SGA differently than in a database instance. This course describes the ASM instance and how it works, and demonstrates how to manage it with various utilities. It discusses the ASM disk groups and how to create, extend, and drop them. This course also identifies how to configure the Oracle network environment which includes configuring and controlling the listeners that allow database connections, creating Oracle Net Service aliases, and the tools for configuring and managing the Oracle network, naming conventions, and shared server usage.
Oracle Database 11g Release 2: Storage Structures and User Security	An Oracle database is divided into logical storage units called tablespaces. Oracle also provides Oracle-Managed Files (OMF), which eliminate the need for the DBA to directly manage the operating system files in the Oracle database. To access the database, a user must specify a valid database user account and successfully authenticate as required by that user account. What the user can execute once they are logged in is controlled by privileges granted to them, which can be system or object. Privileges can be better controlled by using roles and profiles, which control resource consumption and account status and passwords. This course describes the purpose and functions of tablespaces, and provides details on how to create and manage database user accounts. It also discusses creating privileges, roles, and profiles, as well as using the password file and assigning quotas to users.
Oracle Database 11g Release 2: Managing Concurrency, Undo, and Auditing	Oracle Database 11g Release 2 is designed to prevent multiple users from changing the same data at the same time by implementing locks. These locks are used to manage data concurrency and are implemented automatically, which can sometimes cause lock conflicts. Lock conflicts can be detected and managed through Enterprise Manager or SQL statements. Managing undo data and implementing Oracle Database security are also important DBA roles. Data is manipulated using DML, and undo data exists as a copy of the original, premodified data and is captured for every transaction that changes data. Security requirements have been a matter of individual concern until recently, but now there are a variety of laws enforcing the privacy and accuracy of data. This course discusses the locking mechanism in Oracle and how to resolve lock conflicts and deadlocks. It also discusses how to manage undo data, and how to implement database auditing and maintain the audit trail. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 11g: Administration I (1Z0-052) exam. Passing this exam will earn the learner Oracle Certified Associated (OCA).
Oracle Database 11g Release 2: Managing Database Maintenance and Performance	General database maintenance and performance monitoring are important Oracle DBA tasks. Proactive and reactive database maintenance is made easy by the sophisticated infrastructure of Oracle Database 11g Release 2, including elements such as Automatic Workload Repository (AWR) and database health checkers. DBAs must make sure that databases are open and available to users when they need it and that it is working without bottlenecks by gathering performance metrics. This course explores how to specify, review, and maintain audit information. It also discusses how to use Enterprise Manager to monitor performance, and how to use Automatic Memory Management (AMM) and the Memory Advisor to size the memory areas correctly, as well as how to troubleshoot invalid and unusable objects. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 11g: Administration I (1Z0-052) exam. Passing this exam will earn the learner Oracle Certified Associated (OCA).

Course	Description
Oracle Database 11g Release 2: Backup and Recovery	Preparing for and performing data recovery and completing database backups are expected job duties of an Oracle Database 11g Database Administrator (DBA) to ensure that the database is available for users when they require it. They also need to ensure if a failure does occur that the loss of data is minimized as much as possible and they can recover the database in an efficient manner. As an Oracle DBA, it is important to understand the various internal consistency checks a database performs as it moves from the shutdown stage to being fully open. Equally important is an understanding of what can cause a failure, and how to recover from an instance failure. This course explores how to identify the types of failure that can occur in a database and how to prepare a database for failure recovery by using checkpoints, log files, and the flash recovery area and ARCHIVELOG mode, as well as how to perform different types of backups. It also discusses the need for performing recovery and the use of tools such as the Recovery Manager (RMAN) and the Data Recovery Advisor for file recovery operations.
Oracle Database 11g Release 2: Moving Data and Oracle Support	From time to time Oracle DBAs are required to move data. Oracle Database 11g Release 2 offers various ways to complete this task, including Oracle Data Pump, SQL*Loader, and the use of external tables. DBAs are also required to ensure that the database is up-to-date with the latest patches and that critical errors are resolved, which includes contacting Oracle for support. This course explores how to move data using Data Pump Wizards or the command line. Working with the Enterprise Manager Support Workbench, My Oracle Support, service requests, and patch management are also covered.
Oracle Database 11g Release 2: Database Architecture and Recovery Operations	An important aspect of Oracle Database administration is to understand how a database and its major components function. Also as an Oracle Database administrator, you need to be able to recover when problems occur in the database. This is accomplished using backups, which are used to protect against problems such as media failure, user errors, and application errors. This course reviews the major architectural components of the Oracle Database 11g architecture, such as memory structures, background processes, and the logical and physical storage structures. This course also discusses how to prepare an Oracle Database 11g for recovery and backup using RMAN, ARCHIVELOG mode, retention policies, and a Flash Recovery Area. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 11g: Administration II (1Z0-053) exam.
Oracle Database 11g Release 2: The RMAN Catalog and Creating Backups	RMAN uses a recovery catalog to store metadata about Oracle databases, and allows stored scripts to be used to run sequences of RMAN commands stored in the catalog. When administering an Oracle Database, it is important to be familiar with what a backup is, how the process of creating a backup is completed, and the various types of backups available. This knowledge allows you to make an informed decision on the best way to maintain the integrity of your data and the availability of your database. This course discusses how to create and manage the recovery catalog. It also explains how to configure backup specifications, including methods of optimizing a backup and how to use RMAN to create backups. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 11g: Administration II (1Z0-053) exam.
Oracle Database 11g Release 2: Performing Restore and Recovery Tasks	As a database administrator it is very important to understand how to restore and recover your database in the event of a loss of a file due to media, hardware, or user error. The restoration process involves moving a backup into place to be used by the database when a file is damaged. The recovery process involves applying redo to bring the file forward in time to before the failure or up to the failure point. This course discusses the type of failures that can occur and how to recover from them. It also discusses how to perform user-managed backup and recoveries. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 11g: Administration II (1Z0-053) exam.
Oracle Database 11g Release 2: Using, Monitoring and Tuning RMAN	Reconstructing the contents of all or part of a database from a backup typically involves two phases. The first phase is the retrieval of a copy of the data file from the backups. The second involves reapplying changes to the file that occurred since the backup, using archived and online redo logs. To effectively administer an Oracle Database 11g database, recovery should be performed when critical or non-critical files are lost. Once you configure RMAN to perform recovery operations, it is important to have measures in place to monitor RMAN jobs. This course explains how to use RMAN to perform recovery operations, such as recovering a database from an incremental backup, switching to image copies for fast recovery, restoring a database to a new host, and using a backup control file for recovery and performing an automatic tablespace point-in-time recovery (TSPITR) are also covered. It also discusses how to monitor the progress of RMAN jobs, including how to interpret RMAN output such as messages and error stacks. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 11g: Administration II (1Z0-053) exam.
Oracle Database 11g Release 2: Database Diagnostics and Flashback Technologies	Administering an Oracle database requires monitoring and diagnosing data failures and recovering from them. Oracle Database 11g Release 2 provides the Data Recovery Advisor which eases this task by automatically detecting errors when they occur and providing repair advice. The use of the Automatic Diagnostic Repository can also be used, which holds diagnostic information about critical error events. Flashback technology can be used when a logical corruption occurs in the Oracle database and you need to recover data quickly and easily. With the use of a Flashback Table, you can recover a set of tables to a specific point in time without having to perform traditional point-in-time recovery operations. This course explains how to use the Data Recovery Advisor and how to set up Automatic Diagnostic Repository, how to use the Support Workbench, run health checks, as well as detect and repair database corruption within the Oracle Database 11g environment. This course discusses how to use the Oracle Flashback technologies, including Flashback query, table and transaction, as well as Flashback Data Archive. It also discusses how to restore items from the Recycle Bin and how to flash back a database using Flashback Database.
Oracle Database 11g Release 2: Managing Database Memory and Performance	Because there is a finite amount of memory available on a database server and on an Oracle Database 11g instance, you must pay attention to how memory is allocated. Also, database planning must include a balance between performance, cost, and reliability. You must consider the investment in the system architecture, which includes the hardware and software infrastructure needed to meet your requirements. This course explores the database's memory structures, focusing on how to configure SGA parameters and how to implement Automatic Memory Management and Automatic Shared Memory Management, and how to configure automatic PGA memory management. This course also explains how to monitor the performance of sessions and services, including how the Automatic Workload Repository (AWR) works, and how to use the SQL Tuning Advisor to identify and tune SQL statements that are using the most resources. This course also describes the benefits of Database Replay within your Oracle environment.
Oracle Database 11g Release 2: Managing Database Resources and the Scheduler	By using the Database Resource Manager, you have more control over the allocation of machine resources than is normally possible through operating system resource management alone. Many tasks in the Oracle environment need job-scheduling capabilities. Using advanced Scheduler features, you can exercise more control over various aspects of scheduling, such as job windows and prioritizing jobs. This course explains how to configure the Database Resource Manager to access and create resource plans, create, configure, and administer consumer groups, as well as activate a resource plan and monitor the Resource Manager. This course also explores how to simplify management tasks by using the Scheduler to create, program, schedule, and monitor job execution as well as how to use a time-based or event-based schedule for executing Scheduler jobs. Incorporating advanced Scheduler concepts such as how to use the Scheduler to prioritize jobs is also covered.
Oracle Database 11g Release 2: Managing Database Space and Duplication	To effectively manage space, you can configure automatic management by the Oracle database server. This allows you to generate alerts about potential problems and recommend possible solutions. This course explores how to use the Oracle database server for automatic space management, proactively monitor and manage tablespace space usage, and reclaim wasted space from tables and indexes by using the segment shrink functionality. Using the segment advisor, resumable space allocation, and moving tablespaces are also covered. This course will also explore how to duplicate a database using RMAN and Enterprise Manager.
Oracle Database 11g Release 2: SQL Monitoring and Performance Enhancements	Oracle Database 11g Release 2 offers improvements and new features to provide DBAs a better way to monitor SQL commands in real-time and to allow the database to automatically manage its own memory and gather optimizer statistics. These features enable the DBA to ensure the optimal memory sizes are being used for the database using Automatic Memory Management, and that SQL statements are running properly by monitoring them in real-time using Enterprise Manager. It also offers a new feature to conceptually extend the buffer cache by using DB Smart Flash. This course demonstrates how to monitor SQL commands in real-time using SQL Monitoring, use Automatic Database Diagnostic Monitoring (ADDM), DB Smart Cache, gather and view different statistics for partitioned tables, hash-based sampling, multicolumn, and expressions, and use deferred statistics.
Oracle SOA Suite 11g: Introduction to SOA	This course outlines the challenges faced by enterprises in integrating applications, and how Service-Oriented Architecture can provide a solution. The various drivers that enable you to build a reference architecture, which is the first step toward embarking into a Service-Oriented Architecture, will also be covered. This course also introduces the Oracle SOA Suite 11g architecture and its components at an introductory level. Additional related products, such as Oracle BAM, are discussed along with Oracle SOA Suite and they provide a comprehensive solution for SOA implementation.
Oracle SOA Suite 11g: SOA Governance and Service Design	In this course, the need for governance in a Service-Oriented Architecture environment is highlighted, and the different characteristics related to service management are covered. You are also introduced to the concepts that enable defining and implementing a service. This is an important aspect of designing an SOA system as it allows appropriate business functionality to be mapped to the appropriate service type.
Oracle SOA Suite 11g: SOA Composite Applications	In this course, the need of governance in a Service-Oriented Architecture environment is highlighted. It also introduces the various service artifacts and service classification in a Service-Oriented Architecture environment.
Customizing the SharePoint 2010 User Interface Programmatically	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into programmatically working with the SharePoint interface and site customization using Visual Studio 2010. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-573 (Microsoft SharePoint 2010, Application Development). Passing this exam will earn the learner MCTS: SharePoint 2010, Application Development certification.
Working With SharePoint Data	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into SharePoint data access via the Client Object Data Model and document storage. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-573 (Microsoft SharePoint 2010, Application Development). Passing this exam will earn the learner MCTS: SharePoint 2010, Application Development certification.
Identifying and Resolving Windows 7 Application Issues	With the deployment of a new Operating System version comes the possibility of installation or operation issues of software and applications developed for previous OS versions. Software errors can be encountered during the installation, immediately after the installation, or after a period of use. Issues occurring during or soon after an installation are generally caused by some form of restriction, such as permission or policy constraints; an incompatible program configuration setting; or the inability of the installation program to access needed resources. Failures can often be resolved by changing a program configuration setting that is not supported.
Management and Maintenance of Windows 7 Client Systems	Desktop operating systems sometimes develop problems over time or after configuration changes have occurred. These problems generally involve system performance issues or hardware/software-related problems. This course provides a look at key tools provided in Windows 7 to monitor and resolve system issues and to help identify what has happened to affect performance or function. Included is a discussion of the Event Forwarding capability first introduced in Windows Vista, as well as the use of Performance Monitor, Resource Monitor, and Task Manager. If CPU or memory resources are suspected of being causing problems, you may also want to leverage the Memory Diagnostic Tool or Windows ReadyBoost feature. For hard disk maintenance, the desktop technician will also want to be familiar with defragmentation and disk cleanup, the checkdisk and checkntfs tools, System Configuration Tool options, Device Manager, and in some cases how to create a system image or use the Recovery Console options.
Troubleshooting Logon and Resource Access Issues in Windows 7	The desktop support technician is often called upon to help with logon problems and to set up or resolve issues with resource access. Logon errors can be caused by simple issues such as network connectivity or use of incorrect credentials, an inability to contact authenticating servers, account misconfigurations, or even name resolution. This course provides technicians with an understanding of the authentication and authorization process, and the various user account policies and settings that can restrict the logon event. It also covers troubleshooting printer access, working with problems with file and printer sharing, and the role of User Account Credentials in causing local or network resource access issues, and troubleshooting printer access. The course describes how account auditing can be used to troubleshoot some logon or access problems, and the role Credential Manager plays in accessing network or Internet resources using Windows 7.
Resolving Windows 7 Network Connectivity Issues	Windows networking has improved considerably in Windows 7, but you will still be required to verify the configuration settings and troubleshoot problems for your clients. The good news is that Windows 7 comes with new built-in troubleshooting tools, as well as the trusted command-line utilities you're used to from previous operating systems. When it comes to network connectivity problems, the hardware should always be checked first. Windows 7 provides new and effective troubleshooting functionality using the Troubleshoot Problems link in the Network and Sharing Center, which should be your next step in troubleshooting. This course also provides you with the necessary background on the proper setup of wireless and remote access connections and the key parameters to check if a client is experiencing problems establishing a VPN or DirectAccess connection.
Troubleshooting IE8 and Encryption Issues in Windows 7	This course provides the desktop support technician with an overview of managing Internet Explorer 8, in particular, in relation to browser security features such as Enhanced Security Configuration, Security Zones, Trusted Sites, and Protected Mode. Also included are guidelines on how to handle ActiveX controls and browser add-ons. These types of add-ons can often cause errors or unexpected behavior. In addition, the basics of securing sites with certificates and solving certificate errors are covered.
Protecting Windows 7 against Malware and Vulnerabilities	This course provides the desktop support technician with guidelines for preventing the infection of client systems by malicious software, how to identify possible infections, and an overview of the tools available to resolve any infection. It will also detail how Windows Firewall can be used to block unwanted content, but allow needed programs and services to be accessed. Also covered are the configuration options provided by the Advanced Security Snap-In, which provides advanced rules and monitoring settings for remote or standalone client systems but can also be configured through Group Policy in the Enterprise environment. To ensure overall vulnerability management of the operating system this course also stresses the importance of the Windows Update process, and provides the information needed to configure Windows Update, verify installed updates, or remove troublesome updates.
Microsoft .NET Framework 4: Web Applications with Visual Studio 2010 and Visual C# 2010	Visual Studio is an integrated development environment that includes a drag and drop interface designer and many other tools for building .NET applications. The latest version is Visual Studio 2010 and it supports a variety of languages including Visual Basic 2010, Visual C++, Visual C#, and Visual J#. ASP.NET 4 is Microsoft's latest version of ASP for developing web applications using the .NET Framework. It builds on the previous version ASP.NET 3.5, while maintaining backwards compatibility. This course provides an overview of how to develop web applications with Visual C# 2010 and ASP.NET 4. Topics covered include how to create web forms with server controls, using event handlers, utilizing state-management capabilities, and implementing globalization and accessibility in a web application. This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Web Applications Development with Microsoft .NET Framework 4, 70-515. Passing this exam will earn the learner the MCTS: .NET Framework 4, Web Applications certification.
Microsoft .NET Framework 4.0: Web Application Optimization and Customization with VB 2010	Visual Studio 2010 and ASP.NET 4.0 provide developers with the tools they need to create unique, flexible ASP.NET web sites that can use custom master pages, themes, and skins, as well as Web Part pages that allow users to personalize their own web pages. This course explores the various ways you can employ these tools to develop and optimize web applications. Specific topics covered include modifying page layout with master pages, using themes, and utilizing Web Parts in ASP.NET 4.0 web applications.
Agile Programming and Testing	Agile software development is an iterative, incremental approach to developing and releasing software. Agile principles include commitment to timely and ongoing software deliveries, changing requirements, simplicity in approach, and sustainable development cycles. The Agile method also promotes self-organizing, self-empowered, self-monitoring teams and individuals who work collaboratively with face-to-face communication. Agile development practices include frequent releases, ongoing testing, customer and stakeholder participation throughout the development process, co-ownership of code, and pair-programming. In this course you will be introduced to agile team practices including pair-programming and co-ownership of code. You will also become familiar with agile programming practices including test-driven development, and behavior-driven development and you will become familiar with agile testing activities in relation to software components, user interfaces, and data.

Course	Description
Setting up a Site and Adding Content in Dreamweaver CS5	Adobe Dreamweaver CS5 is a versatile web site development application, suitable for personal and enterprise development environments. This course explores the concepts of creating a new site in Dreamweaver CS5, including configuring site properties and application preferences, adding content, and manipulating text. A look at the major interface elements of Dreamweaver CS5, including features such as Live View and workspaces, is also provided.
Adding Links and Images in Dreamweaver CS5	Using Adobe Dreamweaver CS5 in conjunction with other products, such as Adobe Photoshop CS5, you can create web sites that are media rich and visually appealing. This course explores processes of creating intuitive site navigation using linking, and performing asset management. The course also discusses working with rich media in the form of Flash video, a pervasive web technology. Working with images, creating image maps, and methods of optimizing images for best performance are also covered.
Tables, Accessibility, and Standards in Dreamweaver CS5	When designing a web site, it's important that your content is engaging, but it's also crucial that it is structured in an intuitive and accessible manner. Creating a site layout using tables is one method of ensuring a consistent and easy to navigate web site. This course explores how to structure content using tables, and examines creating and manipulating tables and other layout elements, and working with tabular data. Building an accessible web site that complies with international standards, and targeting browsers to ensure browser compatibility within Dreamweaver and Adobe BrowserLab are also covered.
Reusing Content in Dreamweaver CS5	Adobe Dreamweaver CS5 provides web developers with a variety of tools that allow them to reuse existing content and assets when developing web sites. This course explains these features, including templates, the site library, and the implementation of frames and framesets.
Cascading Style Sheets in Dreamweaver CS5	Cascading Style Sheets, commonly referred to as CSS, are a set of formatting conventions allowing you to standardize and enhance the appearance of a web site. By implementing CSS you can fully separate your web site's presentation from its content, and give the site a consistent feel. Dreamweaver CS5 provides increased CSS support, with the ability to enter Inspect mode to view the styling associated with page elements. This course explores this new feature along with other CSS features including a set of prebuilt CSS layouts complete with educational inline comments, access to the Adobe CSS Advisor web site, and CSS management features that facilitate moving CSS rules from page to page and converting inline CSS to CSS rules. This course examines the process of creating, editing, and applying the various types of cascading style sheets and style rules. CSS visual layout tools and advanced CSS techniques are also covered.
Photoshop CS5: Getting Started	Adobe Photoshop CS5 is one of the most popular digital imaging toolsets used by professional graphic designers, and photographers. This course explores the streamlined Photoshop CS5 interface, including Photoshop's integration with Adobe Bridge and the new Mini Bridge panel, and manipulation tools used to automatically straighten, crop, rotate, and resize images, including a feature that allows you to temporarily rotate the appearance of a photo as you are working on it. The course also explains the basics of retouching photos using red eye correction, and automatic color and tone adjustment features.
Critical Thinking	Critical thinking is useful for examining an issue or problem logically. This Challenge Series product explores applying the critical thinking process.
Promoting Creative Thinking	Strategic creative thinking is a process, requiring encouragement and the freedom to take risks. This Challenge explores methods for promoting creative thinking in the workplace.
Acting Decisively	Acting decisively moves beyond simply making decisions. Decisive leaders exhibit confidence and are able to articulate the rationale behind their choices. This Challenge explores the qualities that embody decisiveness.
Intellectual Property Overview	Employees are often confronted with the responsibility of protecting a company's intellectual property rights, while still communicating the company's identity or ideas to internal and external customers. How do employees perform this function effectively? This course explains the basic types of intellectual property, the legal protections in place, and the potential consequences of violating intellectual property laws.
Crafting an Organizational Vision	Leading an organization toward the development of a compelling new vision requires both courage and creativity. This Challenge Series product examines the vision crafting process.
Building Upward Relationships	Winning the confidence of managers more senior to you requires understanding your organization and your boss's expectations and preferences. It also requires forthright communication, authenticity, and respect. This Challenge Series exercise examines possible strategies for building upward relationships.
Achieving Goals through Perseverance and Resilience	Obstacles and setbacks can get in the way of your goals. Few things are as frustrating as watching your best-laid plans fall to pieces and go off track. To succeed, you must adapt, keep your focus, and get things back on track; and this requires resilience and perseverance.
Advanced HTML5	This course provides instruction on many of the new API's that have been introduced with HTML5 relating to web support, communication, and 3D graphics. The course also covers features that are strictly speaking not part of the HTML5 specification, but are often associated with HTML5 because they were introduced at much the same time.
AJAX, the SharePoint Ribbon, and Content Type Development in SharePoint 2010	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into the visual components of SharePoint which include Ajax and the new server ribbon. Also, this course covers the use and implementation of custom field types and delegate controls. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-576: PRO: Designing and Developing Microsoft SharePoint 2010 Applications. Passing this exam will earn the learner (MCPD): SharePoint Developer 2010 certification.
Application Design and Security in SharePoint 2010	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into working with user interface and security in SharePoint This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-576: PRO: Designing and Developing Microsoft SharePoint 2010 Applications. Passing this exam will earn the learner (MCPD): SharePoint Developer 2010 certification.
Backing up, Restoring, and Troubleshooting Essentials 2010	As with any IT system resource, a backup and restore plan should be documented and followed to ensure no data is lost in case of an unexpected failure. System Center Essentials 2010 is a management system that provides a central location for administrators to manage clients and servers within their organizations. Essentials uses databases in SQL Server to store all the data that is recorded during the management of the computers, and these databases need to be backed up to ensure this information is not lost. If there is a failure, there also needs to be a documented plan for restoring the data to have Essential back online with minimal downtime. To troubleshoot issues with System Center Essentials, log files are provided to give more insight into the issue and to help resolve it quickly. This course discusses how to back up System Center Essentials and how to restore it after a failure. It also discusses how to troubleshoot common installation, configuration, and features issues.
Basic Business Math: Averages and Equations	Basic math skills are practical in any business situation, whether it's calculating average call turnaround times in a call center or using equations to find the stock of inventory and the items that have been sold in a retail store. Because math skills are valuable in so many business situations, refreshing your skills can demonstrate your mathematical competence and business savvy.
Basic Business Math: Charts and Graphs	Basic math skills are practical in any business situation. Often, numbers can be portrayed in graphical form, giving the reader clear and concise information at a glance. Being able to read and select the right types of charts and graphs in a basic business environment is invaluable.
Basic Business Math: Percentages and Ratios	An understanding of basic mathematical principles is important for any business person. They enable you to figure out resource requirements, estimate costs, work out average time spent on different activities, or calculate commission earnings. Percentages and ratios are a means of highlighting many relationships in business, not least of which are financial. The ability to calculate work with percentages and ratios is an essential skill for anyone working today.
Basic Business Math: Using Whole Numbers and Decimals	An understanding of basic mathematical principles is important for any businessperson. Math skills enable you to figure out resource requirements, estimate costs, work out average time spent on different activities, and calculate commission earnings. The ability to analyze and comprehend numbers is a vital skill for personal, as well as corporate, growth and success.
Bouncing Back with Perseverance and Resilience	No matter what your current project, success is never guaranteed. Sometimes, you may fail. To achieve your goals when this happens, you need the ability to bounce back, regain your focus, and take action â€" fast. Delivering on your goal is often about being able to rise to a challenge and overcome an obstacle.
Brand Management for Social Media and Wireless Technologies	The brand tenets of the past â€" notably control and predictability â€" are no longer valid. Ever-increasing consumer power, driven by social media and other web-based and wireless technologies, is having a significant impact on brand effectiveness and brand staying power. Consumers are now key drivers for corporate brand strategy. Brand managers need to understand how to harness the power of these technologies and how consumers interact with these technologies. And they must appreciate how they can use social media and wireless technologies to their strategic advantage. This course provides instruction on the benefits and potential risks associated with the use of social media and wireless technologies to promote a brand. It also explores how brand managers should approach branding across these platforms in order to improve brand visibility and ultimately brand success.
Building Lasting Customer-brand Relationships	The focus of brand management today is on building lasting relationships between a brand and its customers. Effective brand relationship management involves knowing a brand's customers and being aware of their changing needs and behaviors. It also involves looking for new ways to deepen the attachment between a brand and its customers. This course explores how customers connect with brands and provides an overview of actions you can take to develop a customer-brand relationship. It also outlines a methodology to analyze customer-brand connections and to make a connection at an emotional level by using brand stories.
Business Execution: Crafting a Business Strategy that Executes	Good planning gives your company a competitive advantage. However, a large proportion of the planned strategy often fails to materialize. This isn't because of unforeseeable events but because the plans lack reality, failing to fully assess the implementation capabilities of the organization and its position within the environment. Executable strategy begins with a clearly-defined strategic direction that considers existing strategy, as well as internal and external influences. Strategic themes then enable an organization to develop a workable strategy that aligns with its goals.
Business Execution: Understanding the Fundamentals	Business managers are usually comfortable formulating strategy to enhance business outcomes. But what happens when plans fail to translate to reality? Why is business execution so difficult? Delivery is vital to the survival of all organizations, yet unclear plans, unsuitable workforces, and limited resources can have a detrimental effect on the best strategic ideas. Good leadership, having the right people in the right roles, and a business culture that's focused on getting the job done are the cornerstones to building and maintaining a company that can execute its strategy. This course will review the drivers of business execution and the fundamental concepts that companies need to pay attention to in order to realize their plans. The course looks at the leadership behaviors that foster actionable strategy, as well as the value of selecting the right people for the right roles. It also considers how to create and manage a 'get it done' culture.
Business Law and Ethics	Dealing with the balance of ethics and the law is a day-to-day challenge for many managers. While you might be inclined to act in ways that are legal in the technical sense, there is value also in recognizing the intent behind a law. Meeting the spirit of the law often comes down to acting in a way that is both legal and ethical.
Business Law and the Manager's Responsibilities	Do you know what your legal responsibilities are as a manager? Do you know that in certain circumstances you may be held personally responsible for the actions of others? How can you protect your organization and yourself when dealing with legal issues? As a manager, knowing the answers to these questions can help you make decisions that are better for you and your organization.
Business Law Basic Concepts	How does the law impact you in your day-to-day operations? Have you ever thought about the issue of legal accountability and how it will determine the decisions you have to make as a manager?
Campus to Corporate: Developing a Professional Image	Projecting a professional image is vital to career success. Knowing how to dress is part of it, but there's much more. It's about demonstrating your best qualities through the attitude you bring to your work. And it's about respecting yourself, your job, your organization, and your coworkers. This course explains how you can show professionalism by your appearance and by following rules of conduct â€" for example, rules about using cell phones at work or about what you publish on social networking sites, even on your own time. It also offers guidance on the basics of how to communicate in a professional manner. Finally, it helps you recognize and avoid e-mail blunders that could diminish your professional image.
Campus to Corporate: Meeting New Expectations	Campus life is now behind you, and you are taking the first steps along your career path. The better you can adjust to the new expectations, the smoother and easier these steps will be. This course gives you an understanding of corporate culture so you'll have a better grasp of the new expectations. It also outlines how to manage your time and responsibilities in this new environment and how to demonstrate initiative. Finally, it explains the importance of building good professional relationships with your colleagues and shows you what you can do to foster these relationships.
Capital Budgeting: Capital Allocation	No organization can claim to have an infinite amount of capital for funding projects. Capital rationing is a fact of organizational life that often requires decision makers to make difficult choices between promising investments. In deciding which projects to accept or reject, an organization must not only perform a quantitative assessment to choose the most profitable projects, but also assess a variety of qualitative factors to analyze the impact and feasibility of each project. Quantitative assessment leads to sound capital allocation based on projected cash flows, while qualitative assessment adds an element of risk management, relying on the experience and knowledge of those familiar with the business. Once capital is allocated and projects are implemented, it's important to continue to monitor the projects' progress. A post-implementation audit is an important follow-up, used to detect any deviations from the forecasted results and to gain experience that can be used in making future capital budgeting decisions.
Capital Budgeting: Discounted Payback Period and Profitability Index	When it comes to deciding which new projects to invest in, organizations rely on quantitative tools to objectively compare different proposals. Using measures such as profitability index (PI) and discounted payback period (DPBP), decision makers assess which projects to undertake â€" the ones that will maximize the value of the organization. These tools account for changes in the value of future cash flows due to the time value of money.
Capital Budgeting: Net Present Value and Internal Rate of Return	Organizations rely heavily on quantitative tools such as net present value (NPV) and internal rate of return (IRR) measures to assess which projects to undertake through the capital budgeting process. These tools are based on the time value of money concept, which enables you to calculate the present value of expected project returns and compare projects based on their present value.
Capital Budgeting: The Capital Budgeting Process	Organizations everywhere must decide how to most efficiently spend their capital to continue operations, innovate, and grow. Capital budgeting is a systematic process used to determine how capital â€" a limited resource â€" is best allocated to projects that maximize the value of the organization. The projects chosen must align with the organization's greater strategy.
CISA Domain: Governance and Management of IT â€" Part 1	IS Governance is an incredibly important part of IS security. Management and monitoring of resources are built into the audit process and the CISA must be aware of the role they will play in the process. This course examines the role of Governance, IT Management and IT Monitoring, and the strategies and models used to evaluate and create policies and procedures within the environment. This course also examines the Risk Management strategies that can be used, and how the CISA plays a role in choosing the correct strategy for the environment. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organizationâ€™s information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: Governance and Management of IT - Part 2	Information Security Management Practices should adhere to the business goals of an organization, aligning to the objectives that management set down for company improvement. This course examines different types of management practices such as human resource management, sourcing management, change management, financial management, and quality management. This course also looks at how segregation of duties is used to better control information security. Finally, this course examines business continuity and impact analysis and how it can be used as part of information security management practices. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organizationâ€™s information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.

Course	Description
CISA Domain: IS Operations, Maintenance and Support – Part 1	Auditing IS functions must take the hardware and infrastructure resources into account. This course examines IS operation and how it is managed along with IS hardware, and the various components that need to be monitored and audited. This course also examines the architecture of the software and the data management systems that are used in an IS environment. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organization's information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: IS Operations, Maintenance, and Support - Part 2	Enterprise network infrastructures and architectures are an integral part of enterprise environments today and are widely unknown to most users. The IS auditor must have a high level knowledge of these frameworks and a clear communication path to those who control them. This course examines the types of networks that are commonly found in enterprises today and the services and components that are commonly used in them. This course also examines disaster recovery strategies and scenarios that must be put in place to deal with any emergency situations that may occur. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organization's information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: IS Acquisition, Development and Implementation - Part 2	Business Application Systems play a substantial role in many corporate infrastructures today. This course examines the role of the auditor in environments where business application systems and agile development systems are being used. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organization's information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: IS Acquisition, Development and Implementation - Part 3	This course examines the auditor's role in auditing physical and software infrastructures and the maintenance of those infrastructures. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organization's information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: IS Acquisition, Development, and Implementation - Part 1	The acquisition, development, and management of business projects are important in all information systems builds. The CISA must make sure that all these aspects are brought together, and that the business model of the organization is adhered to at all times during this process. This course examines how business realization is applied, how project management structures are built, and how project management practices are used to correctly implement the project management structures. This course also examines the business applications that are used, and the processes that play a part in these implementations, such as SDLC. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organization's information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help prepare learners for the CISA examination.
CISA Domain: The Process of Auditing Information Systems - Part 2	While performing audits, it is extremely important to classify audit information and to evaluate and document both the controls used and the outcomes of all parts of the audit process. This course examines the audit classification process, how risk-based auditing is performed, how compliance testing is used, and the processes and procedures used to evaluate and document the audit process. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organization's information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: The Process of Auditing Information Systems – Part1	Auditing Information Systems has become an integral part of business management in both big and small corporate environments. This course examines the starting points for performing and IS audit and some of the standards, guidelines, tools and, techniques that can be used to setup, manage, and monitor the audit function. The Certified Information Systems Auditor (CISA) certification is known worldwide as a standard of achievement for those who audit, control, monitor and assess an organization's information technology and business systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
Cold Stress	This course will discuss the effects of cold on your body, outline the risk factors for cold-related ailments, and describe the associated treatments for each. This training will also describe several preventive measure techniques and safe work practices that you can use to protect yourself from cold-related stresses. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Communicating during Difficult Times	Communication is never more important than when a business is experiencing difficult times. When a company is affected by a struggling economy or other pressures, hard decisions have to be made, and employees need to be on board with these decisions. Different levels of leadership bear specific responsibilities at such times. These responsibilities include communicating strategic vision, explaining the rationale for decisions made, and translating those decisions into day-to-day operational terms. Leaders need to communicate to employees how decisions made in difficult times will benefit them and the organization, and impress on them the importance of understanding, accepting, and carrying out these decisions. Creating a comprehensive and empathetic communication plan that identifies the exact nature of the decisions and the actions needed to implement them will help leaders get the necessary support from employees.
Communicating with Professionalism and Etiquette	Organizations rely on proper communications to build strong relationships among employees and develop their customer base. Those who excel in professional environments understand the difference proper communication etiquette makes in demonstrating professionalism and competence. Following the accepted norms and behaviors of communicating in the workplace can help you to ensure that your messages are conveyed as you intended. Observing norms enables you to build and nurture your relationships with colleagues, subordinates, and superiors. This course strengthens your ability to communicate in a professional manner. It walks you through the etiquette of speaking to others in person, as well as on the phone. It then explores the often neglected common rules of written communication, particularly with regard to e-mail. And it considers appropriate ways of communicating using online chat, the best way to conduct yourself during conference calls, and how to set up and use voicemail effectively.
Competitive Marketing Strategies: Analyzing Competitors	To formulate successful competitive marketing strategies for your organization, you need to understand your competitors. Who are your key rivals and what drives their marketing decisions? What do they do well and where do they miss the mark? Gathering and analyzing this kind of information is the starting point for developing effective strategies that can increase your competitive advantage and build market share. This course describes a process for developing a competitor intelligence system that enables you to better understand what you're up against and how you can use information about competitors to design your own marketing strategies for maximum effectiveness.
Competitive Marketing Strategies: Conducting an Internal Analysis	When developing competitive marketing strategies, one of the most important steps is carrying out effective research and analysis. As well as assessing the external competitive environment, you need to look inward. In other words, you need to assess your organizational capabilities – what unique skills and resources does your organization have and how can it effectively deploy these to deliver a sustainable competitive advantage? In addition, you need to consider your marketing activities – how relevant are your marketing objectives, given your organization's current and potential capabilities? And what kind of profile does the marketing function have in your organization? Addressing questions like these will help you improve and develop strategies that reflect your unique capabilities. This course describes how to conduct an internal analysis as part of the process of developing competitive marketing strategies. It explains the types of questions you may need to ask about your organizational resources and capabilities. And it describes areas to consider when doing a marketing audit, including innovation activities.
Competitive Marketing Strategies: Selecting and Implementing Strategies	Competitive marketing strategies can help your organization gain market share, minimize the impact of competitors, and increase revenues. These outcomes can only be achieved, however, if organizations understand how to translate their competitive advantages into winning strategies. This course describes the different types of competitive advantages that can help an organization distinguish itself from the competition. It outlines how to choose the most appropriate competitive marketing approach based on those advantages. It also explains the key components of a competitive marketing plan, which shows how strategies can be put into action. Finally, the course describes how to approach the implementation of competitive marketing efforts in order to ensure buy-in and support from key stakeholders.
Creating and Maintaining a Positive Work Environment	Leaders play a vital role in establishing and maintaining a positive work environment. This is key to any organization's long-term success, no matter how many employees you have. It's leaders who foster the work atmosphere; they're responsible for conducting things in a way that helps raise people's spirits. Leaders can also help counteract a negative environment, and create a positive one by communicating honestly, respecting and supporting others, and maintaining a good attitude themselves. This course introduces some best practices for creating a positive work environment. Specifically, you'll learn the benefits to establishing it, its characteristics, and some concrete steps you can take to create one. You'll also explore how to maintain this atmosphere by learning how to recognize the signs and impact of negativity and how to take corrective action. Finally, you'll be able to practice through a simulated scenario how to maintain a positive work environment with your employees.
Creating and Sustaining a Customer-focused Organization	To create a customer-focused organization, you need an in-depth understanding of what types of customer-focused tools and solutions are available. And you must know the level of customer focus that you're seeking to achieve. As a manager, you also need to know how to select the most appropriate implementation strategy that aligns with your organization's capabilities and its objectives. This will help you to create stronger, more valuable, and lasting relationships and experiences for your customers. This course provides direction on how to approach, implement, and sustain effective customer-focused service strategies in order to increase your organization's competitive advantage.
Creating User Interfaces for Windows Applications with C# 2010	Windows Forms and Windows Presentation Foundation (WPF) includes various controls that allow for the development of rich user interfaces. They also allow for the creation of user defined and custom controls as well as the integration of Windows Forms with WPF. This course covers the various control and layout options that comprise the User Interface. Specific topics covered include creating and configuring controls, creating user and custom controls, layout panels, and utilizing Windows Forms in a WPF application.
Creating Windows Applications with C# 2010	Windows Forms and Windows Presentation Foundation (WPF) along with Visual Studio 2010 enable developers to build sophisticated Windows client applications to run on, and take advantage of the capabilities of the Windows platform. This course introduces the learner to WPF and outlines the application types supported by it, basic application creation, basic configuration, and event handling using C# 2010. Specific topics covered include creating WPF applications, utilizing WinForms, handling events, and configuring commands and application settings.
Cross-functional Strategic Management	Cross-functional management involves managing in a way that bridges the functional silos that constrain your organization. You have to rethink your approach to business operations and promote synergy and collaboration in a team-based environment while moving toward a common objective. This course defines organizational cross-functionality and its benefits. It helps you develop techniques to support a cross-functional strategy throughout your organization. And it shows you how different types of knowledge management systems can play a role in implementing that strategy.
Custom Branding and Navigation for SharePoint 2010	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into the branding of SharePoint, which includes working with master pages, page layouts, and application pages. It also covers working with navigation controls and providers. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-576: PRO: Designing and Developing Microsoft SharePoint 2010 Applications. Passing this exam will earn the learner (MCPD): SharePoint Developer 2010 certification.
Customer Advocacy: Communicating to Build Trusting Customer Relationships	Customer advocacy is an approach to customer management that seeks to generate exceptional value for customers by focusing on their success. At a time when customers have more power than ever, customer advocacy can be an effective way of building long-lasting customer relationships. Advocates keep the best interests of the customer in mind – even if it means recommending competitors' products or services. This builds trust in the advocate organization. To be successful at customer advocacy, however, an organization needs an in-depth, ongoing understanding of what customers truly value. This course describes how to find out what customers value by using effective questioning techniques and then draw on this feedback to drive improvements in the customer experience. And the course outlines the importance of trust in the customer relationship and how a customer advocacy approach helps build trust. It also describes how to address customer complaints and problems in a way that builds trust. This entails viewing complaints as key opportunities for both resolving issues and providing customers with the tools and services they need in order to be successful.
Customer Advocacy: Enhancing the Customer Experience	Providing customers with a valuable experience each time they interact with your organization is a hallmark of effective customer advocacy. But many customer experiences are forgettable because nothing particularly important happens. So how can organizations turn these experiences into something more than they are – into experiences that create an emotional connection with the customer and deliver the unexpected?
Customer Advocacy: Supporting Customer Advocacy	The success of customer advocacy efforts is directly related to an organization's ability to not only meet but also exceed customer expectations at every point of contact. This requires a knowledgeable and motivated employee base that has a solid understanding of what customer advocacy means and how to implement it effectively. But employees need support from management to achieve success. This course describes how to support customer advocacy efforts effectively in your organization. It explains how to communicate the goals and values that drive the customer advocacy approach, and how to create an environment that supports cooperation and coordination – two important elements in achieving success with customer advocacy. In addition, the course describes how to motivate advocacy employees by rewarding cooperation. And it explains how to measure the success of your customer advocacy efforts so that you can provide support to employees in areas where they may need help, as well as provide positive feedback about what they're doing well.
Customer-focused Interaction	Having positive interactions with your customers is one of the most effective ways to ensure you're providing excellent customer service. However, customers' expectations have evolved over time, and so too have customer service strategies. Many organizations are improving their customer relationships and customer satisfaction levels by moving beyond traditional methods of gaining client feedback, such as from customer satisfaction surveys. Instead, these companies are engaging in real-time conversations with their customers through various technologies, such as social media and wireless Internet. And they're integrating customer relationship management (CRM) with knowledge management to further support and enhance their existing efforts. This course provides insight into the role of social media and mobile technologies in supporting customer-focused service cultures. And it looks at how these technologies can generate a direct and positive impact on an organization's customer service levels and, ultimately, competitive position.
Data Access and Storage in SharePoint 2010	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into consuming external data sources, and Business Catalog services. This course also covers integration using SOAP, and introduces WCF and REST. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-576: PRO: Designing and Developing Microsoft SharePoint 2010 Applications. Passing this exam will earn the learner (MCPD): SharePoint Developer 2010 certification.
Database Systems and Relational Databases	A database is used by organizations to store their data, and allow their employees to access, update, and manage it. Organizations use a Database Management System, also known as a DBMS to control, store, organization and retrieve that data for the users through end-user applications. There are multiple types of database, such as flat-file, network, and hierarchical. The most widely used database is the relational database, which is based on a mathematical theory. A relational database stores data in relations, which are tables, that store data in rows or tuples and columns or attributes. The relational database is based on the relational model and consists of a relational schema which contains the database objects. This course discusses what database and DBMS are, the different database models and the database architectures. It also discusses what relational databases are, its components, and how relational databases were identified by Dr. Edgar Codd, including the 12 rules that were identified that a database should adhere to be considered relational.

Course	Description
Dealing with Common Meeting Problems	Have you ever been in a meeting where conflict got in the way of achieving meeting goals? Where someone dominated the discussion and others didn't contribute at all? Where the discussion wandered and little was accomplished? The human factor can introduce problems in meetings, despite your best preparation and planning endeavors. But you can learn to improve the effectiveness of your meetings by evaluating them and addressing common problems that jeopardize their progress.
Delivering a Difficult Message with Diplomacy and Tact	Delivering a difficult message can be one of the most challenging things you do in a professional environment. It can bring anxiety, as you are faced with addressing an uncomfortable issue, and stress at the thought of the conversation's potential to result in a situation of high emotions.
Developing a Brand Internally	Many brands fail to deliver what they promise because of a lack of internal focus and engagement in the brand development process. If your employees and organizational culture aren't aligned with your brand, you'll likely fail to deliver the full value potential of your brand. Internal engagement is increasingly being viewed as not only key to effective brand development, but an important driver of customer value. Aligning the brand promise, organizational actions, and the real brand experience helps generate brand staying power and customer loyalty. This course discusses the benefits associated with developing brands through internal engagement and provides instruction on how to approach and implement an internal brand development program. It also provides direction on how to measure and sustain internal branding efforts over time.
Developing a High-performance Organization	Helping your organization to reach its full potential is among your most important responsibilities as a leader. In a modern competitive business environment, tapping an organization's potential for high performance not only helps it to be more competitive but also helps it to better respond to and manage the influence of external factors. In short, high-performance organizations are those with a competitive edge. Facilitating a high-performance environment requires the right skillset. This course helps you assess your organization's potential for high performance in terms of its mission statement, strategy, performance measurement strategies, customer orientation, leadership, and culture.
Developing Business Logic Using SharePoint 2010 Workflows and ECM	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into developing custom workflows, event receivers and customizing Enterprise Content Management features. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-573 (Microsoft SharePoint 2010. Application Development). Passing this exam will earn the learner MCTS: SharePoint 2010. Application Development certification.
Developing Character for Perseverance and Resilience	Some people seem to rise effortlessly through the ranks of the organization. You might equate this success with natural ability, talent, and business acumen. However, there's often another story behind this success: the challenges and the setbacks that had to be overcome, and the approach that led to achievement. Because setbacks are an inevitable part of daily life, you must develop an attitude of perseverance and resilience in order to reach your goals. From changes in the economic climate to the loss of working resources, setbacks are challenges you encounter and must somehow overcome.
Developing SharePoint 2010 Web Parts and Controls	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into developing, debugging web parts, delegate controls and .NET user controls. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-573 (Microsoft SharePoint 2010, Application Development). Passing this exam will earn the learner MCTS: SharePoint 2010. Application Development certification.
Developing the Right Attitude for Performing under Pressure	With the right attitude, you can optimize your performance under pressure. Although meeting the challenge of high pressure situations is a different experience for everyone, one thing is constant: you need an attitude that leads to effective and efficient goal-oriented action. You won't always be able to control the external events that lead to pressure, but you can control your reaction.
Development Models and Methods in SharePoint 2010	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into SharePoint sandboxing, workflows, and event receivers for development. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-576: PRO: Designing and Developing Microsoft SharePoint 2010 Applications. Passing this exam will earn the learner (MCPD): SharePoint Developer 2010 certification.
Discovery, Routing, and RESTful Services in WCF 4 Applications with C# 2010	This course shows how to implement discovery, routing, and RESTful services in .NET Windows Communication Foundation (WCF) 4 applications using Visual C#. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Technology Specialist: Microsoft .NET Framework 4 Windows Communication Foundation exam (70-513).
Discovery, Routing, and RESTful Services in WCF 4 Applications with VB 2010	This course shows how to implement discovery, routing, and RESTful services in .NET Windows Communication Foundation (WCF) 4 applications using Visual Basic. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Technology Specialist: Microsoft .NET Framework 4 Windows Communication Foundation exam (70-513).
Effective Succession Planning: Determining a Talent Pool for Key Positions	Do you want to take the guesswork out of determining your company's future and avert a crisis if key positions are left vacant? Building a talent pool for your organization is a deliberate, systematic effort to find high-potential employees for key positions within your workforce. It's a smart business decision to assess current and future talent.
Essential Mentoring Techniques: Building and Maintaining Mentoring Relationships	Like all relationships, mentoring comes with its share of obstacles. Effectively building and maintaining a mentoring relationship is important for creating a satisfying and productive pairing. Although the mentee drives the growth phase of the mentoring relationship, the mentor's ability to effectively understand, gauge, probe, and respond to the issues the mentee brings to the table is a crucial aspect of maintaining a solid mentor-mentee bond. In this course, you'll learn how to manage the mentor-mentee relationship and how to respond appropriately to issues that arise. The course examines how to give constructive feedback that enables mentees to solve their own problems. It also provides guidelines on how to deal with program issues such as too much formality and too little support. It explains how to address interpersonal issues in order to sustain a valuable mentoring relationship. Finally, it looks at the unique issues that might arise when mentors and mentees are involved in a virtual mentoring relationship.
Essential Mentoring Techniques: Designing and Initiating Mentoring Programs	Mentoring programs are as varied as the organizations that implement them. Options include one-to-one, group, executive, and e-mentoring approaches. These all share common execution strategies that can establish your mentoring program as a viable function within your company. Understanding the goals required from your mentoring program and ensuring that support is available for both mentors and mentees will aid your decision on how to approach mentoring for your company. This course explores how to set up a successful mentoring program by looking at the elements that are needed to design and implement an effective program. It covers how to prepare and plan your program so that participants are oriented and connected effectively. And it explores the criteria for matching mentees and mentors to create fruitful relationships. You will also learn the importance of personal development plans and how to set the learning process in motion so that mentees can achieve their objectives.
Essential Mentoring Techniques: Mentoring Fundamentals	Mentoring can benefit everyone. Mentor relationships, whether formal or informal, are a key to enabling success in both our personal and professional lives. Facilitated mentoring programs offered by organizations can lead to employees acquiring knowledge and expertise more efficiently. These programs also offer other benefits, such as increasing employee retention and work productivity. The mentor relationship helps mentees work out what they want to achieve and how to get there, while benefiting the mentor in the capacity as a role model. Mentors are much more than coaches. They help the whole individual develop by providing advice and resources, supporting career goals, and celebrating achievements.
Evaluating Supplier Performance and Managing Supplier Relationships	Evaluating the performance of your suppliers and maintaining mutually fulfilling relationships with them are essential activities in supplier relationship management. There are many types of supplier-related problems that you may have to deal with, and effective purchasing personnel use key performance criteria to analyze and track their suppliers' performance. Analysis of supplier performance can help you ensure that your company is getting the best value and service from suppliers, and detect areas in which corrective action needs to be taken. Effective performance feedback is a key component of long-term supplier partnerships.
Forming Peer Relationships and Alliances at Work	Developing a healthy network of peers you trust plays a major role in your success at work. Cultivating these relationships is an important responsibility and it requires awareness, skills, and technique. Establishing a network of mutually supportive peers requires more than an appearance at a social event your organization sponsors. It's an ongoing exercise in demonstrating social skills and an interest in the success of others. It involves recognizing the role each person serves and building collaborative relationships with a diverse network of your peers who support you as you support them.
Fundamentals of Organizational Behavior for the Individual	Globalization, diversity, outsourcing, virtual teams, downsizing, and changing forms of work are just some of the challenges facing companies today. Managers must be prepared to deal with the organizational issues that such challenges give rise to. Whether you're in Human Resources, a manager of a large department, or the leader of your team, you have to be able to constantly improve the organizational dynamics in your workplace. To do this, you need to start with the individual, which means you need to be able to recognize and work with different individual behaviors, attitudes, and perceptions. This course defines organizational behavior and identifies the variables and characteristics that influence an individual's attitudes and perceptions in the workplace, and how these can affect performance. And it shows how you can improve the attitudes, perceptions, and behaviors of employees at an individual level within your organization.
Fundamentals of Organizational Learning	Organizational learning is often considered a luxury, and the tendency to focus on the 'here and now' can shift attention away from the need for continuous learning at all levels of the organization. The reality, however, is that organizations that develop a learning culture will not only weather difficult times better than most, but will flourish in an ultra-competitive global market.
Fundamentals of Purchasing and Vendor Management	Purchasing and vendor management are important organizational functions. An organization's purchases account for a large share of its total costs. The changing nature of today's business environment and the move toward decentralization have extended the purchasing function to departmental levels so that it also includes non-purchasing professionals. Regardless of their specific roles, many managers and team leaders have purchasing and vendor management responsibilities. These individuals must understand the purchasing process and have a general knowledge of common purchasing considerations and strategies and their impact on purchasing activities at the departmental level. Equipping purchasing personnel in this way can help organizations save on purchases and build more rewarding vendor relationships.
Getting Started with Crystal Reports 2011	Business data comes from a variety of sources and is stored in various formats. The volume and variety of business data presents immense potential for understanding and responding to customer requirements and business process optimization. In order to realize this potential, SAP provides the Crystal Reports 2011 reporting tool.
Getting Started with Software Programming	Today's computers are powerful tools capable of accomplishing sophisticated tasks, but not without the assistance of skilled software developers. This course introduces the learner to the magic behind computer software development, beginning with a brief history of computer languages and how these languages have evolved into powerful programming environments, and ending with the actual creation of simple algorithms.
Getting Started with WCF 4 Using C# 2010	This course introduces the .NET Windows Communication Foundation (WCF) technology and its architecture. It shows how to create a basic WCF service and how to host the service in a managed application, a Windows Service, Internet Information Service (IIS), or Windows Process Application Activation Services (WAS). It also covers how to generate a client proxy class and configuration file to access a WCF service. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Technology Specialist: Microsoft Windows Communication Foundation Development with Microsoft .NET Framework 4 exam (70-513).
Getting Started with WCF 4 using VB 2010	This course introduces the .NET Windows Communication Foundation (WCF) technology and its architecture. It shows how to create a basic WCF service and how to host the service in a managed application, a Windows Service, Internet Information Service (IIS), or Windows Process Application Activation Services (WAS). It also covers how to generate a client proxy class and configuration file to access a WCF service. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Technology Specialist: Microsoft Windows Communication Foundation Development with Microsoft .NET Framework 4 exam (70-513).
Global Brand Management	Extending a brand globally is an intricate process that requires thorough research and preparation, organizational commitment, and a strong understanding of the risks and rewards associated with taking a brand global. This course outlines how to best approach global brand development by outlining how to carry out essential international market research and internal analysis, and the key stages associated with launching a global brand. It also provides the main guiding principles for global branding and outlines the level of organizational support required for any successful global branding effort. And it addresses the impact of counterfeiting and trademark infringement on brands, what it means for global brand managers, and how corporate social responsibility can be used as means to help protect global brands.
Hexavalent Chromium	Hexavalent chromium, also known as chromium (VI) and hex chrom, is the toxic form of the metal chromium. It has many industry sources, including chromate pigments in paints and dyes; chromates used as anticorrosive agents in primers and surface coatings; chromic acid electroplated on to metal parts; and particle byproducts that result from welding and smelting specific metals.
HR as Business Partner: Using Metrics and Designing Strategic Initiatives	When HR aligns its initiatives with higher-level business strategy, your organization will be better positioned to achieve its goals. By becoming part of the strategic planning process, HR can help drive the future success of the company because, ultimately, all business objectives are met by the organization's people. By collecting data on meaningful outcomes, HR can steer the organization in the right direction, and design initiatives that directly serve the business strategy.
Identifying and Managing Customer Expectations	Understanding your customers' expectations and behaviors is essential to implementing a successful customer-focused service approach. But how do you get to the core of what your customers truly value? This course explores what customers value from a service perspective and how to identify their needs and expectations. It also examines how you can use customer relationship management tools to help identify and manage customer expectations in order to maintain competitive advantage.
Independent Contractors and Temporary Employees	Many companies are hiring contract or temporary employees to meet their changing staffing needs. Before hiring an independent contractor or temporary employee â€" also referred to as a contingency worker â€" companies should be aware of the costs involved along with the relevant legal and taxation issues. It is important that both parties have a clear understanding of the terms of their agreement with the appropriate distribution of risks and responsibilities. This course explains the differences between independent contractors and temporary employees, the benefits and drawbacks of both, and how to get the most out of your hiring practices.
Information Architecture and Workflow Solutions in SharePoint 2010	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into SharePoint content types, taxonomy, workflows and workflow toolsets. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-576: PRO: Designing and Developing Microsoft SharePoint 2010 Applications. Passing this exam will earn the learner (MCPD): SharePoint Developer 2010 certification.
Initiating Succession Planning	What if one of your key people suddenly left the position? If this person's role affects your business ventures, direction, and productivity, could you find the talent you need if you only had very little time to do it? Would you scramble trying to replace that person by placing ads, phoning contacts, and taking the first available suitable replacement? You can eliminate such scenarios through succession planning. This can also help you develop talent for your organization for key roles that impact business initiatives and productivity. An effective succession planning program involves seeking out talent from a broad range of sources, assessing leadership potential, involving others in planning for talent, and using various methods to develop and prepare people for advancement.
Insider Trading	Illegal insider trading is harmful to the marketplace and can seriously undermine investor confidence. This course will explore the laws that govern the trading of stocks and other securities by corporate insiders and describe the role the Securities and Exchange Commission plays in enforcement. It will also discuss the civil and criminal penalties for insider trading and the procedures for reporting illegal behavior.
Installing and Configuring System Center Essentials 2010	System Center Essentials 2010 is a system management tool for medium-size organizations. It is used by network administrators to manage computers and devices in their organizations. Essentials 2010 can be used to secure, monitor, update, and track their clients and servers in one central location, and can also be configured to manage clients and computers in workgroup based networks within the organization. This course discusses the benefits and features of using Essentials 2010. It also demonstrates how to install and complete the initial configuration, as well as how to install agents on clients and servers that will be managed using Essentials.

Course	Description
Introducing Cloud Computing	This course explores the evolution and definition of cloud computing and cloud services. It provides a look at the key characteristics that make cloud services unique and very valuable to some business scenarios. The course serves as a basic technology overview of the concepts and strategies emerging from the cloud and aims to provide the background needed to determine if and how cloud products and services can improve traditional business processes.
Introduction to Designing a Relational Database	Database design is an important process for creating databases. In an organization, the process sets the foundation for good database implementation and ensures that everything required for the business is provided. It also ensures that the database will perform as expected for the users. This course discusses what database modeling is and how it is used to aid database design. This course also describes the four steps in the database design life cycle, which are: requirements gathering and analysis, conceptual database design, logical database design, and physical database design. In addition, this course describes how to complete the first two steps in the database design life cycle â€" gathering and analyzing business requirements and developing the conceptual database design.
Introduction to HTML5 and CSS3	This course provides an overview of the changes to HTML5 and CSS3 from their previous versions. It introduces some of the key features of HTML5 and CSS3, and how to apply these features to create a simple HTML5 program styled with CSS3. This course also shows how supporting browsers will render the page and provides fallback solutions for non-supporting browsers.
Introduction to Java EE 6	The Java platform, Enterprise Edition, or Java EE is the enterprise edition of Java. It comprises a group of technologies that enable components for all tiers of an enterprise application to be developed. Java EE is itself a set of specifications. The Java EE 6 software development kit (SDK) is a reference implementation provided by Oracle that enables developers to build, test and deploy Java EE applications.
Introduction to Software Program Design	In order to work their magic, computer programmers need to understand the various methods required by programming languages. This course introduces the learner to the basic methods and processes necessary to construct algorithms, including variables and data types, expressions and statements, and more advanced concepts like arrays and functions.
IT Strategy Essentials: Business and IT Strategy Alignment	How well are IT and business strategies aligned in your organization? In companies where IT and business collaborate successfully, IT is often used to exploit innovation to drive constant improvement in business operations. This can result in new products and capabilities that give the company a competitive advantage. You can measure IT and business alignment by examining the extent to which IT supports business goals, and the degree to which business strategy capitalizes on IT capabilities. This course reviews the essential components of an IT-business aligned strategy. It also describes how to identify the level of IT and business alignment in your organization, and how to determine the value IT currently brings to your business in areas such as innovation, automation, and knowledge management. In addition, the course outlines ways you might improve alignment by, for example, developing an understanding of the role IT plays and how that role affects budget, selection of technology, and IT governance.
ITILÂ® 2011 Edition Foundation: ITILÂ® and the Service Lifecycle	Organizations that provide IT services to internal or external customers need to provide excellent services to enhance value to the organization. The IT Infrastructure Library (ITILÂ®) can help organizations achieve these goals and increase external and internal customer satisfaction. To be successful, an organization needs to have the capabilities to manage these services and good practices to ensure these capabilities are fully utilized. This course addresses using service management as a practice for IT companies. This course will assist the learner in preparing for the ITILÂ® Foundation level certification examination and is aligned with the ITILÂ® 2011 Edition syllabus.
ITILÂ® 2011 Edition Foundation: Service Design Fundamentals	IT organizations must design their services according to their business objectives, thereby aligning those services with their business needs. Within ITILÂ®, Service Design is a stage of the Service Lifecycle that helps IT organizations create the design specifications to provide these IT services. This course will assist the learner in preparing for the ITILÂ® Foundation certification examination and is aligned with the ITILÂ® Foundation Syllabus.
ITILÂ® 2011 Edition Foundation: Service Strategy Processes	In order to decide the best path for an IT service organization to grow, service providers need to develop a strategy to maintain an advantage over their competitors. This course details the processes that affect Service Strategy: Demand Management, Financial Management, and business relationship management. This course will assist the learner in preparing for the ITILÂ® Foundation certification examination. This course is aligned with the ITILÂ® Foundation Syllabus.
Key Strategies for Managing Cross-functional Teams	Managing cross-functional teams can be challenging because you have to unite individuals from different departments and different levels of the organization around a common goal. Each phase of a cross-functional team's development has associated risks, and steering the team through these phases requires special leadership characteristics and management techniques. This course explains the various development stages of cross-functional teams and the risks at each stage. It also identifies the key abilities a cross-functional leader should have and outlines best practices for cross-functional team success.
Listening with Skill	Effective listening requires focus and active concentration. This challenge explores skills and methods for listening for comprehension and productive communication.
Making a Positive Impression in an Internal Interview	Interviewing for a new job can be stressful. You can easily get caught up in the anxiety of wondering what the interview questions will be, what answers you should give, and how to leave a positive impression. This can get even worse when the interview is for an opportunity in your current organization, as you try to answers questions about your work from those who know your work well.
Management of Relational Database Data	Database Management Systems, DBMSs, are used to control, maintain, and use a relational database where the data is stored. A relational database consists of the data records, files, and database objects. An important part of each organization is allowing users to gain access to the data for them to view and manipulated if required. In order for users to do this query languages are used which enable users to write queries and send them to the database to retrieve the appropriate data and return it to them. Queries can also be written to manipulate the data by updating, deleting or inserting it to the database. The Structured Query Language, known as SQL or SEQUEL, is the main query language used by most DBMSs, this is based on relational algebra and relational calculus which was developed by Dr. Edgar Codd for his theory for the relational database. This course discusses the relational algebra operations and relational calculus for a relational database, how to use SQL to manage data in a relational database, and how transactions and concurrency control are used to ensure data integrity and data consistency. It also discusses how security is implemented in a relational database to keep the data secure.
Managing Attitudes during Difficult Times	Employees may experience fear, anxiety, and frustration when their company is going through difficult times. If employees' attitudes suffer, so too does their performance. You must take steps to keep employees engaged, enthusiastic, and motivated when a company is facing challenges. By learning how to manage employee attitudes that often surface in difficult times, and by motivating and supporting employees, you can help boost the morale of everyone in your business.
Managing Computers, Devices, and Updates in System Center Essentials 2010	System Center Essentials 2010 allows network administrators to manage computers and devices in midsize IT environments by allowing them to deploy updates and software packages based on specific computer needs. Essentials allows the creation of specific computer groups, and then creates and deploys updates from Microsoft Updates and other software vendors either automatically or manually using packages by automatically or manually approving them. Essentials also provides a way to inventory hardware and software on computers, view the status of updates, and which software packages have been deployed. It also provides a way to remove updates and software packages that have already been deployed to managed computers. This course demonstrates how to manage computers and devices in Essentials 2010 and viewing the inventory on the computers. It also demonstrates how to configure and manage updates and software packages, including how to deploy Microsoft Office 2010 to managed computers in a specific computer group.
Managing Effective Business Meetings	Ineffective meetings can waste time, veer off course, and fail to meet objectives. But with the right techniques, you can lead productive meetings that achieve their goals and leave participants with a sense of satisfaction and accomplishment. Whether regular, recurring, or set up to achieve a special task, all meetings follow a core process: from opening on a positive note, through accomplishing the agenda items, to closing the meeting and following up.
Managing Experienced Managers	Experienced managers are extremely valuable to an organization. With the experience and judgment they have developed over time, these managers can provide leadership and drive to guide the organization to new highs. So it's important that you devote time and other resources to ensuring their ongoing commitment to the organization's long-term and short-term goals. Managers with highly developed skills manage their teams and subordinates more efficiently, reduce overall employee turnover, and increase the organization's performance.
Managing for Rapid Change and Uncertainty	In an ever-changing business environment, organizations globally are faced with the challenges of having to reinvent themselves or face failure. This course examines the factors driving organizational change and shows how you can use a change management strategy to mitigate any potentially negative impact in your organization. It helps you prepare yourself and your team to meet the challenge of change and uncertainty. It also enables you to secure everyone's support while you're implementing change. And it gives you guidelines on how to embed the changes once they've been implemented.
Managing High Performers	Are you paying enough attention to your high performance employees, the people who really help drive your organization? To assume that they don't need your ongoing support because they seem self-sufficient can be a costly mistake. If you don't give them the attention they need and deserve, they may take their energy elsewhere. The key is to keep them engaged and motivated. This course helps you better understand what motivates high performers so you can use effective techniques to retain them and develop their full potential. It focuses on the importance of giving high performers challenging and meaningful work, autonomy, mentoring opportunities, and appropriate feedback.
Managing Internal Dynamics in a Cross-functional Team	One of the greatest benefits of cross-functional teams is the diversity of viewpoints, experience, and backgrounds among team members. But this can also prove to be their biggest weakness if not managed properly. Negative interpersonal dynamics can steer the work of a cross-functional team off-track quickly and irreversibly, jeopardizing its great potential. This course explains how to head off interpersonal problems by facilitating open communication and handling meetings effectively. It also outlines how to resolve conflicts when they do arise in a cross-functional team.
Managing New Managers	People are the most important part of any organization. Developing tomorrow's organizational leaders requires a continuous commitment by managers and HR professionals to prepare new managers to grow into leadership roles. New managers must be properly oriented and trained when moving to their new positions. But training is an ongoing process, and mentoring is one key strategy for turning these new managers into leaders who'll help keep the organization prosperous into the future. This course covers the elements of an effective orientation program. It then illustrates some appropriate techniques for training new managers, such as job coaching, customer and supplier visits, and involvement in shared projects with other teams. Finally, it introduces a mentoring model so you can help new managers realize their leadership potential.
Managing Resources during Difficult Times	Companies facing tough times such as economic hardship or even extreme growth need to take action. In particular, they need to mind their costs, including their staff-related costs. It's important to communicate with employees about changes in costs and potential reductions in staff as soon as possible to maintain their commitment to the company. Downsizing should be a last resort, and there are many progressive measures that can be implemented before resorting to it. But when downsizing is necessary, there must be detailed planning, and careful selection and advising of those affected. This helps avoid negative consequences.
Managing Software Project Outsourcing: Dealing with Risks	Every outsourcing initiative has its risks. These can include the discovery of a strategic mismatch with the vendor, security breaches or loss of intellectual property, and the failure of the outsourced team to implement the project on time or within scope and budget. Risk arises throughout a project â€" from strategic assessment, through planning, implementation, and close. Being aware of the risks and planning your responses can help you manage a successful outsourced project. This course explains how to assess risks by first identifying them and then determining how likely they are to occur and how significant an impact they would have. It describes the key issues to address in a risk control plan, including the risk responses to be applied and the people responsible for taking action. And it presents best practices for reducing risks in an outsourcing relationship.
Managing Software Project Outsourcing: Working with the Outsourced Team	Once a contract is signed with an outsourcing vendor, you must carefully manage the relationship with that vendor. Getting off to a positive start with the outsourced team goes a long way toward achieving success. In this course, you'll learn how to begin the outsourcing relationship positively by being clear about expectations, and preparing your in-house team for the transition to working with the outsourced team. The course also explains key issues to tackle during this transition phase, including training, knowledge transfer, and issue resolution. In addition, it describes how to communicate effectively with the outsourced team and how to address cultural and time zone issues so that you can develop and maintain a positive relationship with your team of outsourcers.
Managing the Dismissal of an Employee	One of the main reasons managers are reluctant to dismiss an employee is because they dread the termination interview. Even if the termination is a layoff, giving notice to an employee is a heavy burden. How you manage the termination interview will impact remaining employees and your organization. You must learn how to handle dismissals fairly by preparing yourself in advance and maintaining control of the situation. Ensure your company's security and the well-being of your team members by undertaking the appropriate follow-up responsibilities.
Manipulating XML with the XML DOM and Ajax	Accessing and parsing XML data is an important facet of utilizing it in web applications. Some of the most popular ways of accessing and parsing XML data are through the XML Document Object Model (XML DOM) and through asynchronous JavaScript and XML (Ajax). This course will explore how to use these techniques with XML to realize its data potential.
Microsoft Excel for Mac 2011: Applying Basic Data Formatting	Excel 2011 provides a number of tools and features that allow you to visually enhance the appearance of worksheets and workbooks. Data and cells can be manipulated and customized using various alignment and formatting features. This course explores the processing of formatting cells and text, using basic formatting options such as bold and underline, and tools such as the Format Painter. The course also shows you how to align text in a worksheet and how to set certain conditions, that when met, change the appearance of the data â€" for example you can format data to quickly see the top 10 values in a range. This course also explains the various options for number formatting in Excel for Mac 2011.
Microsoft Excel for Mac 2011: Getting Started	Excel for Mac 2011 is the newest version of Microsoft's comprehensive spreadsheet tool for Macintosh systems that offers features supporting a wide range of data entry, formatting, organization, and analysis methods. The new ribbon menu arranges the many features of Excel into related tabs, making it easy to quickly access the ones you need. The Excel Workbook Gallery contains a variety of visually appealing templates that simplify file creation by speeding up the styling and formatting processes, and oftentimes adding useful features such as a Total row in a pre-built Invoice template. This course explores these topics and many other basics of Excel 2011, including opening the application, creating new spreadsheets, and entering data both manually and through Excel's automatic features.
Microsoft Excel for Mac 2011: Moving Data and Modifying Worksheets	Excel for Mac 2011 enables you to produce intuitive and attractive workbooks, and lets you rearrange and move data within the workbooks and worksheets easily. This course explores methods of copying and moving data within a worksheet. It also demonstrates how to modify the layout of a worksheet by adding, removing, and resizing rows and columns. In addition, the course examines ways of inserting new worksheets, deleting worksheets, and rearranging worksheets within a workbook.
Microsoft Excel for Mac 2011: Navigating the Interface and Viewing Workbooks	While it can often seem complicated and daunting, navigating the Excel 2011 interface isn't all that difficult. This course will show you how to move around the Excel interface using a variety of keys on your keyboard, and by using menu and ribbon commands. The course also covers the ways in which you can view and arrange workbooks and worksheets and explores how you can access Excel's Help features.
Microsoft Excel for Mac 2011: Using Basic Formulas	Formulas are the building blocks of data calculation in Excel for Mac 2011. Being able to use formulas to perform everything from easy to complicated calculations not only simplifies your work but also helps to reduce the number of errors that can arise in such complex tasks. This course introduces formulas, demonstrates how to create and edit them, copy and paste them, and how to check for errors that can arise when using formulas in Excel for Mac 2011.
Microsoft Excel for Mac 2011: Using Basic Functions	One of the great features of Excel for Mac 2011 is its ability to perform a wide variety of functions to make your use of Excel easier. Functions are built-in formulas that save you time by allowing you to choose one that suits your needs rather than creating a complex formula from scratch. This course introduces you to the components of functions, and how and when to use a particular function in the most efficient and practical way.

Course	Description
Microsoft Word for Mac 2011: Adding and Formatting Images	In an effort to make our text clear and organized, we sometimes neglect the overall attractiveness of our documents. This course demonstrates powerful drawing and graphic features of Word 2011 â€" features that can boost the appeal of virtually any document! The course focuses on the processes and tools that allow you to add pictures, Clip Art, photos, and SmartArt to your documents. It also explores drawing components such as shapes, WordArt, and text boxes.
Microsoft Word for Mac 2011: Creating and Formatting Tables	Word for Mac 2011 has a robust set of tools that allow you to create, style, and format tables in your documents. This course explores the various methods of inserting tables in Word documents, including drawing a table by hand, choosing a table size by selecting a layout from a dynamic grid, and by configuring table settings to match the number of columns and rows that you require. It also discusses using table styles to enhance the appearance of tables and changing the layout of tables.
Microsoft Word for Mac 2011: Formatting and Working with Text	Word for Mac 2011 makes it easy to apply layout and style to documents by providing a variety of formatting options. This course explains how to copy and paste text while retaining the formatting from the source location, along with how to apply attractive styles from the Styles gallery, and arrange text through paragraph justification and line spacing. In addition, the creation of page borders, and bulleted and numbered lists are demonstrated.
Microsoft Word for Mac 2011: Getting Started	Word for Mac 2011 is the newest version of Microsoft's word processing tool for the Mac platform. It offers a streamlined interface and features that allow you to create attractive and engaging documents. The ribbon, which is unique to Microsoft Office, organizes Wordâ€™s many features into related tabs and makes it easier to quickly access those you need. And if you don't want to start your document with a blank white page, you can easily choose from a variety of templates using the Word Document Gallery. This course explores these topics and many other basics of using Word 2011, including opening the application, creating new documents, opening documents, basic text editing, and an introduction to the many tools that will help you create and edit your documents.
Microsoft Word for Mac 2011: Moving Around a Document	Word for Mac 2011 offers a variety of intuitive navigation features that help you move around and find your way through documents, whether they're a few pages or hundreds of pages long! This course explores basic navigation features such as scrollbars and built-in tools such as the Sidebar. The Sidebar combines features of the Document Map, thumbnails, Reviewing pane, and Search features found in earlier versions of Word for Mac into one, easy-to-use interface. The course also demonstrates how to use a variety of different views in Word including Full Screen, and explains the views so you know when to use each one to suit your needs.
Microsoft Word for Mac 2011: Saving, Printing, and Spellchecking	Word for Mac 2011 offers a variety of features that enable you to finalize your documents, including various saving and printing options. It also includes a spelling and grammar check tool that helps you to avoid embarrassing mistakes in your documents before sharing them with others. Once you're ready to share your work, you can e-mail your documents as attachments, share through SkyDrive, or use a SharePoint site for collaboration. This course explores these features so you can save, print, proof, and share your files using Word for Mac 2011.
Microsoft Word for Mac 2011: Structuring and Organizing Documents	Microsoft Word for Mac 2011 provides many intuitive options for structuring your documents quickly and easily. This course demonstrates how to set margins and indents so your document uses proper page and paragraph spacing. If you're creating large documents with many pages, you might want to add page numbers to make your information easy to locate. The course explores how to add page numbers along with other structural components that can guide your formatting decisions, such as page and section breaks, headers, and footers.
Monitoring and Using Reports in System Center Essentials 2010	System Center Essentials 2010 allows administrators to actively monitor all objects being managed, ensuring they are running correctly. If a failure occurs or a service is not working properly, they can immediately correct the issue by viewing the alerts that are generated by Essentials monitoring features. Essentials allows notifications to be setup to send alerts when an issue arises. The Authoring feature enables administrators to manage and configure management packs, which contain the monitoring settings for applications and servers, and allows administrators to setup monitoring for Web Applications and distributed applications in the network. To manage computers in the network more efficiently, reports can be run to view specific information about each computer and Essentials also supports the remote accessing of managed objects using Remote Assist and Remote Desktop to aid users or to correct issues that may have occurred. This course demonstrates how to use the monitoring and authoring features in Essentials, as well as how to use reporting and manage computers remotely.
Negotiating Contract Terms	The most successful negotiators strive to achieve win-win results. This Challenge Series exercise explores the obstacles to negotiation and the various techniques that can be used to reach a collaborative solution.
Negotiation Skills for Sales Professionals: Preparing to Negotiate	Effective sales negotiation skills are essential for any successful sales professional. However, being able to maximize the value of your proposal for both you and your customer isn't an easy task. This course provides direction on how to use a strategic negotiation process to strike effective, long-lasting, and profitable sales agreements with your customers. It focuses on the preparation stage of the process: setting clear objectives, prioritizing your concessions, and preparing thoroughly before you initiate negotiations. And it shows you how to conduct research in order to anticipate the customer's needs and potential objectives so you can position yourself for success during the negotiation process.
Negotiation Skills for Sales Professionals: Reaching Agreement	One of the most difficult tasks in sales negotiations is overcoming barriers to agreement and closing the deal. Being able to understand and anticipate certain barriers is an essential skill for every sales professional. This course provides instruction on the following barriers to agreement: deadlock situations, a customer who doesn't trust you, and negotiation tactics designed to force your price down. It also covers strategies for overcoming each of these barriers, and it provides an opportunity to practice the strategies in a realistic simulation.
Negotiation Skills for Sales Professionals: Value Exchange	Negotiating concessions and exchanging value are integral aspects of any sales negotiation process. But when is the best time to make concessions? And how do you make concessions effectively so that you maximize the value of your proposal to the other side and maintain a position of power? This course provides detailed instructions on how to use concessions to achieve agreement during a sales negotiation. It covers guidelines for when to stand your ground and when to give ground, and you'll also have a chance to practice your negotiation skills in a realistic simulation in the final topic of the course.
Oracle SOA Suite 11g: Human Task and Business Rules Components	This course introduces the Human Workflow task component and its functionality. It also introduces you to Oracle Business Rules and its features.
Oracle SOA Suite 11g: Mediator and BPEL Components	This course introduces you to the Mediator component and its routing functionality. You will also be introduced to process orchestration concepts and using the BPEL component.
Oracle SOA Suite 11g: SOA Security and Adoption Planning	This course provides an introduction to the topic of securing services and composite applications. It also describe the activities involved in SOA adoption planning.
Organizational Behavior: Dynamics of a Positive Organizational Culture	An organizational culture isn't a set of rules or standards, but rather an interactive process â€" a social construct that's constantly changing. It's an invisible, dynamic force that drives a company and its actions. Culture is reflected in artifacts, patterns of acceptable behavior, and shared traditions, values, policies, attitudes, structures, and beliefs within any relatively stable organization. In this course, you'll learn how to foster a positive organizational culture. You'll first learn about the characteristics of a positive workplace culture and the benefits it offers. You'll consider the elements that drive the culture of an organization, such as autonomy and the degree of structure. The course also considers how employees influence the culture and how the culture affects employee behavior. And finally, you'll learn how to apply strategies that can help cultivate a healthy and positive workplace.
Organizational Budgeting Activities and the Master Budget	A budget is a financial blueprint for planning an organization's activities and controlling its performance over a designated period of time. It helps allocate an organization's resources as it pursues its financial goals. Organizational budgeting refers to activities that focus on the creation of organizational and departmental budgets, their allocation, and their use in monitoring an organization's activities. Departmental heads, managers, and professionals throughout an organization deal with budgets one way or other in their day-to-day operations, and familiarity with an organization's key budgeting activities is expected at every level.
Organizational Structure and Employee Behavior	The structure of an organization, including the complexity of the management hierarchy and the nature of the authority and reporting flow, can affect all aspects of employee interaction and overall behavior in the company. The organizational structure is the formal framework for communication and authority, and must be designed in a way that enables a company to achieve its mission, goals, and objectives. In this course, you'll learn how to instill positive employee behavior within your organizational structure. You'll first learn about the elements of an organizational structure that can affect employee behavior and how those elements play out in different types of organizational structures â€" functional, divisional, and matrix. You'll also learn about the measures you can take to help ensure employees adapt to the organizational culture. And finally, you'll learn how to enrich the jobs of your employees by determining the best method of job redesign for an employee.
Performing with Others under Pressure	High-pressure environments can be hard on professional relationships. You can so easily get caught up with a major project or looming deadline that your interpersonal skills slip. Under pressure, you may start to make instinctive emotional reactions as your awareness of others' feelings fades. But, to be as effective as possible, you need the support of others, and high-pressure situations are no exception.
Personal Conflict Styles	Understanding the five styles identified by Kenneth Thomas and Ralph Kilmann is useful for navigating conflict. This impact explores these five conflict styles.
Planning and Preparing an Operating Budget	Preparing and planning budgets involves a number of organizational activities, ranging from determining the organization's budgetary goals to approving its budgets over a specific period of time. Individual departments translate the organization's budgetary goals into departmental goals relevant to their area. Preparing operating budgets often starts with revenue forecasting, followed by various expenses budgets. Many forecasting tools are used for forecasting revenues and expenses. Knowing the various activities associated with preparing, reviewing, and having management's approval on operating budgets helps you with your own budgeting responsibilities in the organization.
Portable Fire Extinguishers	This course is designed to protect employees and help prevent serious property loss from workplace fires. It identifies the various classes of fires, types of portable fire extinguishers, and actions to take in the event of a fire. It describes when and how to use portable fire extinguishers to put out small fires.
Preparing for an Internal Interview	Preparing for an internal interview requires a unique strategy to leverage one thing you have over external candidates: an internal understanding of how your organization operates. Making the most of this knowledge can be a major asset to you. Whether it's being able to participate in conversations about your company and industry or demonstrating that you understand the organizational culture, being on the inside means you have a great advantage, which you don't want to waste. Climbing the organizational ladder takes more than a view from the inside, though. You must prove you're ready for the next step in your career. You must be able to create the right impression to show you're competent and ready to perform to the challenges that will come with your new role. This course explores three essential steps in preparing for an internal interview: improving your inside knowledge; assessing your skills, accomplishments, and values; and preparing strong answers to the questions you'll face in the interview.
Preparing for Effective Business Meetings	Whatever their format, efficient meetings are those that not only accomplish tasks but progress in a way that makes the best use of participants' time. Because meetings are one of the most expensive modes of communication in today's organizations, it's critical that you optimize the time you spend in them. Running an effective meeting starts with careful planning.
Preparing Operating Budgets and the Cash Budget	Budgets translate an organization's strategic plans into actionable goals for respective departments. The cash budget and operating budgets, in particular, help departments plan the allocation and use of organization's financial resources. A budgeted income statement, which is the final operating budget to prepare, represents an organization's expected profitability if activities are carried out as planned in operating budgets. A cash budget is prepared to ensure availability of adequate cash to pay for expenses incurred during budgeted period.
Preparing to Dismiss an Employee	Dismissing an employee is never an easy task because it can be emotionally difficult. Also, dismissals can impact other employees and the company. If it's the right thing to do and you're well prepared, the dismissal can provide an opportunity for you to educate other employees, and improve employee morale and productivity. Being well prepared for dismissing an employee allows you to handle the dismissal with integrity and fairness.
Preventing Problem Performance	Few workplaces are entirely free of performance issues. However, you can prevent many problems from developing, and keep small issues from growing into serious ones, by effectively planning, monitoring, and communicating for good performance. Nurturing a culture of performance that includes a strong performance management system is a proactive approach that can prevent problems by helping employees perform to their highest potential. With regular communication and the right mix of monitoring techniques, you can motivate employees toward good performance and identify problems before they get out of hand.
Problem Solving: Process, Tools, and Techniques	In personal and professional settings alike, the interrelated tasks of problem solving and decision making are often encountered. This Challenge Series exercise focuses on the process, techniques, and competencies that help create winning solutions.
Professional Networking Essentials: Developing Confidence	Why can some people walk into a room and start making new acquaintances almost immediately? It's as if they're hardwired to know how to introduce themselves and establish a relationship with everyone they meet. Wouldn't it be great to have that kind of finesse with people and be able to network with ease?
Professional Networking Essentials: Finding Opportunities To Make Connections	In the modern connected business environment, knowing the essentials of professional networking is a major asset and key for success. Networking is all about people and making beneficial connections that will help you build a stable and fulfilling career. Unleashing the power of a network isn't something to be taken lightly. Poor networking skills and lack of etiquette can create roadblocks for you. However, with the right approach and techniques, the impact of a well-developed professional network can help make you more effective at work.
Public Speaking Strategies: Confident Public Speaking	Effective speech delivery is crucial to public speaking, as it allows you to showcase your work and communicate with confidence. No matter how much time you've spent perfecting your message, no one will hear it if you are unable to engage your audience, handle on-the-spot challenges, and avoid being disrupted by nerves.
Public Speaking Strategies: Preparing Effective Speeches	The phrase natural born speaker is misleading. While some people are more outgoing and conversational, a well-delivered speech is far from being spontaneous or natural. In fact, effective public speaking requires significant planning and preparation. Like cooking, driving, or playing a sport, it's a learnable skill.
Purchasing: Finding Sources of Supply	Your organization's purchases probably account for the largest share of its total costs. Having a clear understanding of your product and service requirements and conveying those requirements to the right suppliers may result in huge savings for your organization. But finding the right suppliers takes effort. First you need to identify the best available suppliers based on reliable information and research. Then you need to prepare a solicitation document, such as a Request for Proposal or Request for Quotation, and send it to the qualified suppliers.
Querying XML Data with XPath and XQuery	The XML Path Language, XPath, is designed to allow the developer to select specific parts of an XML document. XPath is also used extensively with the XML query language, or XQuery. This course will cover how to use these languages to both navigate and query XML data. Specific topics covered include XPath basics, XPath functions, as well XQuery built-in and user-defined functions. Attention is also given to XQuery support in Microsoft's SQL Server relational database server.
Recognizing and Diagnosing Problem Performance	When you recognize performance problems early and diagnose them accurately, you can help turn them around and avoid serious consequences. Whether the problems lie in poor employee interactions, failure to comply with policies, or underperformance, managers need to know how to detect them in a timely manner. Performance problems can vary in scope, frequency, and magnitude. They can occur as single incidents or persistent patterns of behavior. Whatever their nature, you must intervene early, involve the employee, and uncover the true root causes in order to find the best possible solution.
Selecting Suppliers and Administering Contracts	One of the most important steps in the purchasing process is to select the supplier that best meets your organization's purchase needs. To help with this part of the process, organizations develop supplier evaluation criteria and use tools designed to conduct a comprehensive and objective evaluation of suppliers. Once the supplier is chosen, the next step is to formalize the deal through a contract that outlines the terms of the supplier-buyer relationship. Reaching agreement with suppliers over contract terms requires purchasers to be effective negotiators.

Setting and Managing Priorities within the Organization: Deciphering Priorities	As a manager, you need to be able to determine the difference between what has to be done and what has to be done first. By establishing clear priorities, you provide your team with the focus it needs to take the most effective action and achieve its goals more quickly. If the department's priorities aren't deciphered and defined, the team may lose sight of what's most important and fall behind on objectives and performance.
Setting and Managing Priorities within the Organization: Mission and Goals	Getting your priorities straight, no matter where you are in your organization, is about keeping a focus on your goals. It requires you to think about the bigger picture to ensure your department's work supports the strategic objectives of your organization as effectively as possible.
Setting and Managing Priorities within the Organization: Motivation	Harnessed properly, personal motivators can become the driving force for action on your department's priorities. As a first step to energizing your team to take action on the priority tasks and issues, you need to understand the values and rewards that motivate you and your team members. This enables you to get the most from your team.
SharePoint 2010 Features and Solutions	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into WCF Data Services, REST, SharePoint Features, and Solutions. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-573 (Microsoft SharePoint 2010, Application Development). Passing this exam will earn the learner MCTS: SharePoint 2010, Application Development certification.
SharePoint 2010 Site Branding	Microsoft SharePoint 2010 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight into Branding, Mater Pages, Themes, and CSS. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-573 (Microsoft SharePoint 2010, Application Development). Passing this exam will earn the learner MCTS: SharePoint 2010, Application Development certification.
Signs and Tags	This course will present basic information about the different accident prevention signs and tags with regard to displaying levels of danger and precautions required. The failure of people, equipment, supplies, or surroundings to behave or react as expected causes most accidents. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learner objective is to recognize accident prevention signs and tags.
Social Networking for Users	A social networking service is an online service used to build networks of people often with a common interest or goal. The networks reflect networks of people in the real world. Typically each user has a representation in the form of a profile, and the service allows interaction in the form of messaging, and typically some way to share events, activities, and content, possibly in the form of digital photos, videos or web links. The big international social network providers are Facebook for personal social networking, Twitter, which is described as a micro-blogging service and which allows users to broadcast 140 character messages, and LinkedIn, which is used for professional networking. This course will focus on using social networking services in a business context, and will include a discussion on the services available, instruction on using services in a professional manner, and a discussion of potential issues arising from social networking usage in the workplace.
Software Program Control Flow Fundamentals	Computer software works because programmers create algorithms, which when broken down, are nothing more than a collection of logical constructs. This course introduces the learner to the logic behind computer software, including using defining tables to solve a problem, conditional statements like IF…THEN, and repetition using FOR and WHILE loops.
Strategies for Communicating with Tact and Diplomacy	Communicating with diplomacy and tact requires strategy, awareness, and skills. Its aim is to establish trust and rapport in relationships while delivering messages effectively. However, it's often pushed aside by good intentions cloaked by gut reaction and misinterpretation.
Taking Action for Performing under Pressure	Acting effectively in high-pressure situations is not easy. Overconfidence can lead to poor judgment, and overthinking the situation can lead to paralysis. Also, your perception may become clouded by negative thoughts and emotions in times of pressure. But it's exactly at these times that you need to perceive the challenges most clearly so that you can set appropriate goals and take effective action to achieve them.
TestPrep 77-882 Excel 2010	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 77-883 PowerPoint 2010	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 77-884 Outlook 2010	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 77-885 Access 2010	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
The Fundamentals of Globalization: Strategies for Globalization	Global strategies can range from adapting your standard products or services for local needs to obtaining cost advantages by producing in low-cost bases and selling in the most lucrative markets. Opportunities for achieving competitive advantage abound in the global marketplace. However, you must be able to determine which strategies will harness those opportunities most effectively. The goal of any strategy is to create value for customers and the organization. This course outlines value-creation opportunities in the global marketplace, as well as the challenges of pursuing those opportunities. It also describes three broad global strategies â€" adaptation, aggregation, and arbitrage â€" and how companies may use them in unique combinations.
The Impact of Situation and Style When Communicating with Diplomacy and Tact	Communicating with diplomacy and tact is more than a skill. It requires an awareness of your environment and style, and an ability to adapt to different situations.
The Logical and Physical Database Design Methodologies	When designing a database â€" after the requirements are gathered from the organization and the conceptual ERD has been approved â€" the logical design, and then the physical design can be completed. The logical design consists of taking the conceptual diagram and converting it to represent the logical implementation of the database; this includes identifying the entities, attributes, and the relationships that will exist. This also includes normalizing the database to remove redundant information. After the logical database design, the physical database needs to be implemented. Implementing the physical design includes actually creating the tables, determining the columns and their specifications, and determining indexes and views. This course discusses how to complete the logical database design and how to implement the physical database design.
The Value of Peer Relationships	Positive interpersonal professional relationships play a key role in determining individual and organizational success. Because of this, they are an important influence on strategic decision making. The bond between peers is the most basic relationship element in any organization, and it can stunt efforts for success or stimulate efforts that flourish. The unique character of each relationship in an organization may influence the entire group. This course examines the benefits of positive peer relationships. It also explores how individuals can cultivate peer relationships that can make an organization more collaborative and competitive.
The Voice of Leadership: Inspirational Leadership	In order to develop your leadership qualities, you need to accomplish certain tasks and activate your inner greatness. When you strive for inspirational leadership, you demonstrate credibility and create a community with a shared vision.
The Voice of Leadership: Self-assessment and Motivation	It's exciting when you can see your leadership development progress. Understanding how far you've come, and knowing what areas need improvement, increases your motivation to continue to grow as a leader. You can change your behaviors and increase your motivation by learning.
The Voice of Leadership: The Power of Leadership Messaging	How you present yourself to others can determine the power of your message and how it reflects on you as a leader. One of the keys to developing your leadership message is establishing credibility. You must always do what you say you'll do. Powerful leadership messages have distinct qualities, and leaders who learn how to deliver these messages are much more likely to persuade their audiences.
Trenching and Excavation Safety	This course is designed to better inform the employee of the possible health and safety concerns unique to trenching and excavation. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to list factors to consider before trenching and excavation begins, identify the purpose of the site assessment, describe the purpose of a trench box, specify different types of excavation, sloping, and shoring principles, recognize other hazards that are present in excavation work, and identify the cause of excavation and trenching-related fatalities.
Understanding Organizational Power and Politics	Because people sometimes have a negative opinion of politics and politicians, you might to think that politics should be kept out of business organizations. However, organizations are sites where power and influence are exercised, so politics can't always be avoided. The real challenge is to leverage organizational politics in a positive way. This course defines politics in relation to power and influence, distinguishes between negative and positive politicking, and gives instruction on how to be a politically constructive leader in your organization. More specifically, it provides guidance on using positive political actions to promote a course of action and get the best from employees.
Using Budgets for Management and Control	One of the most important uses of budgets is as a control tool. Once the budgets for various departments are planned and approved, they drive each department's activities to achieve its budgetary goals. Departmental managers along with organizational leadership review department's performance over a designated period and identify variances from budget goals. In particular, they identify adverse variances and, where possible, they take corrective measures to bring department's performance back on the track. If the causes of variance are beyond organization's control, the budgets have to be revised.
Using Progressive Discipline to Correct Problem Performance	You've taken positive steps to help your employee turn a performance problem around, but the problem still persists. What do you do next? At this point, you must proceed cautiously but firmly and use a progressive approach to discipline. In progressive discipline, employees are subjected to increasingly severe penalties over time if performance doesn't improve. This approach satisfies the demands of due process, involves the employee in resolving the problem, and records the employer's efforts to assist the employee. Documenting each stage of formal disciplinary action ensures that the employee understands future consequences if problem issues aren't improved.
Virtualization Management in Essentials 2010	System Center Essentials 2010 contains a built-in Virtual Machine Manager to provide administrators with a central location to manage both physical servers and clients as well as virtual machines. Administrators can create and configure Virtual Machines directly from the Essentials 2010 console. This can be done by converting physical machines to virtual machines or creating new virtual machines based on templates or from virtual hard disks. Virtualization Management in Essentials allows midsized and small organizations to maximize their IT resources by consolidating them onto one server that can run multiple virtual machines, which can then be deployed throughout the organization for the employees. This course demonstrates how to use the Virtualization Management feature of Essentials 2010 to designate a host server and create and manage virtual machines, including how to configure virtual machines to enable Essentials to manage them like physical servers and clients on the network.
WCF 4 Contracts, Behaviors, and Data Management Using C# 2010	This course shows how to create and optimize .NET Windows Communication Foundation (WCF) service contracts, data contracts, and message contracts according to the requirements of a WCF application. It details the roles of channels and how to choose an appropriate binding for an application. It also covers how to implement different data serialization and encoding options and shows how to use service, operation, and custom behaviors to manage and optimize a WCF application. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Technology Specialist: Microsoft Windows Communication Foundation Development with Microsoft .NET Framework 4 exam (70-513).
WCF 4 Contracts, Behaviors, and Data Management Using Visual Basic 2010	This course shows how to create and optimize .NET Windows Communication Foundation (WCF) service contracts, data contracts, and message contracts according to the requirements of a WCF application. It details the roles of channels and how to choose an appropriate binding for an application. It also covers how to implement different data serialization and encoding options and shows how to use service, operation, and custom behaviors to manage and optimize a WCF application. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Technology Specialist: Microsoft Windows Communication Foundation Development with Microsoft .NET Framework 4 exam (70-513).
Web Services and XML	Since XML provides a language that can be used on various platforms and by a variety of applications, it is an ideal way for web services to send information back and forth. This course will examine the key role that XML plays in the creation and use of web services and its various elements. Specific topics include using SOAP, WSDL, REST, and security.
Windows Applications Content Creation and Management with C# 2010	Windows applications created using WPF and Windows Forms allow for the inclusion of a variety of media and types in its applications to further the development of rich user interfaces. Using WPF a developer can create two-dimensional or three-dimensional graphics, create and manipulate images, create and modify documents, and also share resources across applications. Specific areas covered include creating and configuring graphics, utilizing images and multimedia in WPF, creating and formatting documents, and utilizing binary and logical resources in WPF applications.
XML Language Basics	XML (Extensible Markup Language) is a language used primarily for the management, display, and organization of data. XML consists of tags used to define elements and is derived from SGML or Standard Generalized Markup Language for use on the web. This course discusses the basics of creating documents in XML. It also covers how to use Document Type Definitions (DTDs) to define the structure of the document, as well as its newer alternative, an XML schema.
XML Transformation Using XSLT and XSL-FO	XSLT and XSL-FO provide a way to transform XML data into a variety of formats. They each have an important role to play since data often needs to be formatted for presentation to the end user. This course will examine how each is used to format and transform XML for user consumption, as well how to use both client-side and server-side methods to perform XSLT transformations.
CISA Domain: Protection of Information Assets ? Part 1	One of the main reasons an organization will bring on a CISA is to protect the IS assets of that organization. Resources, both internal and external, need to be secured and access must be controlled at all times. This course examines information security elements and assets, both internal and external, along with the threats that play a role in the protection of those assets. This course also examines the computer crimes that can befall an organization and the incident handling methods that can be used. Finally, this course examines logical access and the methods that can be used to protect assets. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organizationâ€™s information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.
CISA Domain: Protection of Information Assets ? Part 2	Securing the network infrastructure is one of the main reasons an IT department exists in an enterprise environment. The role of a CISA is to audit the security measures and to make sure that the most efficient methods are being used to secure the environment. This course examines the components of the network infrastructure, the common threats they face, and how they can be secured. This course also examines the methods used by a CISA to audit and test the IS security and the internal and external security controls that can be used. The Certified Information Systems Auditor (CISA) certification is known world-wide as the standard of achievement for those who assess, audit, control, and monitor an organizationâ€™s information systems. CISA has been given ISO/IEC 17024:2003 certification by The American National Standards Institute (ANSI). This course will help to prepare learners for the CISA examination.

Course	Description
.NET Overview: Windows, Web, and the Cloud	The Microsoft .NET Framework can be defined as an environment for developing, deploying and running applications, and web services on Windows platforms such as Windows Server 2008, Windows 7, and Window Azure. The latest release is Microsoft .NET Framework 4. The .NET Framework supports the use of different languages and libraries for application development. Supported languages include Visual Basic, Visual C++, Visual C#, and Visual J#. The latest release of all of these languages is release 2010. This course will provide an overview of the features and architecture of the .NET Framework, and the technologies, languages, development tools, and hosting options it provides.
Accident Investigation and Reporting	This course will provide an overview of accident investigation and reporting procedures. The accident investigation and reporting process helps to provide a safe working environment by determining the causes of an accident, then reporting them so that accidents can be prevented in the future. The content in this course is designed to comply with the intent of the applicable regulatory requirements. |n |n Learner objectives for this course are: differentiate between the three cause levels of accidents, recognize why an accident should be investigated, recall the steps for conducting a formal investigation, identify recommended interviewing techniques, describe problem solving techniques commonly used in accident investigation, and recall topics included in an investigative report.
Adobe AIR for Flash Developers	Adobe AIR is an application deployment extension used to make applications traditionally destined for the web available as browserless applications. This course explores the basics of AIR deployment for Flash developers including topics on creating AIR files, creating AIR application and installer files, customizing AIR application publish settings within Flash CS5.5, and previewing and debugging AIR files. The course also covers using digital signatures to secure AIR applications, and customizing descriptor files.
Adobe InDesign CS5: Fundamentals	Adobe InDesign is a popular design application used for page layout and desktop publishing. InDesign CS.55 includes a streamlined interface that matches the look and feel of Adobe's imaging programs including Photoshop and Illustrator. This course explores the fundamentals of Adobe InDesign CS5.5 including the interface, the major tools, methods of setting up InDesign projects, and adding and editing basic shapes and text.
Adobe Reader X	Adobe Reader X, or Reader for short, is a free downloadable tool required to read Portable Document Format (PDF) files that are typically created using Adobe Acrobat. Reader is compatible with multiple operating system environments as well as being available as a freeware plug-in, making it the primary tool used to view PDF files. This learning path explores the basic features of Reader including opening, viewing, and managing PDFs, filling in PDF forms, and searching PDF files.
AGG (GETA) â€" Information for Employees	This course deals with the General Equal Treatment Act â€" GETA (Das Allgemeine Gleichbehandlungsgesetz â€" AGG) and provides information for employees. The General Equal Treatment Act entered into force on 18 August 2006 and affects both civil law and employment law. This course deals with the employment law consequences of the Act. The aim of this course is to inform all employees of the basic content of the General Equal Treatment Act and its consequences in their day-to-day work. |n |n Please note that this course is not Section 508 (Accessibility) compliant.
AGG (GETA) - Information for Management	This course deals with the General Equal Treatment Act - GETA (Das Allgemeine Gleichbehandlungsgesetz â€" AGG) and provides information for management. The General Equal Treatment Act (GETA) entered into force on 18 August 2006 and affects both civil law and employment law. The legislature did not provide for any transition deadlines in the employment law area. This course deals with the employment law consequences of the Act. The aim of this course is to inform executives and human resources managers of the content of the GETA, and to give them specific information so that management can react appropriately to the Act. The implementation of the requirements of the Act can be seen as an opportunity for companies. |n |n Please note that this course is not Section 508 (Accessibility) compliant.
Asserting Yourself in the Workplace	
Auditing for Cash and Inventories	Managers, investors, and various other stakeholders use a company's detailed financial information to plan various budgets, investment profiles, and risk measures, among other things. When auditing a company, the auditor's job is to ensure that all the financial information is reasonably accurate as well as provide feedback on areas that seem to have weak internal controls. Auditors are particularly concerned with the cash and inventory accounts, as these can easily be manipulated through fraudulent activities and prone to material misstatements. Cash is especially at high risk because it can be easily transferred. |n |n This course describes what auditors have to consider when auditing cash and inventories. It presents the methodology for auditing cash, which consists of listing the audit objectives for cash transactions and performing a series of tests on internal controls and on recording transactions to ensure these objectives are met. The course also describes how the risks related to inventories are identified. And it outlines the different types of tests that can be performed to determine whether the reporting of physical flow of inventories and their related costs is correct.
Auditing for Internal Control and Risk Assessment	Strong corporate governance is a feature shared by some of the world's most highly reputable and successful companies. It is a set of processes, behaviors, and rules used to ensure that company employees act in the best interest of the company's stakeholders. An important aspect of good corporate governance is the company's ability to establish strong internal controls and risk management processes to meet stated objectives. Internal and external auditors provide opinions on the ability of these systems to manage various risks inherent in the company's business. |n |n In this course, you will learn how to assess internal control and risk management processes as part of an audit. You'll learn what internal control is and examine its components: the internal control environment, identifying and assessing sources of risk, internal control procedures, information and communication, and monitoring. The course also outlines how to select which internal control procedures to review in an audit and what actions to take based on the outcomes of this review, as well as how to assess internal control in an organization that uses the enterprise risk management (ERM) framework.
Auditing the Revenue Cycle	Modern corporations often operate in a global context and are required to collect volumes of information to be used for future decisions or to be included as part of the organization's financial statements. The systems and processes used to capture, manipulate, and communicate this information must be dependable, accurate, and safe. Auditors are required to provide reasonable assurance that the information flow within these systems and processes is not fictitious, but represents true economic transactions, is as complete and accurate as possible, is accounted for at the correct periods, and is properly classified and recorded in the financial statements. |n |n This course examines the audit function related to the revenue cycle, specifically the auditing of sales data flow through the systems and processes that capture and record it. First, it looks at the objectives of the revenue transaction cycle audit. Then it describes the revenue cycle and how to perform control tests and substantive tests to assess how well the stated objectives are being met. The course ends with presenting the auditor's findings and recommendations to the audit committee and management.
Beyond Change: Working with Agility	
Building and Managing Upward	
Business Execution: Linking Strategy to People and Operations	Creating exceptional strategy doesn't on its own guarantee it'll be executed successfully. Your people must develop an understanding of the strategy, and your work processes must be tightly aligned to maximize organizational performance. So how do you communicate strategy and secure alignment? Strategy needs to be translated from high-level themes into individual strategic goals. Otherwise, the strategy will be difficult to execute. Operational processes must work together to achieve goals because strategic progress is faster when business units are aligned, rather than working in isolation. This course offers techniques for effectively communicating a common understanding of the mission, values, and vision that drives your strategy. You'll learn how to cascade balanced scorecard objectives to help employees understand how department strategy and their personal work connect to organizational goals. The course also explains the importance of incentives to achieve objectives and of evaluating organizational competencies to develop employees who can execute your organizational strategy.
Business Execution: Monitoring and Evaluating Initiatives	Execution isn't over once strategies have been implemented. Ongoing monitoring and evaluation of strategic implementation are needed to ensure the strategy continues to create value and that changes in circumstances are taken into account. Strategy is useless if it's static. Good execution requires a dynamic approach that scrutinizes the strategy's effectiveness at junctures and reacts by revising it if necessary. This course considers the importance of continually monitoring and evaluating strategy to ensure good execution. It looks at methods of monitoring the execution of strategy, such as actions plans, dashboards, strategic review meetings, and measuring employee engagement. And it demonstrates a four-step process for evaluating executed strategy and examines the methods of effectively revising strategy.
Business Planning Essentials: Performing Key Analyses	Business plans are created for many different reasons â€" to get funding for a project, to evaluate future growth, or to fulfill strategic initiatives. But many plans go out of date before they're even complete. Changes happen fast in business and, for a plan to have any value, it needs to evolve with your organization and stay relevant in the face of uncertainty. Ongoing analyses of the internal and external environments are important to help keep plans relevant. This course describes how to carry out an internal analysis, including the assessment of your organization's market strategy, resources, organizational structure, and financial position. It shows how understanding internal factors can guide you in writing a business plan that reflects the strengths and resources of the organization. The course also explains the key elements examined in any external analysis, such as the competitive landscape and industry trends, and how these factors may inform your business plan and help ensure it is both relevant and compelling. Finally, the course covers how to use the results of your analyses to identify important opportunities, like new demand or market growth, and challenges â€" such as changing customer needs or threats from substitutes â€" that may need to be addressed in the business plan.
Business Planning Essentials: Preparing a Business Plan	Anyone who wants to gain support for an idea or initiative needs a well-prepared business plan. A business plan is like a road map that helps you clearly see the opportunities and obstacles you'll inevitably face as you pursue your business idea. Preparing a plan takes a lot of time because a plan typically contains many sections and comprehensive information. But it's worth spending time on it. With a well-prepared plan, you stand a better chance of getting the support you need to succeed. This course describes what a business plan is, why you use it, and its main ingredients â€" opportunity, solution, execution, and outcomes. It also explains how to prepare to create your plan by defining your purpose clearly, doing proper research, and establishing goals. In addition, the course offers guidelines on how to write and structure your plan effectively by, for example, paying particular attention to the executive summary, telling a compelling story, and making sure your idea fits the business need.
Business Planning Essentials: Preparing for Implementation	One of the most difficult aspects of business planning is moving from strategic thinking to action. This course describes activities that help coordinate the implementation of business plans, including developing action plans, determining how the implementation should be measured and monitored, as well as how to assess outcomes. It details how to use an action planning process to facilitate business plan implementation. This process entails steps such as clarifying the outcomes you want, listing the actions necessary to achieve those outcomes, assigning responsibilities, and determining resources needed. Finally, the course explains how to develop a reporting and monitoring structure in order to help ensure a more streamlined implementation process.
Challenges of Facilitating	Dealing with challenging situations and behaviors is a part of any manager's or leader's job. Being observant, knowing what questions to ask, and being able to deal with conflict effectively are facilitation skills that can help when a situation becomes difficult. Managers who observe early signs of dysfunctional behavior â€" behavior that impedes the progress of work in some way â€" can prevent disruptions and help employees to be more productive. And those managers who know how to facilitate conflict discussions effectively can promote healthy debate and resolution of issues. This course identifies ways to help prevent dysfunctional behavior by getting to know employees and establishing some ground rules. It also describes how to respond to objections and lack of commitment that may hinder work progress. It outlines a process for dealing with objections that includes clarifying what the objection is, summarizing it, and responding appropriately. Finally, the course covers techniques for facilitating productive conflict discussion that will encourage employees to agree on a solution.
Code of Conduct Awareness	A company's Code of Conduct is a key part of its ethical framework. Outlining an organization's key ethical principles and providing guidance on the expected standards of behavior for employees, the Code serves as an important resource for employees as they navigate the sometimes challenging waters of the workplace. This course will introduce employees to the uses and benefits of their organization's Code of Conduct, and offer practical advice on how to apply the Code to ethical dilemmas they may encounter in the business environment. |n |n This course was developed with subject matter support provided by The Beale Firm, PLLC. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Compressed Gas Safety	Many industrial and laboratory operations require the use of compressed gases for a variety of different operations. This course will establish the needed elements for an effective compressed gas safety program. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to identify the specific hazards associated with compressed gases, identify hazards associated with handling acetylene, hydrogen, and oxygen gases, identify cylinder marking requirements, specify the special storage, use, and handling precautions necessary in order to control the hazards, and identify transportation requirements.
Conflict: Avoid, Confront, or Delay?	
Coping with Aggressive Behavior in the Workplace	
Coping with Conflicting Priorities	
Creating User Interfaces for Windows Applications with Visual Basic 2010	Windows Forms and Windows Presentation Foundation (WPF) includes various controls that allow for the development of rich user interfaces. They also allow for the creation of user defined and custom controls as well as the integration of Windows Forms with WPF. This course covers the various control and layout options that comprise the User Interface. Specific topics covered include creating and configuring controls, creating user and custom controls, layout panels, and utilizing Windows Forms in a WPF application. |n |n This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Windows Applications Development with Microsoft .NET Framework 4 exam (70-511). Passing this exam will earn the learner the MCTS: .NET Framework 4, Windows Applications certification.
Creativity: Developing and Communicating	
Customizing and Managing Multithreaded Applications with C# 2010	This course examines how .NET allows you to customize the look and feel of an application based on user culture. It also demonstrates how applications can manage multiple tasks through the use of asynchronous programming patterns and the Task Parallel Library, or TPL. Specific areas covered include UI customization, animation, localization, various application multithreading options, and Parallel LINQ Queries or PLINQ. |n |n This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Windows Applications Development with Microsoft .NET Framework 4 exam (70-511). Passing this exam will earn the learner the MCTS: .NET Framework 4, Windows Applications certification.
Customizing and Managing Multithreaded Applications with Visual Basic 2010	This course examines how .NET allows you to customize the look and feel of an application based on user culture. It also demonstrates how applications can manage multiple tasks through the use of asynchronous programming patterns and the Task Parallel Library, or TPL. Specific areas covered include UI customization, animation, localization, various application multithreading options, and Parallel LINQ Queries or PLINQ. |n |n This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Windows Applications Development with Microsoft .NET Framework 4 exam (70-511). Passing this exam will earn the learner the MCTS: .NET Framework 4, Windows Applications certification.

Developing Learning Practices	Today's organizational leaders know that cultivating a learning culture means more than providing training sessions â€" it means sustaining an ongoing process of learning using various practices, all integrated with the operations and routines of the business. It means analyzing needs and planning strategically before launching a learning initiative. It means setting up diverse opportunities for acquiring, creating, and sharing knowledge. And it means ensuring that employees have the chance to practice and apply what they have learned in a way that makes a significant difference to the business. |n |n This course delves into four key practices that augment and support organizational learning: planning for learning, building knowledge, diffusing knowledge, and applying knowledge in the organization. For each of these practices, the course outlines strategies and guidelines that help bolster the organization's learning culture and its competitiveness within its given market.
Developing the Capacity to Think Strategically	Do you look at organizational opportunities and problems from a broad perspective? Do you keep in mind the potential impact your decisions and everyday business may have on other stakeholders in and outside the organization? Do you take a holistic view of the issues you face in your day-to-day activities? A strategic thinker does all these things and, by doing so, helps an organization reach its strategic goals. But strategic thinking isn't just for top executives. It's important that all functional managers, departmental leaders, and professionals in an organization learn how to think strategically. It can help them better manage their business units. With the goal of helping you to develop your capacity to think strategically, this course describes what strategic thinking is â€" in particular, how it differs from operational thinking and strategic planning. It explores the personal traits of effective strategic thinkers, as well as some barriers to strategic thinking. And it describes ways you can help develop your capacity for thinking strategically by recognizing the importance of being creative, being prepared to deal with the complexity of different levels and views, and being aware of what's going on inside and outside your organization.
Developing Your Customer Focus	
Do You Share Your Organization's Values?	
Emotional Intelligence at Work	
Engaging Top Performers	How do you move your company to drive results and take a prominent place in the market? By engaging your top performers â€" those employees who consistently bring high levels of performance and positively influence the culture of your organization. Managers and leaders need to recognize who their top performers are, how they're different from other employees, and how to ensure they maintain a deep connection with their work. You can keep your top performers committed and engaged by providing challenging work and development opportunities. |n |n This course helps you recognize the characteristics of top performers and the benefits they bring to an organization. You'll learn how to improve your workplace so that it both attracts and meets the needs of top performers. Finally, the course discusses four communication styles, including the one typically used by top performers, so that you'll be able to recognize and adjust your own style to effectively communicate with top performers.
Essential Mentoring Techniques: Evaluating and Ending the Mentoring Program	Is your mentoring program valuable? Does it contribute to the achievement of business goals? A mentoring program's survival depends on how successfully it contributes to mentee growth. Companies must make the best use of resources to remain competitive. When resources are stretched thin, organizations need to know how much their mentoring programs are contributing to the bottom line. Evaluating the progress of mentoring relationships and measuring the success of the mentoring program are vital to sustaining it. And knowing when to successfully and tactfully end mentoring relationships will make the best use of resources. This course considers how mentors can use self-assessment to identify and address skill gaps to maintain successful mentoring relationships. It also examines the qualitative and quantitative methods used to evaluate mentoring programs and how to assess the overall effectiveness of the program. Finally, the course provides guidelines on how to effectively end mentoring relationships when there are difficult circumstances or when the relationship has successfully completed its objectives.
Essential Selling Skills: Closing the Sale	One of the most difficult steps in any sales effort is securing the sale. When is the best time to ask for the order? What if the prospect doesn't seem interested or challenges the merits of your proposal? This course demonstrates how to leverage your value proposition in the final stages of the sales process, so you can present it in the most effective way possible. It discusses how to time your closing, and presents strategies for successfully closing the sale. The course also examines how objections function within the closing process and provides an analysis of how to overcome objections to the sale. And finally, it explores the merits of following up after a sale.
Essential Selling Skills: Mastering Cold Calling	Cold calling is a fundamental part of sales. However, it's also one of the most difficult skills to master. How do you get past the gatekeepers and ensure you reach the right people? What should you say when you do? How can you counter objections? This course provides a strategic approach to cold calling, including how to time your calls effectively and how to handle gatekeepers. It demonstrates how to develop succinct and persuasive messaging to help ensure successful calls. And it provides instruction on how to overcome some of the most challenging objections and how to ensure you secure an appointment.
Essential Selling Skills: Qualifying Sales Prospects	Qualifying sales prospects or leads is an essential step in the sales cycle. Before you begin extolling the virtues of your product or solution, you need to ensure that it's something the prospect needs and is in a position to buy. The most effective way to do this is through a strategic discovery or qualification meeting designed to elicit important details from your prospects, such as their current business realities and challenges, available resources, and what success looks like to them. This course describes how to plan for such a meeting, as well as how to conduct that meeting effectively by asking questions in a way that gets you the information you need. The course also explains how to develop a qualified lead into a sales opportunity. This can be done by using the information you gathered in the qualification meeting to propose a relevant and effective solution for the prospect.
Establishing the Conditions for a Learning Culture	What does it mean to create a culture of learning? What conditions are required for such a culture to develop? For many organizations, developing a culture of learning requires a fundamental shift in thinking. Several small changes in thinking and behavior can collectively shift the direction of a company toward one that's centered on learning. |n |n This course introduces various conditions that together facilitate a culture of learning. It examines the numerous obstacles that must be overcome before moving to a learning culture, including deeply engrained individual beliefs, systems of hierarchy, and lack of transparency. For each obstacle faced, the course introduces practical solutions to overcome it. |n |n It also explores in detail one of the most important conditions for learning: employee motivation. Without motivation, employees will be less receptive to learning programs, and thus less likely to use their learning for the greater organizational good. And the course offers strategies for tapping into intrinsic motivations and generating an enthusiasm for personal improvement that will help sustain a strong learning culture.
Evaluating and Sustaining Organizational Learning	Creating a learning organization is important, but the real value comes in aligning learning with company goals and strategies. Leaders must constantly ask the question:
Exchange Server 2010 SP1: Administrative Tools	The Exchange Management Console (EMC) and the Exchange Management Shell (EMS) are still the primary management tools for Exchange Server 2010 SP1. The Exchange Control Panel (ECP) is a new browser-based tool that allows administrators and end users to perform various management tasks depending on the Role Based Access Control permissions they have been assigned. This course provides an overview of the management tools and how they are used to administer Exchange Server 2010 mailboxes.
Exchange Server 2010 SP1: Backup and Recovery	Whether from a malicious user, a computer virus, or any unfortunate event, there will most likely come a time when your Microsoft Exchange Server will become damaged or experience a loss of data. Through careful planning, the severity of these types of events can be greatly minimized. This course discusses how to plan and implement a disaster recovery strategy for an organization and recover Exchange Server 2010 SP1 data that may be compromised or lost.
Exchange Server 2010 SP1: Client Access	As e-mail is now one of the most common forms of business communication, it is necessary for many people to access their e-mail whether they are at the office, home or traveling abroad. Traditionally, people could only access e-mail remotely through a simplified web interface or by configuring a VPN to their corporate network. Discussed in this course are technologies such as Outlook Web Access and Outlook Anywhere that provide access to e-mail through a web browser and Exchange ActiveSync that enables users to synchronize a mobile device with an Exchange server.
Exchange Server 2010 SP1: High Availability	With e-mail becoming one of the most popular choices for business communications, it is now more important than ever for e-mail to always be accessible to users. Exchange Server 2010 SP1 includes Database Availability Groups (DAG), which ensures e-mail will always be available to users; DAG replaces Cluster Continuous Replication (CCR) and Standby Continuous Replication (SCR). Also discussed is high-availability options for non-mailbox server roles as well as public folders.
Exchange Server 2010 SP1: Installation and Configuration	Exchange Server 2010 SP1 provides new levels of reliability, flexibility, and ease of administration. This course demonstrates how to complete a typical installation of Exchange Server 2010 and how to install additional Exchange Server roles. Also discussed are the requirements and process for transitioning from previous versions of Exchange Server to Exchange Server 2010.
Exchange Server 2010 SP1: Mailbox Server Administration	The primary focus of all editions of Exchange Server has been the messaging functionality it provides to users, and this remains the case with the release of Exchange Server 2010 SP1. This course discusses how to create user mailboxes as well as resource mailboxes. Also covered is the creation and management of distribution groups and address lists.
Exchange Server 2010 SP1: Message Transport	The SMTP protocol is the primary protocol used to relay e-mail messages between servers on the Internet. Since most e-mail systems are connected to the Internet, it is important to understand how SMTP is configured in Exchange Server 2010. This course discusses the implementation of send and receive SMTP connectors on Hub Transport servers and Edge Transport servers. Also covered in this course are Transport Server management tasks such as configuring accepted, authoritative and remote Domains as well as modifying transport properties.
Exchange Server 2010 SP1: Monitoring Mail Flow and Performance	To ensure that the Exchange Server 2010 environment runs smoothly, it is necessary to monitor system activity and the performance of your Exchange servers. Monitoring allows you to obtain data that can assist in tuning the performance of the Exchange environment as well as aid in troubleshooting. This course discusses how to monitor, audit, and log the performance of Exchange Server 2010.
Exchange Server 2010 SP1: Planning for Exchange Server	Microsoft Exchange Server 2010 SP1 is the latest release in Microsoft's e-mail and messaging software. The core functionality of Exchange Server remains the same; however, there have been key improvements in the areas of security and compliance, unified messaging, mobile communications, reliability, and recoverability. This course discusses the new features of Exchange Server 2010 and the hardware required to support an installation. Also discussed are the steps that should be followed when planning for a new installation, from the network infrastructure to the roles various servers will perform.
Exchange Server 2010 SP1: Public Folders and Messaging Records Management	
Exchange Server 2010 SP1: Transport Rules, Message Compliance and Security	As e-mail is now the most popular form of business communications, messages that contain sensitive information need to be protected. Information Rights Management (IRM) can provide protection for messages both online and offline. Messages can be protected manually by users of Microsoft Outlook and Outlook Web App. And automatic protection of messages can be configured with Transport Protection rules. Also explored in this course is the implementation of message classifications, message journaling, content filtering, and connection filtering.
Exploring Self-development	
Facilitating Collaborative Processes	In order to develop better and more successful solutions to work-related issues, you need to engage employees in collaborative processes such as planning, decision making, and problem solving. And to do this well, you must be a good facilitator. This course describes how to support collaborative processes by drawing on the principles of facilitation. These principles include empowering employees to engage with work and take responsibility, encouraging them to be creative, sharing relevant information openly and honestly, and helping employees see connections between their work and the work of others. The course describes how to apply these and other principles in collaborative sessions. In particular, it examines visioning sessions, where you want employees to contribute their ideas on what an ideal future looks like, and decision-making sessions, where you need to guide employees to reach a consensus about an important issue.
Getting Organized with Mac OS X Lion	Built on a UNIX foundation, OS X Lion is version 10.7 of Apple Inc.'s OS X desktop and server operating system for Macintosh computers. OS X Lion takes full advantage of the technologies in Mac computers so that all aspects of a Mac work together, like the Spotlight feature that's integrated into several Mac applications. OS X Lion provides several methods of organizing items, such as smart folders and labels. There are multiple ways of searching for items, and the method you choose would depend on what you're looking for, where you are at the moment, and how much information you want about it. In OS X Lion, the App Store enables you to easily get new apps for your computer, while Launchpad can be used to organize those apps. This course introduces experienced Mac OS X users and novices alike to ways of organizing and finding items, as well as managing apps in OS X Lion.
Getting Ready to Present	
Getting Started with Mac OS X Lion for End Users	OS X Lion is version 10.7 of Apple Inc.'s OS X desktop and server operating system for Macintosh computers. Built on a UNIX foundation, OS X takes full advantage of the technologies in Mac computers so that all aspects of a Mac work together, from the default browser - Safari - to the iLife suite of applications. OS X Lion includes plenty of new features, including improved desktop management and multitouch gestures. This course introduces experienced Mac OS X users and novices alike to the features of OS X Lion, including the desktop interface, new features in OS X Lion, and how to manage workspaces with Mission Control.
Getting Started with Safari	This course introduces you to Safari - Apple's innovative, fast, and full-featured web browser. The course covers such topics as exploring Safari's streamlined, intuitive interface, and working with Safari using Mac OS X Lion's multi-touch gestures. Other topics include using Safari's Smart search field, bookmarking your favorite web sites, and using tabbed browsing and Safari's customizable Top Sites feature.
Giving Feedback to Coworkers	
Handling Difficult Questions as a Presenter	
Having a Difficult Conversation	Having a difficult conversation can be an uncomfortable experience that causes anxiety for even the most experienced managers. When properly carried out, however, what threatens to be an emotional confrontation can be a meaningful and constructive experience. It's up to the manager to turn a difficult encounter into a positive experience. However, this requires a good understanding of the methods that can be used to commence the conversation and keep it on track. This course explains the methods that can be used to have successful difficult conversations. These methods include sticking to an agenda, stimulating open dialogue, and connecting with the subject. It also explores how you can learn from the experience and share perspectives, find mutual understanding, and work with the subject to design an action plan.
Hot Work Permits	Hot work can be defined as any operation such as brazing, cutting, welding, grinding, soldering, or torching that can cause sparks or flames. While such work is necessary, the hazards associated can be minimized through an effective hot work permit program. This 30-minute course provides an overview of an OSHA-compliant hot work permit program, including the permit process, roles and responsibilities, and controls used to minimize the risk of fire. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to identify key elements of a hot work permit program, describe the primary roles and responsibilities of key personnel involved in a compliant hot work permit program, and recall controls used to minimize the risk of fire and injury during hot work operations.

Implementing and Assessing a Succession Planning Program	Succession planning involves more than just identifying high potentials for key areas and positions. How do you prepare those individuals for future work requirements and performance? And how do you know if your succession planning program is working? You have to systematically close the development gaps between what possible successors can do and what they'll be required to do for future positions. This involves creating individual development plans that meet professional growth expectations and organizational objectives. Once implemented, you then need to monitor your plans to ensure objectives are being met. |n |n In this course, you'll learn the steps necessary to implement individual development plans, including how to formulate and develop learning objectives that close the gaps between present and future performance. And you'll explore how to assess your succession planning program and determine its success by using effective measurement criteria.
Initiating Discovery Meetings	
Introduction to Auditing	The audit function has become very important over the years. Various stakeholders are applying greater pressure on companies to increase transparency and strengthen corporate governance initiatives. Auditing is used as a tool to evaluate the quality of an organization's output, including the people, systems, and procedures, as well as financial statements. Today's auditors are multifaceted individuals who have a broad experience and understanding of how different business components operate and interact with one another. |n |n This course helps you understand what auditing entails. It includes a description of the objectives and benefits of auditing to various parties, as well as the different types of audits that can be conducted by internal or external auditors. It describes the four phases of the general process for auditing, which are planning, gathering evidence, evaluating evidence, and issuing a report. And it outlines some general auditing standards to indicate what's required from the auditors in terms of skills and attitudes, as well as in terms of standards to meet at different stages of the auditing process.
ITIL® 2011 Edition Foundation: Service Design Processes	
ITIL® 2011 Edition Foundation: Service Operation Processes	
ITIL® 2011 Edition Foundation: Service Strategy Fundamentals	IT organizations face a variety of challenges to maintain a strategic advantage over their competitors. Within IT Infrastructure Library (ITIL®), Service Strategy is a stage of the Service Lifecycle that helps IT organizations create value for their organizations through their service assets. This course examines how value is created through service assets, and how these service assets can perform better through service automation. It also details two processes: Strategy Management for IT services and Service Portfolio Management. This course will assist the learner in preparing for the ITIL® Foundation certification examination and is aligned with the ITIL® 2011 Edition Foundation Syllabus. |n |n ITIL® is a Registered Trade Mark of the Cabinet Office in the United Kingdom and other countries.
Java SE7 Fundamentals: Decision Constructs, Arrays, and Loops	
Java SE7 Fundamentals: Handling Errors and Deploying Applications	
Java SE7 Fundamentals: Introduction to Java	Java, an object-oriented programming language, is the most widely used development language in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course describes key features of Java and object-oriented programming, Java technology and the development environment, working with IDEs, and the product life cycle. It covers using object-oriented analysis, identifying problem domains and objects, defining criteria for recognizing objects, attributes, and operations, and designing and modeling a class. Defining a class, identifying class components, using variables, using a main method, identifying keywords, testing and executing a simple Java program, common causes of syntax errors, and the purpose and features of an IDE debugger are also explored. In addition, this course covers identifying the uses of variables and defining a variable's syntax, primitive data types, declaring, initializing, and using variables and constants, modifying variable values by using operators, and using promotion and type casting.
Java SE7 Fundamentals: Overloading, Validation, and Object-Oriented Concepts	In Java programming, methods have several uses. They make programs more readable and easier to maintain and development and maintenance is quicker. Methods are central to reusable software, they allow separate objects to communicate, and they distribute the work performed by the program. Method overloading allows several methods in a class to have the same name but different arguments, so the method signature is different. In Java, you encapsulate by hiding object fields to make all fields private. Constructors are method-like structures in a class that have the same name as the class. They are frequently used to initialize fields in an object, and can be overloaded. Inheritance results in a class hierarchy of Java technology classes similar to the taxonomies found in biology. This course covers creating and invoking methods, static methods and variables, and method overloading. In addition, this course covers encapsulation and constructors. An overview of inheritance, working with superclasses and subclasses, polymorphism and overriding methods, interfaces, and the Object object are also covered.
Java SE7 Fundamentals: Variables, Operators, and Objects	
Java SE7 New Features: I/O, Network, and Desktop Enhancements	The release of Java SE 7 includes several I/O, network, and desktop enhancements. This course covers I/O enhancements, such as enhancements in file I/O APIs, the Path interface and the methods for manipulating a path, as well as the Files class and its methods for file operations. It also explores network enhancements, such as the new Asynchronous I/O API, working with AsynchronousSocketChannel and completion handlers, AsychronousServerSocketChannel, AsynchronousFileChannel, and AsynchronousDatagramChannel. Desktop enhancements, such as the new features for Swing components and Java 2D, are also covered.
Java SE7 New Features: Java Language and Technology Enhancements	The release of Java SE 7 brings a number of new features and enhancements. This course introduces and describes these features and improvements. The course also describes the operating systems and browser support, and Java SE 7 support in NetBeans IDE 7.0.1. It explores Java language enhancements, such as using Strings in switch statements, improved integral literals, improved type inference, improved exception handling, the try-with-resources statement, and simplified varargs method invocation. Core technology enhancements, such as the JVM enhancements - support for dynamically typed languages, the garbage-first collector, and upgraded class-loader architecture - as well as concurrency and collections, and JDBC enhancements, are also covered.
Java SE7 Professional: File I/O, Concurrency, JDBC, and Localization	Understanding File I/O, concurrency, how to work with data via JDBC, and localization, are crucial to getting the most out of your Java applications. This course covers using the Path class to operate on file and directory paths, using the Files class to check, delete, copy or move a file or directory, reading and changing file and directory attributes, recursively accessing a directory tree, finding a file by using the PathMatcher class, and watching a directory for changes by using WatchService. In addition, it examines operating system task scheduling, defining, creating, and managing threads, synchronizing threads for accessing shared data, identifying potential threading problems, and using the java.util.concurrent library. It explores the layout of the JDBC API, as well as connecting to a database by using a JDBC driver, submitting queries and getting results from the database, specifying JDBC driver information externally, using transactions with JDBC, using the JDBC 4.1 RowSetProvider and RowSetFactory, and using a DAO pattern to decouple data and business methods. The advantages of localizing an application, defining locales, building a resource bundle for each locale, calling a resource bundle from an application, changing the locale for a resource bundle, and formatting text for localization by using NumberFormat and DateFormat are also covered.
Java SE7 Professional: Generics, Errors, and I/O	Understanding interfaces and inheritance, collections, string processing, error handling, and I/O is vital to learning to program with Java SE 7. This course covers modeling business problems using interfaces, defining a Java interface, choosing between interface and class inheritance, extending an interface, and refactoring code to implement the DAO pattern. In addition, it explores creating a customer generic class, using the diamond operator to create an object, creating a Collection by using an old style syntax and generics, using enumerated types, as well as implementing an ArrayList, a Set, a HashMap, and a Stack using a Deque. It demonstrates how to read data from the command line, create strings using a StringBuilder, and search, parse, and replace strings by using regular expressions. It defines the purpose of Java exceptions, and explains how to use the try and throw statements and the catch, multi-catch, and finally clauses. It covers autoclosing resources with a try-with-resources statement, common exception classes and categories, creating custom exceptions, and testing invariants by using assertions. The basics of input and output in Java, reading data from and writing data to the console, using streams to read and write files, and reading and writing objects by using serialization are also covered.
Java SE7 Professional: Syntax and Class Design	Java technology applications are written in the Java Programming Language and compiled to Java bytecode. This course introduces the Java platforms, how to obtain a JDK, and commercial support options for Java SE. It describes creating simple Java classes, using Java fields, constructors, and methods, modeling business problems using Java classes, using package and import statements, testing Java classes, and creating Java subclasses. In addition, it explores access levels, override methods, overloading constructors, using the instanceof operator to compare object types, using virtual method invocation, using upward and downward casts, and overriding methods from the Object class. Designing general purpose base classes using abstract classes, constructing abstract java classes and subclasses, modeling business problems using the static and final keywords, implementing the Singleton design pattern, and distinguishing between top-level and nested classes are also covered.
Making Yourself Approachable	
Meeting Team Performance Challenges	
Mentoring 1Z0-803 Java SE 7 Programmer I	
Mentoring 77-888 Excel 2010 Expert	
Mentoring Systems Security Certified Practitioner (SSCP)	
Microsoft Excel for Mac 2011: Inserting Basic Charts	Charts make data easier to understand by providing a clear diagrammatic representation of your information. By using Excel for Mac 2011's strong charting capabilities, you can create attractive and organized representations of worksheet and workbook data, and you can easily insert and customize charts to suit your needs. This course demonstrates how to effectively insert and edit charts in Excel 2011. It explores the abundance of available chart types such as column, pie, and bar charts, and the best use of each type. The course also shows how to modify the layout and format of charts.
Microsoft Excel for Mac 2011: Saving, Sending, and Printing Workbooks	Excel for Mac 2011 makes it easy for you to save, print, and share workbooks and worksheets. When you create an Excel workbook, you will most likely want to save it for future use, and in many instances, print it to save a hard copy or share with someone else. This course describes these Excel features and explains how to use them to increase your efficiency and productivity, including sharing your workbooks with colleagues using SkyDrive and SharePoint.
Microsoft Office 2010: Getting Started with Lync	Lync 2010 offers a full unified communications platform ideal for use in a business environment. Using Lync 2010 features such as instant messaging, audio and video-enabled meetings, Group Chat, Skill Search, activity feeds, enterprise voice, and Lync Attendant allows seamless and efficient communication among local and remote users. This course introduces Lync 2010 and the host of available features. It describes how to sign in to and out of Lync 2010 and customize your personal preferences. In addition, this course explains the concept of presence, and the various presence options that are available. Adding and organizing contacts, and viewing contact information, as well as instant messaging single or multiple users, and other IM-related options are also covered.
Microsoft Office 2010: Lync Meetings, Calls, Sharing and Collaboration	Lync 2010 offers multiple methods of communicating with colleagues and allows you to integrate voice and video into your communications. In addition, Lync 2010 provides means of collaboration with both scheduled and unscheduled online meetings, conference calls, and video calls. This course explores the considerations involved in planning an online meeting, including the Online Meeting Options dialog box, access and presenter options, and audio and language options. In addition, it examines the various configuration options available to meeting presenters, such as managing participants, interacting with meeting content, modifying permissions, and audio and video options. The course explores the process of joining a scheduled online meeting, configuration options available to meeting participants, and starting unscheduled meetings using the Meet Now feature and the Contacts list. Configuring audio and video, starting and answering Lync calls, adding voice to in-progress conversations, starting a conference call, video calls, and recording options are also explored. The course also describes how to use sharing and collaboration features in Lync.
Microsoft Office 2010: Managing Information with OneNote	Microsoft OneNote 2010 is a digital notebook application that lets you manage information quickly and efficiently much like a paper notebook you would use to take meeting or class notes. This application lets you type, paste, print, add web clips, audio, video, add handwritten notes to a notebook and to send content from other applications. You have a number of options for expanding notebooks. You can move things around on every page and a notebook can store an infinite amount of data, dependent only on the limitations of the storage location. This course explores the basics of OneNote 2010 including an introduction to the interface, ways of formatting your notebook's text, methods of adding links, images, and tags to a note, and organizing content into sections and pages.
Microsoft Office 2010: Sharing Information with OneNote	OneNote 2010 allows you to share your notes, by e-mail, SharePoint, SkyDrive, or by blogging them. You can collaborate on a shared notebook in a live session in which co-workers can edit and add to notes at the same time. This course explores OneNote's integration with other Office applications such as Outlook, Word and PowerPoint, and covers remote access, sharing, and privacy settings.
Microsoft Outlook for Mac 2011: Getting Started	Microsoft Outlook for Mac 2011 enables you to send and receive e-mails in an intuitive manner, using a streamlined interface. This course explores the Outlook for Mac interface, including such key features as the ribbon, menu system, and Navigation Pane. The course also teaches you how to open an e-mail, how to add contacts to an e-mail, and how to reply to a message.
Microsoft Outlook for Mac 2011: Managing Contacts	Outlook for Mac 2011 includes a Contacts feature that houses easy-to-access personal information about people and businesses. You can add your own contacts and include such information as a person's e-mail address, name, phone number, and even a photo to give the contact a personal feel. You can easily import contacts from other files and applications, and export them from Outlook just as efficiently. This course explores these areas of contact management in Outlook for Mac 2011, and includes how to add contacts, contact groups, and arrange contacts.
Microsoft Outlook for Mac 2011: Managing Conversations and E-mail	Outlook for Mac 2011 is the productivity application within Office for Mac that provides e-mail, contact management, scheduling, task, and note-taking tools to help you stay organized. You can use Outlook's intuitive interface to categorize and arrange your e-mail messages in a way that best suits your needs. This course shows you how to perform some basic tasks, such as organizing your Inbox using folders, easily color-categorizing e-mails for fast retrieval, and arranging e-mail in Outlook for Mac 2011.
Microsoft Outlook for Mac 2011: Mastering E-mail	Outlook for Mac 2011 offers a variety of features that allow you to deliver polished and professional correspondence that includes a variety of types of attachments, embedded rich content such as photographs, and finishing touches such as custom signatures. For advanced filtering of your messages, Outlook offers a number of handy Search tools to help you locate and narrow your results. This course explores adding and previewing e-mail attachments, inserting photos and links into messages, creating signatures, and searching your inbox for exactly what you need.
Microsoft Outlook for Mac 2011: Scheduling with the Calendar	While Microsoft Outlook is known for being a robust e-mail application, it also includes a calendar system that can be used for efficient information management. This course explores the many features of the Outlook Calendar, including how to use Calendar to add appointments, set appointments as recurring events, set reminders for appointments, and schedule meetings. The course also explains how to customize the appearance of the calendar to best suit your needs.
Microsoft PowerPoint for Mac 2011: Adding Simple Presentation Enhancements	PowerPoint for Mac 2011 provides you with all the tools necessary to create and present engaging and effective presentations on the Mac OS X platform. This course will equip you to add tables and graphics to a presentation to increase its impact and display information using holistic and intuitive methods. The specific tools you will learn to use are SmartArt, tables, and charts.
Microsoft PowerPoint for Mac 2011: Animations and Presentation Tools	PowerPoint for Mac 2011 provides you with all the tools necessary to create and present engaging and effective presentations on the Mac OS X platform. PowerPoint offers several tools and effects for creating visually engaging and effective presentations, such as slide transition and animation effects. It also makes the presentation of a slide show easy with the use of on-screen presentation tools and multiple presenter views. In this course you will learn how to create animations and transitions, print handouts for your audience, and use tools that will keep your audience engaged as you present your slide show.

Course	Description
Microsoft PowerPoint for Mac 2011: Getting Started	PowerPoint for Mac 2011 provides you with all the tools necessary to create and present engaging and effective presentations on the Mac OS X platform. It uses a graphical approach in the form of slide shows to create and deliver professionalâ€"looking presentations. PowerPoint also offers a variety of attractive templates and slide design options to save you time and effort. This course will equip you to create a basic presentation, either from scratch, using a pre-designed theme, or template. You will learn how to add and format text, as well as modify the structure of a presentation.
Microsoft PowerPoint for Mac 2011: Using Media Files in a Presentation	PowerPoint for Mac 2011 provides you with all the tools necessary to create and present engaging and effective presentations on the Mac OS X platform. Text-based slides in a presentation are fine, but we all know that a picture is worth a thousand words. And the use of sound effects, music, or movies can be worth even more! These types of media files can greatly increase the effectiveness and impact of a presentation. This course will equip you to add photos, audio clips, and movies to a PowerPoint for Mac 2011 presentation.
Monitoring and Improving Performance	Performance management is all about results. But how do you measure those results? What do you do with the data that you collect? And what do you do if you discover that some employees are underperforming? Unless you set targets that can be monitored and measured, you won't know if your unit is doing well and you won't know which areas need attention. |n |n This course shows you how to monitor and improve your employees' performance using a four-step process that covers setting targets, collecting the necessary information, analyzing that information, and responding to performance gaps that appear. It first helps you identify appropriate targets and standards against which you can measure performance. It then introduces different ways of collecting the relevant data and shows you how to analyze the data and decide on appropriate action. Finally, the course presents a technique for dealing with underperformers in a positive and collaborative way.
Moving Beyond E-mail to Maximize Microsoft Outlookâ€™s Potential	Anyone who uses Outlook for everyday e-mail, knows how robust the application is when it comes to sharing information and organizing appointments and contacts. What you may not know is how full-featured Outlook is when it comes to other areas such as instant messaging, tasks, notes, and organizing your daily schedule. This course explores Outlook's My Day feature along with tasks, notes, and messaging features in Outlook for Mac 2011.
Overcoming Challenges of Managing Top Performers	It's a paradox that managers sometimes face â€" their top performers need coaching. One of a manager's biggest challenges is how to keep top performers motivated and encouraged to continue the good work, while addressing the employee's sometimes difficult behavior. Top performers who are driven to succeed often don't handle criticism well. They also may be blunt, impatient, or even domineering in a team setting. However, for the sake of your team and the top performers themselves, you must address problem behavior. |n |n In this course, you will learn about how to help your top performers overcome difficult behavior using a proven coaching process. This enables you to pinpoint key weaknesses in an objective way and involve your top performer in developing an effective action plan for addressing those weaknesses. This course provides you with a four-step process that will enable you to assist the top performer in completing a DISC core behavior style assessment. With this process, you can help your top performers to improve their interpersonal skills, such as listening, showing respect, compromising, and discussing ideas with tact and diplomacy.
Peer Political Styles	
Perseverance: Flexibility in Action	
Persevering through Setbacks	
Personal Productivity Improvement: Managing Tasks and Maximizing Productivity	Do highly productive people have some innate skill that others do not? Or do people become productive because of their choices and actions? This course teaches that anyone can be productive if they choose to be â€" and follow it up with action. People tend to become less productive when faced with major projects, often feeling overwhelmed or unable to complete what's required of them. |n |n This course examines task management and 'chunking' and how they can help workloads seem much less overwhelming. It also looks at how to determine which are priority tasks and which are nonessential. And it examines the importance of scheduling and detailing schedule items using a to-do list. Taking time to create a schedule at the start will save you time and energy in the long run. And knowing how to properly use a to-do list can help maximize personal productivity.
Personal Productivity Improvement: Managing Your Workspace	Business professionals know how difficult it can be to juggle multiple tasks, and often deal with an influx of paperwork and requests each day. |n When the workday begins, it can be challenging to know where to start, and employees often become overwhelmed. A major contributor to these feelings can be a disorganized workspace. If you work in a state of chaos, your mind will follow. By becoming more organized, you can also become more productive and avoid procrastination. |n This course provides business professionals with the information they need to implement positive changes in their working space. It addresses the overwhelming nature of tackling a space that's piled-high with paper, has a disorganized physical or digital filing system, or is overrun with e-mails. You'll begin the process one small area at a time until they have created a well-functioning, productive workspace. Once this is achieved, you'll also be reminded that workspace management is an ongoing process, rather than an event - that is, improvements must be maintained.
Personal Productivity: Self-organization and Overcoming Procrastination	How is organization related to procrastination? In fact, the two often go hand in hand. A lack of organization, coupled with a tendency to procrastinate, can be a vicious cycle. Becoming disciplined, setting priorities, and eradicating time-wasting activities can reduce the desire to put things off. The key to becoming your most productive self is to embrace organization and to overcome procrastination. |n |n This course introduces you to ways of becoming organized to help you accomplish more with the hours you have. It examines the common reasons for procrastination and ways you can overcome them in the workplace. Overcoming the desire to procrastinate can be aided by implementing a strong system of organization. The course presents ways to develop the discipline required to get things done, guidance on setting priorities, as well as approaches to overcommitment.
Planning for Performance	Do you know if your team's goals are consistently being met? Or if the individuals in your team are performing at their peak? Using a performance management system is vital to help ensure that the performance of individuals and teams produces the desired outcomes for organizational success. Having a performance management system in place can focus attention on results that count, boost productivity, align team and individual activities with organizational goals, and improve morale. |n |n After explaining the nature and benefits of performance management, this course outlines the five phases of a performance management system: planning, monitoring, improving, reviewing, and rewarding. It then explains what you need to do in the planning phase. It shows you how to recognize critical success factors and develop key performance indicators based on these. Then it guides you in collaborating with employees to create role profiles that can generate meaningful performance agreements. Having established performance expectations, you will now have a basis for implementing the other components of the performance management system.
Planning Your Career	
PPE: Foot and Leg Protection	This course will help acquaint you with the various types of personal protective equipment (PPE) specifically designed to protect your feet and legs. It will assist you in selecting and maintaining the proper equipment based on the workplace hazards present. The content in this course is designed to comply with the intent of the applicable regulatory requirements â€" recall general OSHA requirements related to personal protective equipment, choose the appropriate foot and leg protection to guard against workplace hazards, and describe how to inspect and maintain foot and leg protection.
Rebuilding Trust	
Retaining Top Performers	Savvy managers realize the benefits of retaining their star performers, and that making a focused effort to retain top talent will save time and resources, and improve the overall performance of the organization. So how do you keep your top performers on board? You must give them a reason to stay and a view of what they'll gain by sticking around. You must ensure that they feel valued and are motivated and rewarded for their performance. |n |n This course provides strategies on how to motivate and reward top performers, including talent assessments, job redesign, and appropriate recognition and compensation. Using these strategies is key to keeping your top performers from leaving. The course also provides tactics for motivating top performers with the aid of a self-assessment so that top performers receive appropriate opportunities, recognition, compensation, and levels of autonomy. It also provides managers with ways to recognize the natural talents of their top performers, thereby assigning tasks that will be the most satisfying to the employee. Finally, you'll learn the principles of effective job redesign so that you can engage top performers in work they'll find satisfying.
Reviewing and Rewarding Performance	Managers often dread employee performance appraisals. However, these appraisals can be a positive experience for both manager and employee if you know the right way to handle them. Good performance needs to be rewarded, and how managers appraise performance and decide on rewards influences employee motivation and productivity. It's important to encourage open and positive performance-related discussions that increase employees' acceptance of their appraisal. Also, by matching rewards to performance, you can send powerful messages that your performance appraisal process is fair and meaningful. |n |n This course shows you how to rate employee performance objectively by applying a five-category rating scale. It then describes some strategies to prepare yourself and your employee for an annual appraisal meeting. Next, it instructs you in how to conduct such a meeting and gives you an opportunity to practice. Finally, it outlines some principles for developing effective rewards and presents a technique you can use to link compensation to different levels of performance.
Risk Management: Assessing Risk	Risk is the driving force behind every business venture, so it's important to understand risk and plan for it. In order to manage risk, however, leaders first need to assess the risk factors that threaten their organization so that they can create a strategy to avoid or mitigate that risk. This course examines the techniques commonly used to assess risk, including opportunity assessment, and threat assessment using FMEA - Failure Mode and Effect Analysis.
Risk Management: Dealing with Risk	The most desirable objective of risk management is to eliminate risk uncertainty, whether for threats or opportunities. But what happens when that's not an option? Even the most thorough planning is subject to risk, and the best leaders are the ones who know how to respond effectively to risk, whether for a threat or an opportunity. This course examines the third stage of risk management â€" dealing with risk. It provides general strategies for dealing with risk, such as risk exposure adjustment and contingency planning. And it outlines strategies specific to dealing with threats and opportunities.
Risk Management: Identifying Risk	Risk is the driving force behind every business venture, so it's important to understand risk and plan for it. Even though the best leaders are accomplished decision-makers who know how to make tough choices on the fly, in today's business environment you must know how to proactively identify risk factors, and how to recognize when business ventures are at risk of becoming critical situations. This course examines the first stage of risk management - identification of risk factors. It also presents several risk identification techniques, including how to use root cause identification, the Delphi technique, and brainstorming sessions to identify risks.
Safe Work Practices	This course provides information about day-to-day safe work practices and working safely with equipment and hazardous materials. The intent of the course is to enable the learner to identify those practices that must be followed that will either eliminate or minimize the potential for injury from workplace hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements. |n |n Learner objectives are to define the purpose of safe work practices, identify the assessment tools used to identify workplace hazards, define job safety analysis (JSA), its methods, and steps, define job safety analysis control methods and specify the effectiveness and limitations of each method, recognize workplace inspection components and procedures, identify housekeeping practices for work areas, identify safe work practices for hand and portable power tools, identify safe work practices for clothing and attire, identify safe work practices for coal handling, identify safe work practices for hoisting equipment, and identify safe work practices for forklifts or other self-powered lifts.
Setting and Managing Priorities within the Organization: Communication	As a manager, you're responsible for ensuring that your team is focused on priorities â€" the goals that further your organization. But you can't achieve this without effective communication. You must convey to your employees what the priorities are, why they are priorities, and what their role is in advancing those priorities. Otherwise your team will be pulling in different directions rather than being united by a common sense of purpose. |n |n This course explains the elements of effective communication specific to laying out priorities. It gives you guidelines on preparing and developing a message that will resonate with your team. And it teaches you delivery and listening techniques to help you engage your employees in the priorities to motivate them to take action as a team with a clear focus.
Setting Goals	
Sharepoint 2010 SP1: Configuring and Administering Search	Microsoft SharePoint 2010 SP1 is a business platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides the essentials to configure and manage Search for SharePoint 2010. The course will cover how to configure crawl schedules, iFilters, crawl rules, content sources, scopes, managed properties, content types, search components, index partitioning and federated search locations . This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-667 (TS: Microsoft SharePoint 2010, Configuring). Passing this exam will earn the learner MCTS: SharePoint 2010, Configuration certification.
SharePoint 2010 SP1: Content Management, Social Computing, and Collaboration	Microsoft SharePoint 2010 SP1 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course provides insight to planning for enterprise content management for SharePoint 2010. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-668 (PRO: Microsoft SharePoint 2010, Administration). Passing this exam will earn the learner MCITP: SharePoint Administrator 2010 certification.
SharePoint 2010 SP1: Operational Health	Microsoft SharePoint 2010 SP1 is a business collaboration platform where people can collaborate, set up web sites, manage documents, and provide intelligence to make key business decisions. This course covers managing SharePoint Server's operational health, including backup and restore methods, monitoring logs, and analyzing the health of the SharePoint farm. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Exam 70-667 (TS: Microsoft SharePoint 2010, Configuring). Passing this exam will earn the learner MCTS: SharePoint 2010, Configuration certification.
Sharing Content and Browsing the Web Privately and Securely using Safari	Using Safari's advanced privacy and security preferences, you can ensure that your personal information is safe from prying eyes and that your browsing experience is safe and private. This course explains such topics as private browsing, resetting Safari, disabling pop-ups, along with more basic Safari usage such as printing, sharing, and saving web pages.
Solution Selling: Creating New Opportunities	For most sales professionals, prospecting for new customers and making those initial sales calls is a big part of their job. But that doesn't mean it's easy. Conducting prospecting calls is one of the most difficult skills to learn. Potential customers aren't always aware of their needs and often don't appreciate a stranger pointing out their problems. It's the job of the sales professional to recognize potential pain, approach each customer in a tactful and appropriate manner, determine the right solution, and present it in an engaging way that helps the customer make an informed decision. |n |n This course explains how to approach sales opportunities when the customer's need is unexpressed or unclear, including how to research a customer's business, identify potential problems, and guide the customer through an exploration of the problem and solution. You'll learn skills needed to carry out planning and research, diagnosing a customer's need, and enticing customers to acknowledge and speak openly about their business problems. And you'll learn some basic calculations used to ensure your solutions are financially beneficial to both you and your customers.
Solution Selling: Mastering the Essentials	
Solution Selling: Meeting an Active Need	

SQL Server 2008 R2: Database Monitoring and Performance	To keep SQL Server 2008 R2 databases running as efficiently as possible, administrators use a variety of performance tuning and monitoring tools. The SQL Server Profiler enables administrators to use trace files and logs to analyze a database's performance. They can also use the Windows System Monitor to monitor SQL Server 2008 R2 using counters, which monitor specific aspects of the server for performance issues. SQL Server 2008 R2 includes the Activity Monitor, which provides an overview of the system's performance in real-time. And the Database Engine Tuning Advisor enables administrators to analyze a database's workload and then implement recommendations to provide better performance for the database. SQL Server 2008 R2 provides a Resource Monitor, which allocates specific resources, and a data collector, which collects specific data and stores it in a management data warehouse. In SQL Server 2008 R2, concurrency issues may arise that require the administrator to intervene by detecting the locking issue and possibly terminating a process that could be blocking a session from performing its task. Concurrency issues can arise when multiple users are trying to access the same data in a database. This course demonstrates how to use SQL Server Profiler, the Database Engine Tuning Advisor, Resource Monitor, and the data collector to monitor and tune the performance of the database. It also addresses how to use the Windows System Monitor, Activity Monitor, and how to detect and resolve locks. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft SQL Server 2008 exam number 70-432. Passing this exam will earn the learner the Microsoft Certified Technology Specialist (MCTS): Microsoft SQL Server 2008, Implementation and Maintenance certification.
SQL Server 2008 R2: Gathering Performance Data	In order to keep SQL Server 2008 R2 running as efficiently as possible, SQL Server 2008 R2 provides a variety of performance tuning and optimization utilities. Among these utilities are the SQL Server Profiler and the Database Engine Tuning Advisor. The SQL Server Profiler allows you to use trace files and logs to analyze your database's performance. The Database Engine Tuning Advisor allows you to analyze a database's workload and effectively configure the physical design structure of databases based on your analysis. SQL Server 2008 R2 offers the ability to view the actual or planned execution plan for queries to ensure transactions are executed with the most efficient path possible. Another set of diagnostic tools provided by SQL Server 2008 R2 are the Dynamic Management Views (DMVs), which help you monitor the health of a server and diagnose problems that may be occurring. This course demonstrates how to view execution plans for transactions and how to use SQL Server Profiler to monitor the databases. It also demonstrates how to tune a database using a workload in Database Engine Tuning Advisor tool and how to use DMVs and catalog views to view system metadata. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft exam: 70-433 TS: Microsoft SQL Server 2008, Database Development. Passing this exam will earn the learner Microsoft Certified Technology Specialist (MCTS): SQL Server 2008, Database Development certification.
Supporting Project Managers	
TestPrep 1Z0-803 Java SE 7 Programmer I	
TestPrep 70-178 Microsoft Project 2010, Managing Projects	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 77-888 Excel 2010 Expert	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep ITIL V3 Foundation (ITV3F)	To test your knowledge on the skills and competencies being measured by the vendor certification exam*. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
The Agriculture Industry Overview	The agriculture industry supplies a wide variety of food products and plant-derived renewable energy sources globally. With several subsidiary industries connected to and depending upon the agriculture industry, it continues to be one of the largest industries in the world and one of the most important for human existence. It's also one of the most vulnerable to changes in economic and political climate, market dynamics, and weather adversities. Growth in global demand over recent years has outpaced supply throughout the world, resulting in spiraling food prices. With scarce land and water resources, demands for alternative use of land, rampant urbanization, and climate change concerns, food security is at the top of the agenda for many national governments. However, industry players are adopting unique strategies and moving forward to overcome these challenges. |n |n This course is designed to help learners understand key concepts, terminology, issues, and challenges associated with the agriculture industry, and strategies employed to meet some of those challenges. It will identify the main sectors of the agriculture industry and its business drivers, and review the key aspects of the industry business model, its competitive environment, and current trends.
The Ethics Enigma	
The Fruits of Integrity: Building Trust at	
The Globally Harmonized System of Classification and Labeling of Chemicals (GHS)	The GHS, an acronym for The Globally Harmonized System of Classification and Labeling of Chemicals, is a system aiming to standardize and harmonize the classification and labeling of chemicals. Although many countries follow regulatory systems for the safe handling and transport of chemicals through labels and safety data sheets, there is no standard approach. So while the formats are similar in different countries, the differences are significant enough to warrant different labeling and safety data sheets for the same product in different markets. With the gradual implementation of the GHS worldwide, countries can have consistent and appropriate information on the chemicals they import or produce, and the infrastructure to control chemical exposures and protect people and the environment can be established in a comprehensive manner. |n |n This course introduces the GHS and explains how hazards are classified and communicated through the use of labels and safety data sheets.
Thinking Like a CFO: Making Financial Decisions	Thinking like a CFO gives you a better understanding of your organization's strategic plans, its operational priorities, and the impact of those priorities on your department. Making decisions and managing your day-to-day operations with a CFO mind-set can also help you get your management's support for financial plans, investment proposals, and funding requests. At a more operational level, many of your decisions and managerial activities related to budgeting, managing payables and receivables, incurring incremental costs, and making purchase decisions can benefit from a CFO perspective. |n |n This course presents some examples of how a CFO perspective is applied to many of the activities and financial decisions you make in your area of business on a daily basis. It presents some guidelines for functional managers for creating budgets, and best practices that may contribute to reduced working capital needs. And it teaches you how your request for incurring an incremental cost or making a buy or lease decision could be evaluated from a CFO perspective.
Thinking Like a CFO: Managing Risk	Thinking like a CFO means you're not just concerned about productivity and efficiency, but also about your organization's long-term financial health and sustainability. One way you express that concern is by how you deal with your department's financial, operational, and compliance risks. If you approach these like a CFO, your decisions will be more in line with organizational goals, and you'll be more likely to win senior management's support for your department's risk management plans. |n |n This course introduces you to a process for managing regulatory and financial risks in line with CFO priorities. It begins by focusing on general actions you can take to support CFO priorities for risk management and compliance. It then presents a method for identifying and categorizing risks your department could be facing. Next it teaches a ranking technique for prioritizing risks. Finally, it suggests an approach to developing a risk response plan for departmental risks.
Thinking Like a CFO: Mind-set and Financial Priorities	Effective management of your departmental operations in terms of productivity, efficiency, and quality is important, but it's no longer enough to ensure success. You must also ensure you align your decisions and departmental activities with your organization's financial goals. You can do this by investing your resources profitably, maintaining a healthy cash flow, and managing your business risks adequately. Thinking like a chief financial officer, or CFO, in your everyday decision making and management can help you achieve these goals. Adopting a CFO mind-set will give you a better understanding of your organization's financial priorities and assist you in getting your CFO's buy-in for your budgets, project plans, and proposals requiring investment. |n |n This course provides some basic tips to get you started thinking like a CFO and explains why it's important to have that perspective. It then details the various responsibilities of CFOs in organizations to help you understand their viewpoint. The course then presents a practical outline of how CFOs pursue three of their basic priorities: managing costs, supporting revenue growth, and managing cash flows in the organization. Understanding how CFOs accomplish these priorities can help you achieve your departmental goals more effectively.
Thinking Like a CFO: Preparing and Presenting a Business Case	Applying CFO thinking in your business decisions and departmental activities helps you align them to your organization's goals. It also helps you get senior management's support and approval when you present your budget, marketing plan, and proposals requiring purchases and funds. As a functional manager and departmental leader, you often need to make a business case for your requests for more resources and funds to the senior management. As several departments often compete for the same resources and budget allocations, your ability to prepare a strong business case and present it effectively becomes critical to your success. |n |n This course teaches you how to apply a CFO perspective in preparing and presenting a business case. You are walked through the typical steps for developing and presenting a business case. A key step is to analyze alternative solutions to the issue you've identified, and this course shows you how to use various financial metrics – payback period, net present value, and risk analysis – to decide between alternative possibilities. Next, you're introduced to a template for structuring your business case for best effect. Finally, the course demonstrates how to strengthen your case by anticipating the kinds of questions that management is likely to ask.
Under the Hood with Mac OS X Lion	OS X Lion provides many ways to configure the operating system, customize preferences, protect files and settings, and synchronize data with a variety of devices. This course introduces experienced Mac OS X users and novices alike to the various settings that reside 'under the hood' in OS X Lion, including commonly used System Preference settings, how to protect your system using Time Machine, and how to back up and recover files. The course also covers how to use iTunes and iCloud to keep your apps and data synchronized.
Up and Running with Safari 5.1	You can use Safari 5.1 for basic web navigation, but once you've mastered the basic features, you can delve into using such features as the Reading List, or RSS feeds with Safari. This covers these features and also explores Safari's support for a wealth of extensions that you can add to the browser to maximize your browsing experience. The course also explores setting a variety of preferences in Safari and using Safari's built in Reader to make articles easier to read.
Using E-mail, the Internet, and Social Media Safely in a Corporate Environment	E-mail has become the most used communications medium in corporate networks today, with this high usage, comes an ever increasing need to understand the security considerations involved and how the end user can help in making sure E-mail security is maintained. Social networking, and the use of social media websites has added another level of complexity to network security as users are able to open security holes if the wrong type of information is made public. This course examines the ethical use of E-mail, guidelines for using E-mail safely, and how to deal with issues as they arise. This course also examines social networking, social media, the proper use of the Internet at work, and the security issues that can arise from posting or discussing corporate information on social media sites.
Using Facilitation Skills as a Manager	Managers need to be good facilitators – in the broadest sense of the word. Being facilitative means empowering and collaborating with employees to get the work done. This course describes how to use facilitation skills to help others work more effectively. It explains how observation skills can help you understand how well people are working together and whether you may need to intervene to get things back on track. Another key facilitation skill covered in the course is using questions effectively to help others focus and engage in their work.
Using Mac OSX Lion to Interact with the World	OS X Lion is a powerful operating system which allows users to interact with the world using a variety of tightly-integrated applications. Communication, sharing and contact management features work together, enabling users to send emails, conduct chats, make video calls, and share files. This course introduces experienced Mac OS X users and novices alike to the connectivity features of OS X Lion, including an introduction to Address Book, a discussion of OS X Lion Mail, the powerful iChat and FaceTime applications, and OS X Lion's networking and sharing features.
VMware vSphere 5 - Part 1: An Overview of Virtual Network Creation	Virtual networking within ESXi is a key area for every vSphere administrator to understand. Designing and building virtual networks with ESXi and vCenter Server bears some similarities to designing and building physical networks, but there are enough significant differences that an overview of components and terminology is warranted. When you create virtual networks, you have two options available; you can choose a virtual standard switch or a virtual distributed switch. |n |n This course defi¬nes the various components involved in a virtual network as well as the factors that affect the design of a virtual network. The course discusses the differences between a virtual standard switch and a virtual distributed switch as well as their features and the advantages of using one over the other.
VMware vSphere 5 - Part 1: vCenter Server Management	VMware vCenter Server provides several built-in options that allow you to manage your environment. Alarms can be created to notify when something goes wrong, scheduled tasks allow various tasks to be performed in an automated way, events allow the administrator to view what's happening in the vCenter Server environment, maps give a visual topology of what's happening, and the customization specifications manager allows quicker deployments in an automated way. This course concentrates on the tools used, and day-to-day management and maintenance of the vCenter Server.
VMware vSphere 5 - Part 1: vSphere Client and vCenter Server Configuration	vCenter Server provides a centralized management framework for VMware ESXi hosts, but it's vSphere Client where vSphere administrators will spend most of their time. vSphere Client is a Windows-based application that allows you to manage ESXi hosts, either directly, or through an instance of vCenter Server. vSphere Client provides a rich graphical user interface (GUI) for all day-to-day management tasks and for the advanced configuration of a virtual infrastructure. While you can connect vSphere Client directly to an ESXi host or to an instance of vCenter Server, the full set of management capabilities is only available when connecting vSphere Client to vCenter Server. |n |n With the release of vSphere 5, VMware also adds a robust new vSphere Web Client. vSphere Web Client provides a dynamic, web-based user interface for managing a virtual infrastructure, and enables vSphere administrators to manage their infrastructure without i¬rst needing to install the full vSphere Client on a system. However, vSphere Web Client in its current form only provides a subset of the functionality available to the ...
Wage and Hour Awareness for Managers	As a manager of employees who earn an hourly wage, it is important for you to be familiar with the basic principles of wage and hour law. Your knowledge of common pay-related issues will allow you to support your company's pay policies and minimize the risk of pay violations. This course addresses minimum wage requirements, pay for breaks and meals, overtime requirements, and recordkeeping responsibilities. |n |n This course was developed with subject matter support provided by The Beale Firm, PLLC. Wage and Hour for Employees	
Windows Application Development with Visual Basic 2010	Windows Forms and Windows Presentation Foundation (WPF) along with Visual Studio 2010 enable developers to build sophisticated Windows client applications to run on, and take advantage of the capabilities of the Windows platform. This course introduces the learner to WPF and outlines the application types supported by it, basic application creation, basic configuration, and event handling using Visual Basic 2010. Specific topics covered include creating WPF applications, utilizing WinForms, handling events, and configuring commands and application settings. |n |n This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Windows Applications Development with Microsoft .NET Framework 4 exam (70-511). Passing this exam will earn the learner the MCTS: .NET Framework 4, Windows Applications certification.

Course	Description
Windows Applications Databinding with Visual Basic 2010	Windows applications allow you to incorporate data from multiple sources into the user interface. This course details how to not only bind controls to data, but also how to convert, validate, and format data in a variety of ways. Specific areas covered include binding to elements, using multiple bindings, utilizing ADO.NET data objects, formatting the display of data, and also data conversion, validation, filtering, sorting, and grouping. |n |n This course is one of a series in the SkillSoft learning path that covers the objectives for the Technology Specialist (TS): Windows Applications Development with Microsoft .NET Framework 4 exam (70-511). Passing this exam will earn the learner the MCTS: .NET Framework 4, Windows Applications certification.
Workplace Harassment for Employees	
Writing under Pressure: Preparing for Success	Certain professions are inextricably tied to writing under pressure, such as the newspaper journalist or the magazine columnist. Indeed, there's a broad spectrum of professions where writing under pressure is an essential skill with direct consequences â€" financial or otherwise. Professionals are often required to complete multiple writing tasks in a limited time frame. This course provides professionals with effective ways to prepare for writing successfully under pressure, including how to reduce stress and prepare a suitable writing environment, as well as how to reduce distractions.
Writing under Pressure: The Writing Process	When a writing project is time sensitive, it becomes all the more valuable to have a reliable, systematic writing process. Otherwise you may end up overwhelmed and frustrated, or so rushed that you produce less than your best work. Even when you're under pressure to complete your writing assignment, you can still achieve great results with a communication that's clear and concise, and achieves its purpose. |n |n This course provides you with a step-by-step process for producing a quality document under a tight schedule. It explores how to streamline your writing process by determining why and for whom you're writing, and what the reader needs to know. It then moves through the steps of generating ideas, gathering information, and organizing those ideas into an outline. This course also offers strategies for overcoming writer's block, getting the words to flow, and ultimately revising the written piece into a polished final product.

Risk Management: Organizational Risk and Safety and Health Legislation	HR professionals are closely involved with various aspects of organizational risk management, especially risks that concern people. These include risks related to business continuity, noncompliance with laws that relate to managing and protecting human capital, and employee safety, health, security, and workplace privacy risks. This course examines various steps in the risk management process and risk management strategies in terms of business continuity planning and liability insurance. The course also discusses arguably the most important employee health and safety regulation for HR professionals, the Occupational Safety and Health Act. The course also presents some other key regulations that HR professionals should be aware of for managing organizational risks and avoiding any noncompliance risks. This course is created to help HR professionals preparing for the Human Resource Certification Institute's (HRCI) PHR and SPHR certification examinations. The content in this course is based on the responsibility and knowledge statements of the PHR and SPHR Body of Knowledge of Society for Human Resource Management (SHRM).
Risk Management: Workplace Safety, Security, and Privacy	Safeguarding employees' safety, health, workplace security, and privacy is essential for an organization's continuation and success, and is of particular concern to HR professionals. This course explains various aspects of employee safety issues, programs, health hazards, and employee assistance and wellness programs that HR professionals should be aware of. It also outlines how security risk analysis and programs can be used to avoid future emergencies. Finally, this course examines workplace privacy issues, privacy policy, and concerns of employees and employers with regard to privacy. This course is created to help HR professionals preparing for the Human Resource Certification Institute's (HRCI) PHR and SPHR certification examinations. The content in this course is based on the responsibility and knowledge statements of the PHR and SPHR Body of Knowledge of Society for Human Resource Management (SHRM).
Strategic HR for SPHR Exam Candidates Part I	Organizational leadership, including HR leadership, is directly involved in developing, refining, and implementing an organization's strategic plan. One of the key roles of senior HR professionals is to align activities in the HR function with the organization's strategic goals. Senior HR professionals are often directly involved with the corporate restructuring activities resulting from organizational changes and initiatives such as mergers and acquisitions, offshoring, outsourcing, and divestiture. Managing third-party contracting and technology and measuring strategic performance, specifically of the HR function, are some other key contributions the HR function makes to the organization. This course examines the core strategic functions of HR, the regulatory framework around them, and the specific capabilities required to perform them. The course also discusses organizational roles and responsibilities for ensuring ethical practices and ethical issues and challenges in performing these functions. This course is created to help senior HR professionals preparing for the Human Resource Certification Institute's (HRCI) SPHR certification examination. The content in this course is based on the responsibility and knowledge statements specified as SPHR only in the PHR and SPHR Body of Knowledge of Society for Human Resource Management (SHRM).
Strategic HR for SPHR Exam Candidates Part II	Planning and implementation of programs dealing with global workforce and compensation, succession planning, training effectiveness evaluation, and ever-changing employee needs are of strategic importance to HR professionals. This course discusses some of the key issues in dealing with global assignments and international assignees. It also outlines characteristics of a succession planning program and process in an organization. Various levels of training evaluation and evaluation methods are discussed too. The course also outlines changing employee needs and organizational programs to meet them. Finally, the course provides integral information on compensation and benefits for executives and international assignees. This course is created to help senior HR professionals preparing for the Human Resource Certification Institute's (HRCI) SPHR certification examination. The content in this course is based on the responsibility and knowledge statements specified as SPHR only in the PHR and SPHR Body of Knowledge of Society for Human Resource Management (SHRM).
Mentoring Certified Associate in Project Management (CAPM) PMBOK Guide 5th Ed.	Mentoring Certified Associate in Project Management (CAPM) PMBOK Guide 5th Ed.
Direct, Monitor, and Control Project Work (PMBOKÂ® Guide Fifth Edition)	Most projects experience problems and unforeseen events that pose a threat to successful completion. Thankfully there are many proven project management processes designed to direct, monitor, and control project work. For example, project baselines for schedule, cost, scope, and quality give the project manager a firm foundation by which to monitor project work and make decisions. When problems arise, strategies for managing changes help get the project back in line. This course will equip project managers with skills to manage change in an integrated fashion so that, for example, changes to scope are reflected appropriately in the quality, schedule, and cost baselines. The Project Integration Management Knowledge Area includes six processes, ranging from the creation of the project charter at the beginning of a project through to the close of a project or phase. This course covers the inputs, tools and techniques, and outputs of the third and fourth processes: Direct and Manage Project Work and Monitor and Control Project Work. Through interactive learning strategies and realistic scenarios, you will explore these concepts and gain a better understanding of the project integration processes in action. This course will assist in preparing learners for the PMPÂ® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) - Fifth Edition, published by the Project Management Institute (PMIÂ®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Project Requirements and Defining Scope (PMBOKÂ® Guide Fifth Edition)	Good scope management focuses on making sure that the scope is clearly communicated and well defined and that the project is carefully managed to limit unnecessary changes. Project scope management is concerned with ensuring that projects include and account for all the work needed to ensure the successful completion of a project. Successful project managers use project scope management throughout the life of a project to identify and control all aspects of the work involved. This course will highlight the importance of project scope management to project performance. Through interactive learning strategies and realistic scenarios, the learner will explore these concepts and gain a better understanding of the inputs to, the tools and techniques for, and the outputs of the Project Scope Management processes. This course covers all the activities related to planning scope management and developing a project scope statement. Specifically, learners will be introduced to the first three processes in the Project Scope Management Knowledge Area â€" Plan Scope Management, Collect Requirements, and Define Scope. Learners will be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) - Fifth Edition published by the Project Management Institute (PMIÂ®). This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMPÂ® certification exam. This course is aligned with the PMBOKÂ® Guide - Fifth Edition, published by PMIÂ®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Monitoring and Controlling Project Scope (PMBOKÂ® Guide Fifth Edition)	A project manager's key responsibility is to ensure that the project is carried out in a controlled manner, according to plan. However, a project can quickly spin out of control if changes to the product's scope are not detected and managed properly. Two processes in particular enable a project manager to do just that: the Validate Scope and Control Scope processes. They belong to the Project Scope Management Knowledge Area and play a key role by helping to monitor and control the boundaries of the project throughout the project life cycle. This course will cover the project inputs, tools and techniques, and outputs of the scope management processes that deal with validating scope and controlling changes to a project's scope baseline. Through interactive learning strategies and realistic scenarios, the learner will explore these concepts and gain a better understanding of the monitoring and controlling processes of the Project Scope Management Knowledge Area. This course will assist in preparing learners for the PMPÂ® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) - Fifth Edition, published by the Project Management Institute (PMIÂ®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Defining and Sequencing Project Activities (PMBOKÂ® Guide Fifth Edition)	Properly defining and sequencing project activities allows a project manager to answer two basic scheduling questions â€" What activities are required to develop the end product? And how should the activities be sequenced for optimal results? The first step in developing a reliable project schedule is identifying project activities and their interrelationships. This course covers the defining and sequencing project activities in the project management discipline, and introduces best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) â€" Fifth Edition, published by the Project Management Institute (PMIÂ®). Specifically, learners will be provided with an overview of the Project Time Management Knowledge Area and the interrelation with the Process Groups. The course also explores project activities and activity attributes, and the method of developing network diagrams, including dependency determination and identifying leads and lags. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work in their own organizations. This course will assist in preparing the learner for the PMPÂ® certification exam. This course is aligned with the PMBOKÂ® Guide â€" Fifth Edition, published by PMIÂ®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.

Course	Description
Estimating Activity Resources and Durations (PMBOK® Guide Fifth Edition)	Resources, such as people, materials, equipment, facilities, and money, are required throughout the entire project life cycle. Determining resource requirements is critical to successful project time and cost management. The ability to estimate the duration of each project activity is equally essential. It is not enough to know what needs to be done and what resources are required. A project manager must know how much time it will take to complete each activity. This course covers estimating activity resources and durations in the project management discipline and introduces best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) - Fifth Edition, published by the Project Management Institute (PMI®). Specifically, learners will be provided with an overview of establishing resource requirements, sources of activity duration information, and methods of estimating activity durations. Some of the duration estimating techniques taught in this course include analogous estimating, parametric estimating, and using three-point estimates. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work in their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide - Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Developing and Controlling the Project Schedule (PMBOK® Guide Fifth Edition)	The project schedule is critical to project management. It contains the planned start and finish dates for project activities and milestones. It also confirms which activities are dependent on others, therefore enabling the project manager to prioritize the order in which activities are to be completed. Developing the project schedule is an ongoing process throughout the project lifecycle, as there are many factors that can either accelerate or delay deliverables in a project. It is essential in successful project management to be able to quickly identify possible impacts, evaluate the effect on all project activities, and adjust the project activities as required to minimize risk. This course covers developing and controlling the project schedule in the project management discipline, and introduces best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition, published by the Project Management Institute (PMI®). Specifically, learners will learn how to analyze activity sequences, durations, and resource and schedule constraints to create the project schedule. Learners will also calculate the critical path using a forward and backward pass, calculate the float, and calculate the critical chain in order to monitor progress and make changes to the project schedule as required. This course provides a foundational knowledge base reflecting the most up-to-date project management information, and assist in preparing them for the PMP® certification exam. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Planning Project Costs (PMBOK® Guide Fifth Edition)	Accurately forecasting the cost of future projects is vital to the success of projects and the survival of any business. Project managers must have the ability to not only identify what work is required at the onset of a project, but precisely forecast how much that work is going to cost throughout the duration of the project. This course provides an overview of estimating and budgeting project costs in the Project Cost Management Knowledge Area, and introduces best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition, published by the Project Management Institute (PMI®). Specifically, this course covers planning how to manage project costs, gathering cost information from numerous sources and then utilizing that information, and using tools and techniques such as bottom-up estimating and reserve analysis for estimating costs. Learners will also determine the project budget by calculating reserves and funding requirements. This course provides a foundational knowledge base reflecting the most up-to-date project management information, so learners can effectively put principles to work in their own organizations. This course will assist in preparing learners for the PMP® certification exam. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Controlling Project Costs (PMBOK® Guide Fifth Edition)	Establishing the budget for a project is a vital process in project management, yet it means nothing if the budget is not adhered to. Controlling project costs is critical to meeting a project's budget targets, and monitoring cost performance can mean the difference between the success and failure of a project. This course provides an overview of the Control Costs process. It introduces the best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) - Fifth Edition, published by the Project Management Institute (PMI®). Specifically, the course examines the inputs, tools and techniques, and outputs of the Control Costs process. In terms of the tools and techniques, it shows how to monitor cost performance through earned value management (EVM), forecasting, and other techniques such as to-complete performance index (TCPI) and reserve analysis. It also demonstrates how to calculate planned value, earned value, actual cost, schedule and cost variance, and schedule performance and cost performance indices. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work in their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide - Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Plan Quality Management (PMBOK® Guide Fifth Edition)	Project managers need to build quality into their projects at the very beginning, during the planning stage. Quality managers have to ensure that quality requirements are met. The Project Quality Management Knowledge Area takes these facts into consideration. It not only includes processes for assuring and controlling quality, but it also includes a process for ensuring that quality is considered from the very beginning of a project's life cycle. In this course, learners will be given an overview of the Project Quality Management Knowledge Area. They'll be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition published by the Project Management Institute (PMI®). Specifically, learners will be introduced to the three processes in the Quality Management Knowledge Area and how they fit into the project management Process Groups. This course also covers, in detail, the Plan Quality Management process. This process helps project managers identify the relevant quality standards for a project and then determine how to satisfy those requirements. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Quality Assurance and Quality Control (PMBOK® Guide Fifth Edition)	There is no question that project quality is essential in ensuring project success. A quality management plan identifies quality requirements and provides all project stakeholders with documented guidelines for delivering a quality product or service. But the question is how do you ensure that the quality management plan will work? How do you know that those guidelines will, if followed, result in a successful project? The quality management plan must be audited and measured consistently and efficiently to ensure that it is both adequate and adhered to. In this course, learners will be given an overview of the Perform Quality Assurance and Control Quality processes within the Project Quality Management Knowledge Area. They'll be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition published by the Project Management Institute (PMI®). Specifically, learners will be introduced to the tools and techniques used in quality assurance, such as quality audits and performing a process analysis. They'll also learn quality control tools, such as cause and effect diagrams, statistical sampling, and inspection. This course will assist in preparing the learner for the PMP® certification exam and provide a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Planning Project Human Resources (PMBOK® Guide Fifth Edition)	When project managers set their sights on delivering creative project solutions on time and within budget, they must select and manage a team of experienced and competent professionals who can meet the challenge. This requires that project managers understand the Project Human Resource Management processes of planning, selecting, developing, and managing a project team. While selecting the right team to do the work is critical to project success, it doesn't stop there. Good project managers know how to create the right type of atmosphere for their projects, keep their team members motivated throughout the project, and manage issues and changes that could possibly derail a project team. This course emphasizes the importance of good project human resource management to overall project performance. It covers the inputs, tools and techniques, and outputs of the first two Project Human Resource Management processes: Plan Human Resource Management and Acquire Project Team. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition, published by the Project Management Institute (PMI®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Managing Project Human Resources (PMBOK® Guide Fifth Edition)	Henry Ford once said that coming together is a beginning; keeping together is progress; working together is success. Mr. Ford knew the importance of teamwork. Ask anyone who has worked in a project environment, and they will tell you that team dynamics can make or break a project. A positive, constructive atmosphere can keep team members motivated and productive, while a negative atmosphere can have the opposite effect. Developing effective project teams is one of the primary responsibilities of a project manager. Once the team is working effectively and the project is underway, it is time for the project manager to proactively manage the project team in order to address and resolve personnel issues that could adversely affect the project. This course covers the Develop Project Team and Manage Project Team processes, the third and fourth processes within the Project Human Resources Management Knowledge Area. Learners will be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition published by the Project Management Institute (PMI®). Techniques for developing project teams, such as training, team-building activities, and recognition and rewards will be discussed. Learners will also be introduced to strategies for enhancing project performance and conflict management techniques. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. It will also assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Plan and Manage Project Communications (PMBOK® Guide Fifth Edition)	It is commonly said that up to 90% of a project manager's time is spent communicating, whether it's with external stakeholders, members of the project team, suppliers, or other managers within the organization. That speaks volumes about the important role of communication to a project. When communications break down, projects fail. When communications are good, the project is more likely to achieve its objectives. Healthy project communication means that the right people are getting the right information at the right time. They are able to make informed decisions. They understand what is going on and are able to proceed with their work. Communications management is one of the most essential functions of a project manager. Project managers need to plan out a strategy to ensure that needed information is gathered and produced efficiently. In this course learners will learn how to plan and manage project communications. Learners will be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition published by the Project Management Institute (PMI®). This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Control Project Communications (PMBOK® Guide Fifth Edition)	A project manager is the communication hub through whom all project information flows. A project manager may receive and distribute dozens of messages per day. Customers, suppliers, project team members, and company executives all rely on the project manager for up-to-date information. Controlling these communications is critical to the project, and it's the project manager's responsibility to ensure that the planned flow of project communications continues so that the needs of both the project stakeholders and the project itself are met. This course emphasizes the importance of the Control Communications process and guides the learner through the tools and techniques that can be used for controlling communications throughout the life of a project. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. It will also assist in preparing the learner for the PMP® Certification Exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition, published by the Project Management Institute (PMI®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Risk Management Planning (PMBOK® Guide Fifth Edition)	There are a few questions that every project manager should ask at the beginning of a project: What do we hope to gain from this project? What kinds of things could keep that from happening? And how should we respond if those events occur? Every project involves some degree of risk. Identifying potential risks and having a plan for dealing with them can spell the difference between a project that reaches a successful conclusion and one that does not. In this course, learners will be introduced to the Project Risk Management Knowledge Area. It covers the best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition published by the Project Management Institute (PMI®). Specifically, learners will be introduced the first process in the Project Risk Management Knowledge Area: Plan Risk Management. Techniques for creating a risk management plan and preparing documentation for the risk identification and analysis processes will be covered in detail. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Identifying Project Risks (PMBOK® Guide Fifth Edition)	Since every project faces some degree of risk, good project management involves a thorough investigation into all potential risks that may impact the project throughout its life cycle. Identifying potential risks and their causes and impacts can mean the difference between a project that reaches a successful conclusion and one that does not. In this course, learners will continue to learn about processes within the Project Risk Management Knowledge Area. It covers the best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Fifth Edition published by the Project Management Institute (PMI®). Specifically, learners will be introduced to the second of the six risk management processes: Identify Risks. The course covers many risk identification methods including group information gathering techniques, diagramming techniques, and SWOT analysis. The results of these methods are compiled in the risk register, which is also covered in detail. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide – Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Performing Risk Analysis (PMBOK® Guide Fifth Edition)	The science of project management was founded, in large part, to manage risk and prevent it from negatively affecting project objectives, schedules, and budgets. Risk in any project is unavoidable. Fortunately, there are proven methods to identify and analyze potential threats so that appropriate risk responses are developed and the project's level of exposure is controlled. Risk analysis has become an important discipline within the field of project management. It involves prioritizing risks and assessing each identified risk's probability of occurrence and potential impact, whether positive or negative. This course explores both qualitative and quantitative risk analysis techniques. Specifically, learners will be introduced to qualitative tools like the probability and impact matrix, risk probability and impact assessment, and risk urgency assessment. Quantitative risk analysis techniques include data gathering and representation and quantitative modeling techniques. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. It is aligned with A Guide to the Project Management Body of Knowledge (PMBOK® Guide) - Fifth Edition, published by the Project Management Institute (PMI®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.

Risk Response and Control (PMBOKÂ® Guide Fifth Edition)	Life is filled with uncertainties, and these uncertainties often affect our decisions and outcomes. Whenever decisions are made without prior knowledge or experience, there is always a chance of risk. When dealing with projects, it's the project manager's job to assess and control risks, avert or minimize their adverse effects, and capitalize on potential opportunities over the life of a project. This course covers the last two processes in the Project Risk Management Knowledge Area â€" Plan Risk Responses and Control Risks. Specifically, you will be introduced to strategies for handling both negative and positive risk, and how to control these risks. This course will also cover all the necessary project documents and plans that require updates as these processes are performed. This course will assist in preparing learners for the PMPÂ® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) â€" Fifth Edition, published by the Project Management Institute (PMIÂ®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Planning Project Procurement Management (PMBOKÂ® Guide Fifth Edition)	Projects routinely require materials, consultants, training, products, and equipment, along with many other types of goods and services. Project procurement is the process of purchasing products and services necessary to fulfill the objectives of a project. Procurements must be carefully planned and administered to ensure they do not cause a project to go over budget or fall behind schedule. In this course, learners will gain an understanding of what processes are involved in planning project procurement and how these processes interact with the overall project life cycle. Common tools and techniques for planning project procurement will be covered, including make-or-buy analysis. Learners will be introduced to the process of developing a procurement management plan and determining which procurement contract best suits the project's needs, which are both vital to ensuring a project manager is able to procure the products or services for project success. This course will assist in preparing learners for the PMPÂ® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) - Fifth Edition, published by the Project Management Institute (PMIÂ®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Managing Procurements (PMBOKÂ® Guide Fifth Edition)	Managing the procurement process can sometimes seem like a project all in itself, as it generally involves a number of detailed and time-consuming steps â€" from obtaining seller responses, selecting a seller and awarding the contract, to managing the procurement relationship. This is the second course in the Project Procurement Management Knowledge Area and covers three processes: Conduct Procurements, Control Procurements, and Close Procurements. Specifically, learners will be introduced to proposal evaluation techniques, procurement negotiations, and handling claims and disputes. The course will also cover the components of procurement documents and a contract file for controlling procurements, as well as techniques for closing procurements. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) â€" Fifth Edition, published by the Project Management Institute (PMIÂ®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®. This course will assist in preparing learners for the PMPÂ® certification exam.
Project Stakeholder Management (PMBOKÂ® Guide Fifth Edition)	A project can be worthless if the right people aren't involved from the beginning. Project Stakeholder Management focuses on making sure that the right stakeholders are identified, that stakeholder requirements are captured and incorporated into the work of the project, and that appropriate stakeholders participate in relevant project activities. Successful project managers use project stakeholder management throughout the project life cycle to appropriately engage stakeholders, manage expectations, and ensure that the project gets what it needs from stakeholders, and stakeholders get what they need from the project. This course highlights the importance of project stakeholder management to project performance. Through interactive learning strategies and realistic scenarios, the learner will explore these concepts and gain a better understanding of the inputs to, the tools and techniques for, and the outputs of the Project Stakeholder Management processes. Specifically, learners will be introduced to the first two processes in the Project Stakeholder Management Knowledge Area â€" Identify Stakeholders and Plan Stakeholder Management. Learners will be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) - Fifth Edition published by the Project Management Institute (PMIÂ®). This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMPÂ® certification exam. |n |n This course is aligned with the PMBOKÂ® Guide - Fifth Edition, published by PMIÂ®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Managing and Controlling Stakeholder Engagement (PMBOKÂ® Guide Fifth Edition)	Stakeholders are critical to your project's success. However, if you don't engage stakeholders when it's most appropriate, and continue effective communication throughout the project life cycle, the value and expertise you require from them could be lost. Managing and controlling stakeholder engagement is more than just responding to queries or issues; it's about anticipating project requirements and making sure the stakeholder engagement plan continues to stay on track so that you have what you need, when you need it. |n |n This course covers managing and controlling stakeholder engagement in the project management discipline, and introduces best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) â€" Fifth Edition, published by the Project Management Institute (PMIÂ®). Specifically, learners will be introduced to tools and techniques for managing stakeholder engagement such as push and pull communication methods. Learners will also learn how to control stakeholder engagement using information management systems, expert judgment, and meetings. This course provides a foundational knowledge base reflecting the most up-to-date project management information. It will enable learners to effectively put principles to work in their own organizations, and assist in preparing them for the PMPÂ® certification exam. |n |n This course is aligned with the PMBOKÂ® Guide â€" Fifth Edition, published by PMIÂ®, Inc., 2013. Integrated Initiation and Planning (PMBOKÂ® Guide Fifth Edition)	Collaboration, coordination, and consolidation are terms to describe integration. Project Integration Management is the Knowledge Area that coordinates with various Process Groups to ensure that each project is managed in a unified and consolidated way. The intention is to have processes interact smoothly. In this course, learners will be given an overview of the Project Integration Management Knowledge Area. They'll be introduced to best practices outlined in A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) â€" Fifth Edition published by the Project Management Institute (PMIÂ®). Specifically, learners will be introduced to Project Integration Management and its processes, the project charter, including the statement of work and business case. They'll also be introduced to the project management plan. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMPÂ® certification exam. This course is aligned with the PMBOKÂ® Guide â€" Fifth Edition, published by PMIÂ®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.
Controlling Changes and Closing a Project (PMBOKÂ® Guide Fifth Edition)	Change is inevitable. Environmental, technological, legislative, and economical changes can have an immeasurable impact on individuals and organizations. In addition to these changes, a project environment could see change requests for additional features and functions from stakeholders. As a project manager, you can mitigate risk by monitoring and controling changes to time, cost, scope, and product quality. Controlling change will also effectively assist in closing projects or phases by ensuring approved changes are implemented and signed off by stakeholders. This course will equip project managers with the tools and techniques to manage project change in an integrated fashion and to close out phases and projects so that all aspects are brought to a controlled close. The Project Integration Management Knowledge Area includes six processes, ranging from the creation of the project charter at the beginning of a project through to the close of a project or phase. This course covers the inputs, tools and techniques, and outputs of the fifth and sixth processes: Perform Integrated Change Control and Close Project or Phase. Through interactive learning strategies and realistic scenarios, you will explore these concepts and gain a better understanding of project integration processes in action. This course will assist in preparing learners for the PMPÂ® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOKÂ® Guide) - Fifth Edition, published by the Project Management Institute (PMIÂ®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMIÂ®.

Title	Description
Managing Projects within Organizations (PMBOK® Guide Fifth Edition)	Project-based operations have become the norm in today's business world. In essence, almost every work effort is a project, from constructing a new building to designing and delivering a new information management system. As projects become the primary method for getting things done and effecting organizational change, it is crucial to choose a good and proven method for managing projects. However, projects cannot be properly managed in a silo. Every aspect of project management is affected by the organization, the social environment, the project's stakeholders, both internal and external, and many other aspects of the context in which the project is carried out. Understanding this context is critical to good planning and good decision making as the project progresses toward achieving its objectives. This course provides an overview of the project management discipline as outlined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) - Fifth Edition published by the Project Management Institute (PMI®). Specifically, it introduces the characteristics of a project, the responsibilities that accompany project management, and the differences between portfolios, programs, and projects. The course will identify key project management concepts and terms and provide information about the variables that can influence project outcomes. It will also cover the project stakeholders and the organizational influences on a project. This course provides a foundational knowledge base reflecting the most up‑to-date project management information so learners can effectively put principles to work in their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide - Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Project Management Overview (PMBOK® Guide Fifth Edition)	Every project is different. Some are small and straight forward. Others are large and complex. Most are somewhere in the middle. Even though every project is unique, they all have certain attributes in common. Every project has a similar life cycle, starting with an idea, progressing through development, and culminating in the delivery of a finished product or service. A product has a life cycle of its own which is tied into â€" yet distinct from â€" the life cycle of the project. All projects have similar overall phases, such as the start up phase, the planning and design phase, the production phase, and the closing phase. That is all straightforward, but how do a project's phases relate to the stages of its life cycle? Do the natural phases of a project affect the way it is managed? And what types of project management processes should be applied to the specific phases? These are all fundamental questions project managers ask. This course answers these questions and more. It is designed to give project managers and project team members a solid understanding about the nature of projects, how they are structured, and how the structures affect the way they are managed. Specifically, it introduces the concepts of project life cycle, product life cycle, project phases, and project management Process Groups. It provides an in depth look at how the project management phases interact with each other and with the elements of the project life cycle. The course illustrates these concepts through many examples of small and large projects. Learners will also be introduced to the fundamental source of information for project management professionals: the Project Management Institute (PMI®) and A Guide to the Project Management Body of Knowledge (PMBOK® Guide) â€" Fifth Edition published by PMI®. The course will identify key project management concepts and terms, explore the PMBOK® Guide, and the project management Knowledge Areas. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing the learner for the PMP® certification exam. This course is aligned with the PMBOK® Guide - Fifth Edition, published by PMI® Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Project Management Process Groups (PMBOK® Guide Fifth Edition)	Processes: a set of interrelated actions and activities performed to achieve a specified set of products, results, or services. Good processes, meaning those based on sound principles and proven practices, are a project manager's best friends. Following a set of established processes minimizes confusion and uncertainty for the project manager and all project stakeholders. It ensures the effective progress of the project from initiation through to close-out. In this course, learners will be given an overview of the project management Process Groups as defined in A Guide to the Project Management Body of Knowledge (PMBOK® Guide) â€" Fifth Edition published by the Project Management Institute (PMI®). Specifically, learners will be introduced to the following project management Process Groups: Initiating, Planning, Executing, Monitoring and Controlling, and Closing. Learners will also discover how the Process Groups interact with the ten Knowledge Areas: Project Integration Management, Project Scope Management, Project Time Management, Project Cost Management, Project Quality Management, Project Human Resource Management, Project Communications Management, Project Risk Management, Project Stakeholder Management, and Project Procurement Management. This course provides a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations. This course will assist in preparing learners for the PMP® certification exam. This course is aligned with the PMBOK® Guide â€" Fifth Edition, published by PMI®, Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.
Creating the Work Breakdown Structure (PMBOK® Guide Fifth Edition)	In order for projects to be successful, a project manager must use planning techniques that define project objectives in sufficient detail. Projects can quickly get out of control if the project plans aren't detailed. A project's work breakdown structure (WBS) provides the foundation for defining work as it relates to the project objectives and breaking it down to an adequate level of detail. The WBS also provides a structure for managing the work to completion. This course will highlight the importance of the WBS and how it relates to the overall success of a project. Through interactive learning strategies and real-life scenarios, the learner will explore these concepts and gain a better understanding of the project management processes related to creating and verifying a WBS. This course will cover the project inputs, tools and techniques, and outputs of the Create WBS process, the fourth process in the Project Scope Management Knowledge Area. This course will assist in preparing learners for the PMP® certification exam. This course is aligned with A Guide to the Project Management Body of Knowledge (PMBOK® Guide) - Fifth Edition, published by the Project Management Institute (PMI®), Inc., 2013. Copyright and all rights reserved. Material from this publication has been reproduced with the permission of PMI®.

Mentoring 77-418 Word 2013	Mentoring 77-418 Word 2013
Creating Workbooks, Worksheets, and Data in Excel 2013	Excel 2013 allows you to create worksheets and workbooks to manage and manipulate data easily. You can cut, copy, and paste data. You can also navigate within data cells, and worksheets. Not only can you manage the data at this level, you can group, color-code, and organize the worksheets within the workbook. This course will cover creating and opening workbooks, moving around in Excel 2013, moving data, and organizing worksheets. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Saving and Printing Data in Excel 2013	Excel 2013 makes it easy to save and print workbooks and worksheets. When you create an Excel workbook, you will most likely want to save it, and in many instances, print it as a hard copy or share with someone else. You can save in various formats since Excel 2013 supports many file types. This course covers saving data, and preparing for printing including setting print options, page setup, print titles, headers and footers, and row and column headings. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013
Formatting Cells and Worksheets in Excel 2013	Excel 2013 provides a number of tools and features that allow you to visually enhance the appearance of worksheets and workbooks. Data and cells can be manipulated and customized using various positioning and formatting features. This course explores formatting cells and text, using tools such as the Format Painter. It shows how to change the way text is presented to make it more visually appealing, including formatting fonts, and applying borders and fills. This course also covers aligning and orienting data, and merging and splitting cells. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Formatting Data in Excel 2013	Excel 2013 provides a number of tools and features that allow you to visually enhance the appearance of data, automatically fill data, and create hyperlinks to various places. This course covers formatting numbers in currency, date, and percentage formats. It also covers ways of automatically filling data through Auto Fill and Flash Fill. Finally, this course covers creating hyperlinks to a website, another place in the workbook, a new document, and e-mail. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Presenting Data using Conditional Formatting and Sparklines in Excel 2013	Excel 2013 provides tools that enable you to efficiently present your data and that can also make your data easier to understand. Conditional formatting allows you to highlight trends and exceptions in cells or ranges of cells by presenting the identified data in a number of unique ways to make it stand out. Sparklines are small charts within a cell that provide a visual representation of data and can be used to show trends in an appealing manner. This course covers applying conditional formatting, creating custom rules, and creating basic and advanced sparklines. |n |n This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013
Performing Calculations Using Functions in Excel 2013	Excel 2013 provides you with the tools that allow you to perform calculations on your workbook data. Being able to use formulas to do complicated calculations not only simplifies your work but also helps to reduce the number of errors that can arise in such complex tasks. This course introduces the basic concepts and terminology associated with formulas and functions. It also covers various ways of referring to cells and cell ranges and demonstrates how to use basic functions including logical and IF-type functions. |n |n This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Presenting Data in Tables and Charts in Excel 2013	Using the tables and charts features in Excel 2013, you can create attractive and well-organized representations of worksheet and workbook data. Both tables and charts can be easily inserted and customized. This course demonstrates how to effectively use and customize tables and charts in Excel 2013; it explores available table styles and chart types and the best use of each type. And the course shows how to change the different elements of a table or chart to provide an effective visualization of your data. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Working with e-mail in Outlook 2013	Outlook 2013 is the latest release of Microsoftâ€™s primary messaging client. Outlook provides all of the tools necessary for managing e-mail, scheduling tasks, and communication. This course addresses the basic features and functionality of Outlook 2013 - how to navigate Outlook 2013, view and reply to incoming e-mails and create new mail messages.
Managing E-mail in Outlook 2013	This course discusses working with attachments and adding signatures to your messages in Outlook 2013 . Managing your email by sorting, filter, printing and deleting messages is also covered. This course also covers ways to personalize your inbox in Outlook 2013, such as changing message preview settings, and adjusting the reading pane and people pane.
Working with Contacts in Outlook 2013	By taking the time to create contacts in Outlook 2013, you can save yourself from having to type out full e-mail addresses every time you send a message, assign a task or send out meeting requests. You can further arrange contacts by creating contact groups that allow you to e-mail multiple contacts at once by only typing the group name. This course covers the multiple ways that contacts and contact groups can be created, and covers how to manage contact information within the People folder in Outlook 2013. It also covers how to integrate contact information from a social network with Outlook 2013.
Scheduling with Appointments, Events, and Tasks in Outlook 2013	The Outlook 2013 Calendar allows you to create appointments and events, as well as schedule meetings. The Calendar is fully integrated with the other components of Microsoft Outlook 2013 allowing you to easily incorporate your contacts and e-mail functionality with the Calendar. This course introduces the major components of the Calendar and discusses how to create appointments and events. Microsoft Outlook 2013 also provides the Tasks feature to help keep you organized and to assist you with the various tasks that you need to process on a daily basis. This course demonstrates how to create tasks in Outlook 2013 to help you to manage your time and stay organized.
Working with Meetings in Outlook 2013	The Outlook 2013 Calendar allows you to schedule meetings in addition to creating appointments and events. This course shows how to schedule meetings with other Outlook users. It also demonstrates the available options when replying to meeting requests and managing meeting requests in Outlook 2013.
Microsoft Internet Explorer 9: Browsing and Managing Web Pages	Microsoft Internet Explorer 9 (IE9) is the latest version of Microsoftâ€™s web browser. Enhancements in IE9 include a simplified interface with ease-of-use features such as tab pages for accessing and browsing frequently used sites. Integration with Windows provides functions such as the ability to pin frequently used sites to the desktop. Searching is now integrated into the Address Bar and IE9 also includes a number of new security and privacy features such as tracking protection to block content from unknown web sites. This course introduces users to the basic features of Internet Explorer 9. This includes functions such as browsing and navigating, printing and saving web pages, accessing recently visited web sites, using tabbed browsing, and managing favorite web sites.
Microsoft Internet Explorer 9: Searching and Subscribing to Web Content	Microsoft Internet Explorer 9 (IE9) is the latest version of Microsoft's web browser. Enhancements in IE9 include a simplified interface with ease-of-use features such as tab pages for accessing and browsing frequently used sites. Integration with Windows provides functions such as the ability to pin frequently used sites to the desktop. Searching is now integrated into the Address Bar and IE9 also includes a number of new security and privacy features such as tracking protection to block content from unknown web sites. This course introduces users to search functionality in IE9. The course also covers the use of accelerators to perform tasks such as mapping a street address from within a web page, and the course shows how to subscribe to web feeds and web slices to receive updated content automatically from web sites.
Microsoft Internet Explorer 9: Customization and Security	Microsoft Internet Explorer 9 (IE9) is the latest version of Microsoft's web browser. Enhancements in IE9 include a simplified interface with ease-of-use features such as tab pages for accessing and browsing frequently used sites. Integration with Windows provides functions such as the ability to pin frequently used sites to the desktop. Searching is now integrated into the Address Bar and IE9 also includes a number of new security and privacy features such as tracking protection to block content from unknown web sites. |n |n This course shows users how to customize the UI by adding or removing toolbars and introduces users to other personalization options in IE9. It covers privacy features such as InPrivate browsing, pop-up blocking, tracking protection, and ActiveX filtering. It also covers security features such as the SmartScreen filter and shows users how to download files securely. Finally, it provides information on Help features and on resolving basic performance issues with features such as Compatibility view, Performance Advisor, and reset options.
Windows 8: New Features and Common Tasks	Microsoft Windows 8 is the latest version of the Microsoft Windows PC desktop operating system. This version represents a significant upgrade, incorporating a completely new tablet-style user interface. For those who prefer to work in the more conventional Windows desktop interface, it will be still available as an app. Other upgrades include the Ribbon element that users of the Office applications will be familiar with, now applied to Internet Explorer 10. |n |n This course will introduce learners to key new features of Windows 8 and also demonstrate how to interact with the new UI using either mouse and keyboard or a touch screen device. Other topics covered include navigating the new UI and performing common tasks.
Files and Connectivity in Windows 8	Microsoft Windows 8 is the latest version of the Microsoft Windows PC desktop operating system. This version represents a significant upgrade which incorporates a default Windows 8 tablet style interface. The Windows desktop will be still available, but with a number of upgrades including changes to File Explorer and how mobile connections are handled. This course will introduce learners to the different ways they can manage files and folders in Windows 8 using the improved File Explorer tool as well as how to manage network connections.

Personalizing Windows 8	Microsoft Windows 8 is the latest version of the Microsoft Windows PC desktop operating system. This version represents a significant upgrade which incorporates a default Windows 8 tablet style interface. The more conventional Windows desktop will be still available which is quite like Windows 7 but with a number of upgrades. This course will introduce learners to the various ways they can configure and personalize the user experience in Windows 8. Specific topics include using Control Panel and PC Settings to configure options, using accessibility options in Windows 8, and customizing the desktop, Lock Screen, and Start Screen.
Working with Apps in Windows 8	Microsoft Windows 8 is the latest version of the Microsoft Windows PC desktop operating system. This version incorporates a default Windows 8 tablet-style interface and represents a significant upgrade from previous versions of Windows. The more conventional Windows 7 style desktop is still available as part of Windows 8, but with a number of upgrades. This course will introduce learners to the various ways they can use and manage apps in Windows 8. Specific topics include how to arrange apps and desktop applications on the screen, using Task Manager and the Windows Store, integrating Windows accounts, and using integrated apps.
Internet Explorer 10, File Sharing, and Recovery in Windows 8	Microsoft Windows 8 is the latest version of the Microsoft Windows PC desktop operating system. This version represents a significant upgrade which incorporates a default Windows 8 tablet interface. The more conventional Windows desktop will be still available which is quite like Windows 7 but with a number of upgrades. This course will introduce learners to how to use the new Internet Explorer 10 as well as the Desktop version, along with sharing files, and managing various backup and recovery options in Windows 8. Specific topics covered include Windows 8 and Internet Explorer 10, sharing files and folders, and exploring the various storage and recovery options available to Windows 8 users.
Managing Hardware and Advanced Options in Windows 8	Microsoft Windows 8 is the latest version of the Microsoft Windows PC desktop operating system. This version represents a significant upgrade, which incorporates a default Windows 8 tablet style interface. The more conventional Windows desktop will be still available, which is quite like Windows 7 but with a number of upgrades. This course will introduce learners to the various ways they can configure hardware and advanced options as well as exploring some of the security features of Windows 8. Specific topics covered include printers, monitors and devices, advanced features, security features included in Windows 8, and managing network connections in Windows 8.
Indoor Hoisting and Rigging	This course is designed to educate the worker on the significant safety issues to be considered while moving large, heavy loads associated with today's manufacturing and construction industries. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to specify general safety issues of cranes, hoisting, and rigging; define the purpose of the crane safety program; describe general inspection practices; describe testing practices; describe basic load handling considerations; specify operator responsibilities; and recognize standard hand signals.
Computer Ergonomics	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an Ergonomics Program and also provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to employees and employers required to work in computer/data entry environments. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to: define terms related to the study of ergonomics, recognize signs and symptoms of injury to the muscles and skeleton and the importance of early reporting, identify risk factors for injury to the muscles and skeleton, and specify controls and work practices to reduce and/or eliminate risk factors for injury to the muscles and skeleton.
Workplace Safety Orientation	This course will provide an awareness level orientation of basic industrial safety fundamentals. It was designed to provide an overview of some of the basic concepts and techniques used in modern industry to protect workers. It also describes the purpose of the following safety programs: Hazard Communication, Bloodborne Pathogen Safety, Lockout/Tagout, Confined Space Entry, Emergency Response, Respiratory Protection, Personal Protective Equipment, and Hearing Conservation. |n |n The content in this course is designed to comply with the intent of the applicable regulatory requirements. In addition to recognizing the purpose of the above mentioned safety programs, learner objectives are to specify the role of the Occupational Safety and Health Administration, identify basic rules of safety and general employee protective measures, and identify common hazards found in the workplace.
PPE: Eye and Face Protection	This course will help acquaint you with the various types of personal protective equipment (PPE) specifically designed to protect your eyes and face. It will assist you in selecting and maintaining the proper equipment based on the workplace hazards present. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: recall general OSHA requirements related to personal protective equipment, choose the appropriate eye and face protection to guard against workplace hazards, and describe how to inspect and maintain eye and face protection.
Personal Protective Equipment: Head Protection	This course will help acquaint you with the various types of PPE specifically designed to protect your head. It will assist you in selecting and maintaining the proper equipment based on the workplace hazards present. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recall general OSHA requirements, choose the appropriate head protection to guard against workplace hazards, and describe how to inspect and maintain head protection.
PPE: Hand Protection	Personal protective equipment (PPE) is designed to protect you from serious workplace injuries or illnesses resulting from contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards. This 30-minute course will help acquaint you with the various types of PPE specifically designed to protect your hands. It will assist you in selecting and maintaining the proper equipment based on the workplace hazards present. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to describe OSHA requirements related to personal protective equipment, choose the appropriate hand protection to guard against specific workplace hazards, and recall general hand protection usage and maintenance guidelines.
Behavior-based Safety for Supervisors	This course is intended to provide supervisors with an overview of the concepts of behavior-based safety. This training will aid those supervisors who have not used these techniques in their day-to-day duties and responsibilities in the past. The content in this course is designed to comply with the intent of the applicable regulatory requirements. |n |n Learner objectives for this course are to: define behavior and identify the scope and purpose of a behavior safety program, distinguish the roles and responsibilities of the supervisor and the employee, identify factors that cause incidents (environmental versus personal factors), identify the influences on behavior, determine how to effectively observe behavior, identify behavior reinforcement concepts, specify ways to motivate employees and address the human factor, recognize the importance of attitude and how it affects safety on the job, and describe transactional analysis.
First Aid: Automated External Defibrillator	The primary focus of this course is the proper use of the Automated External Defibrillator (AED). Use of the AED also includes the correct application of the ABCâ€™s of basic life support and basic CRP techniques, which will also be reviewed in this training. Note: This training should not be used as the primary basis for any AED or CPR certification. It is intended to provide the learner with knowledge-based training only and should be accompanied with a performance-based component provided by a qualified instructor. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
First Aid: CPR	Emergencies requiring cardiopulmonary resuscitation (CPR) can and do occur without warning. It is important that you know the basic emergency techniques for recognizing and treating failures of the respiratory system and heart. This course will focus on the ABCs of basic life support: maintaining an open airway, restoring breathing, and restoring circulation. Note: this training should not be used as the primary basis for any CPR certification. It is intended to provide the learner with knowledge-based training only. This training should be accompanied by a performance-based component provided by a certified CPR instructor. The content in this course is designed to comply with the intent of the applicable regulatory requirements. |n |n Learner objectives are to recall basic life support techniques used to open a victim's airway, recall basic life support techniques used to restore and maintain breathing, and recall basic life support techniques used to restore and maintain circulation.
First Aid: Medical Emergencies	Medical emergencies can occur at any time but may be hidden because of injuries suffered in an accident, or an accident may trigger a medical emergency such as a heart attack, stroke, or seizure. This training will focus on the signs and symptoms of specific medical emergencies and their treatment. Being trained in first aid could mean the difference between life and death. Note: This training should not be used as the primary basis for any first aid certification. It is intended to provide the learner with knowledge-based training only. This training should be accompanied by a performance-based component provided by a certified first aid instructor. The content in this course is designed to comply with the intent of the applicable regulatory requirements. |n |n Learner objectives are to describe how to respond appropriately to a medical emergency, and recall the signs, symptoms, and first aid treatment of the following medical emergencies: choking, poisoning, heart attacks, respiratory distress, strokes, seizures, and diabetic shock.
Flagging Safety	Traffic control is a critical aspect of worker and driver safety on road construction projects. Flaggers need to be knowledgeable about the standards and guidelines established by the Federal Highway Administration's Manual on Uniform Traffic Control Devices. These include general guidelines for flagging, appropriate clothing requirements, and the standards for the signs, barriers and lights, and other devices used in your work. You also need to know where to position yourself for optimum safety, how to judge traffic speed and congestion, and regulate traffic accordingly.
Safe Vehicle Backing	Backing a vehicle can be the most hazardous driving you do all day. Backing accidents are extremely common â€" one in four accidents involves backing. As a responsible driver it is important to choose the safest method to back your vehicle and to understand that your choices impact others. In this course, you will learn about the impacts of backing accidents, their common causes, and how to minimize risks of collision when backing vehicles, including company trucks or delivery vans.
Safety Data Sheets	This course is designed to provide both workers and supervisors with a better understanding of how to interpret a safety data sheet (SDS), as well as address specific requirements associated with SDSs in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recognize the physical states in which chemicals are commonly found, identify chemical routes of entry into the body, identify the purpose of an SDS and describe the most common information found on a typical SDS, define common abbreviations used on an SDS, locate and interpret specific information found on an SDS, and specify control measures to prevent worker exposures to hazardous chemicals.
OSHA 300 Recordkeeping	This course covers OSHA's revised recordkeeping requirements, the new recordkeeping forms, and offers a number of opportunities for you to practice classifying a case's recordability. The content in this course is designed to comply with the intent of the applicable regulatory requirements. |n |n Learner objectives are to identify forms and information required for OSHA 300 recordkeeping; describe measures that can be taken to protect employee privacy; distinguish between recordable and nonrecordable cases; recognize recording criteria unique to OSHA 300 recordkeeping; and describe OSHA 300 recordkeeping log summary, posting, and maintenance requirements.
Construction Safety Orientation	Construction Safety Orientation
Spill Prevention and Control	Spill Prevention and Control
Spill Prevention, Control, and Countermeasure Plan	Spill Prevention, Control, and Countermeasure Plan
Storm Water Pollution Prevention	This one-hour course describes the nature and occurrence of storm water pollution, its environmental effects, and ways to address this important water quality problem. Rainwater that enters a surface water body, by flowing either overland or through a storm sewer system, is called storm water or storm water runoff. Storm water runoff is one of the leading causes of pollution in rivers and lakes. Identifying sources of storm water pollution and keeping them from coming in contact with runoff is the best and most economical way to protect the quality of the nation's waters. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to describe common storm water pollutants, identify categories covered under National Pollutant Discharge Elimination, and discuss methods of preventing storm water pollution. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Electrical Safety	Electrical Safety
Defensive Driving Fundamentals	Defensive Driving Fundamentals
Distracted Driving	Distracted Driving
CompTIA A+ 220-801: BIOS and Motherboards	The CompTIA A+ 220-801 examination measures necessary competencies for an entry-level IT professional. Successful candidates will have the knowledge required to assemble components based on customer requirements, install, configure and maintain devices, PCs and software for end users, understand the basics of networking and security/forensics, properly and safely diagnose, resolve and document common hardware and software issues while applying troubleshooting skills. Successful candidates will also provide appropriate customer support; understand the basics of virtualization, desktop imaging, and deployment. This course focuses on two fundamental hardware components of PCs, the BIOS and Motherboards. It will introduce the learner to BIOS, including how to configure BIOS, monitor system devices and flash BIOS. The course also covers motherboards, including the various form factors of motherboards, slots and sockets, as well as RAM, motherboard connections, and components. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Memory, Expansion Cards and Storage Devices	This course focuses on system-level computer components memory, expansion cards and storage devices. It will introduce the learner to the various types of memory and their characteristics and expansion card characteristics and types. The course also covers types of storage, hard disk drives, and the various types of media and external storage. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: CPUs, Connections, and Power Supplies	This course focuses on the core component of every computer, CPUs, including the types and characteristics of CPUs, CPU socket form factors and considerations, and how to keep CPUs cool during normal operation. This course will also cover other important facets of computing such as connection speeds, wireless connections, and power supplies. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Configurations, Displays, Connectors, & Peripherals	This course focuses on common custom system configurations, such as graphic, video and audio workstations and virtualization workstations, as well as common home-based configurations for gaming and home theaters. It also considers common network clients and servers. Finally the course discusses display types and common peripherals and their connectors. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Network Cabling, IP Addressing, Ports, and Protocols	In order for devices to be part of a network, each must make use of a cabling medium (if wired), cable connectors and have at least one unique address, most commonly an IP address. This course examines the components and communication mechanisms such as cables, connectors, ports and protocols used to allow computers and networks to communicate with one another and share information. It also deals with the properties and characteristics of TCP/IP, the details of IP addressing including the different types of addresses, how they are assigned and the different classes. It also explains common TCP and UDP ports and protocols. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Networking Technologies	This course examines wired and wireless technologies, encryption techniques, small office implementations and Internet connections. It introduces the learner to the various types of wireless standards and ways in which to implement a small office/home office router. This course also covers the various ways of connecting to the Internet and the types of network and topologies commonly in use today. This course prepares the learner for CompTIA A+ exam 220-801.

Course	Description
CompTIA A+ 220-801: Networking Devices and Tools	A variety of devices are used in a network depending on the design requirements. Some devices, such as routers and switches, will be found on almost every network, while other devices, such as wireless access points and VoIP phones, are more specialized and will only be present if the needs of the network require them. This course describes a variety of network devices as well as the networking tools used to implement and facilitate testing of the medium which connects them. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Laptops	Modern laptops have all the performance and capabilities of a desktop PC, but in a highly portable form. A laptop integrates the typical desktop computer components such as a display, keyboard, touchpad and speakers into a single, portable package. This course covers the components, expansion options, displays, and features of laptop computers. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Printers	Printers come in a number of types based on the print process that they use, and are capable of carrying out print jobs locally or over a network. This course discusses the most common types of printers and how to support them. The various features and attributes of printers are presented as well as how to install a local or network printer as well as how to share a printer over the network. Finally this course discusses general printer maintenance. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-801: Operational Procedures	This course focuses on the important operational procedures that every IT professional should adopt, such as common safety procedures, environmental procedures, and how to plan for, and mitigate the risks of power interruption. It then goes on to discuss the important role that professionalism plays in being an IT professional, including communication and prohibited content and activity. This course prepares the learner for CompTIA A+ exam 220-801.
CompTIA A+ 220-802: Introducing Microsoft Windows	This course focuses on the Microsoft Windows Operating System, including Windows versions (Windows 2000, XP, Vista and Windows 7) and the differences between 32 and 64 bit versions, common Windows features such Windows Aero, Gadgets, and User Account Control (UAC). Finally the course discusses Windows tools, including Windows Firewall, Windows Defender, and Windows Security Center. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: Installing and Configuring Windows	This course focuses on installing and configuring the Microsoft Windows operating systems, covering the types of installations and configuration options available. It also covers Windows administration features including using the command line (CMD), and managing Windows by working with administrative tools and system utilities. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: Optimizing Windows	This course focuses on optimizing the Microsoft Windows operating system using disk management tools and common Windows utilities like MSCONFIG, || w task manager, data migration tools, and DXDIAG. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: Managing Windows	This course focuses on working with Windows, including using common Control Panel features, and the basics of networking. It then goes on to cover common Windows maintenance tasks, setting up security for Windows networking, and virtualization, the practice of running an operating system within an operating system. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: Security and Data Disposal	This course focuses on information security, including physical security for computer environments. Beginning with security threats, it will cover physical security, and security best practices. It will then cover data destruction and securing networks, including wired and wireless networks. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: Mobile Devices	This course focuses on working with mobile devices, including laptops and tablets, Android and iOS operating systems, connecting with mobile devices, working with e-mail, and implementing wireless security. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: System Troubleshooting	This course focuses on troubleshooting common problems, including the methodology behind troubleshooting computer problems, how to troubleshoot the most common motherboard and RAM problems, and how to troubleshoot operating system problems like failure to boot, spontaneous shutdown, and the blue screen of death (BSOD). The course also covers how to troubleshoot common hardware problems relating to CPUs, power supplies, hard disk drives and RAID. This course prepares the learner for CompTIA A+ exam 220-802.
CompTIA A+ 220-802: General Troubleshooting	This course focuses on general troubleshooting when working with PCs, including the common tools used for troubleshooting, how to troubleshoot networks, and how to troubleshoot security-related issues. This course also deals with troubleshooting common hardware and software problems when working with video, laptops, and printers. This course prepares the learner for CompTIA A+ exam 220-802.
TestPrep Certified Information Security Manager (CISM)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Microsoft SQL Server 2012: Creating Database Objects	SQL Server 2012 is a robust database system that provides a number of database objects used to store and view data. In order to configure a SQL Server 2012 database to meet business requirements, administrators and developers must fully understand how to design, create, and configure these database objects. These objects include tables for storing data in the database, views to allow access to the data within specific tables, and indexes to optimize the performance of the database for data retrieval. This course identifies each of these database objects and demonstrates the steps required to create them using Transact-SQL statements. This course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-461: Microsoft SQL Server 2012: Querying. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Querying Basics and Modifying Data	SQL Server 2012 includes the SQL Server Management Studio which allows access to SQL Server databases and enables you to access SQL Server database data. This data can be retrieved and modified through the use of Transact-SQL within the Query Edit window of the Management Studio tool. Using Transact-SQL you can select data from a databaseâ€™s tables and filter the results to include only the data that you require. Transact-SQL statements also allow you to update, change, and remove data from tables. This course identifies the basic Transact-SQL statements that can be used to retrieve and modify data within SQL Server databases,which includes the DML statements SELECT, INSERT, UPDATE, DELETE, and MERGE. This course also demonstrates how to use joins in queries in combine data from multiple tables and how to use subqueries. This course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-461: Microsoft SQL Server 2012: Querying. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Manipulate Data Using Operators and Functions	Microsoft SQL Server 2012 Transact-SQL offers advanced query techniques, such as built-in aggregate, analytic, scalar, and ranking functions, as well as common table expressions, orCTEs and derived tables to manipulate the result set for a query. To manipulate the result sets and generate summarization information, such as totals, the CUBE, GROUPING SETS, and ROLLUP operators can be used with the GROUP BY statement. The UNION, INTERSECT, and EXCEPT operators can be used to combined the result set of multiple queries. SQL Server 2012 also offers the use of CTEs and derived tables to obtain a result set, temporarily store it, and then pass it to a query to return another result set based on that information. This course demonstrates how to perform advanced query techniques to manipulate data using the SQL Server 2012 built-in functions, operators, and table expressions. This course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-461: Microsoft SQL Server 2012: Querying. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Creating Functions and Triggers	In SQL Server 2012 you can use Transact-SQL statements to access data in the databases. Transact-SQL statements can be grouped together in a number of ways to create more complex queries when one Transact-SQL statement will not retrieve the desired results. You can group Transact-SQL statements by creating programming objects within a database. These programming objects can include user-defined functions and DML triggers. When creating programming objects Transact-SQL provides control-of-flow keywords to ensure transaction are completed in a specific sequence and transaction are completed accordingly without errors. This course demonstrates how to use the control-of-flow language keywords, transaction modes, and how to create user-defined functions, including table-valued functions and DML triggers. This course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-461: Microsoft SQL Server 2012: Querying. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Creating Programming Objects and Optimizing Queries	SQL Server 2012 allows programming objects to be created to group multiple statements together. These objects work with data in the databases. One type of programming object is the stored procedure. Stored procedures can help reduce network traffic between clients and servers by enabling more than one statement to be set to the server at a time. They do this by executing statements as batches. They also provide greater security. Within stored procedures and other programming objects such as functions and triggers, error handling can be implemented to enable errors to be caught and corrected or returned to the user. Cursors and synonyms can also be used in SQL Server 2012. During user interactions with the database resource SQL Server implements certain mechanisms to ensure the integrity of the database, which includes concurrency control and locking. This course demonstrates how to create stored procedures, cursors, and synonyms, as well as how to implement error handling. It also discusses how to view and read execution plans, create plan guides and how concurrency control is handled in SQL Server 2012. This course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-461: Microsoft SQL Server 2012: Querying. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Managing XML Data	XML has been integrated into SQL Server 2012 so that XML data can be stored within databases using the xml data type. SQL Server 2012 also allows for relational data already stored in a database to be changed to XML, and for data to be loaded as XML using various methods. You can query this data using the XQuery language within the XML data type methods. SQL Server 2012 also provides support for using FOR XML to extract relational data from a database in XML format and the use of OPENXML to generate relational views from XML. This course demonstrates how to use the xml data type, XML schema collations, and how to load XML data and how to create XML indexes. It also explores how to retrieve data using FOR XML, process XML data using OPENXML, and how to query data using the XQuery language. This course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-461: Microsoft SQL Server 2012: Querying. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Mentoring 70-461 Querying Microsoft SQL Server 2012	Mentoring 70-461 Querying Microsoft SQL Server 2012
Microsoft SQL Server 2012: Installation and Upgrade	SQL Server 2012 is a comprehensive database platform, consisting of components and management tools such as SQL Server Management Studio, the SQL Server Database Engine, Integration Services, Analyzes Services, and Reporting Services. These tools allow administrators and developers to build and maintain software solutions, and perform required functions in a server environment. This course identifies SQL Server 2012 components and management tools, and outlines the requirements for installing SQL Server 2012, including the hardware, software, and security requirements. The steps required to complete a fresh installation of a SQL Server 2012 and how to upgrade a SQL Server instance are also explored. The course also addresses how to move database from an instance of SQL Server to SQL Server 2012 for a migration detach and attach methods and the Copy Database wizard. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
TestPrep 70-462 Administering Microsoft SQL Server 2012 Databases	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Microsoft SQL Server 2012: Instance Configuration and Database Creation	SQL Server 2012's core component is its Database Engine instance, which provides storage, processing, and security for enterprise data through its controlled access and rapid transaction processing. SQL Server 2012 also provides additional features and components to manage and view data, these include Analysis Services and Reporting Services.SQL Server 2012 provides tools to manage the features and components which includes Server Management Studioâ€™s graphical user tool which allows administrators and developers to create and configure instances and databases on an enterprise level, SQL Server Configuration Manager for managing SQL Server services and protocols, and Reporting Services Configuration Manager to configure Reporting Services. This course demonstrates how to add additional features and components to an installation of SQL Server 2012, how to configure and manage an instance, and how to configure Reporting Services. This course also discusses the database architecture and how to create and configure a database. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Managing Databases and Automating Tasks	Database maintenance is an ongoing task for SQL Server 2012 administrators. This requires the integrity of the database to be checked, the database size to be kept to a minimum by ensuring the files are the correct sizes, and maintenance tasks to be run regularly. SQL Server 2012 Transact-SQL provides DBCC, which is a command that provides statements to maintain the database and database files. An administrator can also create jobs using SQL Server Agent to automate administrative tasks in the SQL Server Database Engine and throughout the enterprise by having the jobs run on multiple SQL Server servers throughout the enterprise using a master server. SQL Server 2012 provides the Database Mail feature which allows e-mails to be sent from SQL Server to users through applications. These e-mails can be anything from alerts to query results and files from any network resource using SMTP. This course demonstrates how to confirm the integrity of a database and manage the size of the database files. It also demonstrates how to configure Database Mail and SQL Server Agent jobs for a single server and for multiple servers. This course also discusses the database architecture and how to create and configure a database. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Security Management	Microsoft SQL Server 2012 provides enhanced security features to ensure that each instance is secure. Using SQL Server 2012 security features, administrators can guarantee that access to a SQL Server instance is granted only to specified users, using either Windows Authentication or Mixed Mode Authentication by creating logins and then mapping the logins to the databases within the instance. Administrators also have the ability to encrypt a SQL Server instance using transparent data encryption (TDE) and to encrypt the data within a database using encryption certificates and asymmetric and symmetric keys. SQL Server 2012 also provides an auditing feature to audit the instance using server-level and database-level events, which can then be reviewed in log files. Policy-based management is another feature which provides administrators the means to specify policies throughout the SQL Server instance that objects need to adhere too to keep the database security and running efficiently. This course demonstrates how to create SQL Server logins, database users, schemas, roles, and how to grant permissions. It also addresses how to use encryption to protect a database and database data, as well as how to use the SQL Server Auditing feature and Policy-Based Management. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Managing Database Data	SQL Server 2012 provides various features and utilities to manage data stored in the databases within a SQL Server instance. This includes support for storing large unstructured data, such as files and documents within or outside the database. The ability to store large data is supported through the FILESTREAM database feature. This enables large unstructured data to be store outside the database on the file system by providing integration between the file system and SQL Server. FileTables is another database feature that allows large data to be store within tables, but accessed from the file system. SQL Server also provides data compression at the row and page level to compress data that is stored within a database which can help reduce its size. Bulk exporting and importing of data is another feature supported by SQL Server 2012 to allow data to be moved from outside sources into SQL Server or out of SQL Server to outside source or other SQL Server databases. This course provides an overview of the FILESTREAM and FileTable features, including how to enable and use them within a SQL Server 2012 database. It also covers data compression and how to use the bcp utility, BULK INSERT, and OPENROWSET(BULK) function to import and export data. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.

Microsoft SQL Server 2012: Managing Indexes, Full-Text Search and Partitions	SQL Server 2012 provides features to allow administrators to ensure that data is accessed efficiently, this includes the use of indexes, table and index partitions, and full-text search. Indexes in SQL Server 2012 database allow data to be accessed quickly using keys that are stored in a B-tree structure. Indexes need to be created and managed to ensure for the best database performance. SQL Server 2008 provides table and index partitioning to allow data to be stored across multiple filegroups within a database. This makes tables and indexes that contain large amounts of data more manageable. Partitions in the database may need to be split to allow for more data to be stored, or data from one partition may need to be moved to another partition. SQL Server's full-text search component can be implemented to ensure that specific data is returned based on search words and phrases. This course demonstrations how to create and manage indexes, table and index partitions, and how to configure and use the full-text search component in SQL Server 2012. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Backing Up and Restoring Databases	Enterprises use databases to store their most critical data. To protect and ensure the data's availability, database administrators need to establish a solid backup and restoration plan. Such plans are used to protect data in the event of a disaster by allowing complete sets of duplicate data to be restored in a timely fashion. There are multiple types of backups that can be taken to ensure data can be recovered, including to the point of failure or a point-in-time recovery. This course demonstrates how to perform backup and recovery operations.This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Database Monitoring and Performance Tuning	To keep SQL Server 2012 databases running as efficiently as possible, there are a variety of performance tuning and monitoring tools. The SQL Server Profiler enables you to use trace files and logs to analyze a database's performance. You can also use the Windows System Monitor to monitor SQL Server 2012 using counters, which monitor specific aspects of the server for performance issues. SQL Server 2012 includes the Activity Monitor, which provides an overview of the system's performance in real-time. SQL Server 2012 provides a the Resource Governor, which allocates specific resources to specific sessions, and a data collector, which collects specific data and stores it in a management data warehouse. Extended Events can be used to monitor performance information based on events that occur in the instance using sessions. In SQL Server 2012, concurrency issues may arise that require you to intervene by detecting the locking issue and possibly terminating a process that could be blocking a session from performing its task. Concurrency issues can arise when multiple users are trying to access the same data in a database. This course demonstrates how to use SQL Server Profiler, System Monitor, Activity Monitor, Extended Events, and the data collector to monitor and tune the performance of the database. It also addresses how to detect and resolve locks. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.
Microsoft SQL Server 2012: Configuring High Availability	SQL Server 2012 provides several key features that improve the availability of servers and databases so that downtime for users is minimized. These solutions include AlwaysOn Failover Clustering, AlwaysOn Availability Groups, database mirroring, and Replication. These reliability features help administrators maintain multiple sets of data that help ensure that critical systems remain accessible, and can be fully recovered in the event of a disaster. This course addresses how to configure SQL Server 2012's AlwaysOn features, database mirroring, and replication to ensure that SQL Server 20012 environments are available to users at all times by providing a high-availability and complete disaster-recovery solution. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-462: Administering Microsoft SQL Server 2012 Databases. This exam is one of the requirements for the Microsoft Certified Solutions Associated (MCSA): SQL Server 2012 certification.

ITILÂ® 2011 Edition OSA: Introduction to Operational Support and Analysis	Within the context of ITILÂ®, service operation is sometimes referred to as the 'factory' of IT. It focuses on the daily activities and organizational infrastructure that are used to deliver services to the organization and the customer. The proper management of these activities and organizational infrastructure is the key to ensuring service operations functions and processes are delivered successfully. Service operations best practices also ensure adequate monitoring and controlling measures are in place and followed throughout the service lifecycle. This ultimately leads to strategic objectives being realized by the organization. This course provides an introduction to operational support and analysis. Specifically, the course covers the fundamentals of the ITILÂ® service operation core area, and how the processes and functions of service operation work within and support the overall service lifecycle. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a registered trade mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Introduction to Event Management	It's essential that you know the status of all components in your IT infrastructure at any given time. Monitoring all events that occur can provide you with invaluable data to help your organization identify and isolate not only problems that are happening, but areas that require improvement before troubles exist. This course provides an introduction to Event Management, including its goals and scope, and how Event Management processes interact with other processes in the ITILÂ® Service Lifecycle. The course also covers the specific components of Event Management including triggers and interfaces, and the detailed steps of Event Management. Finally, the course explores the key performance indicators, challenges and risks of Event Management, and the specific areas to consider when designing it. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a registered trade mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Introduction to Incident Management	No process in IT service delivery is foolproof; at some point in time an unplanned interruption will most likely occur ranging from a minor incident to the disastrous crashing of a critical system. The key to surviving any type of incident lies in an organization's ability to deal with incidents, no matter how big or small, as quickly and efficiently as possible so that services resume and service levels are brought back within acceptable range with as little impact as possible on other processes, the organization itself, users, and customers. This course introduces the goal and scope of Incident Management. Specifically, the course covers the purpose of Incident Management, as well as the value Incident Management provides to the overall organization. In addition, the course covers the elements to consider when managing incidents, including timescales, incident models, and major incidents. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a registered trade mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Incident Management Interactions	The ability to resolve a problem efficiently is critical for both you and your customers. But what happens when you have dozens, hundreds, or even thousands of customers each contacting you with the same issue? While you may be able to resolve each of their incidents one at a time, the loss of time, revenue, and resources is far too great to manage this way. Effective Incident Management is not just about resolving incidents as quickly as you can. It's about having the ability to identify and address widespread incidents, developing processes for handling categories of incidents as efficiently as possible, and taking proactive steps to address problems before incidents even occur based on patterns you see in incidents being reported. This course covers the nine steps in the Incident Management process, including identifying, categorizing, and closing incidents. This course also details the different ways incidents can be triggered, and the interfaces of incidents and Incident Management with other processes. Finally, the course covers the challenges, risks, and critical success factors of managing incidents effectively. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a Registered Trade Mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Introduction to Request Fulfillment	When you think of reasons for contacting the IT Department in your organization, it's most likely to resolve a problem. Typically you contact them when something isn't working right â€" whether it be a connection error, system crash, or other incident that impedes your ability to do your work. But more often than not Service Desks also field requests for numerous situations that don't typically fall into the 'out of order' category, but require attention, time, and a quick turnaround â€" for example, someone needs a new password, to change an existing password, or they need to add a new software program to their machine. It is important for organizations to be able to manage these demands in an efficient way by having processes mapped out for these repetitive requests, and having dedicated staff to support these requests. This course provides an introduction to Request Fulfillment. Specifically, the course covers the purpose, scope, and benefits of Request Fulfillment to the organization. This course also covers the importance of Request Models, and the activities of Request Fulfillment including menu selection, financial and other approval, fulfillment, and closure. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a Registered Trade Mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Request Fulfillment Process Interfaces and Challenges	What would you think if you called your Internet provider to get a new password, and they told you it was going to be a week before they could resolve your request? Or even worse, imagine them not being able to do it at all because of poor planning. Efficient request fulfillment is critical to keeping your customers happy. And in order to perform well, you need a clear definition of the types of requests that can flow through request fulfillment processes, and well-planned procedures for addressing the requests. You also need to be able to foresee possible risks, so you can implement preventative measures. This course covers the components of request fulfillment, including triggers, interfaces, and necessary information for adequately addressing common requests. The course also explores the challenges and risks, along with critical success factors that, if implemented in your processes, can lead to successful request fulfillment in your organization. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a Registered Trade Mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Introduction to Problem Management	Problems will inevitably crop up at some point while managing your IT Service Life Cycle. Usually, they are first noticed when the incidents they cause are detected. Proper Problem Management aims to eliminate recurring incidents by addressing the root problem causing them, through efficient detection, investigation, diagnosis, and resolution practices. This course covers the purpose and scope of Problem Management, its value to the organization, and specifically the value and use of problem models in Problem Management. This course also provides a detailed view of the Problem Management process, including using tools like Ishikawa diagrams and Pareto Analysis, to investigate and diagnose specific problems. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITIL Â® is a Registered Trade Mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Problem Management Process Interfaces and Challenges	An efficient Problem Management process is vital in ensuring your organization is ready to handle and resolve problems successfully. And the ability to know what information is important and how to use that information to analyze how well your Problem Management process is performing can mean the difference between success and failure in your Problem Management efforts. This course details the components of Problem Management, including triggers such as staff, suppliers, and testing. This course also covers the interfaces of Problem Management with other processes across the Service Life Cycle and the specific information systems used in Problem Management. Finally the course details the critical success factors necessary for ensuring successful operations in Problem Management. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a Registered Trade Mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Introduction to Access Management	You probably wouldn't leave the keys to your car, house, or office lying around for anyone to grab and use as they please. The same attention you give to protecting your physical valuables should be considered when protecting the confidentiality, availability, and integrity of your organization's IT data and intellectual property. Proper Access Management is critical for providing access to users who require it, and keeping those who don't out. This course covers the purpose, scope, and value of Access Management to the organization. This course also details the steps in the process for managing access, including requesting access, verification, providing rights, monitoring, logging and tracking, and removing and restricting rights where necessary. Finally, the course covers the key performance indicators used to check the efficiency and effectiveness of an organization's Access Management process, and critical success factors to ensure success. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a Registered Trade Mark of the Cabinet Office.
ITILÂ® 2011 Edition OSA: Introduction to the Service Desk	Whether you call your Internet provider because you can't connect to your bank because your online banking password isn't working or your satellite television provider because your signal is poor, chances are all these different calls for completely different things will have at least one thing in common â€" you'll reach a Service Desk. This is because most IT service providers recognize the value and necessity of a Service Desk for their internal and external customers. Service Desks are an integral point of contact in organizations for addressing IT service-related issues, concerns and questions, and it's essential they are set up properly in order to achieve customer satisfaction and organizational objectives. This course covers the importance and benefits of the Service Desk in an IT service delivery organization, as well as the objectives and responsibilities Service Desks strive to deliver. This course also covers the different Service Desk organizational structures, such as local, centralized, and virtual, and also explores the different considerations, such as the environment that must be addressed when setting up and maintaining a Service Desk. Finally, the course covers the key considerations when staffing a Service Desk such as different roles necessary, skill levels, training considerations, and staff retention. This course will assist the learner in preparing for the ITILÂ® Operational Support and Analysis certificate and is aligned with the ITILÂ® Intermediate syllabus. --- ITILÂ® is a registered trade mark of the Cabinet Office.

Course	Description
ITIL® 2011 Edition OSA: Service Desk Metrics and Outsourcing	Service Desks are an integral part of any IT service-providing organization, and it's vital to accurately and consistently measure how your Service Desk is performing to ensure it is addressing the needs of customers and users, and also to make changes where necessary. When a decision is made to outsource a Service Desk, there are also special considerations that must be planned to ensure that customers and users receive a consistent level of service. |n |n This course covers the purpose and importance of using metrics to evaluate the performance of a Service Desk, including metrics like average turnaround times and resolution rates. This course also details the different types of user satisfaction surveys that can be used to assess customer and user perceptions of Service Desk operations. |n |n Finally, the specific considerations that must be addressed when the choice is made to outsource the Service Desk, including common tools and processes, SLA targets, good communications, and ownership of data are covered. |n |n This course will assist the learner in preparing for the ITIL® Operational Support and Analysis certificate and is aligned with the ITIL® Intermediate syllabus. |n |n --- |n |n ITIL® is a registered trade mark of the Cabinet Office.
ITIL® 2011 Edition OSA: Introduction to Functions	When you hear the term 'manage', you might typically think in terms of people management — the staff and human resources of an organization that perform the work of the business. However, much more than just people are managed in a successful IT organization. The tools, systems, and networks they use, and the processes and tasks they perform must also be managed. Management of the technical assets and architecture, and management of how those assets and architecture are used, maintained, supported, and delivered are essential to a complete and efficient IT organization. This course covers the Technical Management function, including its role, objectives, and activities. The course also covers the role and objectives of the IT Operations Management function, and the documentation created and used in this function such as Standard Operating Procedures, Operations Logs, Shift Schedules and Reports, and Operations Schedules. This course will assist the learner in preparing for the ITIL® Operational Support and Analysis certificate and is aligned with the ITIL® Intermediate syllabus. --- ITIL® is a registered trade mark of the Cabinet Office.
ITIL® 2011 Edition OSA: Function Activities	Every IT service requires applications — software that provides functioning for systems, services, and processes. And proper Application Management is critical to successfully delivering, supporting, and maintaining IT services in your organization, both internally to your users and to your external customers. This course covers the high level and low level roles of the Application Management function within the organization, and the objectives of Application Management. This course also details both the generic and specific activities that are part of the Application Management function. This course will assist the learner in preparing for the ITIL® Operational Support and Analysis certificate and is aligned with the ITIL® Intermediate syllabus. --- ITIL® is a registered trade mark of the Cabinet Office.
ITIL® 2011 Edition OSA: Technology and Implementation Considerations	Implementing processes and technologies in any organization requires significant planning, analysis and management. Implementing Service Management process capabilities is no different. The method of implementation must be planned, requirements must be identified, and technologies must be carefully evaluated before proceeding with the implementation. Expected challenges and potential risks must also be identified and mitigated wherever possible. This course covers the technology considerations when implementing Service Management process capabilities, including the generic tool requirements and how to properly evaluate tools for consideration. This course also covers implementation considerations, including best practices in Project, Risk and Staff Management, as well as challenges, risks, and critical success factors to address during implementation. This course will assist the learner in preparing for the ITIL® Operational Support and Analysis certificate and is aligned with the ITIL® Intermediate syllabus. --- ITIL® is a registered trade mark of the Cabinet Office.
VMware vSphere 5 — Datacenter Design: Introducing vSphere Design Fundamentals	In order to design and integrate VMware solutions into the enterprise virtualized environments, it is important to have an understanding of the overall design process and framework. This course explains datacenter design principles and methodologies that will be used in a virtualized enterprise design. |n
Workplace Harassment for Supervisors and Managers — Multi-State Edition	Harassment of any type can have a very negative impact on an organization's work environment. Managers and supervisors have a responsibility to both their employees and their company to know their role in preventing and responding to all forms of workplace harassment, including sexual harassment. This two-hour course is intended to help develop a set of values in managerial and supervisory employees that will assist them in preventing and effectively responding to incidents of workplace harassment. This course is designed specifically to address the sexual harassment training requirements under California, Connecticut, and Maine law, but is applicable for supervisor and manager training in all states. Additional customization is required in order to fully address the state requirements. This course was developed with subject matter support provided by the Employment Law Group of the law firm of Wilson Sonsini Goodrich & Rosati. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Sexual Harassment Prevention for	Sexual Harassment Prevention for Employees
Workplace Harassment Prevention for	Workplace Harassment Prevention for Managers
Preventing Harassment in the Global Workplace — Employee Edition	As an employee, it is important for you to act respectfully toward all your coworkers, whether they're located in the next office or on the other side of the globe. This course explains the benefits to everyone of supporting a respectful workplace and illustrates basic principles for promoting professional interaction in the workplace. This course was developed with subject matter support provided by Mason Hayes+Curran. This document contains general information based on Irish law at the time of its writing. Please note however that it does not constitute legal or commercial advice, nor is it intended to create a solicitor-client relationship. Neither is it intended to provide a comprehensive or detailed statement of the law. No liability whatsoever is accepted by Mason Hayes+Curran or Skillsoft for any action taken in reliance on the information in this document. You should not act or refrain from acting, on the basis of any information posted on our website but rather you should always seek specific legal and other professional advice. Preventing Harassment in the Global Workplace — Manager Edition	As a manager, you play a vital role in supporting your company's efforts to create a workplace defined by respectful and professional interaction between employees. This includes not only preventing illegal harassment, but also avoiding intimidating, hostile, or otherwise uncivil behavior. You have a responsibility to model appropriate behavior in how you treat your employees and to address any instances of inappropriate conduct swiftly and appropriately. This course explains why it is important for a company to foster a respectful work environment. It also presents strategies for addressing inappropriate behavior in the workplace. This course was developed with subject matter support provided by Mason Hayes+Curran. This document contains general information based on Irish law at the time of its writing. Please note however that it does not constitute legal or commercial advice, nor is it intended to create a solicitor-client relationship. Global Anti-bribery	Global Anti-bribery
EU Privacy and Information Security	The legal basis for privacy and data security in the EU is set out in Directive 95/46/EC, known as the Data Protection Directive, which was issued in October of 1995. EU member states were required to enact laws to carry out the Directive. The main purpose of the Directive is twofold. First, it aims to protect individuals' personal data. Second, it seeks to ensure that the securities and protections afforded to individuals do not restrict the ability to process or exchange economically critical data between the member states. While the specific laws for each member state differ, the Directive serves as the primary guidance for all the laws. In other words, member states may have more stringent interpretations of the Directive, but they cannot be less stringent than the requirements outlined in the Directive. There are significant differences across the EU member states in their data protection laws and in the practice of their respective national regulators, as not all aspects of data protection law are harmonized. Therefore, when a data protection issue occurs, particularly one which affects several member states, it may be dealt with differently under each national law. This course addresses EU privacy laws at the level of the Directive and provides several examples of the specific approaches taken by certain member states. It also discusses the Safe Harbor Agreement that outlines a framework for adequate security procedures for US companies that exchange personal information with EU member states. This course was developed with subject matter support provided by Mason Hayes+Curran. This document contains general information based on Irish law at the time of its writing. Please note however that it does not constitute legal or commercial advice, nor is it intended to create a solicitor-client relationship. Global Privacy and Information Security	Global Privacy and Information Security
Anti-Money Laundering: An Overview	This course provides basic information on US money laundering law and international anti-money laundering efforts. It also discusses actions that those working in banks, insurance companies, and other financial institutions can take to better identify and manage risks associated with money laundering. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Global Conflicts of Interest	Many employees routinely face situations that can create a potential conflict of interest, where divided loyalties may affect their ability to make impartial decisions on behalf of their employer. Inappropriate resolution of these conflicts can result in direct financial loss to the organization, as well as the erosion of an organization's ethical culture and a damaged reputation. This course describes how to identify potential conflicts of interest and respond appropriately to them. This course was developed with subject matter support provided by Davenport Lyons. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice and may or may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, a solicitor-client relationship. Readers should not act upon this information without seeking independent legal advice.
The Internet, Social Media, and Electronic Communication	Regular use of the Internet and electronic communications is a way of life for most people, as technology makes it easier to communicate with coworkers, clients, family, and friends. The near constant availability of e-mail, social and professional networking web sites, smartphones, and other tools has blurred the line between work and home to the point where our online activities at home may have an impact on our companies and employment. Most employers encourage staff to use the Internet and other electronic communication tools for business purposes, and some employers also permit a certain level of personal use in the workplace as well. For this reason, it's important to be familiar with your company's policy on Internet use and electronic communications. This course provides background information to be considered in light of your own company's policies. You will learn about some generally accepted best practices for protecting your own and your company's best interests while using e-mail, instant messaging, text messaging, as well as other Internet technologies such as social networking sites and blogs. This course was developed with subject matter support provided by Davenport Lyons. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice and may or may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, a solicitor-client relationship. Readers should not act upon this information without seeking independent legal advice.
Union Awareness	Union Awareness
Interviewing: Doing it Right	This course will present strategies for exercising sound judgment in the hiring and interviewing process. It will help managers and supervisors recognize and avoid discrimination in the recruitment process. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Business Ethics	The recent economic downturn has heightened the public's scrutiny of corporations and contributed to the perception that some firms have lost their commitment to operating with integrity. This course considers the concept of ethics and its role in today's corporate culture. It looks at the impact of business ethics on both the individual employee and the organization as a whole, and explores how the use of an ethical framework can promote ethically-driven behavior. The course also focuses on how employees can use an ethical filter to help resolve ethical dilemmas. This course was developed with subject matter support provided by the Labor & Employment Law Group of the law firm of Baker, Donelson, Bearman, Caldwell & Berkowitz, PC. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.

EEO and Lawful Hiring	As a manager, it is essential to use recruitment strategies that attract the right candidates. But just as important is the avoidance of discrimination, both intentional and unintentional. In this course, you will learn about the Equal Employment Opportunity laws that guide your employer's recruiting efforts and how to help ensure your hiring practices are fair and lawful. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Procurement Integrity	Procurement Integrity
Government Contracting Essentials	This course will provide a resource for employees of organizations who do business with the federal government and who therefore need to know how various federal laws that govern the contracting process affect their operations. Note that there may be special local or state rules that also apply, but those are not addressed in this course. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Canadian Antitrust	Canadian companies and their employees operate under the country's Competition Act, an antitrust law intended to maintain and encourage competition in Canada. Violating the Competition Act's pricing and distribution provisions can leave responsible individuals and their companies open to significant civil liabilities and criminal penalties. This course will help you recognise the business benefits of the Competition Act and the practices covered under it. It will also help you recognise and avoid illegal and improper anticompetitive behaviours, and employ practices that do not violate the Act. This course was developed with subject matter support provided by Heenan Blaikie LLP. This document contains general information based on Canadian law at the time of its writing. Please note however that it does not constitute legal or commercial advice, nor is it intended to create a solicitor-client relationship. Neither is it intended to provide a comprehensive or detailed statement of the law. No liability whatsoever is accepted by Heenan Blaikie LLP or Skillsoft for any action taken in reliance on the information in this document. You should not act or refrain from acting, on the basis of any information posted on our website but rather you should always seek specific legal and other professional advice. This content is protected by copyright and other intellectual property laws and may not be reproduced by you without our prior written consent.
A Manager's Guide to Discipline and Documentation	A key role for any manager or supervisor is to ensure employees meet the expectations for appropriate and lawful conduct at work. Dealing with problematic behavior and taking disciplinary action can be stressful. But simply ignoring or avoiding problems is not an option because it may signal to employees that inappropriate behavior is acceptable. And mishandling disciplinary issues may result in employee claims of breach of contract, wrongful termination, or discrimination and retaliation. Consistent and fair procedures, honest communication, and clear expectations can help managers deal with disciplinary issues in a way that improves behavior with fewer negative repercussions. This course explains the principles of effective employee discipline, including the concept of due process in the disciplinary procedure, and it describes how to respond to and document a disciplinary issue appropriately. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
A Manager's Guide to Diversity, Inclusion, and Accommodation	Leading and managing employees in an increasingly diverse workplace can be both rewarding and challenging. What are the expectations of employees? What legislation applies to managing people and their requests? What are the consequences of failing to comply? Managers must operate with sensitivity in handling accommodations for disabilities, religious practices, and medical leave. This requires a basic understanding of anti-discrimination and disability legislation, as well as the employer's policies. This course provides an overview of the Americans with Disabilities Act (as amended), the Family and Medical Leave Act, and other legislation that affects employers' responsibilities in these areas. The course will help managers identify the situations where these laws come into play so that they can respond appropriately to specific requests. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Accident Procedures Involving Large Vehicles	Even with years of experience, training, and attention to detail, accidents can happen. How you respond after an accident has occurred is essential to ensuring your safety as well as the safety of any other individuals involved in the incident. In this course, you will learn basic procedures for how to respond when an accident has occurred, including procedures to follow if there is a fire or a chance of fire, and what types of accidents must be reported to the U.S. Department of Transportation. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Adding Lists and Objects in Word 2013	You can add a number of different objects to your Word 2013 documents to help increase readability and functionality, and also improve their appearance. Several available types of lists, such as bulleted and numbered lists, allow you to format and organize information. Signature lines offer added data security and allow you to easily specify that a signature is required on a document. You can include dates and times to mark when a document was created, when something is due, or for tracking purposes. Hyperlinks allow you to link to other sections of a document, to other documents, to web sites, and to e-mail addresses. This course demonstrates how to create and format various types of lists, and to work with hyperlinks in your document. It demonstrates how to insert the date and time in a document and how to add digital signatures. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Adjusting Document Views and Customizing the Appearance of Word 2013	When working with documents in Word 2013, you can easily zoom in on your text and change views to get a better view of what you're working on. This course demos zooming, and also splitting and arranging multiple documents within the same work area. It also shows you how to switch document views, reorganize a document outline, and use master documents and subdocuments to facilitate working with large or unwieldy documents. It also explores how to customize the Ribbon and the Quick Access Toolbar so you have the commands you need within a single click of your mouse. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Advanced Formats and Layouts in Excel 2013	Excel 2013 provides many advanced features to customize formats and layouts. Data can be customized to any format and adding a customized fill series can not only save you time, but help ensure consistency and accuracy in your work. Customizing cells, adding forms, and creating templates all help tailor your workbooks to your individual needs. Conditional formatting can also format ranges according to specific criteria. Finally, Excel provides tools to help create workbooks that are accessible and consider international audiences. This course will help prepare learners for the Microsoft Certification Exam 77-421: Excel 2013 Expert which certifies individuals as Microsoft Office Specialist (MOS): Excel Expert 2013.
Advanced Formatting in Word 2013	Word 2013 offers features that make it easier to format your documents to give them a professional, stylized appearance. The Design tab offers features that alter the appearance of your entire document. You can quickly apply a theme to give the document visual continuity. You can also easily create and customize a page background. This course covers these features and also includes tips on adjusting paragraph tab settings, using Paste Special to maintain greater control over how text and its formatting are pasted into a document, adjusting line spacing within a paragraph, and changing AutoFormat settings to automatically change the appearance of text as it's typed. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Advanced Formulas and Functions in Excel 2013	The Excel 2013 function library includes a number of functions in the Date and time, Logical, and Lookup and reference categories that enables you to quickly complete tasks and analyze data. Date and time functions allow you to capture dates and times properly. This course covers date and time functions such as NOW, TODAY, DATE, and NETWORKDAYS. Logical and IF-type functions help you make decisions. This course covers IF, AND, OR, AVERAGEIFS, COUNTIFS, and SUMIFS. Lookup and reference functions allow you to perform table lookups to return required information about specific worksheet cells. This course covers lookup and reference functions such as LOOKUP, VLOOKUP, and HLOOKUP. Excel 2013 also provides tools to identify, trace, and troubleshoot errors. This course will help prepare learners for the Microsoft Certification Exam 77-421: Excel 2013 Expert which certifies individuals as Microsoft Office Specialist (MOS): Excel Expert 2013.
Advanced Slide Shows Tools in PowerPoint 2013	PowerPoint 2013 provides you with all the tools necessary to create and present engaging and effective presentations. As an advanced user, you can take advantage of features that allow you to customize your animations to create just the right effect. PowerPoint has tools for getting your animations to move at the right speed and in the right order using custom animation effects and motion paths. You'll learn how to merge shapes, add shape effects and how to use pictures and shapes as links to other pages in the presentation, or to pages on the Internet. This course also explores various ways of incorporating and modifying charts to create professional and effective presentations. Lastly, you'll learn how to create consistent looking presentations using tools like Smart Guides and Master Level Guides to align objects across all slides. This course will help prepare learners for the Microsoft Certification Exam 77-422: PowerPoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): PowerPoint 2013.
Advanced Table Customization in Word 2013	Word 2013 offers a number of in-depth ways to edit and work with tables. This course demonstrates how to resize and move parts of a table, convert tables to text, sort the data within a table, and use formulas to calculate numerical data. It also covers methods for integrating tables into the rest of the content on a page to create a professional look to your document. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Aerial Work Platforms	Aerial work platforms allow work personnel to reach elevated areas that are inaccessible by traditional means such as ladders or scaffolding. But like any heavy equipment, aerial work platforms can be very dangerous if used without due care and attention. This course will teach you to inspect your lift and work area, understand the physical hazards involved in working with an aerial work platform, and recognize their standard safety features. You'll also learn about basic training requirements stipulated by OSHA, and some general best practices for aerial work platform operation. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Aligning Your Business Case to Customer Priorities	
Ammonia Safety	Ammonia is one of the world's most widely used basic chemicals. Anhydrous ammonia is utilized in a wide variety of commercial applications, from fertilizers to refrigerants to solvents. But ammonia can be hazardous. To protect human health and the environment, manufacturers, packagers, shippers, receivers, and others involved throughout the supply chain must adhere to the safe and appropriate use and handling of ammonia. This course will introduce you to the agencies that deal with regulations and standards for handling anhydrous ammonia, and will help acquaint you with the risks, controls, safe work practices, and emergency response procedures involved in dealing with this hazardous chemical. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Animations and Media in PowerPoint 2013	PowerPoint 2013 can help you make presentations more dynamic by adding audio and video clips to any slide. You can directly insert, edit, and play video in your presentation, as well as add audio clips to create attention-grabbing sound effects. PowerPoint 2013 also has new animation tools which make slide shows more fluid and interesting. All of these features are discussed in this course.
Bloodborne Pathogen Awareness	This course will provide you with a basic understanding of bloodborne pathogens, common modes of transmission, methods of prevention, and what to do if an exposure occurs. Information presented will help minimize serious health risks to persons who may have personal exposure to blood and other potentially infectious materials in the workplace. This course has been updated to reflect new legislation for needlesticks in OSHA regulations for Bloodborne Pathogens that went into effect on April 18, 2001. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The training requirements established under the Bloodborne Pathogen standard require an employer to allow for an opportunity for interactive questions and answers with the person conducting the training session. Employers may use a variety of methods to meet the intent of the standard. As an example, OSHA has previously stated that an employer can meet OSHA's requirement for trainees to have direct access to a qualified trainer by providing a telephone hotline. Learner objectives for this course are to identify bloodborne pathogens and symptoms of bloodborne diseases, identify modes of transition of bloodborne pathogens, recognize the proper use and handling of personal protective equipment, identify measures to be taken when the skin or eyes are exposed to infectious material, and specify the components of an Exposure Control Plan. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Bullying and Violence in the Workplace	This course seeks to help employees understand the circumstances that can trigger violence in the workplace and to offer strategies for preventing the escalation of conflict. According to the Bureau of Labor Statistics, in the US, 17% of the 4,609 work-related deaths in 2011 were attributable to violence, of which 458 instances were homicides (US Department of Labor, 2011). Workplace violence includes a range of acts such as assault, stalking, bullying, robbery, and harassment. This course will help employees to recognize early warning signs of potential workplace conflict and the actions they can take to prevent situations that may lead to workplace violence. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.

Carcinogen Safety	This course provides instruction on recognizing hazard management, use, and control of cancer-causing agents, or carcinogens. The learning objectives of this course are to define the terms associated with carcinogen safety, recognize the routes of entry of carcinogens into the body, and identify the methods of hazard control in relation to carcinogens. Furthermore, the course describes the basic safety rules for carcinogen use, identifies the substances that can cause cancer-related medical problems after repeated exposure, explores types of carcinogen hazard control, and identifies the characteristics of Standard Practice Instructions for handling carcinogens. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Chemical Process Safety	This course is designed for employees who work at industrial process plants to recognize potential safety and health implications associated with their job. It is intended to educate the employees to help prevent or minimize the consequences of a catastrophic release of toxic, reactive, flammable, or explosive highly hazardous chemicals, or HHCs, from a process. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to identify the process safety management employer requirements, specify process hazard analysis information, define the purpose of the chemical process safety management program, and recognize the importance of operating procedures in a process safety management program. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information Qtechnology.
Chemical Process Safety Management	Safe working procedures are essential when dealing with highly hazardous chemicals and processes. In this course, you will learn about chemical Process Safety Management (PSM) programs and the fourteen elements that have been developed by OSHA for inclusion in these programs. Required elements of the program that are covered in this course include personnel and training considerations, documentation, equipment maintenance and work processes, and emergency planning. This course will help managers and supervisors who work in industrial process plants develop an understanding of the reasons for and required elements of PSM programs. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
CISM 2013: Information Risk Management and Compliance (Part 1)	Information risk management and compliance is a pivotal part of the role of an information security manager. This course will provide an overview of information risk management and compliance, as well as examine the elements that come into play when creating an information risk management plan and the frameworks and methodologies that are used. This course also examines risk assessment, with special attention to methods of risk identification, risk analysis, compliance, and the calculations used for risk impact analysis. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Risk Management and Compliance (Part 2)	Analysis, mitigation, and monitoring play an extremely important role in information risk management and compliance. This course examines how to properly classify and valuate information assets, perform a business impact analysis, and the principles of disaster recovery. You will learn about the options available to deal with risk, effective controls, and ways to ensure your risk management program is integrated into your organization's other life-cycle processes. You will also examine the many responsibilities of an Information Security Manager related to risk monitoring and reporting. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Governance (Part 1)	Information Security Governance is a major part of the job role of an Information Security Manager. The goal of information security governance is to establish and maintain a framework to provide assurance that information security strategies are aligned with the business objectives and consistent with applicable laws and regulations. This course looks at the role of information security governance in an organization, the need for senior management support for all policies and procedures that are put in place, the actual role the information security manager, and the core principles and metrics that are used as part of this process. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Governance (Part 2)	Many companies realize that their information security is not in the state that it should be. As an information security manager, it will be your role to guide your organization to where information-related risks are controlled and sound information security processes are being followed by each and every employee. In order to move a company from a current state, to a desired state, there are many steps that must be taken. This course examines what an information security strategy is, frameworks and models you can use to build your strategy, who the strategy participants are, and constraints that may stand in your way. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Governance (Part 3)	In order for information security governance to succeed, there must be an action plan put into place to lay the groundwork for success. This course examines the assets, departments, resources, and people that play a role in bringing an action plan to life. This course will also examine the components and constraints of an action plan, along with providing a sample information security strategy to bring it all together. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Incident Management (Part 1)	Managing incidents, and the response that is put forward by an organization falls directly under the duties of a CISM. Organizations must have a plan in place, and must know the steps they will take to deal with incidents when they occur. This course examines what incident management is, how responses are prepared, and concepts and technologies that are used when dealing with incidents. This course also looks at the principles, importance of, and outcomes of incident management and how the information security manager, with the approval of senior management, prepares the people and the resources of the organization to deal with incidents when they occur. Finally, this course explains the steps for conducting a business impact analysis as technique used in effective incident management. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Incident Management (Part 2)	Preparing incident response and recovery plans is a very important part of a CISM's role. This course examines how to identify the current state of incident response capability, identifies the elements of incident response and recovery plans, and discusses principles for effectively managing the plans. This course also examines the importance of testing, documentation, and how to physically prepare recovery sites and related offsite resources. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Program Development and Management (Part 1)	An information security program is the foundation of an information security manager's daily work. This course examines the purpose and fundamentals of IS program development and management, along with the objectives, concepts, and tasks that make up an IS program. This course also examines the scope and charter of an IS program, and how the IS Manager must understand the scope of the program, and things such as chain of command, corporate culture, existing functions, current state of security, and industry standards for information security. It outlines the steps for developing an IS program and how an information security program supports the objectives of information security governance. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Program Development and Management (Part 2)	An information security framework represents the entire IS management structure. This course examines governance frameworks such as COBIT and industry standards like ISO/IEC 27001. This course also examines the components of a security framework: operational components, management components, administrative components, and education and informational components. The course then explains how an IS program road map is defined, and the elements that make up the road map. Finally, the course describes the security architectures and how they are implemented. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Program Development and Management (Part 3)	Information security managers are responsible for all administrative activities related to the development and management of an information security program. Those activities include such things as assigning and training security personnel, overseeing the creation and distribution of policies and other documentation, and monitoring the effectiveness of the security program itself. This course examines the many activities that an information security manager is responsible for and the skills required to perform them. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Program Development and Management (Part 4)	Information security programs typically have numerous operational responsibilities and provide a variety of security services. While programs vary from organization to organization, there are operations and services that are typically found in all well conceived security programs. This course examines the activities and responsibilities of an information security manager related to operations and services within an organization. The course will examine different organizational units such as IT, HR, and Legal that are affected by security programs, and how their needs are integrated into the program. This course also examines how audits and compliance enforcement are performed. Finally, this course examines how technology - both legacy and new technologies such as cloud computing - are managed in modern security programs. This course prepares you for the Certified Information Security Manager (CISM) exam.
CISM 2013: Information Security Program Development and Management (Part 5)	Security programs require strong controls and countermeasures to ensure that security activities are carried out and measures exist to deal with issues that may arise while a security program is being implemented. This course examines control categories, control design considerations, and the control methods and recommendations that a security manager should implement. This course will also discuss the metrics and monitoring practices that should be used put in place as part of a security program. Finally, this course will examine common information security program challenges. This course prepares you for the Certified Information Security Manager (CISM) exam.
Collaboration and Customization with the Calendar, Contacts and Tasks in Outlook 2013	Outlook 2013 has a range of management features for calendars, contacts and tasks. In this course, you will learn how to share calendars and manage multiple calendar. You will also learn how to customize your calendar to suit the way you work. The course will also cover how to share and manage contacts and will teach you how to import contacts and manage multiple address books. You also will learn how to forward and assign tasks and how to manage task assignments. This course will help prepare learners for the Microsoft Certification Exam 77-423: Outlook 2013 which certifies individuals as Microsoft Office Specialist (MOS): Outlook 2013.
Collision Avoidance	Each year, tens of thousands of people are injured or killed in vehicle collisions. That's why it's important that all drivers understand the challenges that face them on the nation's roads and highways. In this course, you'll learn about types of collisions and how to avoid them, how to deal with emergency stop situations such as skids and shoulder drops, how to prevent collisions by properly negotiating intersections, and techniques for dealing with common distractions. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Combustible Dust	Combustible dust is a hidden and insidious menace. Created during the normal course of production, combustible dust lurks in corners and crevices, within equipment and vents, on floors and other surfaces, and in the very air in which we work. A combustible dust explosion can cause immediate and catastrophic loss of life, injuries, and destruction of buildings and equipment. The ensuing fires, secondary explosions, flying debris, and collapsing structural components pose additional threats to both people and property. This course will introduce you to the agencies that deal with regulations and standards for dealing with combustible dust, and will help acquaint you with the risks, controls, safe work practices, and proper procedures involved in dealing with this workplace hazard. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Communicate and Finalize Project Information Using Project 2013	Communicating project information effectively and in the best format for your audience are key success factors in managing a project. This course covers reporting tools available in Microsoft Project 2013, including filters, custom views, and Save as features that allow you to share project files in multiple formats, such as Microsoft Excel, and to multiple locations, such as SharePoint. As well as reporting tools, this course explains how to finalize and archive your project file once the project is complete.
Communicating a High-impact Business	
Community Sites, Search, and Office Integration in SharePoint 2013	As a move towards an even more collaborative working environment, SharePoint 2013 now includes community sites. These allow users to have discussions, store contents, and interact with others in a manner that would be familiar to anyone already using various forms of social media. SharePoint 2013 also provides powerful search capabilities that you can make use of to easily locate any items across a SharePoint site. This version of SharePoint also continues to offer integration with the Microsoft Office suite of products, allowing you to create new Office documents from within SharePoint, or to launch either the full version or Web App version of a product as needed. This course covers participating in a community site, including joining the site, viewing categories and membership, discussions, and leaving the site. In addition, this course explores administering a community site by managing discussions, creating categories, adjusting settings, creating and assigning badges, and configuring reputation settings. Using the basic search functionality included with SharePoint 2013 is also covered, as well as launching Office applications from within SharePoint 2013 and using the Office Web Apps. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Configuring Lists, Libraries, E-mail, and Announcements in SharePoint 2013	You can use SharePoint 2013 to manage a variety of environments including those that house item lists and libraries. This course explores adding and configuring lists and document libraries - two of the most common apps that SharePoint 2013 users work with on a daily basis. It also delves into the communication side of SharePoint 2013 and walks you through configuring e-mail options so document libraries can receive items added through incoming e-mails messages, and teaches you how to work with the announcements app. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013, which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Configuring Pages, Sites, and Content in SharePoint 2013	This course explores SharePoint tasks such as creating sites using templates, and creating, editing and deleting pages. It also walks through processes such as using the Content Organizer to create rules to organize site content in SharePoint 2013. Other configuration topics include activating Document Sets, and customizing the Quick Launch. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Confined Space Entry â€" Canada	
Crane Signaling and Communications	When operating a crane, a signal person â€" or spotter â€" is used in situation when the point of crane operation is not in full view of the crane operator. This course will provide you with an understanding of the training requirements and proper hand signals and communication skills needed by signal persons and crane operators in these situations. This will allow the operation of mobile cranes in accordance with the Occupational Safety and Health Administration (OSHA)'s 'Signal Person Qualification' standard at part 29 Code of Federal Registers (CFR) 1926.1428. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Creating and Customizing Visual Elements in Excel 2013	Excel has more than just charts to offer in the way of visual presentation. Graphic tools such as pictures, shapes, SmartArt, WordArt, and screenshots are all ways to enhance the visual impact of documents that tend to be dominated by numbers and text. The course shows how to insert and edit shapes, text boxes, and pictures. We'll see how to add a SmartArt graphic and we'll demonstrate how to add watermarks to your spreadsheets. We'll also look at how you can use workbook themes to enhance the presentation of your data. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Creating and Modifying Forms in Access 2013	Microsoft Office Access 2013 offers several options for creating and managing forms. You can link the forms to tables and queries by adding bound controls. You can also make a variety of changes to the look and feel of a form. This course describes how to create forms in Access 2013. It covers creating basic forms from scratch, from an existing table, or using the Form Wizard. It includes adding and setting form controls, as well as creating forms from application parts. Finally, this course will demonstrate ways to format a form.
Creating and Modifying Queries in Access 2013	Microsoft Access 2013 includes a collection of query options to help make creating and modifying queries, easy. Access provides a number of query types with the ability to review data before running the queries. You can update or delete data that meets a certain criteria, request user input, and add calculated fields to queries. You can also group and summarize your data in queries. This course explores creating queries through the Query Wizard and Query Design. It also covers different types of queries like the Update and Delete queries, as well as the Parameter query. This course will cover adding new fields to queries, saving queries, and renaming them. It will also cover hiding or removing fields from queries as well as deleting queries. Finally, this course shows how to add calculated fields to queries, and group and summarize data in a query.

Course	Description
Creating and Modifying Reports in Access 2013	Microsoft Access 2013 reports are used to convert data into useful information and are an essential part of any database application. It provides various methods of creating reports to present summarized information easily and effectively. This course demonstrates the use of the Report Wizard, Blank Report, and Report Design. Also covered is how to add and bind controls, group and sort data, and format and print reports.
Creating and Populating a Database in Access 2013	Access 2013 is the newest version of Microsoft's dynamic database management system and it offers features that allow you to create and modify a variety of database types through a convenient graphic user interface. Access, as a desktop application, helps you store and manage related information in one place. It helps prevent errors, inconsistencies, and duplicate information. This course explores the fundamentals of databases and the many tools that will help you create and modify databases in Access 2013. It will cover creating and saving databases, creating and renaming tables, importing and linking data, as well as creating relationships between tables.
Creating Presentations in PowerPoint 2013	Microsoft PowerPoint 2013allows you to create professional-looking slide-show presentations on PCs, tablets, and phones. This course provides an introduction to the main components of the PowerPoint 2013 interface, covering opening and saving a presentation, working with slides, formatting text and text boxes, and using templates and themes variations to create professional looking presentations. You will also learn how to insert images, clip art, and shapes, as well as how to format your images so that they provide the maximum impact for your presentation. This course will help prepare learners for the Microsoft Certification Exam 77-422: PowerPoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): PowerPoint 2013.
Customizing Document Layout in Word 2013	You can use the many layout options in Word 2013 to create flowing, easy-to-read documents with a balanced visual appearance. Word lets you break your document into multiple sections so you can alter aspects of the page formatting - such as page orientation, numbering, or headings - from one section to the next. Word 2013 also enables you to organize text into newspaper-style columns or even tables. This course introduces all of these concepts and teaches you to align page elements, create and work with reusable pieces of content known as Quick Parts, and create reusable actions known as macros. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Customizing Options and Views in Excel 2013	Excel 2013 allows you to customize options and views to create a personalized environment. You can change how data displays by hiding and unhiding rows and columns; enable Show options; and also change the zoom level.You can switch workbook views from Normal to Page Layout, to Page Break Preview, or create custom views. This course will also cover the ways to arrange windows including Arrange All, Freeze Panes, Split, and View Side by Side. It will also show you how to change the defaults for creating new workbooks and personalize the Ribbon and Quick Access Toolbar. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Data Search, Data Validation, and Macros in Excel 2013	Excel 2013 provides time-saving tools to manage data, validate data, and automate repetitive tasks. You can import files, and add and adjust columns and rows, as well as edit workbook properties. Find and replace allows users to find and replace data, in a specific format, or within the worksheet or workbook. It also allows you to use wildcard characters to customize the search. Data validation can be applied to a cell or range to restrict the data being entered. You can put upper and lower limits, restrict the number of characters, put items in a list, or validate against other cells. You can also add error alerts and identify invalid data. This course will also introduce you to macros in Excel and show you how to automate repetitive tasks to make working in Excel easier. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Defensive Driving	This course will provide simple defensive driving techniques to reduce your chances of being involved in a motor vehicle accident. The content in this course is designed to comply with the intent of the applicable regulatory requirements â€" define defensive driving, recognize accident prevention methods, identify the importance of seat belts, describe the facts concerning the impact of 'drinking and driving,' and identify vehicle safety measures on the job. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Defensive Driving Fundamentals â€" Canada	This course will provide advanced defensive driving techniques to reduce your chances of being involved in a motor vehicle accident. The content in this course is designed to comply with the intent of the applicable regulatory requirements â€" specify concerns to be addressed before and while driving, use safe driving techniques to avoid collisions, drive safely in various weather conditions, and respond to specific driving emergency situations. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health and safety consulting firm with offices across Canada.
Demonstrating Business Acumen	
DOT 1: Hazardous Materials Table	This training course will introduce the requirements of the Department of Transportation's Hazardous Materials Regulations, including definitions, the nine hazard classes, and the HAZMAT Table. The proper identification, preparation, and transportation of hazardous materials impact everyone's safety. This course may be used to meet the requirements for general awareness or familiarization training. Your employer will provide additional general awareness, function-specific safety awareness, and security awareness training. The learning objectives of the course are to define terms associated with hazardous materials transportation, classify hazards according to DOT's nine hazard classes, and recall and interpret information found in the HAZMAT Table. DOT 1: Hazardous Materials Table was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
DOT 2: Packaging, Labeling, Marking, and Placarding	This training course will introduce the requirements of the Department of Transportation's Hazardous Materials Regulations, including packaging, labeling, marking, and placarding. The proper identification, preparation, and transportation of hazardous materials has the potential to impact everyone's safety. This training course may be used to meet the requirements for general awareness and familiarization training. Additional function-specific training will be provided by your employer. Learner objectives are to list packaging requirements and practices to ensure safe transport, cite specific information found on the Hazardous Materials Table (HMT), identify what information on the HMT means or is used for, identify appropriate labeling requirements for the safe transportation of hazardous materials, identify the proper marking requirements for hazardous materials to include both bulk and nonbulk materials, and identify the appropriate placarding requirements for the transport of hazardous materials. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
DOT 3: Shipping Papers	This course will introduce the requirements of the Department of Transportation's Hazardous Materials Regulations, including the components of the basic description of hazardous material, general information required on the shipping paper, use of the HAZMAT Precedence Table, and general emergency response information. The proper identification, preparation, and transportation of hazardous materials affect everyone's safety. This training course may be used to meet the requirements for general awareness and familiarization training. Additional function-specific training will be provided by your employer. Learner objectives are to list the four components of the basic description of hazardous material, describe general information included on a shipping paper, identify methods to distinguish HAZMAT from non-HAZMAT on a shipping paper, and interpret information found on the Precedence Table. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
DOT 4: Loading and Storage	This half-hour training course introduces the requirements of the Department of Transportation's Hazardous Materials Regulations, including the interpretation of the segregation table, general guidelines for shipping papers and loading and unloading HAZMAT, and incident reporting requirements. The proper identification, preparation, and transportation of hazardous materials affect everyone's safety. This training course may be used to meet the requirements for general awareness or familiarization training. Your employer will provide additional function-specific training. Learner objectives are to identify characteristics of and interpret the segregation table, recognize general guidelines for preparing shipping papers, list general requirements for loading and unloading HAZMAT, cite actions to take during an emergency response, differentiate between situations which do and do not require immediate notification, and recognize when an incident report must be written.
DOT: Air Brakes	Commercial vehicles are used every day to transport both goods and people. An important safety feature on these vehicles, the air brake system is used to control speed. The US Department of Transportation Federal Motor Carrier Safety Administration (FMCSA) regulates the use of air brakes and sets standards for maintaining and operating these systems to ensure they are used and maintained properly. Drivers of vehicles equipped with air brakes need to know the components of the systems, how they work, and how to use them, and make sure they're operating safely. This course introduces the components that work together to create an air brake system, guidelines on operating a vehicle equipped with air brakes, and checklists for inspecting air brake systems and the air brakes on both single and combination units. DOT: Air Brakes was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
DOT: CSA Fundamentals	CSA, which stands for Compliance, Safety, Accountability, is a Federal Motor Carrier Safety Administration (FMCSA) initiative aimed at improving commercial motor vehicle (CMV) safety and ultimately reducing collisions, injuries, and fatalities related to CMVs. This course will teach you what CSA is and why it's needed, how it works, and what a carrier can do to ensure it has an effective CSA program. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
DOT: Hours of Service	The US Department of Transportation's Federal Motor Carrier Safety Administration (FMCSA) issued a revised Hours of Service order in 2012. The effective compliance date of selective provisions was July 1, 2013. Drivers are now limited to 70 hours of driving time per eight-day period. Commercial motor vehicle operators need to be aware of the new driving rules, documentation requirements, and penalties for noncompliance. Hours of Service was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
DOT: Inspections	Maintaining safe working equipment and working conditions are essential when operating large trucks. In order to ensure that vehicles are safe to operate and share the road with, it is important to perform frequent inspections of the equipment you are using, as well as more extensive annual inspections. In this course, you will learn when to perform operator inspections, what to inspect, and how to report your inspections. You will also learn about requirements and standards for annual inspections as required by the Department of Transportation, or DOT. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Editing and Formatting in Word 2013	A wide variety of tools and features are available in Word 2013 to help you format the overall appearance of your document. Word also provides a number of tools that make it easier to edit your document, including spelling and grammar checking features. This course covers checking the spelling and grammar in a document using the associated panes, finding and replacing terms, formatting fonts using the ribbon and the Mini toolbar, using styles, and copying formatting with the Format Painter. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Emergency and Disaster Preparedness	This course was designed and developed to provide instruction on emergency response, safety, reporting, and evacuation of company facilities and work areas in the event of a natural disaster, fire, bomb threat, or other emergency. The procedures contained in this training should be followed unless otherwise directed by your employer, police or fire department officials. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to discuss the purpose and scope of an emergency response plan, describe the purpose and scope of an emergency evacuation plan, recall the actions to take in specific emergency situations, describe the purpose and scope of a workplace violence prevention plan, and identify specific actions to take in the event of a bomb threat. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Emergency Response and Spill Control (HAZWOPER)	This training describes how to respond to various emergency situations and describes control of situations both by the workers involved and by trained emergency personnel. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: define hazardous materials, recognize where spills are likely to occur, identify the elements of an emergency response plan, identify equipment and supplies in response to a spill, define levels of emergency response personnes, specify spill prevention measures, identify methods to contain or confine chemical material, identify post-response actions after a spill. Emergency Response and Spill Control (HAZWOPER) was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Emergency Response in the Workplace	This course provides information about planning for and responding to emergencies. The intent is to provide the learner with basic information on procedures that cover onsite emergencies such as an accidental release or spill of a hazardous chemical, fire emergencies, explosions, bomb threats, threats to security, or personal injuries. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define key terminology associated with emergency response, recognize the presence of hazardous substances in an emergency, specify the risks associated with hazardous substances in an incident, specify the potential outcomes associated with an emergency created when hazardous substances are present, define the role and responsibilities of the Emergency Response Team, identify additional resources for more information regarding relevant standard operating procedures for emergency response, identify the requirements for air monitoring during emergency response, specify general site security and control procedures according to the emergency response plan and the US Department of Transportation's Emergency Response Guidebook, specify emergency reporting and communication methods, specify basic spill control, containment, and/or confinement operations within the capabilities of the resources and personal protective equipment available in your area, and specify basic decontamination procedures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Emergency Situations While Driving	Do you sometimes worry that you won't be able to handle emergencies that might happen while you're driving? Worrying isn't helpful; instead prepare for potential driving emergencies by learning how to respond appropriately and safely to them. Successfully handling emergencies requires knowledge of how to prevent them when possible and how to handle them when they do happen. Understanding the typical types of collisions can help you avoid them, knowing how to handle a skid can help you successfully steer out of one, and knowing how to adjust your driving to hazardous weather conditions can help you prevent or avoid weather-related emergencies. It is also important that you know how to safely handle a breakdown. Finally, you should know how to complete an accident report in case you're involved in an accident. Emergency Situations While Driving was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Enhancing PowerPoint 2013 Presentations	PowerPoint 2013 enables you to create visually appealing presentations. Adding simple enhancements through the use of, tables, WordArt, and SmartArt allows you to make your presentations more engaging and interesting. This course introduces the SmartArt and WordArt features that allow you to add flair to your presentations by using colors and shapes to emphasize text and data. Also covered are the ways of incorporating and formatting tabular data to create a professional and effective presentation. You will also learn how to create a photo album to display your personal or business photographs. This course will help prepare learners for the Microsoft Certification Exam 77-422: PowerPoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): PowerPoint 2013.
Environmental Regulations Overview	This course provides an overview of major environmental laws and regulations and the specific standards that outline requirements to comply with them. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: define the purpose of the Toxic Substances Control Act (TSCA); specify the purpose of the Resource Conservation and Recovery Act (RCRA); specify the purpose of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), also known as Superfund; specify the purpose of the National Environmental Policy Act (NEPA); and identify the intent of various laws. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.

Course	Description
Ergonomics and Injury Prevention for Commercial Vehicle Operators	This course is designed to prevent drivers from risks of injury they face when operating commercial vehicles, and when manually handling the loads they may be transporting. The course discusses various types of injuries associated with operating commercial motor vehicle. It also addresses the ergonomics practices, safety controls, and personal protective equipment (PPE) that commercial vehicle operators should use to minimize or prevent chances of getting injured at work. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Ergonomics in the Workplace	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to both office and industrial settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define terms related to the study of ergonomics, recognize signs and symptoms associated with musculoskeletal disorders, identify risk factors associated with musculoskeletal disorders, and identify controls commonly used to reduce or eliminate musculoskeletal disorders in the workplace. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
EU Antitrust	
Fall Prevention Awareness - Canada	This course is intended to provide workers who might be exposed to fall hazards, including falls on level ground, with the information needed to recognize and minimize such hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Workers are also provided information to help them recognize common workplace fall hazards, describe fall protection techniques used in general industry, describe the primary components of an effective fall protection program, and identify fall protection techniques, methods, equipment, and limitations. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health and safety consulting firm with offices across Canada.
Fall Protection	This course is intended to provide employees who might be exposed to fall hazards with the ability to recognize such hazards and the ability to minimize them. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recognize common workplace fall hazards, describe fall protection techniques used in general industry, identify fall protection equipment and limitations, and describe the primary components of an OSHA-compliant fall protection program. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
FERPA for Higher Education	Ensuring the privacy of student educational records is an important priority for every educational institution. The Family Educational Rights and Privacy Act (FERPA) outlines the rights of students and their families with respect to the confidentiality of and access to educational records kept by institutions. This course will provide employees of postsecondary educational institutions awareness-level training on their responsibilities and obligations under FERPA. This course was developed with subject matter support provided by the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Finalizing a PowerPoint 2013 Presentation	PowerPoint 2013s collaborative tools allow multiple people to work on the single presentation at the same time. To simplify the process of reviewing changes, you can now merge the reviewed version with your original version into one presentation. This course explores these topics and other collaboration features available in PowerPoint 2013 such as navigating through comments that were added to slides and accepting and rejecting changes. Also covered are slide transitions, proofing, language, and research tools, along with setting up and starting slide show presentations. This course will help prepare learners for the Microsoft Certification Exam 77-422: PowerPoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): PowerPoint 2013.
Financial Integrity	Fraud schemes can be as diverse as the imaginations of those who concoct them, and as sophisticated as ever-evolving technology will allow. But the consequences of fraud can be painfully simple - financial and reputational damage to an organization and its employees. As a result, it's essential for workers at all levels of an organization to be proactive and alert to suspicious financial activity. This course will explore common sources of financial fraud, the signs that indicate risk for fraud, and the importance of reporting any suspicious activities or behaviors. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Fire and Explosion Hazards (HAZWOPER)	This course identifies procedures and precautions to help reduce the risks of fire and explosion from chemical reactions, ignition of explosive or flammable chemicals, ignition of materials due to oxygen enrichment, and sudden releases of materials under pressure. By learning how to protect yourself and others from fire and explosion hazards, you can help save time, resources, serious injuries, and loss of life. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to identify the four elements that trigger a fire; define the terms ignitable, flammable, combustible, and oxidizer; identify safety principles to protect against fire and explosion; specify safe handling procedures for potentially flammable or explosive materials; recognize ignition sources; and identify proper storage of flammable and explosive materials. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Fire Safety and Prevention	This course addresses how to prevent fires and recognize fire hazards. It will also discuss what actions to take in the event of a fire, including the proper use of portable fire extinguishers. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define the chemistry of fire, recognize common fire hazards, classify types of fires and fire extinguishers, identify the general requirements of egress or exit standards, specify how to prevent workplace fires, identify how to respond to a fire, and specify the proper use of portable fire extinguishers. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
First Aid: Basic	First aid is the immediate care for victims of injuries or sudden illness, before professional medical treatment is available. It not only involves the victim's physical condition and emotional state, but the entire emergency situation. This training course will focus on how to use a systematic approach to evaluate an emergency situation and respond to basic first aid situations prior to the arrival of emergency medical services (EMS). Note: This training should not be used as the primary basis for any first aid certification. It is intended to provide you with knowledge-based training only. This training should be accompanied by a performance-based component provided by a certified first aid instructor. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to describe how to appropriately respond to a medical emergency; state how to examine an accident victim for injuries; and recall basic first aid techniques used to treat injuries including severe bleeding, bleeding shock, fractures and dislocations of bones, and burns. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
FMLA Leave and More: An Overview of Legally Protected Leave	A sick child at home. An accident or injury. A death in the family. Notification to serve on the jury for an upcoming trial. Each of these events is part of life and can temporarily prevent an employee from being able to perform his or her job. Supervisors and managers often find themselves in the position of responding to requests for employee leave as they handle the company's day-to-day operations. It is important for managers and supervisors to understand the basic guidelines for granting leave that are established by the Family and Medical Leave Act (FMLA) and other laws. This course describes the family- and health-related situations that trigger an employee's eligibility to take leave under the FMLA. It also explores the other types of leave which are protected by law and examines the criteria for leave entitlement. This course incorporates the FMLA regulations issued by the US Department of Labor, which took effect on March 8, 2013. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Foodservice Worker Safety	There are hazards in every workplace. For young and inexperienced workers, food preparation jobs in restaurants, cafeterias, hotels, or schools are often their first jobs. This course explains many of the hazards that employees in the food services industry may be exposed to, including ergonomics, kitchen equipment, fire safety, machine guarding, slips, trips and falls, sharps, burns, and electrical safety. You will learn principles and best practices for avoiding these types of hazards in your workplace.
Forklift Operation 2: Stability and Capacity	Forklift operation is a specialized job that requires operators to receive specific training. For instance, before operating a forklift, operators need to be familiar with its capabilities and limitations. This course specifies where to find information on safe forklift operation, and explains what this information means. It shows how features of forklift design impact forklift stability and capacity, and emphasizes that operators must be trained to safely operate forklifts according to their specific designs. The course highlights the concept of the stability triangle to help operators understand specific stability concerns presented by different load types, and shows how to safely accommodate these loads to avoid tipovers and falling loads. Finally, the course uses a field calculation to estimate safe load capacity for situations when a load exceeds the forklift's stated capacity. Forklift Operation 2: Stability and Capacity was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Forklift Operation 3: Load Handling	Forklifts are an important tool used in many industries, but they present many hazards to their operators. The good news is that many of these hazards can be avoided, if not eliminated, when operators are trained to properly operate and load a forklift. Some basic practices can be used to improve safe load handling â€" for example, positioning the forks as far under the load as possible. More specific practices for approaching, lifting, and lowering a load can also help forklift operators improve load handing safety, as they perform each of these actions. Armed with this knowledge, forklift operators will be better prepared to safely load the forklifts they operate. Forklift Operation 3: Load Handling was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Forklift Operation 4: Traveling and Maneuvering	Safely traveling with and maneuvering a forklift, like most equipment, requires some special considerations. Forklift operators who know how to safely travel with and maneuver a forklift can protect themselves, pedestrians in the workplace, and the loads carried on forklifts. The specific guidelines provided in this course will protect operators from the hazards of traveling with and maneuvering a forklift. The course offers instructions on how to mount and dismount a forklift properly; on traveling with a load over uneven paths, inclines, and other potentially unstable surfaces; and on maneuvering safely when forklifts start, stop, and change direction. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Forklift Operator: Safety Inspection and Maintenance	Forklifts are used in many industries, and operating them safely is paramount to the safety of both forklift operators and their fellow employees. In this course, you will learn when and how to inspect a forklift and what to do in the event an equipment problem is discovered. You will also learn the necessary precautions to take and procedures to follow when refueling gasoline, diesel, and propane-powered forklifts and when changing or recharging battery-powered units. You will also learn about the health hazards you may face as a result of working with or around forklifts. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Forklift Safety Awareness	The purpose of this training is to help you become a qualified forklift operator; one who has the skills and knowledge to operate a lift truck in a safe and proper manner. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recognize general engineering and capacity principles associated with forklift safety; identify factors that lead to forklifts tipping over; distinguish between safe and unsafe forklift operations; describe the differences between driving an automobile and a forklift; identify general loading and unloading principles associated with forklift safety; specify safe refueling and recharging procedures; and list the steps to perform in walk-around and sit-down inspections. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Formatting E-mail and Configuring Message Options in Outlook 2013	The default installation of Outlook 2013 allows you to easily send and receive messages among colleagues and friends. There are, however, many options that help you make creative, more visually appealing messages, as well as options that change how messages are sent. This course discusses sending e-mail in different message formats as well as formatting options that can be applied to the text and background of an e-mail. Also covered are how to check your message's spelling and grammar, how to track outgoing messages, how to add voting buttons, and how to set importance and sensitivity options. This course will help prepare learners for the Microsoft Certification Exam 77-423: Outlook 2013 which certifies individuals as Microsoft Office Specialist (MOS): Outlook 2013.
Global Antitrust	What is the scope of global antitrust and competition legislation? It might be different from what you think. While antitrust and competition laws do apply to corporate-level mergers and acquisitions, they also impact proposals you might be drafting or bids you're submitting. If you're regularly involved in sales transactions with international clients or partners, an understanding of the standards and reach of antitrust laws is essential. In this course, you will learn about the principles of antitrust and competition legislation that apply in international settings. You'll also learn how to recognize and avoid common violations and the triggers for seeking further assistance. This course was developed with subject matter support provided by Davenport Lyons. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice and may or may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, a solicitor-client relationship. Readers should not act upon this information without seeking independent legal advice.

Course	Description
Global Insider Dealing	Illegal insider dealing can have serious costs for individuals and their organizations. This course will help you recognize ways in which inside information can be misused for illegal securities trading. It will also introduce you to the consequences that illegal insider dealing can have for individuals and their companies, and describe when and why you should report suspicious activities. This course was developed with subject matter support provided by Davenport Lyons. The course materials and content have been prepared to reflect general principles of illegal insider dealing and are not specific to any particular legal jurisdiction. Furthermore, please note that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, a lawyer-client relationship. Readers should not act upon this information without seeking independent legal advice.
Hand and Power Tool Safety	A variety of handheld tools are used in the workplace. This course will provide an understanding of the potential hazards associated with the use of hand tools and power tools, as well as the safety precautions required to prevent those hazards from occurring. Power tool hazards are addressed in the course by relating them to the power source used in them: pneumatic, liquid fuel, hydraulic, or powder-actuated. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to identify general power tool safety precautions; define the purpose and correct usage of guards; specify which tools are equipped with safety switches; identify specific hazards and control measures related to the use of electric tools; recognize specific hazards and control measures related to the use of power grinders; understand specific hazards and control measures related to the use of pneumatic tools; identify specific hazards and control measures related to the use of powder-actuated tools; and identify specific hazards and control measures related to the use of hydraulic jacks. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Harassment Prevention for Employees - Higher Education Edition	Harassment at work can have a corrosive effect on an educational institution's culture and can lead to low associate morale, reduced productivity, and even criminal liability. Focusing on the forms of harassment prohibited by federal law, this course will provide an overview of the types of behaviors that can give rise to harassment claims, including those based on gender, race, color, national origin, religion, age, and disability. It will also discuss the benefits of and strategies for promoting a respectful work environment that is free of all forms of harassment, intimidation, and discrimination. If you have questions about harassment either during or after this course, please contact the designated human resources professional at your school who is trained in this field. Please note that course materials and contents are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation, or constitute as legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Harassment Prevention for Managers - Higher Education Edition	
Hazard Communication (HAZWOPER)	This training discusses programs and procedures dealing with chemical hazards as stated in OSHA Regulation 29 CFR 1910.1200, the Hazard Communication Standard. This training is geared toward employees who are actively involved in cleanup activities. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify employer responsibilities and employee responsibilities under the Hazard Communication Standard, describe methods used to detect hazardous materials in the workplace, identify categories of chemical hazards, describe health effects associated with hazardous chemicals, and list methods used to control hazardous chemicals. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Hazard Communication: An Employee's Right to Know	This course will acquaint you with the precautions that both you and your employer must take in order to safely use, handle, and dispose of hazardous chemicals in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify the routes of chemical entry into the body, define various categories of chemical hazards, interpret information commonly found in a Safety Data Sheet (SDS), and identify types of controls commonly used to reduce or eliminate contact with hazardous materials in the workplace. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Hazardous Weather Driving for Commercial Vehicle Operators	
Hazards to Outdoor Workers	Not every job takes place in a comfortable climate-controlled office. For many people, working in the outdoors is a large part of their work. From agriculture to forestry to ecology to construction, outdoor work plays a major role in the nation's economy. The Occupational Safety and Health Administration, or OSHA, requires that employees be trained to recognize and avoid workplace hazards, including those that occur outdoors. This course will introduce you to the physical and biological hazards of working outdoors. You'll learn about physical hazards such as noise exposure and risk of injury from traffic and heavy equipment. You'll discover the effects of extreme heat and cold on outdoor workers, and controls for preventing damage from extreme temperatures, and about the different types of adverse weather hazards experienced by outdoor workers. You'll also learn about biological hazards including causes and prevention of vector-borne diseases, and how to identify and avoid poisonous plants and wildlife hazards. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Hearing Conservation	This training course will provide information to help you prevent noise-induced hearing loss. It will also explain the purpose and components of a hearing conservation program including the proper fitting, use, and care of hearing protectors. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to describe the effects of noise on hearing; discuss the components of OSHA's Hearing Conservation Program â€" noise monitoring, hearing tests, training, and hearing protection; and specify the proper selection, fitting, use, and care of hearing protectors. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Hearing Conservation - Canada	This training course will provide information to help you prevent noise-induced hearing loss. It will also explain the purpose and components of a hearing conservation program, including the proper fitting, use, and care of hearing protectors. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of this course are to describe the effects of noise on hearing; discuss relevant components of the various provincial, territorial, and federal legislation; define the components of an effective hearing conservation program â€" noise assessment, control methods (engineering, administrative, and personal protective equipment), audiometry (hearing tests), and training; and specify the proper selection, fitting, use, and care of hearing protectors. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health, and safety consulting firm with offices across Canada.
HIPAA â€" Privacy Rule for Business	
HIPAA - Privacy Rule for Covered Entities	
HIPAA - Security Rule for Business	
HIPAA - Security Rule for Covered Entities	
Hydrogen Sulfide	This course is designed to provide an awareness of hazards associated with hydrogen sulfide gas, as well as methods to detect and minimize exposure to the gas. The content of the course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to recognize the hazardous characteristics and exposure limits of hydrogen sulfide, describe the detection equipment and methods, recognize the symptoms of exposure to the gas, and learn the precautions to take during an emergency. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Industrial Ergonomics	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and also provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to employees and employers in industrial work settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define terms related to the study of ergonomics, recognize the general requirements of the ergonomics standard, recognize signs and symptoms of injury to the muscles and skeleton and the importance of early reporting, identify risk factors for injury to the muscles and skeleton, specify controls and work practices to reduce or eliminate risk factors for injury to the muscles and skeleton, and specify how to report MSD signs, symptoms, and hazards in your job and how the employer is required to address them. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Injury and Illness Prevention Program (I2P2)	In the years since the introduction of the OSH Act, employers in the United States have seen a significant drop in the number of workplace injuries and deaths. However, the number of employee injuries and deaths remains unacceptable. In an effort to further encourage prevention and bring these numbers down, OSHA is working to implement Injury and Illness Prevention Program (I2P2) regulations that will require employers to implement and maintain an I2P2. However, working to implement an I2P2 now, instead of waiting for the regulation, has several benefits. First, your organization will be ready when OSHA's regulations do come into effect. Second, and perhaps more important, an I2P2 will help your organization prevent workplace injuries, illnesses, and fatalities, thereby protecting your employees and reducing the costs of responding to these incidences. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Inserting and Formatting Graphics in Word 2013	To add to a Word 2013 document's visual appeal, you can choose from a number of types of images and explanatory graphical lists. You can make eye-catching changes by simply adding your own pictures or choose clip art from Office.com. This course explains how to add pictures, shapes, WordArt, SmartArt, screenshots, text boxes, and even online video to documents. It also covers how to stylize and caption any of these graphical objects. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Job Hazard Analysis	This course is intended to provide information that will help improve the quality of work environments, reduce absenteeism, help maintain a healthier workforce, reduce injury and illness rates, and make workers feel good about their work. This course was specifically designed for supervisors and managers to help enhance existing techniques in job hazard analysis. The content of this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of this course are to define job hazard analysis, identify jobs to select for analysis, recognize questions that should be asked when conducting an analysis, and describe the steps involved in an analysis. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Ladder and Scaffolding Safety - Canada	This course is designed to educate workers to recognize the hazards associated with ladders, stairways, and scaffolds used at work sites, and to make them aware of procedures to control and minimize these hazards. The content in this course is designed to comply with the directions of the applicable regulatory requirements. Learners will be given information on how to identify the types of portable ladders and their use, capacities, and safety considerations, as well as to describe the specific use, capacities, and safety features of fixed ladders. Learners will also be given information on how to specify proper guidelines for ladder maintenance and to identify general scaffold requirements and safety considerations. The learning objectives of this course are to identify safe practices when working with a ladder; identify the types of fixed and portable ladders and their use, capacities, and safety considerations; identify the correct distance from a wall to place a ladder using the 4-to-1 rule; state proper guidelines for ladder care and maintenance; identify the hazards commonly associated with scaffolding; and identify safe work practices that prevent falls and prevent objects falling from scaffolding. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health, and safety consulting firm with offices across Canada.
Ladder Safety	This course provides information about the safe use of portable and fixed ladders. The intent of the course is to provide the learner with information about the hazards involved with the use of ladders and control methods that will greatly reduce these hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify hazards related to the general use of ladders and how to control these hazards, describe the types of portable ladders and their use, capacities, and safety considerations, describe the specific use, capacities, and safety features of fixed ladders, and specify proper guidelines for ladder care and maintenance. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Linux User Notification and Device Management	Because Linux and UNIX were designed from inception as multi-user operating systems, there is often the need for a system administrator to provide information about system status and future availability to all users. Rather than send an e-mail to all users, Linux provides facilities for an administrator to post public notices and messages for all users to see. This course covers the methods available to a system administrator for user notification. This course also demonstrates the system used by Linux to detect and initialize hardware devices on the system - both those found during boot up, as well as those plugged in later such as USB flash drives. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 201.
Liquefied Petroleum Gas (LPG) Safety	This course will provide you with an understanding of the hazards, characteristics, handling, storage, and methods of detection associated with liquefied petroleum gas (LPG). It provides general knowledge of the hazards associated with exposure and requirements to reduce or eliminate exposure and mitigate the hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: recognize characteristics of LPG, describe proper handling and storage of LPG cylinders, state appropriate leak detection methods, and specify what to do in case of a fire emergency. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Loading Dock Safety	Typically, loading docks are busy areas where equipment, such as forklifts, is used to move materials and freight onto or off of trailers. Special attention is needed in these areas to ensure the safety of the workers involved in loading and unloading trailers. In addition to forklift tipovers, its also important to make sure forklifts don't slip or skid off elevated docks, fall between the dock and the trailer, or hit the trailer. Avoiding these types of hazards will help keep everyone involved with loading and unloading trailers safe. This course is designed to help you understand how to make sure the loading dock is safe. First to be covered are OSHA's requirements for both forklift operators and working surfaces in loading areas. Basic and best practices for avoiding hazards while on the dock and during the loading and unloading of the trailer and inspection methods to follow before entering suspension-type highways trailers, in particular, are explained. Combined, this information will help you keep the loading dock and loading dock activities safe for all those involved with loading and unloading trailers. Loading Dock Safety was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.

Course	Description
Lockout/Tagout	This course provides information about control of hazardous energy and work under the protection of a lockout/tagout permit. The intent of the course is to provide information on lockout/tagout practices and the significance of lockout/tagout devices. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define terms commonly used in a lockout/tagout program, describe specific lockout/tagout techniques commonly used in a lockout/tagout program, and recall standard lockout/tagout procedures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Lockout/Tagout â€" Canada	This course provides information about control of hazardous energy and work under the protection of a Lockout/Tagout permit. The intent of the course is to provide information on lockout/tagout practices and the significance of lockout/tagout devices. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learners will be provided with terms commonly used in a lockout/tagout program, information on specific lockout/tagout techniques commonly used in a lockout/tagout program, and a description of standard lockout/tagout procedures. Learner objectives are to define terms commonly used in a lockout/tagout program, identify the responsibilities of an authorized individual, and identify standard techniques and procedures commonly used in a lockout/tagout program. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental health and safety consulting firm with offices across Canada.
Machine Guarding	This course will provide definitions, general requirements, and requirements for different kinds of machinery concerning the Machine Guarding Program. It will provide general discussion of various guarding methods, as well as defining terms associated with machine guarding. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify where mechanical hazards exist, identify the motions and actions of mechanical hazards, specify the hazards created by different kinds of motions, describe the minimum requirements that must be met by all safeguards, recognize the advantages and disadvantages of guard construction, and identify the different types of safeguard devices and guards. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Mail Automation, Cleanup, and Storage in Outlook 2013	Outlook 2013 contains a range of features to help manage the large volume of e-mail that many users receive on a daily basis. This course discusses managing e-mail messages with rules as well as configuring rules for automatic replies. It also cover options for managing junk mail and it discusses the cleanup tools available in Outlook 2013. This course will help prepare learners for the Microsoft Certification Exam 77-423: Outlook 2013 which certifies individuals as Microsoft Office Specialist (MOS): Outlook 2013.
Making the Cold Call	
Management and Customization in Outlook 2013	Outlook 2013 provides a range of search functions as well as functions to flag and categorize Outlook items. The Outlook 2013 environment itself is also customizable. So in addition to controlling items within Outlook, you can configure Outlook itself to suit the way you work. The course covers how to use the Instant Search feature, which allows you to instantly find e-mail messages, and how to refine your searches in Outlook 2013. It covers the creation of Search folders, which is a type of virtual folder used to automatically organize messages in Outlook. Options that allow you to categorize and flag messages are also discussed. You will learn how to create and use local folders, and use the Note and Journal management tools. In this course, you will also learn how to customize the content panes in Outlook, how to customize views, add an account, and configure Outlook options. This course will help prepare learners for the Microsoft Certification Exam 77-423: Outlook 2013 which certifies individuals as Microsoft Office Specialist (MOS): Outlook 2013.
Managing a Sales Pipeline	
Managing Templates, Views, and Versioning in SharePoint 2013	SharePoint 2013 is highly configurable and you can tweak your settings to manage even the way in which the information is presented. This course demonstrates how to manage list views so you can view more types of metadata about a particular item, the creator or the last modified date, for example. The course also shows you how to manage your document templates so that a document library's users can create Excel files by default, for example. In addition, it walks through enabling versioning and teaches you how to enable ratings and content validation, and how to publish assets in SharePoint 2013. It also instructs you on working with content types and column properties so libraries can support more types of files and SharePoint stores more metadata associated with the file types supported. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Managing Web Parts, Users, and Groups in SharePoint 2013	You can use the features of SharePoint 2013 to manage a page's Web Parts and a site's apps so the end result is a highly configurable collection of sites. This course explores adding and configuring Web Parts on personal My Site pages, and how to hide, remove, and export those Web Parts. It also delves into the process of downloading an app from the SharePoint Store. Another essential component of SharePoint 2013 is its array of user and group configuration tools. The course walks you through creating a group, adding users to a group, changing group permissions, and viewing a list of user alerts. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Manipulating Data in Excel 2013	Excel 2013 provides multiple features for organizing and managing data, including sorting and filtering tools that are essential to data analysis. Using data organization features, you can sort, filter, and group and outline data so that you can focus on its key parts. Properly arranged data using the commands in the Data tab allows you to present your data in a logical and easy to understand manner. This course explores organizing data in Excel 2013 using the built-in features. It also covers converting text to columns for easy of splitting text. This course will help prepare learners for the Microsoft Certification Exam 77-420: Excel 2013 which certifies individuals as Microsoft Office Specialist (MOS): Excel 2013.
Mentoring 77-420 Excel 2013	
Mentoring 77-427 Excel 2013 Expert Part	
Mentoring BH0-010 Certified Tester Foundation Level	
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: Create Basic Packages	ETL, extract, transform, and load, is the main process in data warehousing solutions. It facilitates the transfer of the data from a source to a destination, which may also evolve transforming the data during the process. This course discusses the ETL process and how it can be implemented and demonstrates how to create simple SSIS packages that use the Data Flow Task in SQL Server Data tools, SSDT. During the demonstration, how to use connection managers to specify the source and destinations for the data is also covered, as well as how to use other tasks to transform the data before it is extracted. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-463:Implementing a Data Warehouse with Microsoft SQL Server 2012. This exam is one of the requirements for the MCSA: SQL Server 2012, MCSE: Data Platform, and MCSE: Business Intelligence certification paths.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: Custom Components	SQL Server Integration Services (SSIS) is an extensible platform for creating data integration and workflow solutions. SSIS is extensible because developers have the ability to create custom components if the integrated components do not suit their needs. In this course we cover how to develop and install custom components and implement script tasks. Also discussed are the different types of Slowly Changing Dimensions (SCD), and how to manage data that slowly changes over time. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-463:Implementing a Data Warehouse with Microsoft SQL Server 2012. This exam is one of the requirements for the MCSA: SQL Server 2012, MCSE: Data Platform, and MCSE: Business Intelligence certification paths.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: Design and Deployment	This course discusses what a data warehouse database is and how it is used to create reports and aggregate data, the types of schemas and tables that are created within it. This course also covers how to create dimension and fact tables, and how to improve performance of a data warehouse database using indexes, partitions, data compression, and columnstore indexes. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-463:Implementing a Data Warehouse with Microsoft SQL Server 2012. This exam is one of the requirements for the MCSA: SQL Server 2012, MCSE: Data Platform, and MCSE: Business Intelligence certification paths.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: DQS and MDS Solutions	For anyone that is creating a data warehouse data quality should be one of the top priorities. In order to trust the results of data analysis high quality data is essential. Data Quality Services (DQS) is a feature of SQL Server 2012 that can help you find duplicate data entries and identify invalid data values while automatically correcting them.Master Data Services (MDS) is another feature of SQL Server 2012 that enables you to enforce data validation and rules to ensure consistency in your data. This course discusses strategies for usingboth of these technologies in the enterprisedemonstrates the steps to configure the product.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: Enhancing Packages	SSIS in SQL Server 2012 allows for dynamic packagesand to enable values within the package to be manually set depending on your requirements at execution time. SQL Server 2012 allows for the use of parameters, variables, and expressions to create dynamic packages. In SQL Server 2012 you can also perform data mining and text mining to find patterns and rules within the data being analysed. This course discusses and shows how to use parameters, variables, expressions, and event handlers to create dynamic SSIS packages. It also discusses and shows how to use the Data Mining Query, Term Extraction, Term Lookup, and Percentage Sampling transformations. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-463:Implementing a Data Warehouse with Microsoft SQL Server 2012. This exam is one of the requirements for the MCSA: SQL Server 2012, MCSE: Data Platform, and MCSE: Business Intelligence certification paths.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: ETL Solutions	To create complex ETL solutions you can use control flow and data flow. Control flow consists of three elements: containers, tasks, and precedence constraints, which can be used to provide structure, functionality, and order of operations in the control flow. By using the control flow Data Flow Task, data flow can be implemented into the SSIS package to specify the source of the data, how the data should be transformed, and then the data destination. This course discusses and show how to design and implement the control flow elements. It also explains the different types of transformations to transform the data and how to implement them on the data that is extracted for the source. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-463:Implementing a Data Warehouse with Microsoft SQL Server 2012. This exam is one of the requirements for the MCSA: SQL Server 2012, MCSE: Data Platform, and MCSE: Business Intelligence certification paths.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: Installing SSIS	SQL Server Integration Services (SSIS) is a component of SQL Server 2012, that for used for data extraction, transformation, and loading (ETL). SSIS can be installed during the SQL Server 2012 installation or as a separate component later on. Before installing SSIS there are a number of installation considerations that must be addressed first. This includes upgrading from previous versions of SQL, the use of Windows 32-bit or 64-bit and various security requirements. These topics are discussed in the course, along with topics on packaging, deploying and executing SSIS packages.
Microsoft SQL Server 2012 â€" Implementing a Data Warehouse: Troubleshooting	SQL Server Integrations Services and SQL Server Data Tools both offer tools and techniques to troubleshoot, optimize, and audit SSIS solutions. This course discusses how to debug and troubleshoot packages at the design and production level using techniques such as data viewers, data taps, and reports. It also discussion using reports, as well as execution trees and backpressure to view performance information and how to implement auditing at different levels. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft SQL Server 2012 exam 70-463:Implementing a Data Warehouse with Microsoft SQL Server 2012. This exam is one of the requirements for the MCSA: SQL Server 2012, MCSE: Data Platform, and MCSE: Business Intelligence certification paths.
Microsoft Visual Studio 2012: Advanced HTML5 and JavaScript	This course covers concepts in JavaScript object-oriented programming and HTML5 form creation and validation. Instruction is provided for implementing JavaScript objects and methods, as well as for creating HTML5 forms and validating them using both JavaScript and new HTML5 form attributes.
Microsoft Visual Studio 2012: Consuming and Transmitting Data with HTML5	Working with Web applications often requires the accessing, transmission and security of data. From server to client and back again, secure data transfer is one of the many powerful features of the Web. When programming data transfers, application developers need to understand the several technologies, particularly JavaScript Object Notation (JSON), AJAX (Asynchronous JavaScript and XML), and related technologies. This course introduces learners to the consumption of data using JSON, and XML, AJAX, and retrieving data with XMLHTTPRequest. It also considers the serialization and deserialization of data, sending and tracking data, submitting data using the FormSubmit method, parsing data, using XMLHTTPRequest to send data, and using URI/form encoding to "sanitize" data. This course is the seventh in a series in the SkillSoft learning path that covers the objectives for the Exam 70-480: Programming in HTML5 with JavaScript and CSS3. Passing this exam will earn the learner the Programming in HTML5 with JavaScript and CSS3 Specialist certification.
Microsoft Visual Studio 2012: HTML5 and JavaScript	JavaScript is a powerful client-side programming languagethat can be used to implement interactivity, graphics and animation, and other useful features that make the modern Web application function in much the same way as desktop applications. This course introduces the learner to JavaScript, providing a brief history of the language and how it differs from other object-oriented programming (OOP) languages like Java. The course considers how JavaScript can be used with HTML5, the importance of browser compatibility, and how different browsers handle JavaScript. The course then discusses the basic syntax of JavaScript, JavaScript variables, undefined and null values, and objects and arrays. JavaScript assignment operators, arithmetic operators, comparison and logical operators, andmath objects are also considered. Then, JavaScript statements are discussed, specifically conditional statements, loops, and arrays. Inline and external JavaScript, integration of frameworks, and functions are also covered. Finally, the course introduces HTML's native graphics using the HTML5 canvas and SVG Graphics. This course is one of a series in the SkillSoft learning path that covers the objectives for the Exam 70-480: Programming in HTML5 with JavaScript and CSS3. Passing this exam will earn the learner the Programming in HTML5 with JavaScript and CSS3 Specialist certification.
Microsoft Visual Studio 2012: HTML5 APIs and Local Storage	One of the many powerful features of HTML5 is the inclusion of native APIs â€" application programmer interfaces â€" which simplify the development process, eliminate the need for third-party plugins, and provide a common set of methods that programmers can use to develop feature-rich, standalone web applications. This course introduces learners to some of the notable APIs, including the Selectors API, the Drag and Drop API, the Geolocation API. It also discusses working with HTML5's Audio and Video APIs, the File and Storage APIs, and creating offline applications using the ApplicationCache API. This course is one of a series in the SkillSoft learning path that covers the objectives for the Exam 70-480: Programming in HTML5 with JavaScript and CSS3. Passing this exam will earn the learner the Programming in HTML5 with JavaScript and CSS3 Specialist certification.
Microsoft Visual Studio 2012: HTML5 Graphics and Animation	This course covers concepts in using the HTML5 Canvas and implementing SVG to create and/or modify graphics for an HTML5 application, in addition to concepts in applying CSS transitions and 2-D or 3-D transformations.
Microsoft Visual Studio 2012: HTML5, CSS3, and Adaptive UIs	This course covers advanced techniques in styling HTML5 text and block properties, using CSS3 selectors with jQuery, using custom fonts and flexible grid layouts, and implementing adaptive user interfaces.
Microsoft Visual Studio 2012: Introduction to HTML5 and CSS3	This course introduces the key new features of HTML5 and CSS3, and how to apply these features to create a simple HTML5 web application styled with CSS3. This course is one of a series in the SkillSoft learning path that covers the objectives for the Exam 70-480: Programming in HTML5 with JavaScript and CSS3. Passing this exam will earn the learner the Programming in HTML5 with JavaScript and CSS3 Specialist certification.
Microsoft Visual Studio 2012: Utilizing the HTML5 WebSocket API and Web Workers	This course covers the use of the HTML5 Web Socket API for implementing fast, lightweight web-based communications, as well as utilizing HTML5 Web Workers to implement efficient multithread processing in web-based applications.

Modifying Tables in Access 2013	Microsoft Office Access 2013 makes it easy for you to modify database tables. It allows you to customize the table fields, and control and restrict data entry. You can modify the records and sort and filter them. And, you can also customize the visual appeal by formatting the table. This course explores ways to modify tables. It will cover creating and modifying fields, controlling data entry with required fields, indexing, input masks, and data validation rules. The course will also cover ways manage records including adding, updating, deleting records, as well as sorting and filtering. Finally, it will cover ways to format a table.
My Site and Social Features in SharePoint 2013	In SharePoint 2013 social networking and collaboration have become even more of a focus. With the changes to My Site - now consisting of the NewsFeed, SkyDrive, and Sites pages - you have a number of social networking features and organizational efficiencies at your fingertips. This course explores how to configure My Site, including how to access your About Me page and edit your profile to include additional information. It also covers the use of the SkyDrive and Sites pages for managing files and collaboration. In addition, this course demonstrates how to create and manage blog posts, enabling efficient sharing of information with colleagues. Using tags and notes to classify and organize content and using the Newsfeed to keep track of activity on sites, people, tags, and documents you follow are also covered. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Navigating and Reviewing Documents in Word 2013	Word 2013 offers a number of features that make it easier to navigate, search, and review your documents. Using the Navigation pane and the Find and Replace feature, you can quickly locate a specific term within a document, replace any or all instances of terms, or move to a specific heading, section, page, graphic, and more. To help you create professional documents, free of spelling and grammatical errors, you can make use of the AutoCorrect options, and customize spelling and grammar options to suit your needs. When collaborating on documents, you can use the numerous reviewing features to easily track changes and manage comments. This course explores how to search and navigate within a document, reorganize document headings, configure AutoCorrect settings, and customize grammar and spelling options. Working with comments, tracking changes, and reviewing markup are also covered. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Navigating, Lists, Libraries, Alerts, and Document Sets in SharePoint 2013	SharePoint 2013, the new release of Microsoft's popular file storage and collaboration platform, offers a number of new and enhanced features to increase efficiency and organization across users and locations. SharePoint lists allow you to keep track of important workplace elements, such as tasks and contacts, and are fully customizable to suit the needs of your organization. Organize, track, and share files across users and locations by storing them in document libraries, or organize related files further into document sets. Stay in tune with the pulse of your organization by creating alerts on SharePoint items and getting e-mail or text alerts when they change. This course covers how to navigate within the SharePoint 2013 interface using the Quick Launch and top link bar, as well as the Settings menu and the Newsfeed, SkyDrive, and Sites tabs. It also explores list and library management, including adding new items, adjusting item properties, and removing items. It demonstrates how to set alerts on list and libraries, as well as how to set an alert on search query results. Creating and adding files to document sets is also covered. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Office Safety	This course is designed to raise awareness about hazards that may be encountered when working in office and administrative environments. The common hazards associated with work in offices are high noise levels, poor air quality, ergonomic hazards, and office accidents and injuries such as electrical shock and falls. The content of this course is designed to comply with the applicable regulatory requirements. The learning objectives of the course are to identify office noise abatement and air quality and ventilation strategies; identify the signs and symptoms of ergonomic hazards; and identify how to prevent potential office hazards and common office injuries, such as back strain, slips, trips, falls, eyestrain, and electrical shocks. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Performing Basic Tasks in Word 2013	Microsoft Word 2013, the latest offering of Microsoft's popular word processing software, offers a variety of features that enable you to create well organized, visually appealing, and professional documents. This course introduces and demonstrates commonly-used Word tasks, such as creating documents, entering and editing text, cutting, copying, and pasting, and saving and printing documents.
Powered Industrial Truck Safety	This course is designed for personnel who work with or around power-propelled trucks (also called forklifts) that are used to carry, push, pull, lift, stack, or tier materials. The course will better familiarize the worker with the potential health and safety concerns associated with powered industrial trucks. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to explain the purpose of the Powered Industrial Truck standard (29 CFR 1910.178); define operator training requirements for powered industrial trucks; distinguish between the different types of powered industrial trucks; recognize general engineering principles associated with powered industrial truck safety; distinguish potential occupational health and safety concerns associated with the use and maintenance of powered industrial trucks; describe safe loading and unloading methods; and identify general inspection and maintenance procedures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Radiation Safety	This course is designed to familiarize you with the health implications associated with ionizing radiation, and measures that can be used to protect you from radiation exposure. There is a significant health risk to workers if radiation sources are not properly controlled. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: identify the various types of ionizing radiation, recognize sources of radiation exposure, identify the possible effects of radiation exposure on your health, specify the methods and instruments used to detect ionizing radiation, specify measures to protect workers, and define both sealed and unsealed sources of ionizing radiation. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Radio Frequency Safety for Communications Workers	Working with an unseen hazard, like radio frequency energy, can cause you to underestimate the seriousness of the threat you face. Even though the owner of the source of radio frequency energy or your employer is responsible for your safety, it's important that you be prepared to protect yourself. The best way to protect yourself from radio frequency energy exposure is to understand the threat and know what to do to eliminate or minimize your exposure. Knowing what radio frequency energy is, where it originates, what are its sources, and its possible biological effects will help you protect yourself. Familiarity with the standards and regulations that have been developed to limit your exposure can help you make sure they are in place where you work. Finally, specific measures are used to protect against radio frequency exposure on cellular sites, so you can protect yourself by knowing what to look for at these sites. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Reference Tools and Mail Merge in Word 2013	Word 2013 offers a variety of features that let you quickly add reference document elements often found in formal, published papers. This course explores endnotes, footnotes, how to build and update a table of contents, and citations, cross-references, and bibliographies. The course also delves into how to perform a mail merge manually or by following along with a step-by-step wizard. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Regaining Your Customer's Trust	
Regulatory Information	Essentially, all workplaces have safety and health standards that have been imposed by federal and state authorities. The intent of these workplace standards and requirements is to protect the health and welfare of individual employees. This course will explain how safety requirements for workplaces are established and how they are enforced. The training will also discuss important regulatory agencies and their jurisdictions. The content in this course is designed to comply with the intent of the applicable regulatory requirements. You will learn about the scope and purpose of the Occupational Safety and Health Administration, how regulatory standards are established, OSHA inspection and enforcement methods, and other organizations that establish safety regulations that impact the workplace. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Resource Management in Project 2013	One of the most important aspects to a successful project is assigning the right resources to the right tasks at the right time. Microsoft Project 2013 makes it simple and easy to manage your project resources. This course covers how to enter resource information for your project , including human resources, equipment, and materials needed to complete the work. You will also learn how to add cost information for your tasks and how to assign resources to tasks. Finally, this course provides strategies for identifying and resolving common project resource issues using Project 2013.
Respiratory Protection	This course covers information relating to respiratory hazards, protection mechanisms, and safe work practices. It also includes information on how to use respiratory protection for protection from hazardous airborne contaminants in the work environment. This course does not include the types of respirators and other protective considerations required when working with ionizing radiation. Learner objectives are to recognize why respiratory protection is necessary; distinguish between employee and employer responsibilities for respiratory protection; identify the nature, extent, and effects of respiratory hazards to which you may be exposed; specify the operation, limitations, and capabilities of respirators; identify respirator selection procedures and practices; specify proper respirator use and inspection practices; recognize proper respirator maintenance, cleaning, and storage practices; and identify respirator malfunction and follow-up procedures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Respiratory Protection - Canada	This one-hour course covers information relating to respiratory hazards, protection mechanisms, and safe work practices. This course also includes information on how to use respiratory protection for protection from hazardous airborne contaminants in the work environment. This course does not include the types of respirators and other protective considerations required when working with ionizing radiation. Learners will be provided information to help them recognize why respiratory protection is necessary, how to distinguish employee and employer responsibilities for respiratory protection, and how to identify the nature, extent, and effects of respiratory hazards to which they may be exposed. Learners will also be shown how to specify the operation, limitations, and capabilities of respirators, how to identify respirator selection procedures and practices, how to specify proper respirator use and inspection practices, how to recognize proper respirator maintenance, cleaning, and storage practices, and how to identify respirator malfunction and follow-up procedures. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health and safety consulting firm with offices across Canada.
Responding to Bad News	
Responding to News of a Lost Sale	
Reviewing and Protecting Content in Excel 2013	Excel 2013 provides tools that allow you to manage multiple workbooks as well review and protect them while creating and sharing content. You can consolidate data, control recalculation, merge and manage versions of a workbook. Excel also provides the track changes feature allowing you to track, accept, or reject changes. When reviewing comments, you can edit, add, or delete comments. In addition, the spell checker reviews the spelling and allows you to change, ignore, or add to the dictionary. Finally, Excel allows you to protect a range, worksheet, or workbook with a password. This course will help prepare learners for the Microsoft Certification Exam 77-421: Excel 2013 Expert which certifies individuals as Microsoft Office Specialist (MOS): Excel Expert 2013.
Rigging Equipment and Inspection	Securing, lifting, and moving materials can be a hazardous occupation. It's important workers involved with hoisting and rigging activities are aware of the elements of safe rigging practice as outlined by OSHA's safety regulations and standards. In this course, you'll learn about using rigging in a safe and responsible manner. Learner objectives are to identify rigging hazards and the PPE used to protect against those hazards, and to recognize the proper selection, inspection, and storage of rigging equipment. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Scissor Lifts	Scissor lifts are powered, mobile devices that raise personnel vertically to allow them to safely reach a pre-determined working height. But, as with any heavy equipment, scissor lifts can be very dangerous if used without due care and attention. This course will teach you how to inspect your lift and the work area, understand the physical hazards involved in working with a scissor lift, and what the standard safety features of a scissor lift are. You'll also learn about the basic training requirements stipulated by OSHA and some general best practices for operating scissors lifts. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Selling with Trust	
Sharing and Collaboration in Word 2013	Word 2013 enables you to share and collaborate on documents in a variety of ways. To protect a document you can mark it as final, making it read only, you can add a password to the document, and you can edit who changes the document, and what changes they can make. This course explores these concepts along with restoring draft versions of documents and sharing documents via e-mail or SkyDrive. It also examines working with PDF documents in Word and working with blogs. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Sharing and Linking Data, and Adding Office Apps to Excel 2013	Excel 2013 provides tools to allow you to share workbooks, connect to external data, and add Office Apps. You can log into Office using an Office 365 Organizational ID or Microsoft account, allowing you to carry your personalized Office settings with you. You can add online services including SkyDrive and SharePoint storage, as well as Microsoft accounts to access and share your images and videos with social media sites. This course will show you how to link to external data including Access databases and other Excel workbooks. Finally, it will show you how to add Office Apps from the Office Store to extend the functionality of Excel, on demand. This course will help prepare learners for the Microsoft Certification Exam 77-421: Excel 2013 Expert which certifies individuals as Microsoft Office Specialist (MOS): Excel Expert 2013.
Sharing, Printing, Protecting and Delivery Presentations In PowerPoint 2013	Today people can share and send the development of PowerPoint presentations in new and exciting ways. With the proper technological infrastructure in place, Microsoft PowerPoint Web App extends your Microsoft PowerPoint experience of the Web, where you can work with presentations directly on the web site where the presentation is stored. An alternative to sharing a presentation with other team members is to share or send the presentation as an e-mail attachment, send it by instant message, or save it to your SkyDrive Account or to Office 365 SharePoint . You can also export your presentation by creating a video, creating handouts, or packaging the presentation on a CD. This course explores the different methods of printing, protecting, and delivering presentations including how to use PowerPoint 2013 Presenter View, which includes tools such as highlighters and laser pointers, and how to present online using Microsoft Lync and Office Presentation Service. This course will help prepare learners for the Microsoft Certification Exam 77-422: PowerPoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): PowerPoint 2013.
Silica	Silica exposure is a threat for approximately two million US workers and is especially dangerous for more than 100,000 workers who make up the nation's stonecutters, foundry workers, sandblasters, and rock drillers. Crystalline silica is classified as a human lung carcinogen and is known to cause respiratory diseases, including an especially damaging one â€" silicosis. Effective measures are available to protect workers from exposure to and reduce and prevent its potentially devastating health effects. It's important that employees recognize the potential hazards of silica exposure so they can protect themselves. This course covers hazard recognition, potential health threats, exposure prevention, and control. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Site Safety and Health Plan Procedures (HAZWOPER)	This training is designed to provide on-site and off-site employees with information on the company's site safety and health plan. A site safety plan establishes policies and procedures to protect workers and the public from potential hazards posed by a hazardous waste site. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: identify the purpose of personnel organizational structure associated with a site safety and health plan, identify the purpose of a work plan, identify the requirements of a site safety and health plan, identify the purpose and provisions of a site hazard assessment, identify the requirements for a personal protective equipment (PPE) program, and identify the purpose and provisions of site control and standard operating procedures (SOPs). This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.

Course	Description
Slips, Trips, and Falls	Slips, trips, and falls constitute the majority of general industry accidents. They cause 15% of all accidental deaths and are second only to motor vehicles as a cause of fatalities from accidents. This course is intended to provide employees with the ability to recognize and prevent slip, trip, and fall hazards, and to address the key components of ladder safety. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to list injuries that can result from slips, trips, and falls; identify fall hazards in the work area; describe the proper use of a ladder; specify how to set up a ladder; list tips to prevent injuries on stairs; describe how to minimize walkway hazards; and list contributing factors to slips, trips, and falls. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Structuring a Document in Word 2013	Within Word 2013, there are numerous options that allow you to customize how the contents of your documents appear. Items like page margins, paper sizes, and spacing are fully customizable. You can also add headers and footers to easily include important information on some or all of the pages in your document and add page numbers to make it easier to navigate longer documents This course demonstrates how to adjust page margins and paper size, as well as how to add, edit, and remove headers and footers. Adding page numbers, configuring indentation, and adjusting paragraph spacing are also covered.
Talking about the Competition	
Task-based Scheduling in Project 2013	Microsoft Project 2013 allows you to create your project schedule on your terms, based on the needs of your project and preferences. This course introduces the various ways of setting up project schedule information, such as defining the project start date, entering project properties, and displaying the project summary task. It also covers creating your project task structure, including adding, modifying, and deleting tasks. This course also demonstrates how to change your task mode and create milestones. Finally, this course covers how to add task constraints, dependencies and deadlines, and how to enter duration details and display warnings and suggestions about your schedule.
TestPrep 70-461 Querying Microsoft SQL Server 2012	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 70-463 Implementing a Data Warehouse with Microsoft SQL Server 2012	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep BH0-010 Certified Tester Foundation Level	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep Certified Associate in Project Management (CAPM) PMBOK Guide 5th Ed.	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
The AODA: Customer Service and Accessibility Standard	The Accessibility for Ontarians with Disabilities Act 2005 (the AODA) is a comprehensive law designed to make Ontario completely accessible to persons with disabilities by the year 2025. The provincial government is enacting a number of Accessibility Standards as regulations under the AODA. Each Accessibility Standard is targeted at removing barriers for persons with disabilities in key areas of daily living. This course covers the Customer Service Standard, the purpose of which is to make the goods and services provided by businesses and organizations in Ontario accessible to persons with disabilities. This course covers the purpose of the AODA and the requirements of the Customer Service Standard; how to interact and communicate with people with various types of disabilities including those who use assistive devices, service animals and guide dogs, or support people; how to use equipment or devices in order to help those with disabilities access your organization's goods and services; instruction on what to do if customers are having difficulty accessing your organization's goods or services; and instruction on how to approach your organization's policies, practices, and procedures governing the provision of goods and services to people with disabilities. The information contained in these training materials is provided for general information purposes only and does not constitute legal or other professional advice. Participating in this training program or reading these training materials does not create a lawyer-client relationship with Sherrard Kuzz LLP or with any other legal provider. Participants/readers are advised to seek specific legal advice from members of Sherrard Kuzz LLP (or alternate legal counsel) in relation to any decision or course of action contemplated.
The AODA: Integrated Accessibility Standards	Created to provide a high-level awareness of an organization's obligations under the AODA's Integrated Accessibility Standards, this course includes instruction on and practical examples of the requirements of the Employment and Information & Communications Standards. This is a companion course to the previously developed Skillsoft course on the Accessibility Standards for Customer Service and is intended for employers in Ontario with 50 or more employees. The information contained in these training materials is provided for general information purposes only and does not constitute legal or other professional advice. Participating in this training program or reading these training materials does not create a lawyer-client relationship with Sherrard Kuzz LLP or with any other legal provider. Participants/readers are advised to seek specific legal advice from members of Sherrard Kuzz LLP (or alternate legal counsel) in relation to any decision or course of action contemplated.
Title 31: Filling Out CTRCs	The casino industry is a cash business that can be a target for those who want to launder money gained from illegal activities. To prevent that from happening, casinos participate in a process of tracking cash transactions, or other transactions that may look suspicious, and providing that information to law enforcement for investigative purposes. Title 31 is the law that provides casinos and investigative agencies with the tools they need to combat money laundering. Title 31 requires the completion of the Currency Transaction Report by Casinos (CTRC) form whenever there are large transactions involving currency. The form is completed whenever transactions exceed $10,000 in a single day in cash. In this course, you will learn when you should fill out a CTRC and how to complete the CTRC form.
Title 31: Identifying Suspicious Activity	Casino employees have to be aware of ways of combating the use of their casino for money laundering and other potentially illegal purposes. This course looks at a number of suspicious activities related to casinos, and includes the account of a few reported past activities. You will learn how to fill out a Suspicious Activity Report by Casinos and Card Clubs (SARC) form, and how to write a quality narrative for the narrative section of this form.
Title 31: Introduction	Casinos are famously vulnerable to financial crimes due to the inherent cash nature of their business. This course provides an overview of the types of criminal activities which can take place in the gaming industry, such as money laundering by drug traffickers, organized crime, and movement of money for terrorist financing. You will learn about the law, Title 31, that enables casinos and investigative agencies to combat money laundering, taking a look at cases in which money laundering was suspected in the casino environment and subsequently stopped by law enforcement. The requirements of Title 31 are fully explained along with how to identify suspicious activity and record transactions that don't fit the profile of legitimate gaming. Forms used in reporting, such as SARC and CTRC are described in detail including how and where to file them. An overview of FinCEN, the collection point for information related to financial crimes is given and the implications of The Patriot Act on Title 31 are also explained fully. The course then concludes with a summary of the roles played by a range of casino employees in providing valuable information when it comes to solving crimes.
Title IX for Higher Education	Every educational institution wants to foster a welcoming, supportive environment for its students. Gender equity is at the heart of a progressive culture in higher education. Title IX of the Educational Amendments of 1972 is a landmark civil rights law prohibiting discrimination in education programs and activities that receive federal funding. Sexual misconduct, including sexual harassment and sexual violence, as well as the failure to provide equal opportunity in educational and co-curricular programs including athletics are prohibited by the legislation. This course is designed for all members of the campus community who have a responsibility in helping their school develop and maintain a respectful environment. It will provide awareness-level training on avoiding, identifying, and reporting sexual discrimination, harassment, and violence, and on complying with Title IX. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Tools for Tracking Project Performance in Project 2013	An essential part of managing a project is keeping project work on track and aligned with budget, resource, and time allocations. Microsoft Project provides tools for tracking project progress, identifying any potential issues, and making adjustments as necessary. This course covers tools that allow you to easily set baselines and update project progress with percent complete and actual work complete information. This course also includes information on how to reschedule incomplete project work in Project 2013. Finally, it covers analysis tools that allow you to compare planned versus actual project progress, view critical path information, and automatically inspect all tasks to identify potential schedule conflicts.
Toxicology (HAZWOPER)	
Transport Canada TDG: Documents, Markings, and Containers	Being able to properly classify dangerous goods for transportation is a key component of TGA. The classifications, their associated safety marks and containment guidelines ensure that all parties involved in the transportation of dangerous materials are aware of what is in a shipment, and how it should be treated. This course will explain dangerous goods classes and divisions, and packing guidelines. Documentation requirements, safety marks and containment methods will also be covered. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health and safety consulting firm with offices across Canada.
Transport Canada TDG: Introduction and Responsibilities	The Transportation of Dangerous Goods Act (TDGA) was introduced in 1980 to ensure that people and the environment are protected during the transportation of dangerous goods in Canada. This course will teach you the basics of TDG regulations, how they classify dangerous goods, and the basics of dangerous goods transportation. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health and safety consulting firm with offices across Canada.
Transport Canada TDG: Related Regulations and Standards	International shipping introduces additional complexities in the transportation of dangerous goods in and out of Canada. It is important to know which country's regulations would apply in these cases. Would there be a need to satisfy several sets of regulations for one shipment? The desire to have goods move freely between countries has led to agreements between countries and the authorities regulating different modes of transport. This course explains how different jurisdictions and regulatory authorities work together to ensure the safe transport of dangerous goods in and out of Canada. This course was developed with subject matter support provided by The Pinchin Group, a global professional services company focusing on engineering, environment, health and safety, and information technology.
Transport Canada TDG: Special Situations and Emergency Actions	It's important to know how to respond to an accidental release should one occur during the transportation of dangerous goods. This course explains reporting requirements after an emergency situation, and how to put together a plan to deal with such incidents. It also covers how special provisions can be applied to specific types of shipments, and how permits can be used to transport goods within Canada involving activities that fall outside the TDG Act or Regulations. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental, health and safety consulting firm with offices across Canada.
Tuberculosis: Prevention and Control	This course will provide you with a basic understanding of tuberculosis, common modes of transmission, methods of prevention, tests used to determine TB, and what to do if an exposure occurs. Information presented will help minimize serious health risks to persons who may have personal exposure to tuberculosis in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recall facts associated with tuberculosis, describe common modes of transmission, state methods to prevent transmission, and list steps to take if an exposure occurs. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Universal Waste Rule Training	This course provides an overview of the federal Universal Waste Rule. This rule provides generators with a more flexible approach for managing certain widely-generated, low-risk hazardous waste streams. The flexibility is intended to encourage resource conservation, as well as the diversion of universal wastes from landfills. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify the characteristics of batteries that make them a universal waste, identify basic handling requirements of lamps that qualify as universal waste, identify the hazardous waste items classified as universal waste under the Universal Waste Rule, identify the labeling and handling requirements of universal waste pesticides under the Universal Waste Rule, cite the requirements for the participants under the Universal Waste Rule, and cite the requirements for universal waste handlers under the Universal Waste Rule. Universal Waste Rule Training was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Urban Driving	Driving in urban areas presents a different set of hazards to drivers as compared to highway driving. Red lights, intersections, traffic, distracted drivers, and pedestrians are just some of the hazards the urban driver will encounter. This course will teach you how to safely drive through urban areas, how to enter and exit traffic, how to navigate intersections, and how to react to traffic signals. You'll also learn how to share the road safely with pedestrians and bicyclists. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
US Antitrust	US Supreme Court Justice Thurgood Marshall referred to antitrust laws as the 'Magna Carta of free enterprise.' Without these laws, competition would suffer and the likely results would be fewer choices, higher prices, and poor service. Who wants that? Antitrust laws not only benefit you as a consumer but also your organization, by protecting it against those who conspire to limit competition. Understanding what constitutes a violation of antitrust law can help you avoid breaching the law and saddling your organization, and yourself, with serious fines and penalties. This course describes behaviors that may violate antitrust law and explains how to respond appropriately to potential antitrust violations. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws.Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.

Course	Description
US Export Controls	US firms that transact any level of business internationally must be aware of the limitations imposed by the federal government on the export of commercial and defense-related items. This course provides awareness-level training about the regulatory system for exports. It explores the agencies involved in administering and enforcing the regulations, including the Bureau of Industry and Security (BIS), the Directorate of Defense Trade Controls (DDTC), and the Office of Foreign Assets Control (OFAC), and explains how these agencies define key terminology such as 'exports' and 'foreign persons.' It also describes how to determine whether an item to be exported requires a license. This course was developed with subject matter support provided by The Potomac Law Group, PLLC. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice and may or may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking independent legal advice.
Used Oil Management	Failure to properly dispose of used oil is a serious, but little recognized, environmental problem. This half-hour course reviews the various regulatory requirements associated with used oil management primarily from a generator's perspective. The goal of this training is to provide you with an overview of the used oil management programs and explain the different regulatory scenarios that apply to used oil. The training also provides basic information for used oil handlers whose activities are regulated by the Used Oil Management Standards. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to describe what constitutes used oil and when used oil is considered hazardous waste; indicate the regulatory path that must be followed based on specific used oil mixtures; identify used oil generators and discuss the regulatory requirements they need to follow; state the used oil record-keeping, transporting, and recycling requirements; and summarize how used oil filters are managed. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Using and Configuring Search in SharePoint 2013	Having the ability to execute an effective online search has become an essential professional skill. SharePoint 2013 offers search capabilities that let you refine a search, use operators in your search to pinpoint exactly what you're looking for, and configure search settings. This course explores the search tools available in SharePoint 2013, including configuring search options, creating query rules and using promoted results, using the Refinement panel, running property and phonetic searches, and using wildcards and operators in search phrases. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Using Competitive Selling Skills	
Using Financial Functions and What-If Analysis in Excel 2013	Excel 2013 provides powerful financial functions and data-analysis tools that enable you to explore data and to make educated business decisions based on that data. Using financial functions, iterative calculations, and the Watch Window can help you make the make better financial decisions and ensure the calculations are accurate. This course will cover What-if Analysis which enables you to retrieve required results from formulas by determining the data the formula requires, forecast worksheet outcome models, and to see how changing values in formulas affect the formula results. These tools include Goal Seek, Scenario Manager, and Data Tables. This course will help prepare learners for the Microsoft Certification Exam 77-421: Excel 2013 Expert which certifies individuals as Microsoft Office Specialist (MOS): Excel Expert 2013.
Using PivotTables, PivotCharts, and Advanced Charts in Excel 2013	One of the most powerful tools that Excel 2013 provides is the collection of PivotTables, PivotCharts, and PowerPivot. These tools allow you to dynamically reorganize and display your data. They can summarize huge amounts of data by category without the need to input complex formulas or spend long hours manually reorganizing your spreadsheet. You can choose and change what you want to summarize. In addition to these benefits, PowerPivot has the ability to handle huge amounts of data, quickly and easily. The course also shows how to create advanced chart elements, such as trend lines and dual axis. This course will help prepare learners for the Microsoft Certification Exam 77-421: Excel 2013 Expert which certifies individuals as Microsoft Office Specialist (MOS): Excel Expert 2013.
Using Tables in Word 2013	Tables are a great way of sorting and organizing data to make it easier to read and analyze. In Word 2013, you can create tables in a variety of ways, either using the ribbon to specify the number of columns and rows required, drawing a table and customizing it as needed, or converting existing text to a table. Once you've created a table, there are many options available to customize its overall appearance. You can add and remove cells, columns, and rows as needed, as well as merge cells, split them apart, or even split a table into more than one table. You can use row and column design options, predefined styles, and border settings to further customize a table's appearance. This course demonstrates how to create tables and add and remove cells, columns, and rows. It shows how to split or merge cells and split tables, adjust table style options, and customize table borders. This course will help prepare learners for the Microsoft Certification Exam 77-418: Word 2013 which certifies individuals as Microsoft Office Specialist (MOS): Word 2013.
Warehouse Safety	Modern industry relies heavily on warehouses as distribution hubs for material goods. Goods are stored, usually temporarily, in warehouses as they make their way to their final destination â€" for example, retail or commercial customers. This constant turnover of materials makes for a very busy environment where the use of equipment, climbing, the use of ladders, and the storage of materials and dangerous chemicals present potential safety hazards. This course explores the typical hazards you're likely to be exposed to in a warehouse and offers advice on how to protect yourself. This course was developed with subject matter provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Workflows, Collaboration, and Analysis in SharePoint 2013	SharePoint makes it easy for end users to work with the file types they're familiar with by offering easy integration with other Office products. This course demonstrates how to use connect and synchronize SharePoint data with Office data and how to use Office web apps. It also shows you how to create and manage workflows, and view most popular items and a usage report. This course will help prepare learners for the Microsoft Certification Exam 77-425: SharePoint 2013 which certifies individuals as Microsoft Office Specialist (MOS): SharePoint 2013.
Workplace Hazardous Materials Information System - Canada	The Hazardous Products Act and its regulations are administered by the Government of Canada's Department of Health, commonly referred to as Health Canada. Furthermore, supplier labelling and Safety Data Sheet, or SDS, requirements are set out under the Hazardous Products Act and the associated Controlled Products Regulations. This course covers information required through coordinated federal, provincial, and territorial legislation. The course will acquaint you with the precautions Canadian employees and employers must take in order to use, handle, and dispose of hazardous chemicals safely in the workplace. The intent of the information provided in this course is to help prevent and minimize employee exposures to the workplace hazardous materials, and to minimize accidental release of these material in the work environment. The content of the course is designed to comply with the applicable regulatory requirements and is presented using Canadian English. The learning objectives of the course are to identify the routes of chemical entry into the body; define various categories of chemical hazards; interpret warning labels; identify information commonly found in an SDS; and identify controls commonly used to reduce or eliminate contact with hazardous materials in the workplace. This course was developed with subject matter support provided by the Pinchin Group of Companies, an environmental health and safety consulting firm with offices across Canada.
Workplace Security Awareness	This course will provide an awareness-level orientation of basic workplace security fundamentals and appropriate actions for workers to take in the event of potential threat situations that may be encountered in the workplace, including encountering trespassers, receiving phone threats, dealing with workplace violence incidents, evacuating during an emergency, and protecting against various types of terrorist acts. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify general security guidelines and best practices, recall how to deal with trespassers and unknown persons in the workplace, describe how to deal with threatening phone calls, identify actions to take in the event of workplace violence incidents, recall steps to take in the event emergency situations require evacuation, and describe protective measures to take in the event of various acts of terrorism in the workplace, including mail tampering, biological threats, chemical threats, explosions, nuclear blasts, and radiation threats. Workplace Security Awareness was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
The Dangers of Multitasking	The Dangers of Multitasking
Listening to Improve Conversations	Listening to Improve Conversations
IMDG 4: Loading, Unloading, and Offering Dangerous Goods	IMDG 4: Loading, Unloading, and Offering Dangerous Goods
IMDG 1: Introduction, General Provisions, and Classifications	Shipping dangerous goods presents safety issues that must be addressed. The International Maritime Dangerous Goods (IMDG) Code was developed to help ensure dangerous goods are transported safely by sea. Its regulations provide the individuals who handle and ship dangerous goods with the information they need to do so safely. This course begins with an introduction to the IMDG Code, including its origins, purpose, and enforcement and training requirements. In the United States, the Pipeline and Hazardous Materials Safety Administration (PHMSA) develops and enforces regulations for the safe transport of dangerous materials. The connection between the two sets of regulations will be explained. A physical description of the IMDG Code is given, as well as instruction on how to access and use the information it contains to determine if dangerous goods are regulated by IMDG and PHMSA and how to ship them properly. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IMDG 2: Dangerous Goods List, Special Provisions and Exceptions	The International Maritime Dangerous Goods (IMDG) Code is the recognized code of practice for the safe carriage of dangerous goods by sea. Manufacturers, packagers, shippers, stowers, carriers, and others involved throughout the supply chain must adhere to the provisions in the IMDG Code when dealing with cargo to be transported all or in part by ship. The IMDG Code contains the Dangerous Goods List, a list of the dangerous goods most commonly carried by sea. The list covers, as far as practicable, all dangerous substances of commercial importance. This course will introduce you to the IMDG Code Dangerous Goods List, and will help acquaint you with IMDG Code packing and tank provisions for dangerous goods containers. This IMDG course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IMDG 3: Packaging, Marking, Labeling, Placarding, and Documentation	The International Maritime Dangerous Goods (IMDG) Code is the recognized code of practice for the safe carriage of dangerous goods by sea. Manufacturers, packagers, shippers, stowers, carriers, and others involved throughout the supply chain must adhere to the provisions in the IMDG Code when dealing with cargo to be transported all or in part by ship. This course will familiarize learners with the IMDG Code and its requirements and regulations for packaging, marking, labeling, placarding, and documenting dangerous goods for transport by sea. This IMDG course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Bank Branch Management: Dealing with Operational and Credit Risks	There are many risks facing banks: home owners defaulting on mortgages, interest changes impacting the value of a bank's loans, human error, and natural disasters, among many others. One of the main categories of risk a bank faces is operational risk. This includes process-related risks, process execution and delivery risks, external and internal fraud risks, damage to asset risks, and business system risks. Another category of risk is credit risk, the likelihood that borrowers might not fulfill their contracts, and the value that could be recovered by the bank if a borrower defaults. The way to reduce or mitigate these risks is to have an effective risk management plan to deal with operational and credit risks. This course examines the basics of risk management. It covers the causes of operational risk and how to manage it. It also covers the basics of credit risk, the common credit products, and how to manage credit risk.
Bank Branch Management: Teller Roles and Credit Card Operations	Bank tellers are the face of retail and commercial banks. Even with the move to online and electronic banking, tellers represent the bank and their values. They promote financial products and services while ensuring accurate transactions that comply with bank policies and regulations. They often handle credit card payments and transactions, and would work with the various types of credit cards in the transaction process as they are very knowledgeable in the details and know the value of the cards to banks and consumers. This course examines the basic bank teller roles and functions, including promoting the image of the bank, promoting the bank's products and services, ensuring accurate transactions, and enforcing policies and compliance regulations. It will also cover the compliance requirements for a teller. This course will then cover credit card operations including the types of credit cards and the transaction process, and it will highlight the value of credit cards to the banks and the consumer.
Bank Branch Management: Internal Controls and Banking Technology	Internal controls and banking technology rely on each other to mitigate risks, and at the same time, drive innovation in banking technology and services. Internal controls are used to achieve operational success by increasing efficiency, consistency, reporting accuracy, and compliance. Banking technology is constantly evolving to suit the needs of banks and their customers. An effective interrelation between internal controls and banking technology helps achieve operational success. This course covers the basics of internal bank control, including major internal control objectives for banks, typical control framework characteristics, and types of controls. It will also cover the scope of control and will differentiate responsibilities between the internal control groups. Furthermore, the course describes banking technology, including the evolution of banking technology, e-banking, current integrated architecture, and current and future trends in technology.
Bank Branch Management: Branch Security and Fraud	Robbery is the first thing that comes to mind when bank branch security is mentioned. However, bank security involves much more than just robbery prevention. Banks face a variety of security threats, including forces of nature, human error or failure, and fraud and information security threats, among others. Physical branch security measures play a critical role in a bank's security, as do specific responses to bank robberies. Establishing a fraud prevention strategy is vital for bank branch security, along with training and compliance considerations. This course will cover aspects of bank branch security threats, including forces of nature, robberies, human error, and fraud and information security. It will address issues of physical threats to security, and how to put security measures in place to reduce the risk of security breaches. It includes guidelines on specific responses to bank robberies, and on establishing a fraud prevention strategy, including the importance of knowing your customers. The course also covers elements of bank teller training, and regulatory compliance and audits.
Microsoft SQL Server 2012 â€" Developing Databases: Implementing Tables and Views	With its blend of visual tools and powerful Transact-SQL language, SQL Server 2012 will continue to enjoy large market share in the relational database management sphere. Database developers that use SQL Server will experience measureable benefits from obtaining Microsoftâ€™s MCSE certification relating to SQL Server 2012. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Microsoft SQL Server 2012 â€" Developing Databases: Implementing Indexes	With its blend of visual tools and powerful Transact-SQL language, SQL Server 2012 will continue to enjoy large market share in the relational database management sphere. Database developers that use SQL Server will experience measureable benefits from obtaining Microsoftâ€™s MCSE certification relating to SQL Server 2012. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Microsoft SQL Server 2012 â€" Developing Databases: Stored Procedures	An effective strategy that database developers often employ to interface between applications and SQL Server 2012 involves the creation of programs using the Transact-SQL language and saving them as stored procedures or functions as database objects. Subsequently the applications can execute these programs as required and process results. This course introduces this powerful database programming concept and covers the types of programs available, design issues and implementation considerations. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.

Course	Description
Microsoft SQL Server 2012 â€" Developing Databases: CLR Integration	With its blend of visual tools and powerful Transact-SQL language, SQL Server 2012 will continue to enjoy large market share in the relational database management sphere. Database developers that use SQL Server will experience measureable benefits from obtaining Microsoftâ€™s MCSE certification relating to SQL Server 2012. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Microsoft SQL Server 2012 â€" Developing Databases: Working with Data	SQL Server 2012 provides advanced features to enable large data to be stored and accessed within the database itself. By using the FILESTREAM and FileTable features documents are stored in the Windows file system but accessed through the database using T-SQL queries. SQL Server also allows these documents to be searched for words or phrases. Advanced query techniques can also be used to manipulate data to retrieve specific data. This course demonstrates how to configure FILESTREAM, FileTables, and Full-Text Search. It also demonstrates how to use advanced query technique such as PIVOT, UNPIVOT, CROSS||OUTER APPLY, and CTEs, as well as Spatial data. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Microsoft SQL Server 2012 â€" Developing Databases: Working with XML Data	The relational database, such as SQL Server 2012, has been around for decades going back to E.F. Codd and his designs. Since then, many applications have been built upon this concept. In 1999, the internet was gaining momentum. Around the same time, a new hierarchica l concept for storing data was introduced: extensible markup language or XML. As the internet gained more prominence to its current ubiquitous standing, XML took on increasing significance for moving data around. Subsequently, it became equally important for relational and hierarchical data to be somewhat interchangeable between online data-based applications and services. This course introduces XML in relation to SQL Server and how to work with XML data in SQL Server 2012. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Microsoft SQL Server 2012 â€" Developing Databases: Tuning and Optimizing Queries	With its blend of visual tools and powerful Transact-SQL language, SQL Server 2012 will continue to enjoy large market share in the relational database management sphere. Database developers that use SQL Server will experience measureable benefits from obtaining Microsoftâ€™s MCSE certification relating to SQL Server 2012. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Microsoft SQL Server 2012 â€" Developing Databases: Managing and Troubleshooting	With its blend of visual tools and powerful Transact-SQL language, SQL Server 2012 will continue to enjoy large market share in the relational database management sphere. Database developers that use SQL Server will experience measurable benefits from obtaining Microsoftâ€™s MCSE certification relating to SQL Server 2012. This course is one of a series in the Skillsoft learning path that covers the objectives for the Exam 70-464: Developing Microsoft SQL Server Databases. This series may also cover SQL Server 2014 features and functionalities as required by the exam objectives. This exam is one of the requirements for the MCSE: Data Platform certification path.
Laboratory Safety	This overview course is designed for employees who work in an industrial, clinical, or academic laboratory setting. It will serve to educate the laboratory employee to diverse safety and health concerns related to their job. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives include the following: identify general requirements of the Laboratory Safety Standard, recognize the importance of a Chemical Hygiene Plan in your workplace, define the purpose of a Safety Data Sheet, describe safety guidelines specific to laboratory fire and burn hazards, and identify general emergency guidelines to be followed in the laboratory. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Laser Safety Training	This half-hour course is designed to provide awareness of the fundamentals of Class 3B (moderate) and 4 (high-power) lasers or laser systems. The content in this course is designed to comply with the intent of the applicable ANSI regulatory requirements. Learner objectives are to discuss what a laser is and how a laser works, name the types and classes of lasers, describe non-beam laser hazards, recall the biological effects of a laser on the human body, and identify types of control measures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IATA 1: Hazard Class Identification/Classification	This training course will introduce the requirements of the International Air Transport Association's Hazardous Materials Regulations, including definitions, an introduction to the hazard classes, and the List of Dangerous Goods. The proper identification, preparation, and transportation of hazardous materials affects everyone's safety. This training course may be used to meet the requirements for general awareness and familiarization training. Your employer will provide additional function-specific training. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define terms associated with air transportation of dangerous goods, classify hazards according to International Air Transport Association's nine hazard classes, and identify and interpret information found in the List of Dangerous Goods. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IATA 2: Marking and Labeling	This training course will introduce the International Air Transport Association's marking and labeling requirements. The proper identification, preparation, and transportation of hazardous materials affects everyone's safety. This training course may be used to meet the requirements for general awareness and familiarization training. Your employer will provide additional function-specific training. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recognize package specification markings and package use markings, identify hazard labels and handling labels, and apply marking and labeling requirements when shipping dangerous goods. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IATA 3: Packaging	This training course will introduce the packaging requirements of the International Air Transport Association's Dangerous Goods Regulations. This training course may be used to meet the requirements for general awareness and familiarization training. Your employer will provide additional function-specific training. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to recognize the general packing requirements and the conditions normal to air transport, identify the proper packaging for the material to be shipped, and recognize UN specification packaging. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IATA 4: Documentation	This course will introduce the requirements of the International Air Transport Association's Hazardous Materials Regulations, including required documentation to transport dangerous goods (Shipper's Declaration for Dangerous Goods and Air Waybill). This training course may be used to meet the requirements for general awareness and familiarization training. Your employer will provide additional function-specific training. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify the necessary components on the Shipper's Declaration for Dangerous Goods and describe the elements required on an Air Waybill for a shipment of Dangerous Goods. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
IATA 5: Limitations and Shipment Review	This course explains that the Department of Transportation (DOT) governs all modes of transportation in the US, including air transportation. The DOT has a set of regulations pertaining to the shipment of hazardous materials (dangerous goods) known as the Hazardous Materials Regulations (HMR). This training course may be used to meet the requirements for general awareness and familiarization training. Your employer will provide additional function-specific training. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify the requirements placed on a shipper by the Department of Transportation when shipping by air, identify the requirements placed on the shipper by other national authorities, identify the requirements placed on the shipper by the carrier, and verify that a shipment is properly identified, packaged, marked, and labeled, and the documentation is correct. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Harassment Prevention for Employees - State and Local Government Edition	Harassment at work can have a corrosive effect on a public employer's culture and can lead to low employee morale, reduced productivity, and even criminal liability. Focusing on the forms of harassment prohibited by federal law, this course will provide an overview of the types of behaviors that can give rise to harassment claims, including those based on gender, race, color, national origin, religion, age, and disability. It will also discuss the benefits of and strategies for promoting a respectful work environment that is free of all forms of harassment, intimidation, and discrimination. If you have questions about harassment either during or after this course, please contact the designated human resources professional at your employer who is trained in this field. Please note that course materials and contents are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation, or constitute as legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Harassment Prevention for Managers - State and Local Government Sector Edition	Typically, when people hear the term 'workplace harassment' they think of sexual harassment. But that is just one of the many forms workplace harassment may take. Unlawful harassment is any form of unwanted or unsolicited behavior directed at an individual or group of individuals, by another associate or superior, on the basis of a protected characteristic as outlined by various anti-discrimination laws (Title VII of the Civil Rights Act, the Americans with Disabilities Act, and the Age Discrimination in Employment Act). These protected characteristics include race, color, national origin, religion, gender, disability, and age. Depending on state law and other circumstances, additional characteristics such as sexual orientation and marital status may also be protected. This course will review the characteristics of various forms of harassment and discuss what supervisors and managers can do to discourage harassing behavior of any type in their own work groups by their employees or themselves. Please note that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Heat and Cold Exposure Management (HAZWOPER)	This course is intended for personnel who may be exposed to temperature extremes at hazardous waste sites. Heat-related illness is a major hazard, especially for workers wearing personal protective clothing. Cold-related injuries can cause loss of limbs or even death. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify heat-related illnesses that can result from exposure to hot temperatures, specify first aid measures for heat-related illness, identify individual factors that affect the body's ability to withstand hot temperatures, specify steps to avoid or reduce heat-related illness, specify conditions and injuries that can result from exposure to cold temperatures, specify first aid measures for frostbite and hypothermia, identify individual factors that affect the body's ability to withstand cold temperatures, and recognize measures for preventing injuries related to cold temperature exposure. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Regulatory Overview (HAZWOPER)	This course provides information about the history, purpose, and mission of key regulatory agencies including OSHA, EPA, and DOT. The intent of the course is to provide the learner with an understanding of the sources of regulatory occupational safety and health work practices and standards. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to specify why regulatory standards are established, identify the purpose of the major regulatory agencies that establish regulations impacting the workplace (OSHA, EPA, DOT), identify the purpose of RCRA, CERCLA, and SARA, identify hazardous waste, identify the scope and purpose of HAZWOPER, identify steps to prevent hazardous materials and exposure to hazardous waste, and identify which workers are affected by HAZWOPER. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Site Control (HAZWOPER)	This training describes measures designed to minimize your exposure to hazardous substances, and prevent the migration of contamination to 'clean' areas of the site. OSHA requires that employees who work at hazardous material sites, or respond to spill emergencies, receive training to eliminate unnecessary risk of exposure to hazardous substances. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to: define the purpose of the site control program, identify site control measures used to minimize employee exposure to health and safety hazards, including site map, site preparation, work zones, buddy system, site security, communications, and safe work practices. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Personal Protective Equipment (HAZWOPER)	Equipment and devices have been developed over the years to protect the human body against a variety of environmental and physical hazards. Today, many forms of personal protective equipment, or PPE, are available to protect you from injuries and illnesses. OSHA and EPA regulations classify PPE into four categories, based on the level of protection afforded. This training is intended to introduce you to the four levels, and to acquaint you with the different types and the correct selection of PPE. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to specify why PPE is necessary; identify the proper category of protection for a hazardous situation; identify which PPE is necessary based upon the hazards present; identify the limitations of PPE; and specify the proper care, maintenance, useful life, and disposal of PPE. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Decontamination (HAZWOPER)	This training provides information concerning decontamination, which is the process of removing contaminants that have collected on workers and equipment. Decontamination protects you from hazardous substances that may contaminate and eventually penetrate protective clothing, respiratory equipment, tools, vehicles, and other equipment used on-site. It also prevents the movement of contaminants from the site to the community. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to list the major factors that affect permeation of contaminants, identify the steps in making a decontamination plan, identify the zones of a hazardous material site, list decontamination procedures for personnel and equipment, describe tests used to determine the effectiveness of decontamination methods, identify health and safety hazards associated with decontamination procedures, and recognize how emergency decontamination situations should be handled. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Mobile Crane Operator Safety	Cranes are often an essential part of a job and work site. Because of their ability to move large and heavy loads, understanding how they work as well as what and when to inspect are important to maintaining a safe work environment. In this course, you will learn about the requirements and certifications for operating or rigging a crane, as well as basic properties of the crane's operation, and inspection procedures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.

Trailer Coupling and Uncoupling	As a commercial vehicle operator, you are responsible for the safe operation of your tractor trailer. Following appropriate practices to couple and uncouple trailers, as well as maintaining equipment, ensures that you and the other motorists that share the road with you are safe. In this course, you will learn about the safety factors that apply to coupling and uncoupling vehicles and the risks associated with these tasks. Trailer Coupling and Uncoupling was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Flatbed Cargo Securement	Safe loading and operation of a flatbed trailer depends on following rules and regulations related to safe loading of cargo, proper use of securement devices, and regular inspection of the load. In this course, you will learn about the hazards, rules, and safety provisions for ensuring your safety as a vehicle operator, as well as the safety of other vehicle operators you share the road with. Flatbed Cargo Securement was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Negotiating Hazards for Commercial Vehicles	According to the FMCSA, collisions at intersections alone account for 45% of all reported crashes and 21% of fatalities. Intersections are just one of many common hazards you may encounter in the course of everyday travel while in your truck. In order to safely negotiate the hazards you come into contact with, you must be familiar with the procedures and precautions to take. In this course, you will learn about what you need to do to safely negotiate turns and merging, intersections, downgrades, and railroad crossings. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Supply Chain Transparency	Supply chain transparency is an essential component of responsible supply chain management. It tangibly demonstrates to consumers that the suppliers and sub-contractors that the company engages with promote favorable human rights practices. With an increased focus on corporate social responsibility in this context, confronting exploitation in labor and supply chains has become a key issue for every company. This course builds awareness of how human trafficking may reveal itself in supply chains and equips sourcing managers with the skills to support the company's efforts to prevent and respond to trafficking activities. This course is designed for use in all US states as a training component of an organization's supply chain management program, such as is required under California's SB 657. This course was developed with subject matter support provided by Seyfarth Shaw at Work. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice and may or may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking independent legal advice.
The US Constitution	This course looks at how the US Constitution was established, as well as how the national government was formed and structured. It also explores the rights and liberties of the American people as enshrined in the Bill of Rights and subsequent amendments to the Constitution. Finally, the course looks at how the power was distributed and the creation of the three branches of government: the legislature, the executive, and the judiciary. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Sexual Harassment Prevention for Federal Employees	Sexual harassment can have disastrous effects on victims and organizations, including federal government agencies. This course helps employees define and identify sexual harassment, become familiar with the elements of prohibited conduct in the workplace, and understand the responsibilities of the federal employer. It also offers strategies should sexual harassment occur. This course meets the training compliance requirements provided for in the EEOC's guidelines on sexual harassment, and under Executive Order 13087, issued on May 28, 1998, prohibiting discrimination based upon sexual orientation. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.

Accessibility and Section 508 Awareness	Section 508 was introduced to help ensure federal agencies provide equal access to technology for those with disabilities - both federal employees and the public. Under Section 508, agencies are required to eliminate any barriers that people with disabilities may encounter as they use information technologies to access information. Section 508 also promotes the development of new tools and technologies to help ensure equitable electronic accessibility for employees and the public. This course outlines the key Section 508 requirements that federal agencies must follow. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Workplace Safety	Every year occupational injuries and illnesses involving civilian federal employees occur. These injuries and illnesses take their toll on American taxpayers in the form of the chargeback billings from federal agencies as a result of the injuries and illnesses suffered. This course outlines the occupational safety and health requirements for federal employees. It covers the essential responsibilities federal government agencies have with regard to creating safe and healthful working environments. This course also provides information on the types of occupational safety and health training agencies should provide for their employees. It also addresses compliance and documentation of workplace safety incidents, the importance of accurate record-keeping, and the submission of annual reports to the Equal Employment Opportunity Commission (EEOC). The course explores whistleblower protection with regard to occupational injuries and illnesses, and meets the training compliance requirements mandated under OSHA Regulation CFR 1960 and Executive Order 12196. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Government Ethics	The role of the Office of Government Ethics (OGE) is to help promote ethical behavior and work practices within the executive branch, and to raise awareness about the Government's commitment to ensure all of its operations are carried out equitably and with integrity. This course provides instruction on how the OGE defines ethical behavior within government and how it works with executive branches to implement ethics programs and guidelines. It also explores the OGE's key objectives including preventing conflicts of interest, ensuring impartiality in the performance of duties, and promoting high standards of integrity in the day-to-day operations of all executive branch departments and agencies. This course meets the training requirements under Executive Order 12674 and Executive Order 12731 outlining agency responsibilities on the principles of ethical conduct for government officers and employees. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Proper Use of Government Charge Cards	Charge cards provide US federal agencies with a solution for making relatively small purchases. The charge card program is known as the GSA (General Services Administration) SmartPay® program. Federal cardholders can use the GSA SmartPay program to pay for work-related commercial goods and services, travel expenses, and fleet expenses. This course provides an overview of the GSA SmartPay program and its best practices. It details the benefits of the program to the US federal government and its contractors, and identifies the key features of Purchase and Travel charge cards. The course outlines the ways in which agency policies regulate the type of purchases that can be made with the Purchase card. It also describes how best to use and manage the Travel card. In addition the course explores card misuse and fraudulent use of charge cards and provides insight into card pre-issuance, issuance, and maintenance of the charge card program. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Federal HR Flexibilities	Federal agencies have a wide range of human resource (HR) capabilities that can be used to help manage workforce challenges. The US Office of Personnel Management (OPM) is a federal government agency that helps other government agencies overcome personnel challenges, recruit and retain federal employees, and provide them with training and personal development programs. The OPM also designs and implements key human resource-related polices across all government departments. This course provides an overview of the many personnel options and services available to applicants, existing employees, and managers in the federal government. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Information Security Awareness	Federal employees must be aware of the potential threats to the information systems they operate. They also need to be aware of the information assurance regulations governing these systems and operate these information systems securely. In addition, federal employees must understand how to adequately protect information including Personally Identifiable Information (PII). This course outlines the role of federal employees with regard to protecting information and ensuring the secure operation of federal information systems.
Privacy Awareness	This course provides instruction on Personally Identifiable Information (PII), and explains its importance, authority, procedures, and reporting requirements. This includes personal information about both federal employees and private citizens. This course will help federal employees understand the importance of the privacy of personal information. It outlines how federal employees should follow federal privacy laws and ensure Fair Information Principles (FIPs) are followed. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.

Pre-retirement Planning for FERS	All federal employees should be aware that the federal government starts the retirement planning process immediately upon employing an individual in a permanent position. The government has passed legislation that each employee covered by the Federal Employees Retirement System (FERS) will be mandated to contribute into the Civil Service Retirement and Disability Fund (CSRDF), the Social Security Fund, and the Medicare Fund. Legislation was also passed to establish a savings and investment plan â€" the Thrift Savings Plan (TSP) â€" which is voluntary, in order for each employee to have a supplemental annuity in retirement. Although the government starts the planning process, each employee also needs to plan and prepare for retirement. It is a full career process, from the date of employment to the date of retirement. This course will provide federal employees with sufficient information to enable them to make informed decisions about retirement planning. This course was edited and updated by Georgia Bohuslav, Federal Retirement Consultant, Subject Matter Expert (SME). The course materials and content are for informational purposes only and do not constitute personal retirement advice. Transmission of the information is not intended to create a retirement consultant relationship with an employee. Readers should not act upon this information without seeking individual retirement counseling with a Human Resource Specialist within their specific agency. The information provided is general information only and it may or may not reflect the most current retirement information.
Telework for Government Employees	This course provides telework guidelines for federal employees. It explains how to determine whether telework is a viable option for you, and how to prepare for a successful teleworking experience. This course also provides instruction on the best practices for teleworking, and how to manage the challenges associated with telework. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Sexual Harassment Prevention for Federal Managers	Federal managers and supervisors have an important role in building and maintaining a workplace where employees can thrive. Among other things, this means being prepared to take action in response to any allegation of sexual harassment. Sexual harassment is a universal problem that can have disastrous effects on victims, perpetrators, and organizations, including federal agencies. This course describes types of sexual harassment, including quid pro quo and hostile environment, and outlines ways to help prevent sexual harassment by maintaining a culture of respect. The course also explains how a manager should respond sexual harassment occurs in the workplace. This course was developed with subject matter support provided by The Potomac Law Group, PLLC. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice and may or may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with legal statutes or statutory instruments. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking independent legal advice.
The Plain Writing Act	Confusing content, imprecise instructions, and unnecessarily complicated processes all cause problems for people who need to read and use government documents. The Plain Writing Act aims to address these issues by requiring executive agencies to produce documents that are easy to understand and use. This course will help you meet this requirement by introducing principles of effective composition for both paper and web content, such as analyzing your audience, organizing the presentation of information, and choosing clear words and phrases. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Reasonable Accommodation for the Federal Workplace	Leading and managing employees in an increasingly diverse workplace can be both rewarding and challenging. What do your employees expect? What legislation applies to accommodating their requests? What are the consequences of failing to comply? Federal agency managers must operate with sensitivity in handling accommodations for disabilities, religious practices, and medical leave. This requires a basic understanding of the anti-discrimination and disability legislation. This course provides an overview of the Rehabilitation Act, the Family and Medical Leave Act, and Equal Employment Opportunity Commission guidance that affects federal employers' responsibilities in these areas. The course will help managers identify the situations where these laws come into play so that they can respond appropriately to specific requests. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
USERRA: An Overview	This course provides federal agencies and their employees with an overview of obligations and rights under the Uniformed Services Employment and Reemployment Rights Act (USERRA) regarding leave for individuals who are called to duty in the uniformed services. This course explains several key aspects of USERRA, including who is covered; the obligations of agencies not to discriminate against individuals on the basis of past military service, current military obligations, or an intent to serve; the prohibition against retaliation toward individuals who exercise their rights under USERRA; the right of covered employees to continuation of benefits during service; and the law's requirements for the reinstatement of servicemembers on their return from duty. This course was developed with subject matter support provided by the Labor, Employment, and Employee Benefits Law Group of the law firm of Sheehan Phinney Bass + Green PA. Please note, however, that the course materials and content are for informational purposes only and do not constitute legal advice. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation or constitute a legal opinion with respect to compliance with any federal, state, or local laws. Transmission of the information is not intended to create, and receipt does not constitute, an attorney-client relationship. Readers should not act upon this information without seeking professional counsel. The information contained herein is provided only as general information that may or may not reflect the most current legal developments. This information is not provided in the course of an attorney-client relationship and is not intended to constitute legal advice or to substitute for obtaining legal advice from an attorney licensed in your state.
Connecting the Dots: Insightful Account Management	Connecting the Dots: Insightful Account Management
Setting up a Project in Project 2013	Microsoft Project 2013 provides you with a comprehensive set of tools to organize and manage your project from the first through to the last phase. Being able to use Project not only simplifies your work but can also help to reduce errors that might occur when trying to manage so many tasks and deliverables at once. This course introduces the various ways of setting up a project plan using existing templates, previous project plans, or starting from scratch. It also covers how to create the project calendar and customize settings that are required for your project such as setting working and non-working hours and days, creating custom fields to record project-specific information, and changing general options such as date and currency formats.
Succeeding in Account Management	Succeeding in Account Management
Special Insurance Arrangements: Group Insurance, Reinsurance, and Annuities	Insurance companies contribute to the economic growth of countries, businesses, and individuals and help improve the economic climate. Special insurance arrangements such as group insurance, reinsurance, and annuities cater to the special requirements of a variety of customers, with group benefits providing life and health insurance as employee benefits, reinsurance providing protection for insurance companies against risk, and annuities providing periodic payments over a specified period of time. This course presents a high level view of group insurance and pension plans, reinsurance, and annuities.
Insurance Basics, Underwriting, and Actuarial Practices	The global insurance industry provides protection for corporations, groups, and individuals, ensuring that risk can be mitigated and losses, if any, can be recouped. There are basic concepts associated with insurance, underwriting, and actuarial practices. These concepts form the basis for a thorough understanding of the practical uses of insurance, the purpose of risk assessment and mitigation, and the role played by insurance companies and their employees. This course presents a high-level overview of the basics of insurance, risk assessment, underwriting, claims, and actuarial science.
Futures Fundamentals: Commodity, Equity, and Currency Futures	Futures contracts have long been used by the agriculture industry to eliminate the price risks associated with farming produce. This elimination of price risks, known as hedging, has become a common practice in today's markets. Trading in futures has moved beyond its agricultural origins and is now a modus operandi for numerous trading parties whose incentives are to either decrease the risk factor by hedging, or to make a profit through speculation. Futures contracts form a significant trading sector in the global financial system. They now trade on various commodities, including energy, single stocks and stock indices, interest rates and currencies, and some more exotic benchmarks such as the climate. This course examines the fundamentals of futures contracts, including their pricing and quotation, and how they are used by hedgers as a protection against adverse price risks and by speculators as a means to increase profit through calculated risk. The course looks at commodity, equity, and currency futures.
Interest Rate Futures and Forward Rate Agreements	Management of interest rates is an important aspect for any financial institution that lends or borrows funds, as well as for those that invest in fixed income instruments and any other company that uses debt to fund its operations. Benchmark interest rates, which are set by economic authorities in various regions of the world, such as the London Interbank Offered Rate, can materially affect the bottom line profit of these companies. Interest rate management is an important activity for these companies. Using interest rates related activities, these companies can offset any adverse effects associated with interest rate movements. These products are also used by entities that wish to speculate on the movement of interest rates, essentially taking an educated bet on where interest rates may move to over a period of time, and profiting from such moves. This course examines the fundamentals of both long-term and short-term interest rate futures and their specifications, as well as their application in hedging and speculation. It also introduces and demonstrates how Forward Rate Agreements may be used by a corporation to lock in a funding rate into the future.
Life, Health, and General Insurance	Insurance is a form of risk management for individuals, families, and organizations, and even for insurers themselves through reinsurance. Life and health insurance companies offer their products so that the insured â€" the policyholders â€" can have peace of mind and protection from the inevitable consequences of life, such as personal injury, disability, health care costs, and death. This course presents a high-level view of key products and services associated with life, health care, long-term care, disability, and general insurance for individuals and organizations.
Commodity and Energy Markets and Derivatives	The commodities and energy markets are generally considered to be some of the largest markets in existence. Every day billions of dollars of commodities such as oil, coal, gold, and sugar are bought and sold between various traders acting on behalf of producers, manufacturers, and financial institutions. The derivatives market has seen explosive growth around these markets over the decades. Although traditionally used by farmers and other manufacturers to protect themselves against price movements that would affect their profitability, derivatives are now widely used by many financial institutions as a way to profit on speculation and arbitrage. Financial institutions, such as banks and hedge funds, are profit seekers by their inherent nature and are willing to take risks in return for these profits. Hedgers, on the other hand, look to protect themselves by removing risk or hedging. These two different points of view complement each other and have allowed the market to grow rapidly and become liquidâ€" for every hedger there is almost always a speculator willing to take the opposite side of the trade. This course covers the fundamental characteristics of the commodities and energy markets. We examine the types of underlying products that are traded, such as various metals and energy producing chemicals, and we also examine what they are used for. We then identify various financial contracts known as derivatives whereby these products may be bought or sold at a predetermined price, in specific quantities, and for delivery at a future date. The course focuses on the features of forward and futures commodity contracts and swap and option commodity contracts and their uses for hedging, speculation, and arbitrage.
Bank Branch Management: Payment and Settlement Systems	Arguably, the most important system in retail and commercial banking is the payment and settlement system. Payment and settlement systems are made up of a series of rules, processes, software, and hardware for transferring funds between two parties. They could be individuals, companies, and other banks in various geographies. There are many types of transfers including online banking, automated clearinghouse system, pre-authorized debts, direct deposits, debit card purchase or payments, and electronic check processing. Also, there are wholesale payment systems that deal with large-value electronic payments. With any financial transaction come different types of risks including credit, liquidity, legal or regulatory, and even reputational risks. This course examines the basic components of payment and settlement systems, the key principles of payment systems, and the risks associated with payment systems. This course also covers the types of payment and settlement systems including the types of electronic funds transfer, and the characteristics of wholesale payment systems.
Bank Branch Management: Mortgage and Auto Loans	Mortgages and auto loans make up the majority of the loans at retail banks. Mortgage loan components include the principal, interest rate, mortgage term, amortization period, and repayment schedule. Individuals applying for mortgage applications are considered for credibility, down payment, and income or expense ratios. With an approved mortgage comes responsibilities for both the borrower or mortgagor, and the lender or mortgagee. Auto loans are similar to mortgages. Assets and liabilities, securities attached to the loan, credibility, the debt-to-income ratio, and the repayment arrangements are key in the loan consideration. These are the two most common loans, and arguably the most valuable to a bank. This course examines the basic mortgage loan components, the mortgage application criteria, and borrower and lender responsibilities. The course also discusses auto loan components and the loan approval criteria.
Mutual Funds: Basic Concepts, Structure, and Types	Mutual funds are pools of money that investment experts professionally manage through investments in various securities such as stocks and bonds. The global acceptance of mutual funds is due to the ability of vast number of smaller investors to have their money professionally invested and offer a high degree of diversification and liquidity. There are many types of mutual fund, which allows investors to choose those that best fit their circumstances, for example, high risk-high return, low risk-low return, specific sector investments, global investments, fixed income, etc. This industry is ever-growing as more and more investors realize the advantages of professionally managed funds. This course covers an introduction to mutual funds, including their advantages and disadvantages. It then describes various costs associated with mutual fund operations including distribution, transaction, and portfolio management fees. The also course covers types of mutual funds including active management, passive management, equity, bond, hybrid, and global and international funds.

Course	Description
Mutual Funds: Portfolio Management and Accounting	Mutual funds have seen phenomenal growth over a number of decades, with no sign of it slowing down in the future. The key benefits to investors are that the funds allow for diversification, professional investment management, and asset liquidity. Equity and bond are the two most traditional types of mutual funds where active and passive investment strategies are employed. Active investment strategies require the investment managers to perform due diligence and apply financial and business acumen to increase the value of funds under management, whereas passive investment strategies focus on replicating an already established index of equities or bonds. An important aspect of mutual funds is accounting, which is centered around the accurate valuation of the fund's assets and the calculation of the Net Asset Value. The topics in this course cover equity mutual funds and the strategies used for their management such as replication, sampling, growth, and value. Bond mutual funds are introduced and corresponding strategies such as managing the duration and yield curve position are covered. Finally, the course introduces the main accounting functions of mutual funds and how the Net Asset Value is calculated.
Mutual Funds: Performance Evaluation and Regulations	Over the past few decades the mutual fund industry has seen extreme swings in performance, resulting in dramatic changes in the value of investors' portfolios. The risk versus return dynamics of a mutual fund must be carefully analyzed by any investor. The investors must consider whether the type of mutual fund they are about to invest in is appropriate for their objectives. In order to do so, the investor should assess the fund's historical return and the amount of risk that the fund has taken to achieve that return, as well as other critical factors. To assess all this information, investors must be able to read and understand the fund prospectus and any other complementary information that is provided by the fund manager and other public sources. The mutual fund industry is a highly regulated industry whereby financial authorities set rules and restrictions to improve transparency of transactions, in an effort to ensure the safety of investors' money. This course introduces a number of performance metrics such as Total Return, Sharpe Ratio, Treynor Ratio, Alpha, Standard Deviation, Beta, and R-squared, which are used to determine the risk and return characteristics of a mutual fund. The course then covers the basics of a mutual fund prospectus and Statement of Additional Information, along with an overview of global mutual fund regulations.
Microsoft Exchange Server 2013 - Core Solutions: Deployment	Exchange Server 2013 is Microsoft's latest release of their popular messaging and communications server. A variety of features have been added or expanded upon with this release, most notably the consolidation of server roles. This courses discusses the Exchange prerequisites and network requirements for installing Exchange Server in your organization. Also, demonstrated is the installation of Exchange Server 2013 and the new Exchange Administration Center (EAC). This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Exchange Server 2013 exam 70-341 Core Solutions of Microsoft Exchange Server 2013. This exam is one of the requirements for the MCSE: Messaging certification path.
Microsoft Exchange Server 2013 - Core Solutions: Mailbox Server Management	Microsoft Exchange Server 2013 Mailbox servers are used to host mailbox databases and address books, as well as provide unified messaging services, and message transport and routing. This course covers how the Mailbox server role integrates directly with Active Directory, and how the Client Access server sends requests from clients to the Mailbox server. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Exchange Server 2013 exam 70-341 Core Solutions of Microsoft Exchange Server 2013. This exam is one of the requirements for the MCSE: Messaging certification path.
Microsoft Exchange Server 2013 - Core Solutions: Client Access Servers	Microsoft Exchange Server 2013 consists of two server roles: the Client Access server and the Mailbox server. This course covers the architectural changes that are new in Exchange Server 2013, and focuses on the Client Access server role, and the variety of services it provides.This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Exchange Server 2013 exam 70-341 Core Solutions of Microsoft Exchange Server 2013. This exam is one of the requirements for the MCSE: Messaging certification path.
Microsoft Exchange Server 2013 - Core Solutions: Configuring Mobile Connectivity	Exchange Server 2013 supports a number of different methods that a user can implement to connect to their mailbox. Whether they are on their computer or using a mobile device there will be a supported way to access email. This course covers options such as Microsoft Outlook Web App, Outlook Anywhere and Exchange ActiveSync and discusses how to implement them in your environment.
Microsoft Exchange Server 2013 - Core Solutions: Message Transport	Microsoft Exchange Server 2013 relies on a variety of components and services to ensure reliable message transport. This course covers how message flow and message routing works, and discusses the role of the transport pipeline in Exchange Server 2013. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Exchange Server 2013 exam 70-341 Core Solutions of Microsoft Exchange Server 2013. This exam is one of the requirements for the MCSE: Messaging certification path.
Microsoft Exchange Server 2013 - Core Solutions: Access Control	Microsoft Exchange Server 2013 provides a variety of methods for administering Active Directory and Exchange Server in the same environment. By default the shared permissions model is used, but options are available that separate administration of Exchange and Active Directory. Exchange Server also includes many features that help prevent unwanted or spam email from reaching it recipients and these solutions are discussed throughout.
Microsoft Exchange Server 2013 - Core Solutions: High Availability and DR	Microsoft Exchange Server 2013 offers a variety of features to help ensure systems can survive failure and prevent data loss. This course covers the built-in high-availability features, as well as the disaster recovery, backup, and restore options in Exchange Server 2013. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Exchange Server 2013 exam 70-341 Core Solutions of Microsoft Exchange Server 2013. This exam is one of the requirements for the MCSE: Messaging certification path.
Microsoft Exchange Server 2013 - Core Solutions: Monitoring and Troubleshooting	Microsoft Exchange Server 2013 offers a variety of features to help monitor and troubleshoot messaging systems. This course covers how to configure and manage Exchange workload, as well as the various options to monitor and troubleshoot Exchange related issues. This course is one of a series in the SkillSoft learning path that covers the objectives for the Microsoft Exchange Server 2013 exam 70-341 Core Solutions of Microsoft Exchange Server 2013. This exam is one of the requirements for the MCSE: Messaging certification path.
Banking Supervision and Corporate Governance	With the rapid growth of the banking industry in the early 21st century, it became clear that increased banking supervision was required. This increased supervision was also necessary to ensure that the global financial framework would remain intact even at times of great market turmoil and bank failures. The Basel Committee on Banking Supervision, which is considered to be the global banking industry standard setter, has created a number of core principles which it believes will lead to good corporate governance and best practices in the banking sector. This course examines the core principles and the self-assessment methodologies set forth by the Basel Committee. This course also describes key core principles in depth including corporate governance, disclosure and transparency, and the supervisory approach.
Special Banking Risks and their Management	As they emerged from the banking crisis that originated in 2007, banks around the world were fully aware of the importance of proper risk management techniques. They realized that the key to managing any risk is the proper identification of the risk. Today, financial institutions continue to face both internal and external risks, including credit risk, operational risk, and market risk. As a result, banks are encouraged to develop systems and processes that will mitigate and control these risks and to appoint qualified staff who can recognize, measure, and manage them. This course introduces common and special risks that banks face, including credit, operational, liquidity, foreign exchange, leverage, systemic, and technology risks. The course emphasizes the need to recognize these risks and their origins. It then introduces a general risk management process for a bank and identifies methods that banks can use to manage foreign exchange risk and technology risk.
Internal Control and Audits in Banks	Internal controls and strong corporate governance lead to effective and efficient bank operations in which risks are properly managed and depositors' assets are safeguarded. These best practices ensure that all stakeholders can put their trust in the financial system. The banking crisis and rapid growth of the banking industry at the beginning of the 21st century created the need for banks to develop strong internal controls and establish good corporate governance. Banks must be audited, both internally and externally, to assess the state of internal controls and corporate governance and address any identified weaknesses. This course introduces internal control processes and internal and external auditing of banks within the prescribed framework of published guidelines by the Basel Committee on Banking Supervision.
Anti-money Laundering and Global Initiatives	Money laundering is an illegal process of using legitimate means to conceal the true source of funds that are acquired through illegal activities, including drug trafficking and terrorism. This activity has grown and become more sophisticated as it keeps pace with modern technology, leaving authorities world-wide with the difficult task of trying to stay one step ahead of the criminals. Various unreliable estimates have been produced to measure this practice globally, with some estimates quoting sums as large as percentage points of the global economy. Because of this, countries across the world have created joint programs to combat and prevent money laundering. This course introduces the concept of money laundering and identifies the different types, enabling circumstances and common indicators for this activity. It also acknowledges global initiatives such as the Financial Action Task Force, the Basel Committee, and the International Money Laundering Information Network, among others, that set recommended actions to prevent and combat money laundering. The course then discusses the Customer Identification Program under the US Patriot Act.
Anti-money Laundering and Regulatory Framework	There is a constant battle between criminal and terrorist groups and global authorities around the movement of illicitly gained funds. Money laundering and terror financing are two of the most important regulatory issues that financial institutions, particularly global banks, must deal with. Various government initiatives worldwide have established strict rules on the transfer of funds and confirmation of fund sources and client identity. Sources in the industry estimate that many billions of dollars of illicit funds and funds used for terrorist activities change hands every year. This course introduces the major global anti-money laundering initiatives and regulations, and how these aim to curb global money laundering and terror financing. These initiatives and regulations include the Bank Secrecy Act, the USA PATRIOT Act, and the Wolfsberg Anti-Money Laundering Principles, as well as other national regulatory initiatives around the world.
Capital Adequacy Planning Approaches	Banks and financial institutions are exposed to a number of credit, operational, and market risks. The three Basel regulations – Basel I, II, and III – adopted a rigorous approach in their attempt to provide a reliable and risk-managed operating framework. They require banks to maintain an adequate capital level at all times in order to cover their aggregate risk. A number of approaches are used for identifying and measuring risk, then planning the capital requirement for the bank based on that risk. This course provides an overview of various approaches used for capital planning. More specifically, it presents components of the standardized measurement approach, the IRB approach, and the advanced IRB approach. It also aims to identify market risk and the capital requirement to cover that risk. Finally, the course outlines the risk-adjusted return on capital to quantify the amount of capital necessary to support all of a bank's operating activities.
Basel Regulations and Capital Adequacy Requirements	Banks are required to maintain an adequate capital level at all times to protect depositors and creditors, including other banks, from exposure to risk. A set of international banking regulations, known as Basel I, was introduced in 1988. This accord recommended a minimum capital requirement of 8% of risk-weighted assets for banks operating internationally. The way in which the adequate capital requirement for banks is calculated has changed dramatically since then. Following a series of revisions and impact analyses, implementation of a new set of regulations, Basel II, began in 2007. Basel II aimed to strengthen the stability of the international banking system through capital requirements that were aligned closely to the underlying credit, market, and operational risks. Basel III began implementation in 2013 and lays down stricter capital standards, additional capital buffers, and higher risk-weighted assets and minimum capital ratio requirements. This course provides an overview of the main features of the Basel regulations relating to capital adequacy requirements. It discusses various elements of Basel I, including the approach for determining capital adequacy and on-balance-sheet and off-balance-sheet items and associated risks. The course then identifies factors that led to the development of the Basel II and Basel III standards. Finally, the course examines the impact of the Basel regulations on capital requirement for banks.
Derivative Contracts: Futures, Forwards, Swaps, and Options	A derivative contract, or derivative for short, is a bilateral contract that derives its value from an underlying security – a stock, bond, or a commodity – and is used for managing risks associated with these securities. Derivatives have seen a phenomenal growth over the past few decades. Traditionally, they are used for protecting banks, financial institutions, and traders from adverse movements in the price of financial instruments and commodities. In other words, derivatives are generally used for hedging purposes. However, more recently they have also been used by sophisticated investors to speculate on price movements of reference assets or to employ strategies for riskless profit, called arbitrage. In this course we examine some generally used categories of derivatives – futures, forwards, swaps, and options, and their applications. We examine pricing, margin requirements, mark-to-market, and cash flow calculations along with important considerations and characteristics of these products.
Credit Analysis and Loan Pricing and Regulations	The credit crisis of the early 21st century has been a stark reminder to financial organizations of the inherent risks involved in extending large amounts of credit. Banks have revisited their credit procedures and have a renewed emphasis on credit analysis and pricing loans correctly to reflect the associated credit risks. A robust credit risk analysis process will ensure that banks can better judge the amount of credit risk that they are willing to undertake and what kind of measures they should take to protect themselves from such risks. It is also important for banks to understand lending regulations that are set up to protect them from holding illiquid assets and becoming insolvent. This course introduces the basics of credit analysis and the general process for conducting it. It then discusses the components of loan pricing and describes how banks' lending policies are regulated by the banking authorities.
Measuring Credit Risk of Derivative Contracts	The size of the global derivatives market has by some estimates reached a notional value of a quadrillion dollars. Among the primary users of derivatives are commodity-based corporations, banks, pension funds, insurance companies, mutual funds, hedge funds, and private investors. The credit worthiness of different parties to these contracts has been under focus since the credit crisis of 2008, which led to many institutions going bankrupt due to a lack of focus on credit risk. Credit risk has emerged as the major risk in dealing with derivative contracts. In order for derivatives users to manage the associated credit risk, they must develop models and procedures required to measure credit risk in monetary terms. This course identifies the sources of credit risk in widely used derivatives, with a distinction made between over-the-counter versus market traded derivatives. The course also introduces the credit equivalent risk framework, which utilizes statistical techniques to determine a risk factor that is used as an input to determine potential credit loss. In determining potential credit loss, the course also considers the probability of default and recovery rates determined through a credit rating process, analysts' judgements, and other information sources.
Mitigating Credit Risk	Over the past decade, credit risk has become a main focus for many financial institutions, most notably banks. Credit risk occurs when there is a possibility of a borrower or counterparty to a transaction being unable or unwilling to perform their financial obligations. Utilizing credit risk mitigation techniques, financial institutions are able to minimize what could otherwise be substantial losses when the credit markets or particular borrowers are under pressure. The losses may sometimes be large enough to render a company insolvent and put it out of business. Mitigating the loss due to credit risk ensures that if conditions deteriorate, the financial institution will be able to recover quickly or even remain unaffected. This course introduces two main sources of credit risk: pre-settlement risk and settlement risk. It also investigates various methods for mitigating credit risk, such as netting, margins, collateral, and hedging.
Credit Rating Systems and Capital Reserves	When dealing with other parties, banks and other financial institutions face a variety of risks. The most relevant of these is credit risk. The global expansion of sophisticated products, such as derivatives and a host of other products, has further fueled the rise in transaction values. This poses a real threat to a company's well-being, regardless of its size. Emerging from the credit crisis of 2007, which saw a number of financial institutions, both large and small, fail due to unmanageable credit losses, it has become paramount for organizations to track and manage credit risk. In addition, new global banking rules are in place to guide various financial institutions towards best practices for credit risk management. Under current international banking regulations, credit ratings of counterparties have become ever more important in determining how much capital reserves financial institutions should set aside to protect themselves from potential counterparty defaults. This course focuses on external credit rating agencies and the process by which credit ratings are determined. It discusses how credit ratings are used to calculate credit risk, which in turn allows the banks and financial institution to determine how much capital they need to cover their risk. The course also discusses the use of an internal credit rating process to determine capital reserves.

Course	Description
Financial Analysis for Credit Risk Determination	Making credit decisions requires both quantitative and qualitative analysis. A diligent credit analysis coupled with strong credit policies will typically reduce a financial company's credit risk. Quantitative analysis includes financial statement analysis (FSA). Banks and other financial institutions use FSA techniques frequently in performing their credit decisions. FSA is used to determine the financial state of a company and how it compares to its peers. It consists of techniques that include financial ratios and cash flow analysis. Key financial ratios are used to assess the company's profitability, ability to pay back interest and debt, and the levels of leverage that the company deploys. In the context of credit, the cash flow analysis provides information on whether the company can generate enough funds to increase their debt load. This course gives a brief overview of the structure of a company's financial statements, including the income statement, balance sheet, and cash flow statement. The course introduces financial statement analysis and some of its components, such as ratio analysis and cash flow analysis. Ratio analysis includes financial ratios that are indicative of the company's liquidity, solvency, profitability, and efficiency, and how these ratios are analyzed both historically and also compared to the company's peers. The course also covers two different methods of calculating the company's free cash flows, an important indicator determining whether the company can add to its debt load.
Nonfinancial Credit and Asset Analysis	Making credit decisions requires proficiency in both quantitative and qualitative analysis. Qualitative analysis is a nonfinancial credit analysis that complements the quantitative analysis and is regularly used by banks and other financial institutions that lend money to businesses. In addition to other information about the entity, the analysis also reveals important information such as whether the business being analyzed has competent management and whether it is likely to produce enough cash flow to service any credit that may be extended. After credit decisions have been made, credit analysts must constantly monitor the quality of the loan portfolio to ensure that the bank does not take on any unnecessary risk. This involves ranking loans according to their quality, as well as ensuring that enough bank reserves are put aside to protect the bank from possible defaults. This course introduces nonfinancial credit analysis and includes the Five Cs used to assess credit risk, as well as Porter's Five Forces that assess the competitiveness of a business. It then looks at a framework for evaluating the management of the business to determine its competence in performing its duties. Finally, the course briefly examines the process for analyzing asset quality in a bank's lending portfolio and classifying assets according to their level of credit risk.
Problem Loans and Risk Analysis for Common Loans	Problem loans affect the bottom line profitability of banks. Therefore, it is vital to identify these loans and determine the reasons why they occur. Warning signs typically exist that may inform loan portfolio administrators of impending issues with consumer or business loans. When loans do become problematic, there are certain measures that banks can take to protect themselves, such as restructuring debt, liquidating, or securing assets. Such techniques were widely used during the global credit crisis of the early 21st century, and continue to be relevant in a contemporary credit risk management setting. It is important for analysts to understand the different kinds of consumer loans and tools such as credit scorecards that assist in determining the credit risk level of borrowers. This course introduces non-performing loans and gives an overview of their warning signs. It also describes ways that banks can protect themselves from non-performing loans and minimize any associated losses. It then identifies types of consumer loans and how consumer credit scorecards are used to distinguish high risk borrowers from low risk ones.
Risk Analysis for Specialized Loans	Asset-based loans, such as accounts receivable loans and inventory-based loans are ways for companies to free up cash flow that can be used for funding other working capital requirements. These specialized loans, in which a company's noncash assets that are expected to be converted to cash sometime in the future â€" such as accounts receivable and inventory â€" are converted into cash by a bank. This type of lending is generally used when lending from other places in the market is difficult or impossible. Another form of lending is participation lending, which allows many banks to control their credit risk by contributing smaller amounts to a larger loan. In case of a default, the funds at risk are much smaller than if one bank took the whole loan upon itself. This course introduces accounts receivable and inventory-based loans and the ways to analyze risks associated with these. It then investigates participation loans and focuses on critical points that an analyst must consider when dealing with participation loans.
Microsoft SharePoint Server 2013 - Core Solutions: Information Architecture	SharePoint Server 2013 builds upon previous releases to provide new ways of sharing information, organizing projects, and discovering people and information. This course covers the latest editions of SharePoint 2013, and the new features and architecture changes found in each edition. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint path.
Microsoft SharePoint Server 2013 - Core Solutions: Logical and Physical Design	When rolling out SharePoint 2013, logical and physical design aspects must be carefully planned and documented. This course is intended to guide you through the process of planning the logical and physical design of a SharePoint Server 2013 implementation. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint track.
Microsoft SharePoint Server 2013 - Core Solutions: Installation	SharePoint Server 2013 builds upon previous releases to provide new ways of sharing information, organizing projects, and discovering people and information. This course covers the installation options available in SharePoint 2013, as well as farm configurations, and e-mail and mobile device services. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint path.
Microsoft SharePoint Server 2013 - Core Solutions: Web and Service Applications	SharePoint Server 2013 builds upon previous releases to provide new ways of sharing information, organizing projects, and discovering people and information. This course covers creating and configuring web applications and service applications in SharePoint 2013. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint track.
Microsoft SharePoint Server 2013 - Core Solutions: Authentication	SharePoint Server 2013 includes a variety of built-in security features to help secure sensitive and confidential information. This course covers the various authorization and security features found in SharePoint 2013, as well as user and content management. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint path.
Microsoft SharePoint Server 2013 - Core Solutions: Security and Taxonomy	SharePoint Server 2013 includes a variety of built-in security features to help secure sensitive and confidential information. This course covers the various security feature used to hardened web sites and farm configurations, as well as metadata and taxonomy features used to categorize and classify information. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint path.
Microsoft SharePoint Server 2013 - Core Solutions: User Profiles and Search	SharePoint Server 2013 social features enable organizations to quickly gain information on projects, team processes, and development schedules. This course covers user profiles, and My Site features that allow each user in an organization to have a personal site. This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint path.
Microsoft SharePoint Server 2013 - Core Solutions: Maintenance and Monitoring	SharePoint Server 2013 includes a variety features used to help monitor and optimize a SharePoint Server 2013 environment. This course covers how to properly create a maintenance plan, diagnostic and logging tools, and troubleshooting and tracing solutions This course is one of a series in the SkillSoft learning path that covers the objectives for the SharePoint 2013 exam 70-331. This exam is one of the requirements for the MCSE: SharePoint path.
Credit Derivatives and Credit Risk	Credit derivatives have gained increased attention over the past decade primarily due to the need for major financial institutions to transfer credit risk off their books. These financial contracts are also widely used by speculators to profit from potential credit events. It has become imperative for major financial institutions to recognize the need to measure credit risk using traditional and contemporary models. Credit risk measurements allow the financial institutions to determine what type of credit derivatives to use and how to price them. It is important for analysts to distinguish between the different types of credit derivatives such as Credit Default Swaps, Total Return Swaps, Credit Linked Notes, Synthetic Collateralized Debt Obligations, and others. In addition to this, analysts must have a good understanding of the types of credit risk models that exist. This course gives an overview of credit risk and how credit derivatives assist in transferring credit risk to other parties. It briefly covers major types of credit derivatives including credit default swaps, total return swaps, spread and bond options, credit-linked notes, principal-protected structures, repackaging vehicles, and synthetic CDOs. The course introduces various credit risk models and gives an overview of the Altman's Z-score model and neural networks.
Classical Credit Derivatives and Total Return Swaps	Credit derivatives have seen immense growth over the past decade. They are used by hedgers to protect against credit risk and by speculators to take on credit exposure in the hope of earning high returns. Credit derivatives are also used by other financial institutions, such as banks, as a means of funding. Credit derivatives typically reference fixed income securities as a contract's underlying asset because of the inherent credit risk that arises from fixed income security ownership. Total return swaps have emerged as one of the most commonly known, and used, types of credit derivative due to their versatility and effectiveness in transferring credit risk from one entity to another. This course introduces some classic credit derivatives, such as asset swaps, basket and portfolio swaps, and principal protected notes, and also focuses on total return swaps and their applications. The course commences with an overview of debt instrument basics, which provides the basis for understanding its association with credit derivatives.
Securitization and Asset-backed Securities	Securitization has become one of the leading tools used by banks and other financial institutions to manage their balance sheet by transferring assets off the balance sheet â€" typically loans. The securitization process and the products involved are highly complex financial tools and transactions, which can limit investors' ability to monitor and manage risk. Securitization became a widespread practice in the 1970s, although examples of it can be found much earlier. It has experienced immense growth globally, by some estimates to around $13 trillion. Securitizations involving mortgages and other assets, such as credit card receivables, housing and auto loans, airline receivables, and student loans, have become common place. Securitization brings many advantages to the issuer in the form of lower funding costs, reduction in asset and liability mismatching, as well as lower capital requirements and transfer of credit risk. This course introduces the concept of securitization and important aspects relating to it, such as the role of a special purpose vehicle and note tranching. It examines mortgage-backed securities (MBS) and the major risks faced by investors. Different asset-backed security (ABS) structures, which include securities backed by credit card receivables, home equity loans, auto loans, and student loans, are presented at a high level. Then, the course presents the structure of collateralized debt obligations (CDOs) that include collateralized bond obligations (CBOs) and collateralized loan obligations (CLO), as well as how regular CDOs and Synthetic CDOs are used for arbitrage and balance sheet transactions.
Credit-linked and Repackaged Notes	The structured derivatives market gained traction in the early 2000's due to its ability to convert security features, primarily cash flows and maturity, to meet investors' specific needs. This market is composed of complicated combinations of securities and derivatives, allowing for a large degree of flexibility to cater to investor demands. Because potential risks have also become increasingly complicated to identify and measure, it is important for individuals involved in these structured deals to have a good grasp of the dynamics of various transactions and how they may be altered when packaged with others. This course provides an introduction to the basics of credit-linked notes (CLN) and their variations and structures, including total return swap-based CLNs and default-based CLNs. The course also provides an overview of repackaged notes and other synthetic structures dealing with the packaging of derivatives with assets such as synthetic bonds, and callable and puttable asset swaps.
Credit Default Swaps and Credit Spread Options	Credit Default Swaps have emerged as the most widely used credit derivatives in the financial markets. They provide banks and other financial institutions with the means to transfer credit risk off their books and to diversify their financial portfolios. These products are also extensively used for additional yield generation through the receipt of premiums, as well as to speculate on credit spread curve fluctuations. Options on credit default swaps, known as swaptions, have become popular as an extension of swaps, which provide channels for credit spread strategies to hedge and speculate credit risk. The use of credit spread options and credit spread futures has increased the demand for credit derivatives. They are most frequently used by international banks and investment houses to manage and profit from credit events. This course provides an overview of credit default swaps, swaptions, and constant maturity credit default swaps, and also covers how they work and their typical payoff profiles. It then introduces the two categories of credit spread options: those that reference obligations with fixed credit spreads and those that reference the level of credit spread on the reference obligation. Credit spread forwards contracts are also briefly covered.
Credit Derivatives Applications	The ongoing rapid growth of credit derivatives, which began in the late 1900s, has primarily been fueled by the requirements of large international banks to manage their regulatory capital requirements and increase the efficiency of their capital reserves. This has led to a wider acceptance of these instruments, mainly as a means to remove credit risk off the books of one entity and onto the books of another who is willing to accept it. In addition to large international banks, many smaller regional banks and insurance and reinsurance providers, as well as institutional investors, hedge funds, and corporations, have become the users of credit derivatives. This course gives a brief overview of the general characteristics of credit derivatives and the market for them, including the major participants and the roles they play. It also examines various credit risk applications from banking, investor, and corporate applications.
Credit Derivatives: Pricing and Operational Issues	Credit derivatives were introduced in the early 1990s and have been widely adopted as a means for transferring credit risk exposure from one market participant to another. Before this time, these products were primarily used by banks to reduce the credit risk inherent in their loan portfolios. Credit derivatives have since evolved to include an array of different structured products that can be greatly tailored to the user's specific needs, and are used by a variety of entities wishing to hedge, speculate, or profit from arbitrage. By 2005, the growth of credit derivatives outgrew the processing capabilities of firms offering these products, both in terms of technology and people. These products are highly complex to price, and human errors and system failures can lead to enormous financial losses. This course introduces the general risks generated by credit derivatives, including credit risks, default risks, modeling, and legal risks. It briefly covers some pricing techniques for several widely used credit derivatives, including credit default swaps, asset swaps, and bond options. The course concludes with an overview of operational issues, such as technology requirements and testing procedures, as well as the transaction process and issues arising from unconfirmed trades.
Credit Derivatives: Regulatory, Legal, and Taxation Issues	Credit derivatives are highly complex financial instruments used to transfer credit risk from one entity to another. These instruments are defined as contracts that are traded over-the-counter between private parties. Due to their private nature, the inherent risks posed by such agreements have forced regulators to address legal, accounting, and tax issues related to these agreements. Standardized documentation and definitions have been created to allow for mutual understanding between the two parties and try to remove any vagueness in the contract details that may prove detrimental to either party. Standardization will never be complete for such agreements due to the specific requirements of different users from one contract to another; however, they hope to build on a mutual solid foundation while still allowing flexibility to meet end user requirements. Because proper accounting and taxation treatment of these products is constantly evolving, professional judgment plays a great role in these areas. This course introduces regulatory documentation set out by the International Swaps and Derivatives Association (ISDA) and the legal issues that may arise due to a lack of proper documentation and understanding between two parties. It also examines the issue surrounding the definition of restructuring as a credit event. The course briefly covers regulatory issues, including centralized clearing mechanisms and collateral margins, and the accounting treatment and tax issues regarding credit derivatives.
Managing Resource Utilization in Linux	As a Linux administrator, the systems you manage will be used by a number of clients playing varying requirements on the resources of your server. Administrators must be able to monitor resource utilization in order to both mitigate any issues that may arise, as well as predict and plan for future resource requirements. This course covers the tools available within Linux to determine issues that may be limiting available resources as well as monitoring these resource usage over time. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 201.
Booting Linux and Installing Applications from Source	As a Linux System Administrator you'll sometimes require a specific piece of software, or specific version of software that is not available as a binary from your Linux distribution's repository. In this situation, compiling your own binary directly from the source code may be the only way to obtain this application.This course covers the prerequisites required to compile software on your system, as well as how to extract and build software from source. A number of alternative bootloaders aside from the now standard GRUB bootloader are also discussed. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 202.

Course	Description
E-mail and Security in Linux	Linux has networking and system security as two of its fundamental design goals. Linux functions as the e-mail server for a large number of businesses and organizations. Those wishing to provide POP3 and IMAP mail access often turn to a system such as Courier or Dovecot to provide these services. This course demonstrates how to configure these systems. In addition, because of its strong-networked and secure framework, Linux can be configured as an excellent network router for small to medium applications. This course demonstrates how to configure Linux as a router and also provides the learner with the groundwork for securing and testing the security of a Linux installation. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 201.
Linux Kernel Compilation and Linux Startup	As a Linux System Administrator, you may find that there are times you need to update or customize your Linux kernel for new features, bugfixes, or optimal performance. This course covers the tasks involved in building, patching, and customizing a Linux kernel. In addition, it also covers customizing and troubleshooting booting a Linux system. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 201.
Linux File Sharing and Filesystem Management	As a Linux System Administrator, managing, protecting, and proving access to the files and data of your users is paramount. This course covers the creation, maintenance and configuration of filesystems in Linux as well as configuring file sharing via Samba and NFS. In addition, this course also covers configuring DHCP service. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 201.
Linux Network Configuration	As a Linux System Administrator, you will need to setup and configure network clients and DNS services. This course covers the tasks involved in basic and advanced options for configuring Linux network clients and DNS services. In addition, it also covers configuring a Linux DNS server. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 201.
Linux Network Services	As a Linux System Administrator, configuring servers to provide services and improve the work environment for your users is a common task. This course describes configuring mail services such as Sendmail and Postfix. It also covers The configuration of the Apache web server, Nginx HTTP and reverse proxy server, as well as the Squid proxy server. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 202.
Linux System Maintenance and Hardware Configuration	As a Linux System Administrator, you will need to add and configure hardware within your servers. This course will give you an understanding of these topics, as well as configuring software RAID, system logging, packaging software, and creating a plan for system backups. This course is for people taking the Advanced Level Linux Professional (LPIC-2) Exam 202.
Linux Security	As a Linux System Administrator, the security of your systems and the information on them is of utmost importance. This course covers a myriad of security topics including NIS, LDAP and PAM, as well as firewall configuration. In addition it also covers securing FTP, OpenSSH and TCP Wrappers. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 202.â€‹
Linux System Troubleshooting	As a Linux System Administrator, you will encounter times when for various reasons your system isn't behaving as it should. This course covers troubleshooting various aspects of a Linux system from boot problems to network configuration issues as well as general system configuration and shell problems. This course is for people taking Advanced Level Linux Professional (LPIC-2) Exam 202.
Oracle Database 12c: Enterprise Manager Cloud Control and Creating CDB and PDB	Oracle Database 12c has introduced a number of new features to their management system to maintain the lead in the industry new trend-setting products. Two of these are the Enterprise Manager Cloud Control and Multitenant Container Databases. Enterprise Manager Cloud Control is designed for cloud computing allowing the Oracle Database 12c to be managed through a complete, pre-integrated, off the shelf private cloud solution. Oracle Multitenant allows Oracle to contain a set of portable schemas, objects, and related structures, which appear as separate databases to an application. The self-contained collection is called a Pluggable database and the multitenant container contains one or more of these PDBs. This course describes the Enterprise Manager Cloud Control and Multitenant Container architectures and demonstrates of to use these two new features, including creating CDP and PDBs using different methods. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: Managing CDB and PBD, and Data Optimization	Oracle database contains the Oracle Multitenant feature, which enables Oracle database to contain a portable set of schemas, objects, and related structures that appear logically to an application as a separate database, called a Container Database or CDB. CDB contains pluggable databases or PDBs. Database administrators need to understand how to manage this new option. This course will demonstrate how to connect to, start and shut these databases down, as well has how to manage their tablespaces and users. It will also demonstrate how to backup and recover them for different media failure situations. This course is one in a seriesin the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: Using Automatic Data Optimization, Storage, and Archiving	Oracle Database 12c offers multiple features to enable customers to implement an ILM strategy. These features include Heat Map and Automatic Data Optimization to create policies, as well as In-Database Archiving and Temporal Validity to archive data. This course describes how to use Heat Map and ADO to implement an ILM strategy along with partitioning and compression. It also describes how to use the Online Move data file, Online Move partition, In-Database Archiving, and Temporal Validity features to manage database storage and data archiving. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: Managing Security	Oracle Database 12c has provided some new security features to better enable security within a database instance. This includes unified auditing to consolidate all audit trails and to improve auditing performance, new administrative privileges and the ability to analyze privileges on users. It also provide a feature called Oracle Data Redaction, which enables sensitive data to be shielded from applications and users on-the-fly before results are sent to the end-user or application. This course will discuss and explain how to use and implement these features in Oracle Database 12c. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: High Availability and Database Management	An important part of managing an Oracle Database instance is ensuring high availability and manageability. In Oracle Database 12c new features and enhancements have been added to the RMAN client utility to ensure for better back up and recovery of databases. It has also added the Real-Time Database Operation monitoring to allow administrators to monitor database operations. Oracle has also provided the Oracle Enterprise Manager 12c Database Lifecycle Management pack which allows for processes to be automated to manage a database lifecycle. This course will discuss how to use the new features of RMAN, Real-Time Database Operation Monitoring, and schema and change management. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: Tuning SQL and Using ADDM	Oracle Database 12c provides many new features, like SQL Plan Directives, to make tuning and monitoring SQL easier. Other improvements include enhancements to the Automatic Database Diagnostic Monitor (ADDM) which now includes Emergency Monitor, Real-Time ADDM, Compare Period ADDM, and Active Session History (ASH). This course discusses how to use these new and improved features in Oracle Database 12c to monitor and tune SQL and the database. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: Resource Manager, Online Operations, and ADR	Oracle Database 12c introduces several Resource Manager enhancements to handle resources within CDBs and PDBs. There's a new multiprocess multithreaded Oracle architecture and enhancements to the Database Smart Flash Cache and undo segments. And there are new features for tables and indexes to help to diagnose database data and improve network traffic. This course will discuss and show how to use these new and enhanced features. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Oracle Database 12c: Transporting Databases and Managing Data	Oracle Database 12c offers new and enhanced features providing better importing and exporting of databases and data. These features include support for CDB and PDBs and better handing of the data being moved. Also provided are better features to allow DBAs to create and manage partitioned tables and indexes and stored large amounts of data within a column. This course will discuss the new and enhanced features of Oracle Data Pump, SQL*Loader and external tables. It will also demonstrate how to use the new features for partitioned tables and indexes and SQL. This course will show and show how to use these new and enhanced features. This course is one in a series in the SkillSoft learning path that covers the objectives for the 1Z0-060: Upgrade to Oracle Database 12c certification exam.
Overcoming Resistance to Coaching	Overcoming Resistance to Coaching
Gaining Access through Cold Calls	Gaining Access through Cold Calls
Effective Sales Coaching	Effective Sales Coaching
COMPLIANCE IMPACT: Information Security â€" The Break-In	Given the global nature of commerce and the volume of electronic information routinely exchanged every day, data security has never been a more critical business issue. This Compliance Impact dramatizes how a simple act of carelessness can cause a serious data breach.
IRB Framework and Risk-rating System	When banks and other financial institutions offer loans, leases, and other credit related services, counterparty credit risk is arguably the most significant risk that they face. The Basel regulations, specifically Basel II and III, stress the need for a strong risk measurement and supervision framework and recommend banks follow one of two approaches. The first approach, called the standard approach, requires banks to use ratings from external credit rating agencies to determine minimum capital required to cover their credit exposures. In contrast to this simplistic approach, the second approach, called internal-ratings based (IRB) approach, relies on internal risk rating systems developed by the banks themselves. Banks are required to categorize their risk exposures in categories such as corporate, sovereign, bank, retail, and equity. The estimation of key risk components or parameters such as probability of default, loss given default, exposure at default, and maturity is also required. This course presents a high level view of IRB approaches, rating systems, and related concepts. The course covers the foundation IRB and advanced IRB approaches, and discusses related concepts such as banking-book exposures and risk components. The course also goes on to discuss key components of an IRB system and the rating system design for a bank.
COMPLIANCE IMPACT: Respectful Workplace â€" Reuben's Story	As an employee, it is important for you to act respectfully toward all your coworkers, whether they're located in the next office or on the other side of the globe. This Compliance Impact dramatizes ways in which disrespect can occur in the workplace.
COMPLIANCE IMPACT: Antitrust â€" Rigging the Bid	Antitrust and competition laws have a broader scope than you might realize. They apply not only to corporate-level mergers and acquisitions, but also to proposals you might be drafting or bids you're submitting. This Compliance Impact demonstrates the importance of being aware of antitrust guidelines when engaging with competitors.
COMPLIANCE IMPACT: Insider Dealing â€" The Tipping Point	Illegal insider dealing can have serious consequences for individuals and companies, so it's important to understand what it is and how to avoid it. This Compliance Impact experience follows characters who compromise themselves and their organizations through illegal insider dealing.
COMPLIANCE IMPACT: Conflict of Interest â€" Just Helping a Friend	A conflict of interest is a problem of divided loyalties or conflicting obligations â€" for instance, your interests and those of your organization. Being aware of the potential for conflicts of interest in your workplace and knowing how to respond appropriately if they arise can help you avoid any negative consequences. This Compliance Impact follows an employee as she enters into a conflict of interest situation.
COMPLIANCE IMPACT: Reasonable Accommodation â€" The Ask	In an increasingly diverse workplace, managers must operate with sensitivity in handling accommodations for disabilities, religious practices, and medical leave. This Compliance Impact shows the types of situations that can trigger legally mandated accommodation and explains how to respond appropriately.
Mentoring 77-428 Excel 2013 Expert Part	Mentoring 77-428 Excel 2013 Expert Part Two
COMPLIANCE IMPACT: Bribery â€" The Shipment	Bribery is any attempt or action to give, pay, or promise something of value with the intent to influence a business decision or gain a commercial advantage. This Compliance Impact experience dramatizes a situation where people behave inappropriately to expedite delivery of a shipment that's been held up in customs.
COMPLIANCE IMPACT: Using the Internet â€" Beware the Share	While the Internet has transformed how we share information, there are potential risks associated with using it in the workplace. You need to protect your own and your company's best interests when using Internet technologies. This Compliance Impact dramatizes some situations where employees' use of the Internet poses a threat to their companies.
COMPLIANCE IMPACT: Business Ethics â€" Adjusting the Figures	Ethics has a foundational role to play in today's corporate culture. Being able to respond appropriately to situations that present ethical risks will help you contribute to a positive business environment. This Compliance Impact demonstrates how employees' unethical actions can result in severe and negative consequences.
COMPLIANCE IMPACT: PCI â€" Verifying the Transaction	The payment card industry (PCI) is booming with people using credit and debit cards with increasing frequency for all sorts of transactions every day. Unfortunately, the prevalence of credit and debit card usage creates opportunities for fraud, theft, privacy violations, and counterfeiting. This Compliance Impact gives guidance on ways to protect payment card information during transactions.
COMPLIANCE IMPACT: Workplace Violence â€" The Warning Signs	According to the Bureau of Labor Statistics, in the US, 17% of the 4,609 work-related deaths in 2011 were attributable to violence, of which 458 instances were homicides. Workplace violence includes a range of acts such as assault, bullying, and harassment. Understanding more about workplace violence and how to react when it occurs can help make the workplace safer for you and your coworkers. This Compliance Impact dramatizes an incident of workplace violence and explores how to prevent and respond to violent crises.
Data Maintenance and Oversight for IRB Systems	Banks that adopt the IRB approach to determine regulatory capital rely on their internal systems for assessment of credit risk. In order to produce reliable risk estimates, these IRB systems are subject to strict validation and data management practices. The two most significant of these practices are data maintenance and control and oversight. Effective IRB data maintenance encompasses sufficient checks and balances during collection, storage, retrieval, and analysis of essential data for obligors and facilities throughout the entire data life cycle. A control and oversight mechanism ensures that the various components of the IRB system are functioning properly. This course introduces various aspects of data maintenance, control, and oversight mechanisms for IRB systems. It illustrates the life cycle tracking for data and discusses the role of data in the IRB system. The course also outlines various Basel guidelines for ensuring data quality and integrity, and independence, transparency, reviews, audits, and corporate oversight of IRB systems.
Basel Regulations and Operational Risk Management	Operational risk is a significant risk that banks and other financial institutions face. Basel regulations, specifically Basel II, have established principles and guidelines for holding adequate capital to cover losses that arise from operational risk events. There are two broad categories of operational risk activities: measurement and management. Operational risk measurement involves quantitative assessment of operational risk and is used for determining regulatory capital. On the other hand, operational risk management involves a qualitative assessment of operational risk and a system to manage that. A successful operational risk program under Basel II combines quantitative and qualitative approaches to ensure operational risk is effectively measured and managed. This course discusses various aspects of operational risk management and measurement as outlined in Basel II regulations. It identifies key operational risk events and sources, and common risk measurement methods. It then introduces aspects of the operational risk management framework and Basel II principles for managing operational risk in banks. These principles deal with developing an operational risk management environment, as well as the governance, continuity, and disclosure of operational risk in banks.
Operational Risk and Advanced Measurement Approach	Basel regulations, specifically Basel II, establish principles and guidelines for banks to calculate their minimum capital requirements for credit, market, and operational risk. Operational risk represents the risk of financial loss resulting from inadequate or failed internal processes, people, and systems or from external events. Depending on the level of sophistication of individual banks, Basel II permits three methods for calculating operational risk capital charges: basic indicator approach, standardized approach, and advanced measurement approach (AMA). The AMA is the most sophisticated and risk sensitive of the three and allows banks to use their own method for assessing their exposure to operational risk provided they meet certain requirements set by Basel. A bank's AMA would be obliged to make use of certain data elements, primarily taking into account internal loss, business environment, and internal control factors to create a reliable estimate of the operational risk capital charge. Banks should also have systems for regular validation and verification and should ensure successful development, implementation, and maintenance of the AMA framework. This course presents a high-level view of the advanced measurement approach and Basel regulations for its successful deployment in banks. It recognizes types of AMAs and characteristics of AMA data elements. It then explains validation and verification as part of operational risk management framework and identifies key components of operational loss event valuation.

Course	Description
Operational Risk Identification, Assessment, and Quantification	The Basel Committee identifies operational risk as the key risk that banks face on account of inadequate or failed internal processes, people or systems, or external events. The Committee requires that banks hold adequate capital to cover these potential losses. Banks use a number of methods and tools to identify, assess, quantify, and respond to potential operational risk events. These may include building and using a loss event database, identifying key risk indicators (KRIs), and using tools such as risk and control self-assessment (RCSA), scenarios, and scorecards. The analysis of historic losses also provides meaningful information for assessing the bank's exposure to operational risk and for developing a strategy for their mitigation and control. This course introduces identification, assessment, and quantification of operational risk in a bank or a financial institution including key decisions affecting the determination of internal loss database, the KRI framework, steps in the RCSA process, and operational risk quantification.
Operational Risk Management Framework, Process, and Applications	Basel regulations include established principles and guidelines for managing operational risks and holding adequate capital to cover potential losses from operational risk events. The Basel Committee requires a bank or a financial institution to have an adequate operational risk management framework for this purpose. As a result, an operational risk management (ORM) framework and corresponding ORM processes should comprise important steps such as identification, assessment, reporting, monitoring and control, and mitigation of operational risk. The ORM efforts at a bank yield several management applications aimed at business goals such as risk awareness, loss reduction, and risk optimization and mitigation. This course discusses various aspects of operational risk management framework, process and applications in banks. It identifies key risk events, characteristics of an operational risk management framework, and steps in an ORM process. The course then discusses key management applications of ORM efforts, challenges, and components of ORM deployment strategy.
Management and Supervision of Liquidity Risk	During the credit crisis of 2007, many of the problems were not a result of shortage of capital, but of enormous liquidity risk taken by banks. When the Basel Committee on Banking Supervision introduced the third Basel Accord, or Basel III, in December 2010, it required banks to have stronger liquidity standards as well as better risk management and supervision. As a result, Basel III introduced several liquidity risk measurement, management, and supervision tools and guidelines for banks, including two liquidity ratios to provide supervisors with important information required to assess the liquidity risk of a bank and to ensure that banks survive liquidity pressures. Basel III also introduced several principles that banks should follow for efficient management and supervision of their liquidity risk. This course discusses liquidity, liquidity risk, and its management. It introduces the two key liquidity risk ratios - the liquidity coverage ratio and the net stable funding ratio. The course then introduces various principles for governance, public disclosure, supervision, measurement, and management of liquidity risk at banks.
Liquidity Risk Measurement, Monitoring, and Application of Standards	Liquidity of a bank describes its ability to meet out its debt obligations as and when they arise without incurring unacceptably large losses. A sound liquidity risk management framework comprises an array of metrics, measurement, and monitoring tools to assist supervisors in identifying and analyzing liquidity risks. Basel III introduced several liquidity risk standards, including two liquidity ratios to assess the liquidity risk and to ensure that banks survive liquidity pressures. Basel III also introduced a set of monitoring tools aimed at capturing specific information related to a bank's cash flows, balance sheet structure, available unencumbered collateral and certain market indicators. This course presents a high-level view of common liquidity risk ratios, measurement and monitoring of liquidity risk, and application of liquidity risk management tools. It discusses key liquidity risk standards and tools for measuring and monitoring liquidity risk in banks. The course also provides a brief introduction to the key considerations in the application of liquidity standards in a bank.
Basel II and Basel III: An Overview	Developed by the Basel Committee on Banking Supervision, the latest Basel regulations – Basel II and Basel III – represent decades of comprehensive global banking reforms. The aim of Basel II and Basel III is to strengthen the stability of the international banking system. Basel II is based on three mutually reinforcing pillars: minimum capital requirements, supervisory review process, as well as market discipline and disclosure requirements. Its key goal is to determine the minimum level of capital banks need to maintain to cover the risks they're exposed to in their lending and investment activities. Considered a major overhaul of Basel II, Basel III requires stronger capital and liquidity standards to be accompanied by better risk management and supervision by banks. Basel III endeavors to plug any gaps that were present in Basel II and also attempts to strengthen the regulations promoted by Basel II. This course gives an overview of Basel II and Basel III; the factors that led to the two accords, objectives, key approaches, and differences between them. It focuses on how various Basel regulations help banks become stronger and better managers of their risks. The course goes on to discuss the three pillars of Basel II and its approaches for measuring capital requirements for credit, operational, and market risk. Finally, the course outlines key features of Basel III, its differences and improvements over Basel II, and some key components of its global implementation and timeline.
IRB Approach for Corporate and Retail Exposures	One of the key goals of the Basel framework is to ensure that banks maintain a minimum level of capital at all times in order to cover their credit risk. Basel regulations propose a number of approaches for determining credit risk capital. Basel II, for instance, proposes an advanced and sophisticated approach called the internal ratings-based (IRB) approach for determining capital requirements for credit risk. This approach relies heavily upon a bank's internal assessment of its counterparties and is subject to strict data, validation, and operational requirements. The IRB approach deals with various types of banking-book exposures, such as corporate and retail credits and borrowers, differently because of their unique underlying risk characteristics. This course presents a high-level overview of the IRB approach for determining retail and corporate credit risk. Apart from providing an overview of Basel, and especially the IRB approach, it also discusses the IRB framework for retail and corporate exposures. The course also discusses risk weights and minimum requirements for these two types of exposures.
Quantification of IRB Systems	Basel II proposed a sophisticated approach for determining capital requirements for credit risk, known as the internal ratings-based approach (IRB). The IRB approach is predicated upon a bank's internal assessment of its credit risk and is subject to strict data, validation, and operational requirements. When using the IRB approach, a bank also has to put a system in place that consists of four interdependent components: credit risk rating, quantification of risk ratings, data maintenance, and oversight mechanisms. Taken as a whole, these components present a framework for defining and improving the evaluation of credit risk. The quantification component in this framework helps translate credit risk ratings against the IRB risk parameters, which are probability of default (PD), loss given default (LGD), exposure at default (EAD), and maturity (M). This course introduces the quantification component of the IRB framework and discusses ways to quantify the key risk parameters. It identifies IRB quantification system guidelines and the stages in the quantification process. It also outlines some important considerations in quantifying retail and corporate credit exposures.
Microsoft Windows 8.1 - Configuring: Installing and Upgrading to Windows 8.1	Windows 8.1 is the latest update to Microsoft's desktop operating system. Windows 8.1 carries over, and improves upon, the new user interface introduced Windows 8. Windows 8.1 also adds new features, from enterprise oriented features, such as Workplace Join, to more consumer oriented features like Miracast Display. This course looks at Windows 8.1, what's changed from previous Windows versions, and how to support some of that new functionality. It also covers strategies to get Windows 8.1 on a machine and how to upgrade or migrate settings. This course is one of a series in the SkillSoft learning path that covers the objectives for the 70-687: Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows 8.1 - Configuring: Hardware and Applications	Windows 8.1 is the latest update to Microsoft's desktop operating system. Windows 8.1 carries over, and improves upon, the new user interface from Windows 8. Windows 8.1 also adds new features, from enterprise oriented features, such as Workplace Join, to more consumer oriented features like Miracast Display. This course looks at Windows 8.1 hardware and device drivers, what the requirements are for Windows 8.1 devices and how device detection works. It also examines applications – from Windows 8.1 style applications to desktop applications. Finally it covers Applocker, which allows you to restrict applications based on a set of rules. This course is one of a series in the SkillSoft learning path that covers the objectives for the 70-687: Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows 8.1 - Configuring: Network Configuration	Windows 8.1 is the latest update to Microsoft's desktop operating system. Windows 8.1 carries over, and improves upon, the new user interface from Windows 8. Windows 8.1 also adds enterprise oriented tools such as Workplace Join, to more consumer oriented features like Miracast Display. This course looks at Windows 8.1 networking covering IPv4 and IPv6, name resolution, and wireless networking. This course is one of a series in the SkillSoft learning path that covers the objectives for the 70-687: Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows 8.1 - Configuring: Remote Management and Security	Windows Server 8.1 includes a variety of features to help maintain security and to provide reliable tools for remote administration. This course covers how Windows Firewall is used to protect a Windows 8.1 computer, as well as features used to remotely administer a Windows 8.1 computer, and provide assistance to other Windows computers. This exam will count as credit towards both the MCSA and MCSE certification path.
Microsoft Windows 8.1 - Configuring: Resource Access	The latest update to Microsoft's desktop operating system, Windows 8.1 carries over, and improves on, the new user interface from Windows 8. It also adds new features, including enterprise-oriented ones, such as Workplace Join, and more consumer-oriented features like Miracast Display. This course explains how to access local and shared resources, such as files and folders or printers, using Windows 8.1. It also covers authentication and authorization, covering such topics as smart cards, biometrics, and Microsoft accounts for synchronizing Windows 8 PCs. The course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-687: Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows 8.1 - Configuring: Remote Access and Mobile Devices	The latest update to Microsoft's desktop operating system, Windows 8.1 carries over, and improves on, the new user interface from Windows 8. It also adds new features, including enterprise-oriented ones, such as Workplace Join, and more consumer-oriented features like Miracast Display. This course discusses VPNs and the different technologies supported in Windows 8.1. It also covers Remote Desktop and Remote Assistance. Finally, it covers mobility, configuring mobile devices and how to secure them with BitLocker and BitLocker To Go drive encryption. The course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-687: Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows 8.1 - Configuring: Windows Clients	Windows Server 8.1 includes a variety of features to help configure updates, manage local storage, and monitor system performance. This course covers the Windows Update feature, as well disk management features to help administer and manage local storage. It also explains how to properly monitor a Windows 8.1 computer to ensure optimal performance and reliability. This course is one of a series in the SkillSoft learning path that covers the objectives for the 70-687:Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows 8.1 - Configuring: File and System Recovery	The latest update to Microsoft's desktop operating system, Windows 8.1 carries over, and improves on, the new user interface from Windows 8. It also adds new enterprise-oriented features including Workplace Join, and more consumer-oriented features like Miracast Display. This course covers the startup process for Windows 8.1, tools to manipulate startup, and startup based recovery options including the BCD store and WinRE. It also covers System Restore as a recovery mechanism, PC Refresh and PC Reset, and finally at file recovery options like Windows File History and Backup. The course is one of a series in the SkillSoft learning path that covers the objectives for the exam 70-687: Configuring Windows 8. This exam is part of the MCSA: Windows 8 certification path.
Microsoft Windows Server 2012 R2 - Installing and Configuring: Servers	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course discusses the planning and installation of Windows Server 2012 R2, including an overview of the various editions, features, minimum requirements, and upgrade paths. It also covers installing Server Core, migrating roles from previous versions of Windows Server, optimizing resource allocation, and adding and removing features. Also included are topics such as configuring Server Core and the full GUI interface, deploying roles on remote servers, remote server administration, and NIC teaming. It is one of a series designed to prepare the learner for exam 70-410: Installing and Configuring Windows Server 2012 R2.
Microsoft Windows Server 2012 R2 - Installing and Configuring: Storage	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course looks at local storage space configuration basic and dynamic disks, MBR and GPT disks virtual hard disks, and the creation and configuration of storage pools. This course also examines the creation and configuration of shares and share permissions, offline file configuration, access-based enumeration, the volume shadow copy service, NTFS quotas and how to configure work folders. The course is the second in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012.
Microsoft Windows Server 2012 R2 - Installing and Configuring: Print Services	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course discusses the Enterprise Printing capabilities of Windows Server 2012 R2, including an overview of the various options and features of Print and Document Services. The course also covers installing managing servers using Server Manager and PowerShell and provides instruction on how to set up and configure various options using both the Windows interface and the PowerShell command line. It is one of a series designed to prepare the learner for exam 70-410: Installing and Configuring Windows Server 2012 R2.
Microsoft Windows Server 2012 R2 - Installing and Configuring: Hyper - V	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course examines Hyper-V, and how Windows Server 2012 R2 takes advantage of the architecture. This course also examines the Configuration options for Hyper-V, along with methods used to install hosts in Hyper-V sessions. Finally, this courses looks at configuration options for both virtual machines and differencing disks. The course is the fourth in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012
Microsoft Windows Server 2012 R2 - Installing and Configuring: Networking	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course covers the fundamental elements of core network services which includes IPv4 and IPv6 based addressing and subnets. In addition, it discusses how interoperability between IPv4 and IPv6 is facilitated using available technologies in Windows Server 2012 R2. Finally, this courses also looks at the role of DHCP and how it is used to configure dynamic IP addressing in a network environment. The course is the fifth in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012.
Microsoft Windows Server 2012 R2 - Installing and Configuring: DNS	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course examines installing the DNS Server Role, integrating Primary zones, setting up forwards and root hints, and working with the DNS cache. This course also examines creating records for DNS, and configuring and testing the DNS client using nslookup and ipconfig utilities. The course is the sixth in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012.
Microsoft Windows Server 2012 R2 - Installing and Configuring: Active Directory	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server, as well as providing several new features. This course covers installing and managing Active Directory. The course also looks at Active Directory component and architecture as well as AD objects and schema. This course is the seventh in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012.
Microsoft Windows Server 2012 R2 - Installing and Configuring: AD Groups & GPOs	Microsoft Windows Server 2012 R2 builds upon previous versions of Windows Server, adding several new features. This course examines Active Directory groups and group policy objects. You will examine how to use group nesting, convert groups, change group memberships, enumerate groups, delegate group membership, and manage Active Directory containers. This course also covers how to create and manage a Central store, use Starter GPOs, create GPO links, and use security filtering. The course is the fourth in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012.
Microsoft Windows Server 2012 R2 - Installing and Configuring: Security	Microsoft Windows Server 2012 R2 builds upon features found in previous versions of Windows Server and provides several new features. This course examines the configuration of security policies, application restriction policies, and the Windows Firewall. Specifically user rights assignment, security templates, audit policies, local users and group configuration, and user account control are explored, as are AppLocker, rule enforcement, and software restriction policies. Other tasks to be examined include configuring Windows Firewall, through both static configuration and group policy, configuring security rules, creating exceptions, and importing and exporting settings. This course is the ninth in a series for the Microsoft MCSA in Windows Server 2012 R2 certification and prepares the learner for the 70-410: Installing and Configuring Windows Server 2012.
Mentoring 312-50 Certified Ethical Hacker	Mentoring 312-50 Certified Ethical Hacker (CEH)

TestPrep 312-50 Certified Ethical Hacker (CEH)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 70-411 Administering Windows Server 2012	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test
TestPrep 70-410 Installing and Configuring Windows Server 2012	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Microsoft Windows Server 2012 R2 - Administration: File Services and Encryption	This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
TestPrep 70-412 Configuring Advanced Windows Server 2012 Services	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Microsoft Windows Server 2012 R2 - Administration: Deploying and Managing WDS	Windows Server 2012 R2 includes a variety of features to help deploy operating systems, and to support, maintain and monitor an environment once implemented. This course discusses the Windows Deployment Services role and how to create and deploy images over the network. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: Updating and Monitoring	Ensuring the client computers are up-to-date and running efficiently are two of the main task that an administrator must perform on an on-going basis. Windows Server 2012 R2 provides server roles and tools to make these tasks easier, which includes automation. Windows Server Update Services can be used to automate the task of deploying updates throughout the network. Performance Monitor, Data Collection Sets, Reliability Monitor, and Event Monitor are other tools to monitor the performance of the servers and clients. This course discusses and demonstrators how to use these features and tools in a Windows Server 2012 R2 environment. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: Network Services and Access	Microsoft Windows Server 2012 R2 provides multiple features to allow for network services and remote access to the network; such as DNS zones and records. These features are used to lookup and access DNS resources on the network, and provide different types of zones and records depending on the access required. Windows Server 2012 R2 also includes the Remote Access server role to all clients outside the network to gain access to the intranet using different methods. This course demonstrates how to configure DNS, NAT, VPNs and DirectAccess to gain access to the intranet. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: RADIUS, NPS, and NAP	Creating and enforcing local and remote network access policies for authentication, authorization, and client health are key tasks that an administrator must perform in order to ensure a secure, accessible, and robust networking environment. This course discusses and demonstrates how to install and configure Network Policy and Access Services (NPAS), Network Policy Server (NPS), and RADIUS infrastructure. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: Service Accounts and Policies	Managing service accounts and account policies are key tasks that an administrator must perform in order to ensure a functional, secure and accessible environment. This course discusses and demonstrates how to configure and manage service accounts and account policies. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411: Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: Managing Active Directory	Active Directory Domain Services is a critical part of a Windows Server 2012 R2 infrastructure and therefore requires that is be kept maintained. This will ensure it says operational. This course discusses and demonstrates how to configure domain controllers, including the different FSMO roles and Read-only domain controllers. It also demonstrates how to maintain Active Directory including how to backup and restore it and perform offline maintenance tasks. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: Group Policy Processing	Managing Group Policy Processing and Group Policy Settings are key tasks that an administrator must perform in order to ensure a functional, secure and accessible networking environment. This course discusses and demonstrates how to configure and manage Group Policy Processing and Group Policy Settings. This course is one in a series in the SkillSoft learning path that covers the objectives for the exam 70-411: Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Administration: Managing GPOs and Preferences	The protection and utilization of valuable Group Policy Object assets is an important management task within an Active Directory controlled environment. You need to ensure that you can recreate them if they become corrupt or lost. Windows Server 2012 R2 also provides the functionality to facilitate the configuration and deployment of unenforced domain-wide client computer settings using Group Policy Preferences. This course will demonstrate how to back up, restore, copy, and import GPOs and create migration tables. It will also show how to configure Group Policy Preferences. This course is one in a series in the Skillsoft learning path that covers the objectives for the exam 70-411:Administering Windows Server 2012 R2. Passing this exam will earn the learner credit towards the MCSA: Windows Server 2012 certification and MCSE: Server Infrastructure certification.
COMPLIANCE IMPACT: Antitrust â€" Trade Association Meeting	At trade association meetings, competitors exchange important information and collaborate in a way that benefits industries and consumers. But what happens when an exchange strays from permitted business talk to a potential violation of antitrust law? In this Compliance Impact, an employee must respond to a competitor who brings up a risky topic during a trade association meeting.
COMPLIANCE IMPACT: Bribery â€" The High Commission Red Flag	Bribery violations can be a risk for any company, especially those that operate on a large global scale. Knowing the warning signs for bribery is the first step in helping to prevent that risk from becoming a reality. In this Compliance Impact, an employee considers what action to take when a trusted agent's request raises a red flag for bribery.
COMPLIANCE IMPACT: Insider Dealing - The Memo	Employees who possess confidential information about their company are responsible for safeguarding that information. This obligation extends to the use of certain confidential, or "inside," information in making a decision to trade or not to trade securities, which is prohibited by law. This Compliance Impact explores one such opportunity faced by an employee who must decide what to do with confidential information he inadvertently discovers.
COMPLIANCE IMPACT: Social Media - Blogger Gone Bad	Using social media can be risky, especially when talking about your company or competitors. This Compliance Impact explores a situation where an employee uses social media inappropriately â€" in a way that is both unethical and in violation of her company's social media policy.
COMPLIANCE IMPACT: Harassment - It's No Joke	It's everyone's responsibility to keep harassment out of the workplace . Whether you're the victim or a witness, it's important that you report any incident, no matter how seemingly slight. But reporting harassment isn't always easy. The pressure to fit in and avoid disrupting personal relationships can make reporting uncomfortable. This Compliance Impact explores why it's important to report harassment no matter the circumstances.
COMPLIANCE IMPACT: Harassment - Handling the Complaint	As a manager, it's important to take seriously any harassment complaint you receive.But responding to harassment isn't always easy. This Compliance Impact explores the right way â€" and the wrong way â€" to respond to a harassment complaint.
COMPLIANCE IMPACT: Respectful Workplace â€" One Bad Apple	All employees deserve to be treated with respect and dignity. To offend, embarrass, or in any way mistreat those you work with is unacceptable. This Compliance Impact shows how just one employee can make the workplace unpleasant for all.
COMPLIANCE IMPACT: Reporting Misconduct â€" Trust Your Instincts	Misconduct and ethical violations can lead to extremely negative consequences for a company and its employees. Yet, fear of retaliation often prevents employees from reporting misconduct. This Compliance Impact dramatizes a situation where an employee struggles with whether to report the misconduct of a senior executive.
COMPLIANCE IMPACT: Political Activities â€" Keep It Personal	Everyone has the right to participate in politics. But employees should not use their company's time or resources to do so, and should use care to avoid representing the company or its views when engaging in personal political activities. This Compliance Impact explores a situation where an employee blurs the boundary between her own political views and those of her company.
COMPLIANCE IMPACT: Respectful Workplace â€" The Bully	Bullying is a pattern of mistreatment that can inflict serious damage on victims. It can also be costly to companies who don't take steps to prevent and respond to it. Bullying can take a variety of forms, including verbal abuse, humiliation, and conduct that's threatening or intimidating. This Compliance Impact explores a situation where an employee comes to recognize that a coworker is being bullied.
COMPLIANCE IMPACT: Wage and Hour - Working Off the Clock	When hourly employees are off the clock, they shouldn't be asked to perform any work duties they aren't being compensated for. Even when time is tight and a task needs to be completed, off the clock means off the clock.
Microsoft Windows 8.1 - Supporting Windows 8.1: Installation and Applications	Windows 8.1 includes a number of new technologies relating to deployment including Windows To Go and the ability to natively boot from a virtual hard disk file. Windows 8.1 also includes new technologies for managing applications, such as Client Hyper-V, and a plethora of new group policy settings for IE 11. This course covers installation and migration strategies for Windows 8.1, and also covers application installation, management, and compatibility management for Windows 8.1 systems. This course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Cloud Applications and Settings	Windows 8.1 provides a number of solutions to integrate with cloud services such as Office 365. In this course, we will look at the considerations for deploying cloud services, as well as how to manage store based and custom apps. The course also covers considerations for the management of user profiles and their content. This course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Networking and Remote Access	A primary Windows 8.1 administration task is managing network connectivity and networked machines when on and off network. In this course weâ€™ll cover IP addressing and network connectivity, including wireless networking, remote access, VPNs and DirectAccess, and the processes and procedures of Windows 8.1 authentication and authorization. This course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Data Storage and Security	Storage management has been completely overhauled in Windows 8.1, particularly with the addition of storage spaces, which you can use to simply create fault tolerant arrays which can be dynamically expanded and thinly provisioned. Data security options in Windows 8.1 include EFS for encrypting single files and folders and BitLocker full drive encryption. This course covers data storage and security management in Windows 8.1. This course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Hardware and Mobile Devices	Windows 8.1 has wider support for mobile devices than ever. This course covers the range of Windows 8.1 mobility, how to monitor and troubleshoot mobile issues, and also network printing. This course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Recovery and Endpoint Security	Windows 8.1 includes new technologies to protect end systems. It also includes tighter integration with cloud services for secure, off-site storage. This course covers antimalware and endpoint protection; including features such as Windows Defender and Windows Update. This course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Intune and Public Cloud Services	Bring your own device, or BYOD, culture presents certain challenges for IT Administrators. Windows 8.1 and 8.1 provide wide support for mobile devices, including Windows Intune, which provides cloud-based device management. This course covers the capabilities and configuration of Windows Intune. This course is one in a series that covers the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows 8.1 - Supporting Windows 8.1: Using MDOP	Managing and maintaining client machines within an enterprise can be challenging given the variety of operating systems and devices available to end users. The Microsoft Desktop Optimization Pack, or MDOP, is a suite of tools designed to ease the administration overhead for IT departments. This course examines some of these tools. The course is one of a series which cover the objectives for Microsoft Exam 70-688: Supporting Windows 8.1. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows 8 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: HA	Network Load Balancing (NLB) and failover clustering are features of Microsoft Windows Server 2012 R2, which provide different levels of fault tolerance, high availability, and scalability to the workloads in your data center. NLB provides availability and scalability for servers running TCP/IP services, such as Web, FTP, firewall, proxy and VPN. Failover clustering provides high availability and scalability for services and applications. Both technologies, their key features, differences, usage scenarios, deployment, and configurations are covered in this course. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-412 Configuring Advanced Windows Server 2012 Services. This exam is required for the MCSA Windows Server 2012 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: VMs and DR	Failover clustering allows you to make applications and services highly available, this includes services in your virtual environment. Microsoft Windows Server 2012 R2 allows you to cluster Hyper-V hosts and virtual machines. By integrating Hyper-V with failover clustering, you can create standby replicas of virtual machines, move running virtual machines between hosts, manage downtime, provide high availability, and plan for disaster recovery. Microsoft Windows Server 2012 R2 also provides several options for backing up and recovering servers in the event of data loss, data corruption, or a server outage. This course is one of a series, which covers the objectives for Microsoft Exam Topic 8-412: Configuring Advanced Windows Server 2012 Services. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows Server 2012 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: Storage	Data storage is a fundamental part of an IT Infrastructure. Windows Server 2012 R2 provides many different storage provisioning, management, and security features to ensure that the organization's data is available as needed. This course describes and demonstrates how to configure iSCSI storage and Internet Storage Name Service or iSNS. Storage optimization is also covered, as is Branchcache, a feature which allows data to be cached locally at the organization's branch offices. This course is one of a series, which covers the objectives for Microsoft Exam 70-412: Configuring Advanced Windows Server 2012 Services. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows Server 2012 certification.

Microsoft Windows Server 2012 R2 - Configuring Advanced Services: DAC	Organizations need to store and make data available to users and customers. Administrators need to control how data is accessed and managed. Microsoft Windows Server 2012 R2 provides several tools for managing, securing, and optimizing the organizations data, such as File Server Resource Manager. FSRM is a suite of tools that allows administrators to understand, control, classify, and manage the data stored on their servers. FRSM can be integrated with Dynamic Access Control, or DAC. In this course you learn how to implement a file classification infrastructure using FSRM and DAC. This course is one of a series, which cover the objectives for Microsoft Exam 70-412: Configuring Advanced Windows Server 2012 R2 Services. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows Server 2012 R2 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: DHCP & DNS	Dynamic Host Configuration Protocol, or DHCP allows an administrator to automatically configure TCP/IP settings on clients and hosts. The Domain Naming System, or DNS, provides user-friendly names for devices and services on the network. Integrating DHCP with DNS enables device host records to be updated automatically, reducing the administrative overhead. This course covers advanced features of DHCP and DNS, including optimizing, securing and providing high availability for name and addressing services. IP Address Management, or IPAM, is a feature that was introduced in Windows Server 2012. It allows an administrator to manage the DHCP and DNS services on the network by providing monitoring, auditing and discovery of the IP address space. This course also describes the features of IPAM and demonstrates how to install and configure it. This course is one of a series, which covers the objectives for Microsoft Exam 70-412: Configuring Advanced Windows Server 2012 Services. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows Server 2012 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: AD Domains	Managing Active Directory Domain Service in large distributed environments can be complex. This course describes the characteristics of active directory domains and forests, their boundaries, security and management considerations. It also covers the trust relations which can be established in a distributed AD DS environment. How to configure and secure these trust relationships is also demonstrated. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-412 Configuring Advanced Windows Server 2012 Services. This exam is required for the MCSA Windows Server 2012 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: AD Replication	An Active Directory Domain Services deployment can contain many domain controllers, spread over several different sites. In order to provide efficient logons and highly available directory services for your organization, you need to configure your AD DS sites and replication. This course demonstrates how to configure an AD DS site infrastructure, how to configure, manage and troubleshoot replication between sites and domain controllers. It also explains how to deploy read-only domain controllers and password replication policies. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-412 Configuring Advanced Windows Server 2012 Services. This exam is required for the MCSA Windows Server 2012 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: PKI	Active Directory Certificate Services, or AD CS, allows a company to deploy and manage a Public Key Infrastructure, or PKI, to secure and protect important data and data communications. This course covers the installation and management of a PKI using the AD CS role services, including installation and configuration of AD CS, certificate enrollment, templates, and revocation. This course is one of a series, which covers the objectives for Microsoft Exam 70-412: Configuring Advanced Windows Server 2012 Services. This exam is a requirement for the Microsoft Certified Solutions Associate (MCSA): Windows Server 2012 certification.
Microsoft Windows Server 2012 R2 - Configuring Advanced Services: Federation	Active Directory Rights Management Services, or AD RMS, allows you to protect against leakage or misuse of content within and even outside the organization. Content authors can protect their documents using certificates. To use the document, others must use a rights-enabled application, such as Microsoft Office and obtain an end user license for it. Active Directory Federation Services, or AD FS, allows organizations to collaborate by using a claims based authorization and it allows for a single sign on. This course discusses the concepts and components for AD RMS and AD FS and demonstrates how to set up and configure them. This course can be taken in preparation for exam 70-412: Configuring Advanced Windows Server 2012 Services, which is part of the Microsoft Certified Solutions Associate, or MCSA, credential.
New Features and Common Tasks in Windows 8.1	Microsoft Windows 8.1 is the latest version of the Microsoft Windows PC desktop operating system. It includes a tablet-style user interface, as well as the more conventional Windows desktop interface. This course will introduce learners to key features of Windows 8.1 and demonstrate how to interact with the new UI using either mouse and keyboard or a touch screen device. The course demonstrates how to move around apps, the Start screen, and the desktop. And it covers common tasks such as adding and removing shortcuts and changing settings.
Organizing Files and Searching for Items in Windows 8.1	Windows 8.1 File Explorer provides several options for organizing and navigating to your files. For example, you can use libraries to group folders and back up files. And you can use File Explorer to search for files that may be buried deep in a folder structure. The Search charm can also be used to find files, as well as launch apps and search the Internet. The tools you choose will depend on where you are and what you want to find. This course demonstrates how you can manage your files and make them easier to access. It also shows how to search for items from File Explorer and from the Search charm.
Personalizing Windows 8.1	You can personalize your Windows 8.1 computer to suit the way you want to use it. For example, you can now set Windows to show the desktop, instead of the Start screen, after logging in. This course shows how to customize the appearance of the Lock screen, Start screen, and desktop, as well as taskbar properties. And it demonstrates how you can make the computer easier to use with assistive technologies.
Working with Apps in Windows 8.1	In Microsoft Windows 8.1, you can view the desktop and apps on the same screen. You can get new apps from the Windows Store, and adjust which apps may provide notifications. The process for uninstalling apps and desktop programs is similar, and both can be done from the Start screen and All Apps screen. Windows 8.1 provides two versions of Internet Explorer â€" the new user interface (UI) version, and the desktop version. The new UI version has more settings for customization than the previous version in Windows 8. By signing in to your computer with a Microsoft account, you can apply the same settings to multiple Windows 8.1 devices. Some apps offer account integration, which lets you view multiple accounts in apps, without having to sign in each time. This course demonstrates arranging apps and desktop applications on the screen, using the Windows Store, and using Internet Explorer. It also shows how to connect to Microsoft account and use apps with account integration.
Getting Online, Sharing, and Using SkyDrive in Windows 8.1	Microsoft Windows 8.1 makes it easy to get online by grouping all Internet connections and settings in one place. When you're online, you can share content in Windows 8.1, for example through the Charms bar and File Explorer. And you can access SkyDrive, which is online storage available to anyone with a Microsoft account. This course demonstrates how to join a Wi-Fi network; share items through File Explorer, HomeGroup, and the Charms bar; and set up and use SkyDrive.
Managing Hardware and Advanced Options in Windows 8.1	In Microsoft Windows 8.1, you can use Task Manager to view how your device resources are used, as well as close unresponsive apps. You can add devices, such as printers and monitors to your Windows 8.1 computer. And you can customize settings such as those for privacy and typing. Windows 8.1 offers several security options, which you can customize to meet your needs. This course shows how to manage apps with Task Manager, how to add and manage peripheral devices, and how to customize general settings and security options.
CompTIA Security+ SY0-401: Control Fundamentals and Security Threats	Comptia Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course exams control fundamentals and the CIA traid, along with the types of malware that can affect computer systems and the mechanisms and applications that can be used to combat this malware. This is the first course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Network Protocols, Attacks, and Defenses	Comptia Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course examines common network protocols, the fundamentals and dangers of network attacks, implementation of network security, and available tools and devices used to secure networks. This is the second course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Creating Secure Networks	CompTIA Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course exams router and switch configurations, along with firewall types and configurations, and how IDS and IPS are used to secure a network environment. This course also examines other security mechanisms such as proxy servers, all-in-one security devices, flood guards, and unified security management. Finally, this course examines: layered security, Defense in depth, subnetting, DMZ, and NAT. This is the third course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Vulnerability Assessment and Penetration Testing	Comptia Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course exams penetration testing methods and technologies, along with vulnerability assessment technologies and tools. This is the fourth course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Authentication, Biometrics, and Security	CompTIA Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course covers account management, risk reduction, and LDAP. The course will also cover best practices, mitigation techniques, as well as strategies to reduce overall risk. This is the fifth course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Securing a Networked Environment	Comptia Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course examines the various environmental, data, and physical controls used to secure an environment. It also covers various methods used to harden operating systems. This is the sixth course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Remote Access, Mobile, and Wireless Security	CompTIA Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course examines remote authentication services and mobile security implementation. It also discusses how to secure a wireless network and how to prevent wireless security attacks. This is the seventh course of the security+ SY0-401 certification training path.
CompTIA Security+ SY0-401: Cryptographic Methods and Public Key Infrastructures	Comptia Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course examines how cryptography is used to secure information, the algorithms that are employed, and how public key infrastructures and digital signatures are used to secure information. This is the eighth course of the security+ SYO-401 certification training path.
CompTIA Security+Â SY0-401:Â Securing Applications, Virtualization, and the Cloud	Web servers, web applications, virtualization, and cloud computing are becoming standard parts of corporate infrastructures. This course examines the communication standards and protocols that are used in the web server environment, along with ways to harden web servers and web browsers. The course also examines the different types of attacks web-based applications can face, as well as cloud computing options, and network virtualization. This is the ninth course of the security+ SYO-401 certification training path.
CompTIA Security+ SY0-401: Continuity, Disaster Recovery, and Computer Forensics	CompTIA Security+ is a vendor neutral security certification that tests foundation knowledge of security skills in a computer environment. This course examines business continuity strategies and methods, along with risk assessment methodologies and management techniques, and disaster recovery preparedness. The course also looks at ways to create security training for users and computer forensic methodologies. This is the tenth course of the security+ SYO-401 certification training path.
Oracle Database 12c â€" Install and Upgrade: Database Architecture	To understand how an Oracle Database functions, it is important to gain a basic understanding of its major components. This course identifies the major architectural components of the Oracle Database 11g Release 2, explains memory structures, describes background processes, and explores the logical and physical storage structures. In addition, this course describes the role of a database administrator (DBA) and the tasks and tools required for this role. This course is one of a series in the SkillSoft learning path that covers the objectives for the 1Z0-062: Oracle Database 12c Installation and Administration certification exam.
Oracle Database 12c â€" Install and Upgrade: Installation	The installation of the Oracle software, Oracle databases and ensuring the correct environment are in place are important tasks for a DBA to complete properly. If these tasks are not done issues may occur to the Oracle system. This course covers how to plan for the Oracle software installation and the Grid Infrastructure. It also discusses how to install the Oracle Database 12c databases and post-installation tasks. This course is one of a series in two SkillSoft learning paths that cover the objectives for the 1Z0-062: Oracle Database 12c Installation and Administration certification exam.
Oracle Database 12c â€" Install and Upgrade: Upgrading	As a DBA one of the tasks you performed is upgrading or migrating a database to the newest release when it is available. Upgrading a database enables DBAs to take advantage of the newest technologies that are being offered by the provider. Oracle Database 12c provides the latest in efficient, reliable, secure data management for OLTP and cloud applications. This course discusses upgrade and migration methods, how to prepare for and perform an upgrade, as well as how to perform post-upgrade tasks. It also covers how to use Oracle Data Pump to move migrate data. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062: Oracle Database 12c Installation and Administration certification exam.
Microsoft Windows Server 2012 R2: Server Infrastructure - AD Design	Understanding the Active Directory forest structure; the mechanics of domain controllers, hosted services and strategic placement, along with Active Directory replication is fundamental to effective planning, appropriate design and efficient deployment of a Active Directory forest infrastructure. Forest and domain planning and design is a team effort, and should be a methodical, sequential, and cyclical process. The forest stakeholders and IT designers should support the forest and domain design process; functional outlines and defined security requirement specifications, and detailed service and resource isolation and autonomy requirements. This course discusses Active Directory forest models, forest design guidelines, and domain design model guidelines and deployment. The selection of the forest model and the domain models should be underpinned by a formal specification and build plan and timescale, and should be signed off by the stakeholders and owners; continuous review and testing should be integral activities within the forest design, deployment and operational phases. This course details the design concept and implementation of Active Directory forest and domain trusts, forest and domain functional level options, and the processes and options involved in upgrading Active Directory, a domain controller upgrade.
Microsoft Windows Server 2012 R2: Server Infrastructure - AD DS	An Active Directory site is best defined as a group of Active Directory resources that are hosted on a fast, reliable, and very well-connected network. This course details the design and planning of Active Directory sites that help you map the infrastructure to an organizations physical requirements. This includes strategic domain controller placement and the strategic placement of services such as FSMO roles and the Global Catalog. Branch office support is detailed including the use of Read-Only Domain Controllers, the Filtered Attribute Set (FAT), GPMC, and BrancheCache. To end the course the subject area of domain controller virtualization is explained.
Microsoft Windows Server 2012 R2: Server Infrastructure - DHCP Design	The Dynamic Host Configuration Protocol (DHCP) service and its interoperation with other key services is important in the planning, strategic design, and implementation and maintenance of key Active Directory infrastructural services. In planning the design of the DHCP service deployment, the reliability and continuous availability of the service is key to successfully operation, while the integration of the DHCP service with other Windows 2012 services should also form the backdrop of the DHCP deployment mechanics and operation. In planning the design of a DHCP solution, the IT administrator should consider all of the available features offered by the Server 2012 DHCP service role and deciding which DHCP features to implement should be set against operational requirements; for example, should DHCPv6 be deployed and supported on the corporate networks? How should DHCP interoperate with the DNS service? Is Network Access protection (NAP) interoperability or DHCP MAC filtering required? This course discusses the design and maintenance options for a potential DHCP production solution.
Microsoft Windows Server 2012 R2: Server Infrastructure - OU and Group Policy	Planning and design of the Organization Unit structure within each forest domain is a primary task in support of a operationally optimized Active Directory infrastructure â€" this course discusses Organizational Unit design and some of the primary architectural components of an Active Directory-controlled environment. The Active Directory security model is designed to support focused, selective and targeted delegated administration of the system objects and resources. Being familiar with the Active Directory security model and developing a proactive maintenance approach is a key goal in providing an optimized Active Directory-based service to end users. This course covers Active Directory object security, protection, the general Active Directory security model, and the delegation of access to Active Directory objects by security principles. The design and implementation of a well constructed, configured, and appropriated targeted Group Policy system is fundamental to the end-user experience, system security, and the optimized operation of an Active Directory-controlled environment. Allied closely to the deployed OU structure, Group Policy application must be thoroughly tested prior to deployment to a production system â€" sloppy configuration and untested application can lead to catastrophic problems in a production system. This course covers the methodological approach to designing, creating, testing, deploying and maintaining a Group Policy infrastructural solution within an Active Directory controlled forest environment. Although Active Directory is designed an extensible system it does have operational limits. Knowing the design limitation Active Directory and the important configurable limits is a key aspect of Active Directory management; designed and configurable limits are discussed in ending this course.

Microsoft Windows Server 2012 R2: Server Infrastructure â€" Server Deployment	The strategic design and implementation of an operating system (OS) solution deployment requires a comprehensive understanding of all of the available tools involved in the OS design, customization, encapsulation, distribution and deployment process. Each new release of a Windows operating system brings new and newly named utilities, and it requires a forensic investigation to keep up with the new and deprecated OS servicing and deployment tools and utilities. This course discusses server deployment design, operating system deployment tools and techniques;including the use of the Windows Assessment and Deployment Kit, the operating system deployment design process, and operating system deployment strategy using the Server 2012 R2 Windows Deployment Service server role. The course also includes consideration of server operating system upgrade, as well as cross-domain and cross-forest role server migration, server consolidation and system capacity and resource planning. Finally the System Center Virtual Machine Manager component, including service templates, operating system, hardware and compatibility profiles, image and template libraries, and logical network management are covered.
Microsoft Windows Server 2012 R2: Server Infrastructure - DNS, File and Storage	The designing and planning of end-user and system supporting file and storage solutions is the first step in provisioning an optimized network service solution â€" a storage solution must be included early in the system design process, as early the hardware appraisal and system specification phase. Although Server 2012 and Active Directory-controlled environment can adequately react and adapt to change, knowing the capabilities of the Server 2012 File and Storage Service server role and the required storage requirements, allows the system designers and network stakeholders to take early and informed decisions regarding hardware and system design, to support the specified storage system capabilities, and to accommodate change and expansion. This course outlines the design and deployment options, interoperability, security, and management of a name resolution solution within a Server 2012 Active Directory-controlled environment using the Server 2012 DNS service and other name resolution services. The course also covers the design, planning and deployment of a number of key elements of the Server 2012 File and Storage Service server role and related technologies, including iSCSI and iSCSI Storage Area Network support. Server 2012 includes a number of new features that enhance file and storage support, ease implementation and maintenance of storage-related features, and provides lower cost options, the new features include: Storage Spaces and Scale-Out File Servers and will be discussed in finishing up the course.
Microsoft Windows Server 2012 R2: Server Infrastructure - IPAM and VPN	The planning, strategic design, and implementation and maintenance of key Active Directory infrastructural services include network services such as an IP address management solution and a virtual private network. This course outlines the design and planning considerations for the new Server 2012 IP Address Management feature known as IPAM. Areas covered include the IPAM feature, Group Policy based and manual provisioning of IPAM, IPAM deployment design such as distributed, centralized and hybrid topologies. The configuration of role-based access control, IPAM auditing, IP address migration, multiple DHCP and DNS service management, and how to configure data collection for IPAM are also covered. The second lesson covers the deployment of remote access capabilities by using VPN connections to the private corporate network, and site-to-site VPN connection between partner networks across the public Internet. In addition, the lesson outlines the deployment of an internal Certificate Authority, the autoenrollment feature, and the publication of Certificate Revocation Lists to a Web service.
Microsoft Windows Server 2012 R2: Server Infrastructure â€" DirectAccess	In this course the other main remote access solution technology In Windows Server 2012 R2 is reviewed; DirectAccess. Introduced with Server 2008 R2, the DirectAccess role service role has been augmented and improved, and includes a new fast deployment options allowing small organization to plan and deploy a remote client access solution, on minimal hardware, in a short amount of time. This course covers the new simple deployment method for DirectAccess, and the new remote access server role which supports both VPN and DirectAccess services on the same Server 2012 server. In addition, the lesson covers complex DirectAccess solution planning and deployment, and the planning and design of supporting services.
Microsoft Windows Server 2012 R2: Server Infrastructure - Network Protection	The Server 2012 Network Policy and Access Services (NPAS) server role is deployed to support network security, and optionally to examine and maintain the health of the client computer that request access to the network and its protected resources. This course focuses on network protection, and in particular how the Server 2012 Network Protection and Access System role operates when configured to serve as a Network Access Protection (NAP) client health service monitor. The course also covers NAP; a complex and extensive mechanism that is deployed to protect internal private network resources, and requires careful planning, and appropriate design and testing before being introduced to the production environment. NAP works in conjunction with several other components in an Active Directory-controlled environment and understanding how NAP and NPS interoperates with network a hardware and software system is a prerequisite when approaching the design of a enterprise network protection solution.
Microsoft Windows Server 2012 R2: Server Infrastructure - Implement NPS and WAP	You can protect private system resources by deploying the Network Policy Server as a client health policy checking and remediation service using Network Access Policy (NAP). This allows the system administration to use numerous techniques to check client health at the various network access points and to allow the NPS service to arbitrate on client computer access to the private network. Endpoint Protection is a complementary technology (service role) of the System Center 2012 utility, which monitors client computers for malware status, and client malware prevention readiness by maintaining the up-to-date status of the malware service. In a world where network administrators are under increased pressure to deliver secure internal application access across any Internet connection to any device, Microsoft offers the Web Application Proxy as a solution. With WAP, internal applications can be delivered securely to remote clients with or without another remote access solution, like DirectAccess or VPN. This course covers system protection using Network Access protection, and details System Center Endpoint Protection. To complete the course using Microsoft Web Application Proxy as a solution to deliver secure internal application access across any internet connection to any device is explained.

TestPrep 70-464 Developing Microsoft SQL Server Databases	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Food Allergen Safety	Food Allergen Safety
Active Shooter	Active Shooter
PRINCE2 Practitioner Exam Information	This course provides an overview of the PRINCE2Â® Practitioner certification exam including the expected learning levels for individuals preparing for the exam, and the question formats to expect on the exam. This course also provides an overview of navigating PRINCE2Â® Practitioner exam preparation material found in the PRINCE2Â® manual. PRINCE2Â® is a registered trademark of AXELOS Limited.
Oracle Database 12c - Administration: Database Architecture and Management Tools	To understand how an Oracle Database functions, it is important to gain a basic understanding of its major components. This course identifies the major architectural components of the Oracle Database 12c including memory structures and any background processes, and explores the logical and physical storage structures.Â It also discusses the tools to manage a database instance. This includes SQL*Plus, SQL Developer, Enterprise Manager Database Express, and Oracle Enterprise Manager Cloud Control. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: Manage the Database Instance	After a database has been installed and configured it is important to ensure it runs properly. This includes ensuring it is started and shutdown correctly to avoid problems, configuring the proper initialization parameters, viewing the alert and trace files for any errors or warnings, and viewing the data dictionary and dynamic performance views for information related to the instance. This course discuss and show how to startup and shutdown the database instance, as well as how to view the alert and trace files and the data dictionary and dynamic performance views. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: The Network Environment and User Security	The Oracle network environment requires correct configuring to allow database connectionsÂ from clients. If the listener and connections are not configure correctly access can be blocked. Also to access the database, a user must specify a valid database user account and successfully authenticate as required by that user account. What the user can execute once they are logged in is controlled by privileges granted to them, which can be system or object. Privileges can be better controlled by using roles and profiles, which control resource consumption and account status and passwords. This course discussion how to configure the Oracle network environment and how to manage user security. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: Storage structures and Undo Data	An Oracle database is divided into logical storage units called tablespaces. Oracle also provides Oracle-Managed Files (OMF), which eliminate the need for the DBA to directly manage the operating system files in the Oracle database. Managing undo data is also important DBA role. Data is manipulated using DML, and undo data exists as a copy of the original, premodified data and is captured for every transaction that changes data. This course describes the purpose and functions of tablespaces, including how to manage segments and resumable space allocation. This course also describes how to manage undo data. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: Data Concurrency and Auditing	Oracle Database 12c is designed to prevent multiple users from changing the same data at the same time by implementing locks. These locks are used to manage data concurrency and are implemented automatically, which can sometimes cause lock conflicts. This course discusses the locking mechanism in Oracle and how to resolve lock conflicts and deadlocks. It also discusses how to implement database auditing. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: Backup, Recover, and Move Data	Preparing for and performing data recovery and completing database backups are the responsibilities of a DBA.This ensures that the database is available for users when they require it. DBAs also need to ensure that if a failure does occur, the loss of data is minimized and they can recover the database in an efficient manner. Oracle DBAs also need to understand the various internal consistency checks a database performs as it moves from the shutdown stage to being fully open. Equally important is an understanding of what can cause a failure, and how to recover from an instance failure. This course explores how to identify the types of failures that can occur in an Oracle database and how to prepare a database for failure recovery by using checkpoints, log files, and the flash recovery area and ARCHIVELOG mode, as well as how to perform different types of backups. It also discusses the need for performing recovery and the use of tools such as the Recovery Manager (RMAN) and the Data Recovery Advisor for file recovery operations. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: Maintenance and Performance Tuning	General database maintenance and performance monitoring are important Oracle DBA tasks. Proactive and reactive database maintenance is made easy by the sophisticated infrastructure of Oracle Database 12c, including elements such as Automatic Workload Repository (AWR), ADDM, ASMM, and database alerts. DBAs must make sure that databases are open and available to users when they need it and that it is working without bottlenecks by gathering performance metrics. This course discusses how to use Enterprise Manager Cloud Control to monitor performance, and how to use AMM, ADDM, and the different advisors to obtain necessary information to accurately performance tune the instance. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.
Oracle Database 12c â€" Administration: Resource Manager, Scheduler, and Support	By using the Database Resource Manager, you have more control over the allocation of machine resources than is normally possible through operating system resource management alone. Many tasks in the Oracle environment need job-scheduling capabilities. Using advanced Scheduler features, you can exercise more control over various aspects of scheduling, such as job windows and prioritizing jobs. DBAs are also required to ensure that the database is up-to-date with the latest patches and that critical errors are resolved, which includes contacting Oracle for support. This course explains how to configure the Database Resource Manager to access and create resource plans, create, configure, and administer consumer groups, as well as activate a resource plan and monitor the Resource Manager. This course also explores how to simplify management tasks by using the Scheduler to create, program, schedule, and monitor job and how to access and use My Oracle Support. This course is one of a series in two SkillSoft learning paths that covers the objectives for the 1Z0-062Oracle Database 12c: Installation and Administration. This exam is part of the Oracle Database 12c Administrator Certified Associate, OCA, certification path.

Microsoft Windows Server 2012 R2 - Advanced Infrastructure: Storage and Networks	Virtual storage and virtual networking are two areas of Microsoft's Hyper-V virtualization solution that have seen lots of changes in recent times. This course will cover planning and implementation considerations for virtualization storage and networking using Hyper-V and Virtual Machine Manager 2012 R2. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: VM Administration	One of the key advantages of virtualized server infrastructure is the ability to move running VMs to shift loads from over-utilized hardware resources to under-utilized ones. This course covers VM movement, including storage migration and live migration. This course also covers virtualization infrastructure management with App Controller and Service Manager with Virtual Machine Manager. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: Clustering and NLB	Failover clustering and Network Load Balancing (NLB) are features of Microsoft Windows Server 2012 R2, which provide different levels of fault tolerance, high availability, and scalability to the workloads in your data center. Failover clustering provides high availability for services and applications. NLB provides availability and scalability for servers running TCP/IP services. This course covers the planning and implementation of each technology as well as identifying their key features, differences, usage scenarios, deployment, and configurations. The course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: Updates	The modern data center has very specific requirements for physical and virtual machine management, self-service, business continuity, automation, and monitoring and reporting. This course looks at how System Center 2012 R2 addresses those requirements. It also looks at deploying updates using WSUS and System Center Configuration Manager 2012 R2. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.

Course	Description
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: VM hosts and guests	For organizations that have implemented virtualization and are looking towards private cloud and virtualized data center infrastructures, Microsoft System Center 2012 R2 Virtual Machine Manager is an important management tool. VMM helps manage and maintain control of virtualized infrastructure when deploying many VM hosts and their associated virtual machine instances. This course looks at implementing virtualization hosts and associated virtual machines in a Windows Server 2012 R2 environment. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: Business Continuity	Failover clustering and Network Load Balancing (NLB) are features of Microsoft Windows Server 2012 R2 that provide different levels of fault tolerance, high availability, and scalability to the workloads in a data center, all of which contribute to business continuity. Failover clustering provides high availability for services and applications. NLB provides availability and scalability for servers running TCP/IP services. This course covers the planning and implementation of each technology as well as identifying their key features, differences, usage scenarios, deployment, and configurations. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: Monitoring	This course covers data center monitoring. Operations Manager is the System Center component designed to monitor the data center, and this course will cover how it is used, how to configure management packs and notifications, and how it can integrate with Virtual Machine Manager to provide automated remediation based on alerts triggered in Operations Manager. This course also covers compliance, how to use System Center to manage baselines for ensuring configurations. Finally this course looks at integrating with Service Manager and Orchestrator for automated remediation. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: Certificate Services	The public key infrastructure in Windows Server 2012 R2 is used to integrate PKI to secure and exchange information across not only an intranet, but also across extranets, the Internet, and from application to application. This course examines what a certificate authority is, how certificate templates are used, how to configure and implement certificate distribution and revocation, and the methods used to implement key archival and recovery. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Microsoft Windows Server 2012 R2 - Advanced Infrastructure: AD RMS and AD FS	Active Directory Federation Services provides web-based authorization and authentication services for all users in your organization, both internal and external. Active Directory Rights Management is used to protect an organizationâ€™sconfidential information, and other information that needs to be protected. This course examines both of these technologies and how they work together to increase the security infrastructure in your organization. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-414: Implementing an Advanced Server Infrastructure. This exam is required for the MCSE Server Infrastructure certification.
Adobe Acrobat Pro XI Fundamentals	This course introduces learners to the fundamentals of Adobe Acrobat Pro XI, including how to create PDF files, how to insert and edit text and images, and saving in different file formats. This course also covers page options, including transitions, cropping pages, and using number pages and headers and footers. Finally, the course introduces learners to enhancement features and tools like collaboration, fillable forms, and digital signatures.
Adobe Dreamweaver CC - Essentials	This course introduces learners to the fundamentals of Adobe Dreamweaver CC including the interface, workspace, and creating sites. This course also covers how to work with images in Adobe Dreamweaver CC, including creating hot spots, adding and modifying images, creating rollover images, and using the image properties panel. Finally this course introduces some advanced features and options such as creating HTML files, attaching style sheets, using fluid grid layouts, adding video, and inserting JQuery widgets in Adobe Dreamweaver CC.
Microsoft SQL Server 2014 - New Features	Microsoft SQL Server 2014 - New Features
Adobe Flash Professional CC - Working with ActionScript	Adobe Flash Professional CC - Working with ActionScript
Adobe CC Overview - New Features	Adobe CC Overview - New Features
TestPrep 1Z0-060 Upgrade to Oracle Database 12c	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 70-413 Designing and Implementing a Server Infrastructure	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.

TestPrep 70-414 Implementing an Advanced Server Infrastructure	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Course 3	Course 3
course 1	course 1
Course 2	Course 2
Course 3	Course 3
Course 1	Course 1
Introduction to HTML5	This course covers the use of HTML5 for building webpages. It covers the basic HTML document structure and some of the most common elements that go into a webpage.
HTML5 Layout	HTML5 has many page layout and data presentation elements that can be used to display your data. In this course, you will learn about some of the more advanced, but very common and useful, page and data formatting elements. You'll also learn about the new elements that HTML5 introduces to make page layout semantic.
HTML5 and CSS3	HTML5 and CSS3 provide all the parts necessary to create a visually stunning webpage. HTML5 provides all the structure and bones of the webpage while CSS3 provides the color, smoothness, layout, and visual impression of the web page. In this course, you will learn the basics of manipulating a webpage by using CSS3. You'll also learn some of the basic structure for CSS3 and some of the styling options available.
HTML5 Layout with CSS3	HTML5 and CSS3 complement each other nicely; however, CSS3 has the ability to control the very layout of the HTML5 document. CSS3 allows you to overlap, align, and even place HTML5 objects side-by-side. In this course, you'll learn the basics of how to manipulate the HTML5 objects to format them into the layout you desire. You'll also learn about the use of CSS3 and HTML to create navigation menus and the new nav tag that HTML5 introduced.
HTML5 Forms	HTML5 is the new standard for web development from the W3 Consortium. In this course, you will look at using HTML5 forms, and in particular, the new input types and input validation features that HTML5 provides. You'll learn about the different elements and how they can reduce the amount of work required to handle data entry.
HTML5 APIs and Media	HTML5, its APIs, and Javascript provide a powerful tool to create robust, rich, dynamic web pages. Using these tools and client-side features of the browser allows developers to create dynamic, media rich, and very interactive sites for their users to interface with. In this course, you'll learn about the basic building blocks for building highly dynamic, fast, and reactive web pages.
HTML5 and Advanced CSS3	CSS3 provides a rich environment for manipulating images and text using animation and transforms. CSS3 with HTML5 can accomplish many graphical transforms and animations that used to require Javascript or other third party libraries. In this course, you'll learn to work with different transforms and animations provided by CSS3; for example, to rotate, skew, and scale HTML5 objects.
HTML5 and JavaScript	HTML5 and JavaScript is the standard for creating highly interactive and responsive web pages. Using the latest features of HTML5, CSS3, and JavaScript can minimize development time while providing a rich environment for the users who interact with your website. In this course, you will learn the basic building blocks of JavaScript and how it can interact and manipulate HTML5 and CSS3.
HTML5 Graphics and Canvas	HTML5 and the canvas provide a significant improvement to graphic capabilities on the web. The canvas can be used for interactive or very details drawing within a webpage and SVG can be used to ensure the quality of your images are not lost due to scaling on all screen sizes. In this course, you'll learn the fundamentals of using both SVG and the HTML5 canvas and how they'll allow your website to scale and dynamically display or draw graphics.
Advanced HTML5	HTML5 is the standard for web development. As it becomes more entrenched in everything from enterprises to small businesses, the functionality of traditional desktop apps and their ability to function under even offline conditions requires that HTML5 provide the sophistication of an almost desktop-like experience over the web. New HTML5, CSS3, and Javascript features have made this a reality. In this course, you will learn about using advanced features of the browser, offline storage, and web development for mobile use.
Advanced Features of JavaScript, CSS3 and HTML5	HTML5, CSS3 and JavaScript provide a variety of advanced features for creating highly interactive and responsive web pages. In this course you will learn how to utilize JavaScript to create timers and marquees, implement drag and drop in HTML5, access and validate form data,and manipulate forms with CSS3. You will also learn how to handle events and include meters and progress indicators in an HTML5 page.
Databases in Ruby on Rails: Advanced Concepts	This course covers how to use advanced features to work with Ruby on Rails databases. It covers star schemas, lists and calendar tables, multi-valued dimensions as well as columnar databases. It also covers working with the InnoDB engine as well as managing deadlocks, scan locks and concurrency.
Advanced Ruby Features	Ruby contains a number of features for advanced data management including advanced arrays, regular expressions, accessors, and virtual attributes. In this course, you'll learn about the use of these features. You'll also learn about overloading and overriding methods, and adding methods to classes and objects.You'll explore features such as open classes, ducktyping, and class hooks, as well as immutability and marshaling. Finally, you'll learn about networking in Ruby, as well using GetOptLong, and idiomatic Ruby.
Getting Started with Ruby	Ruby is an open source, all-purpose programming language that has become increasingly popular with the advent of its associated web development framework, Ruby on Rails. In this course, you'll learn the essentials of the Ruby language, including classes and methods, program flow and operators. You'll also learn about working with data types and error handling.
Working with Ruby	There are a number of features in Ruby that can be used to enhance, extend, test, and distribute your applications. In this course, you'll learn about working with collections such as arrays and hashes and using modules such as enumerable to manage them. The course also explores working with blocks and using features of methods and classes such as the self object and method_missing. You'll also learn about networking in Ruby and completing a Ruby application using comments, code organization and ruby gems, testing with MiniTest, and application distribution.
Web APIs with Ruby on Rails	This course covers how to develop webAPIs using the Ruby on Rails framework. It covers how to set up an API,create API endpoints and render XML and JSON. It also covers versioning and authentication as well as documentation and testing.
Ruby on Rails - Fundamentals	This course covers introduces the features of Ruby on Rails including scaffolding and routing. It steps through the creation of a Ruby on Rails project and show how to work with cookies and sessions, and how to implement testing and access statistics.
Rubyon Rails - Database Fundamentals	This course covers how to use ActiveRecord to work with data in a Ruby on Rails application. It covers creating a model, adding and editing records, manipulating data, working with scopes, using forms and creating queries.
Ruby on Rails for .NET Developers	This course covers how elements of the Ruby language for .NET developers. It also covers the features of Ruby on Rails and shows how to create a Ruby on Rails application.
Working with Databases in Ruby on Rails	This course covers how to work with databases in Ruby on Rails. It covers data models, referential integrity, record validation, and optimistic and pessimistic locking.
MySQL: Querying Data Using the SELECT Statement	MySQL is fast, reliable, easy to use, free to download and supports standard SQL. In this course, youâ€™ll be introduced to MySQL and learn how to initially configure My SQL using the MySQL Workbench. Youâ€™ll also be introduced to the core concepts of relational database management systems (RDBMS) as well as core design concepts including table and column design.
Beginning Windows Applications	Software Development Fundamentals covers a common set of methodologies used when creating programs with a variety of programming languages. In this course you will explore how to use strings, the basics of Windows forms applications, and you'll also cover how to create a Windows application.
Introduction to Programming	Software Development Fundamentals covers a common set of methodologies used when creating programs with a variety of programming languages. In this course you'll explore how to create programs, what decision structures are, and also explore the basics of object-oriented programming.
Programming Basics	Software Development Fundamentals covers a common set of methodologies used when creating programs with a variety of programming languages. In this course you will explore programming basics such as the fundamentals of object-oriented programming, data structures, and how to use JavaScript.
Working With Charms and Contracts	Charms and Contracts provide a convenient way for developers to tightly integrate their apps into Windows 8.1. Live tiles and Notifications also allow developers to leverage some of the more unique features of Windows 8.1 when creating Store Apps. This course teaches how to work with charms, contracts, dynamic tile and notifications. This course also covers how to add media to Windows Store Apps. This course is one of a series in the Skillsoft learning path that helps prepare learners for the Microsoft Exam 70-484: Essentials of Developing Windows Store Apps Using C#. This course is one of a series of courses that help prepare the learner for the Microsoft Exam 70-484: Essentials of Developing Windows Store Apps Using C#.
Authentication, Authorization, and App Deployment	Apps built for the Windows Store may require security features in the way of authentication and authorization. When apps are complete they also require certification before submission and approval for listing in the Windows Store. This course covers working with user credentials, and ways to perform authentication and authorization when developing Windows Store Apps. This course also goes over concepts involved in submitting and app to the Windows Store. This course is one of a series in the Skillsoft learning path that helps prepare learners for the Microsoft Exam 70-484: Essentials of Developing Windows Store Apps Using C#. This course is one of a series of courses that help prepare the learner for the Microsoft Exam 70-484: Essentials of Developing Windows Store Apps Using C#.
Office 365 Configuration	This course covers the basic tasks required to create and configure tenants and domains in Office 365.
Office 365 Deployment	This course covers the basic tasks required to plan and complete an Office 365 deployment, add and configure required DNS records, administer rights management, and manage administrator roles in Office 365.
Monitoring and Troubleshooting Office 365 Usage	This course covers monitoring and troubleshooting Office 365 availability and usage.

Course	Description
Managing Office 365 Cloud Identities, Synchronization, and Clients	This course covers the management of Office 365 cloud identities via the Administration Center and PowerShell, the use of DirSync with Office 365, and the planning and management of Office 365 clients.
Office 365 Federated Identities (Single Sign-	This course covers the implementation and management of federated identities in Office 365.
Code of Conduct Awareness — Higher Education Edition	An educational institution's Code of Conduct is a key part of its ethical framework. Outlining the institution's key ethical principles and providing guidance on the expected standards of behavior for employees, the Code serves as an important resource for employees as they navigate the sometimes challenging waters of the workplace. This course will introduce employees to the uses and benefits of their institution's Code of Conduct, and offer practical advice on how to apply the Code to ethical dilemmas they may encounter in the academic environment.
TestPrep 70-483 Programming in C#	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Kendo UI: Installation and Overview	Kendo UI is an application framework and set of GUI widgets and interface elements for building HTML5 and JavaScript apps intended for web and mobile deployment. This course covers installation of Kendo UI and an overview of features including basic web widgets.
Kendo UI: HTML Helpers for ASP.NET MVC	Kendo UI is an application framework and set of GUI widgets and interface elements for building HTML5 and JavaScript apps intended for web and mobile deployment. This course covers the use of HTML helpers in Kendo UI with ASP.NET and MVC.
Kendo UI: Mobile API	Kendo UI is an application framework and set of GUI widgets and interface elements for building HTML5 and JavaScript apps intended for web and mobile deployment. This course covers DataViz and mobile widgets.
Mentoring 70-483 Programming in C#	
TestPrep 1Z0-062 Oracle Database 12c: Installation and Administration	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
JavaScript SPA: Getting Started with SPA in Visual Studio 2013	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and to display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to use various JavaScript SPA templates in Visual Studio 2013 such as Durandal, Breeze, Angular, Knockout, Ember, and Hot Towel for quickly getting off the ground with your first JavaScript SPAin Visual Studio 2013.
JavaScript SPA: SPA Views and Routes	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and to display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will explore common server and client NuGet packages that you can install when developing your SPA from scratch. You will also learn how to create MVC 5 views and configure controller routes in Visual Studio 2013.
JavaScript SPA: Durandal Modules and Lifecycle events.	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and to display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to compose new modules, use RequireJS for module dependency injection at run-time, and handle app lifecycle events in Visual Studio 2013.
JavaScript SPA: Adding Views and Handling View Navigation in Durandal	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and to display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to retrieve data for modules in the Durandal JavaScript framework, as well as learn how to set up and configure module routes using the Durandal shell router, how to activate and bind module routes to the Durandal shell router, and how to dynamically compose views in the Durandal JavaScript framework in Visual Studio 2013.
JUnit Fundamentals	JUnit is a framework for writing and running unit tests for Java. This course covers how to get started with JUnit, key members of the API, and how to create a test case and use fixtures.
Working with JUnit Tests	There are a number of features in JUnit for enhancing and expanding tests. This course covers how to create test suites and categories, optimize JUnit tests using execution procedures, timeouts and rules, manage test data, use theories and mock objects, run tests with Maven, and implement testing in legacy code.
Advanced Features of Selenium Automated Web Testing	Selenium is a set of tools that can be used to automate browsers. In this course, you'll explore how to use the features of Selenium automated web testing to test page elements and functions. You'll also cover how to plan and design for optimized testing and how to extend those tests using features such as the Selenium Grid.
Selenium and Python	Selenium is a set of tools that can be used to automate web testing using a variety of languages including Python. In this course, you'll learn how to set up a Selenium Python project, locate elements, check navigation, display, and input controls. You'll also explore how to execute JavaScript from Python tests, work with Ajax elements, and take remote screenshots.
Selenium and Java	Selenium is a set of tools that can be used to automate web testing with Java. In this course, you'll explore how to set up a Selenium Java project, locate elements, check navigation, display, and input controls. You'll also explore how to execute JavaScript from Java tests, work with Ajax elements, and take remote screenshots.
Selenium and C#	Selenium is a set of tools that can be used to automate web testing with C#. In this course, you'll learn how to set up a Selenium C# project, locate elements, check navigation, display, and input controls. You'll also explore how to execute JavaScript from C# tests, work with Ajax elements, and take remote screenshots.
Selenium Automated Web Testing Fundamentals	Selenium is a set of tools that can be used to automate browsers. In this course, you'll explore the Selenium features for automated web testing. You'll learn how to create test cases and suites with the Selenium IDE, using locators, patterns and variables, tweaking tests with JavaScript and debugging, and running tests.
Microsoft SharePoint Server 2013 - Developing Core Solutions: Planning Sites	Planning and designing Microsoft SharePoint Server 2013 sites involves creating and managing content, provisioning sites, and managing site lifecycles. This course covers the activities involved in creating content types, managing content behaviors, provisioning, and maintaining sites throughout their lifecycle. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Microsoft SharePoint Server 2013 - Developing Core Solutions: Implement Security	Implementing authorization and authentication is essential for Microsoft SharePoint Server 2013 deployments. This course covers the principles for user and application authentication and authorization. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Microsoft SharePoint Server 2013 - Developing Core Solutions: User Experience	Creating an engaging user experience is important for Microsoft SharePoint Server 2013 sites. This course demonstrates how to implement branding and navigation, and how to create custom user interface elements. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Microsoft SharePoint Server 2013 - Developing Core Solutions: Manage Solutions	Microsoft SharePoint Server 2013 objects, features, and solutions evolve and must be managed. This course demonstrates how to manage SharePoint object life cycles, determine a solution structure, and upgrade solutions and features. This course is part of a series of SkillSoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Microsoft SharePoint Server 2013 - Developing Core Solutions: Managing Data	Microsoft SharePoint Server 2013 data must be managed and made accessible. This course demonstrates how to design solutions to store, access, and handle large amounts of data. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Microsoft SharePoint Server 2013 - Developing Core Solutions: Business Processes	Microsoft SharePoint Server 2013 can provide a platform on which to build business processes. This course demonstrates how to plan and create business workflows using SharePoint designer and Microsoft Visio. It also demonstrates how to use event receivers to implement workflows. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Clojure Data-Driven and Web Application Fundamentals	There are a number of specific features and tools for building and deploying Clojure web applications. In this course, you'll learn about development of basic data-driven web applications using Clojure. You'll also explore working with relational and non-relational data and using Compojure and HTML templating. You'll also learn how to deploy Clojure web applications.
JsRender Fundamentals	JsRender is a JavaScript templating framework for rendering HTML dynamically. In this course, you'll explore how to get started with JsRender, how to work with If Else and For tags, how to compile templates, and how to use paths for rendering data.
Advanced JsRender Features	JsRender is a JavaScript templating framework for rendering HTML dynamically. In this course, you'll explore what custom tags are and how to work with them, as well as using converters, helpers and external templates. You'll also learn about navigating and manipulating data as well as working with Ajax implementing data binding.
Microsoft SharePoint Server 2013 - Developing Core Solutions: Create Office Apps	Microsoft SharePoint Server 2013 can provide a platform on which to build applications to support business processes. This course demonstrates how plan, design, create, package, and deploy applications. It also explains how to manage app lifecycles. This course is part of a series of Skillsoft courses that cover the objectives for exam 70-488. This exam is required for the certification Microsoft Certified Solutions Developer (MCSD): SharePoint Applications.
Clojure Fundamentals	Clojure - a dialect of Lisp - is a dynamic programming language that compiles to JVM bytecode. In this course, you'll learn the fundamentals of programming with Clojure including basic syntax and using Leiningen to build Clojure programs. You'll also learn about program flow and working with functions and namespaces.
Data and State Management in Clojure	Interacting with and managing data is an important aspect of Clojure applications. This course covers working with data in Clojure, including using primitive types and data collections. You'll also learn about state management with Clojure.
Optimizing Clojure Projects	Clojure includes a number of features that enable you to optimize your applications. In this course you'll learn about optimization of Clojure projects with multimethods and hierarchies, parallelism, and macros. You'll also learn about profiling and unit testing of Clojure applications.
jQuery Mobile — Forms, Lists, Sets and Tables	jQuery Mobile includes a range of features to manage data input and presentation. In this course, you'll learn about the configuration of forms in jQuery Mobile apps, as well as managing input and output data with features such as validation and serialization. You'll also learn about the creation of lists, sets, and tables with jQuery Mobile.
Optimizing jQuery Mobile Apps	You can optimize jQuery Mobile apps by editing styles and themes. In this course, you'll learn about styles and themes in jQuery Mobile. You'll also learn about the use of the jQuery Mobile API and Service Integration.
Integrating jQuery Mobile with PhoneGap	PhoneGap is a framework for creating mobile apps with standard web APIs.In this course, you'll explore the use of PhoneGap for building and deploying jQuery Mobile apps. You'll also learn about the integration of PhoneGap APIs such as the Camera API into jQuery Mobile apps.
MySQL: Database Concepts, Design, and Installation	MySQL is fast, reliable, easy to use, free to download and supports standard SQL. In this course, you'll be introduced to MySQL and learn how to initially configure My SQL using the MySQL Workbench. You'll also be introduced to the core concepts of relational database management systems (RDBMS) as well as core design concepts including table and column design.
jQuery Mobile — App Basics, UI Controls and Navigation	jQuery Mobile is a touch-optimized web development framework that lets you build mobile web apps that can be used acrossa range of devices. In this course, you'll learn the fundamentals of building apps with jQuery Mobile. You'll also learn about page creation and the addition of UI components, as well as the use of navigation elements and transition effects.
Mentoring 98-361 Software Development Fundamentals	
Getting Familiar With Windows 8.1 UI and Layout	Rich and immersive Windows Store apps can be creating using Windows 8.1, Visual Studio 2013, C# and XAML. In this course, you will learn some of the features that make Windows 8.1 and Windows Store apps stand out. You will also learn the basics using Extensible Application Markup Language (XAML), how to respond to changes in orientation and window modes in an app, and how to use resources, styles, and templates. This course is one of a series in the Skillsoft learning path that helps prepare learners for the Microsoft Exam 70-484: Essentials of Developing Windows Store Apps Using C#.
MySQL: Using the Data Manipulation and Definition Statements	It's essential as a database administrator to understand how to use data definition and data manipulation statements in order to manage and modify database objects. In this course, you'll learn how to use insert, update, and delete statements to manage data within a MySQL database. You'll also learn how to use DDL statements to create, drop, and alter databases, tables, and views.
Programming in C#: Implementing Data Access	Data access and management is a critical aspect of most enterprise applications. In this course, you'll learn how to implement data access in C# applications. You'll also learn about I/O operations, consuming data, using LINQ, serialization, and using collections.
Microsoft SQL Server 2014 - Designing Solutions: Planning Infrastructure	Planning SQL Server infrastructure includes planning from the hardware up all the way to individual table configurations. This course addresses the activities involved in planning database physical and logical structures using the Microsoft Planning and Assessment Toolkit, implementing policy-based management, and managing SQL Server with System Center. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-465. This exam is required for the certification MCSE: Data Platform.
Microsoft SQL Server 2014 - Designing Solutions: Private Clouds	SQL Server 2014 has a number of enhancements and features aimed at private cloud deployment and management of SQL databases. This course describes consolidation and management of consolidated resources, an overview of cloud computing, and how the cloud paradigm has shaped SQL server, configuring SQL in a private cloud configuration, and working with prepared instances of SQL Server. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-465. This exam is required for the certification MCSE: Data Platform.
Advanced Python	This course covers advanced Python 3.x concepts including exception handling, decorators, sequences, lambda functions, and generators.
Python Language Basics	This course covers elementary control and data structures in Python 3.x. It also covers sequences and sorts. Finally this course covers OOP in Python, including classes, methods, and objects.
Applications of Python	This course covers XML manipulation in Python 3.x, file manipulation, and how to work with the file system. It further covers modules and packages and how to work with the built-in SYS module.
Programming in C#: Managing Program Flow	Microsoft Visual C# is a principal development language for the .NET framework. This course offers instruction on how to manage program flow in C# applications. It describes functionality such as multithreading, asynchronous processing, events and call backs, and exception handling. This course is a part of the preparation materials intended to prepare an individual for Exam 70-483 Programming in C#. Passing this exam provides Microsoft Specialist certification and is a credit towards the Microsoft Certified Solutions Developer (MCSD) certification Windows Store Apps Using C#.
Programming in C#: Debugging and Security Implementation	Debugging and securing your applications is crucial prior to deployment. This course describes how to implement debugging and security features in C# applications. You'll also learn about validation of application input, symmetric and asymmetric encryption, managing an assembly, using compiler directives, and implementing diagnostics.

Course	Description
Microsoft SQL Server 2014 - Designing Solutions: Windows Azure SQL Database	Microsoft Windows Azure is a cloud computing offering which includes cloud storage, VMs, and applications. Windows Azure SQL Database is the public cloud SQL service. This course covers the Windows Azure offering, where SQL sits in the offering interaction between SQL and the cloud, and Windows Azure SQL Database. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-465. This exam is required for the certification MCSE: Data Platform.
Microsoft SQL Server 2014 - Designing Solutions: High Availability	In addition to Windows Azure SQL Database, Windows Azure enables you to configure and manage a VM dedicated to running an instance of SQL Server. High availability is the ability of a service to continue after a failure, and SQL Server 2014 has a number of options for implementing high availability. This course covers VMs on Windows Azure, and how to install, configure and manage SQL on a VM, and high availability in SQL 2014 including Windows Server Failover Clusters, AlwaysOn Failover Cluster Instances and AlwaysOn Availability Groups. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-465. This exam is required for the certification MCSE: Data Platform.
Programming in C#: Creating and Using Types	In addition to classes, there are a number of C# types including structs and enums. In this course, you'll learn about creating types, including structs, enums and classes. You'll also learn about consuming types, including converting value and ref types. The course also explores encapsulation, implementing a class hierarchy, using reflection, and managing the object life cycle. Finally, you'll learn about manipulation of strings in C#.
Microsoft SQL Server 2014 - Designing Solutions: Clustering and AlwaysOn	SQL Server AlwaysOn Availability Groups are built on Windows Server Failover Clusters and AlwaysOn Failover Cluster Instances (FCI). This course covers configuration of Windows Server Failover Clusters, SQL Server Failover Cluster Instances, and AlwaysOn Availability Groups. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-465. This exam is required for the certification MCSE: Data Platform.
Microsoft SQL Server 2014 - Designing Solutions: Backup and Recovery	Backup and recovery planning are key to any organizations who implement SQL Server 2014. This course covers backup and recovery, how to create and maintain a disaster recovery plan, and configuration and management of SQL Server replication. This course is part of a series of Skillsoft courses that covers the objectives for exam 70-465. This exam is required for the certification MCSE: Data Platform.
C++11: Advanced Techniques and C++14 Preview	The next C++ standard is known as the C++14 standard. This course aims to familiarize the C++ programmer with C++11 features such as lambda expressions, smart pointers and valarray, as well as some of the upcoming language changes introduced in the C++14 standard.
C++11: Programming Fundamentals	C++ is a general purpose, object-oriented programming language with the C language as its core. The latest release is C++11. This course covers essential C++11 programming essentials, as well as containers, data structures, and data types. It also features lambda expressions, iterators, and enumeration classes.
C++11: Programming Techniques	C++ includes a number of features for manipulating functions and types and it includes features such as concurrency for optimizing applications. This course covers using function adapters, assertions and type traits, and threads and concurrency in C++11. It also covers Smart pointers and valarray.
C++11: Programming with Boost	Boost includes a range of free, portable, and peer-reviewed C++ libraries and includes a number of libraries specific to C++11. This course covers a series of commonly used Boost libraries.
JavaScript - Ember.js Fundamentals	Ember.js is a client-side, JavaScript-based and open-source application framework that uses the Model-View-Controller (MVC) architectural pattern. This course shows how to use the features of Ember.js to create web applications. It covers working with the object model, routing, using templates and helpers, controllers, views and, enumerables. It also shows how to group elements into resources and how to use browser development tools to debug Ember applications.
Advanced Knockout Techniques	Knockout is a JavaScript library used to develop user interfaces based on the Model-View-View-Model (MVVM) pattern. Knockout can be extended to suit your applications' requirements. In this course, you'll explore how to work with JSON data, extend observables, use unobtrusive event handling, work with custom functions, and extend Knockout's binding syntax.
Configuring Forms with Knockout	Knockout is a JavaScript library used to develop user interfaces based on the Model-View-View-Model (MVVM) pattern. Knockout has a range of bindings that apply to form fields . In this course, you'll learn how to use bindings such as the click binding, event binding, and other bindings related to forms to configure form functionality.
Knockout Fundamentals	Knockout is a JavaScript library used to develop user interfaces based on the Model-View-View-Model (MVVM) pattern. Fundamental to Knockout is the use of observables. In this course, you'll learn how to get started with Knockout, how to work with observables, how to control text and its appearance, and how to work with control flow bindings.
Programming in C++: STL I/O and Headers, Templates, and Namespaces	C++ namespaces are an important concept when writing large-scale applications and distributing software. Function and class templates in C++ enable the use of generic types so that your function or class can be written once, to work with many types of data. In this course, you'll explore the STL I/O classes and headers. You'll also learn about using templates for functions and classes, as well as namespaces in C++.
TypeScript Essentials: Advanced TypeScript	TypeScript integrates with standard JavaScript Libraries and platform applications. This course covers integration with Node.js and RequireJS. It also covers working with internal and external modules operators, contextual typing, and various features of the TypeScript language and syntax.
Programming in C++: Structure and Data Types	C++ is a strongly typed language, and so a thorough understanding of data types is critical to be a good C++ programmer. In this course, you'll learn about the basic structure of C++ and the function of operators. You'll also learn about data types, from basic built-in types like integers to the use of custom data types.
Underscore.js: Array, Object, and Utility Functions	Underscore.js array functions take an array as input. Object functions work on objects, and utility functions provide utility, with or without input, or without being tied to a particular input type. This course covers a large range of array functions, object functions, and utility functions from the Underscore.js library.
Underscore.js: Collection Functions and Function Functions	Underscore.js collection functions work on a range of inputs, such as arrays, objects or lists. Function functions are designed to take a function as a parameter. This course covers a large range of collection functions and function functions from the Underscore.js library.
Programming in C++: Program Structure and Exceptions	Understanding the structure of C++ programs is critical for implementing C++ code effectively. Variables are another basic concept that is key to success. This course covers the structure of C++ programs from branching and looping to the inclusion of functions as discrete code blocks. You'll also learn about variables and memory allocation, handling exceptions, file IO, and working with and formatting strings.
Programming in C++: Working with Classes	As an object oriented programming language, one of the most powerful features of C++ is the ability to make custom objects and types. In this course, you'll explore the basics of creating custom classes and object oriented programmingin C++.
Programming in C++: Arrays, Pointers, and STL	Arrays are a powerful construct in C++ enabling grouping, ordering and enumeration of objects. The Standard Templates Library provides a convenient ready-made set of classes to use with C++. In this course, you'll explore C++ arrays, pointers, and data types available using the Standard Templates Library (STL).
TypeScript Essentials: Getting Started	TypeScript can be developed in any one of a number of IDEs, but Visual Studio 2013 has been developed with a number of features explicitly targeted at TypeScript development. This course covers Visual Studio TypeScript functionality. It also covers Types in TypeScript, and objects including functions and classes, and debugging TypeScript. Finally, it covers working with internal and custom TypeScript modules.
Programming in C++: Tools and Techniques	There are many types of constants in C++, and mastering them is critical to producing readable and manageable code. A good IDE will help with the development and maintenance of large code projects, and choosing the right one for your project is important. In this course, you'll learn about the use of constants and references in C++, as well as tools and IDEs for C++ development. You'll also learn about class constructors and deconstructors, and class and function operators. Finally, you'll learn about header and source files and passing command line arguments to C++ programs.
Lean Principles and Six Sigma Projects	Lean is a continuous improvement initiative that streamlines processes and improves overall performance by reducing waste and cycle time. On improvement projects, Six Sigma can provide the underlying DMAIC methodology and tools to reduce variation and defects, whereas Lean tools and techniques can be specifically useful at the Improve and Control stages of DMAIC. This course introduces key Lean concepts and principles used on improvement projects in both service and manufacturing organizations. The course first examines the relationship between Lean and Six Sigma and introduces a few common Lean tools and techniques. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Six Sigma and Organizational Goals	Six Sigma is a data-driven improvement program that focuses on process, product, and service quality and aims to reduce defects, variation, and costs. Six Sigma uses a rigorous and systematic methodology known as DMAIC (Define, Measure, Analyze, Improve, and Control) and a number of qualitative and quantitative tools for achieving profitability, customer satisfaction, and quality-related organizational goals. This course will examine how Six Sigma helps organizations achieve their strategic goals. It introduces the key Six Sigma concepts and then moves on to discuss how they help achieve organizational goals by connecting business drivers to Six Sigma metrics and scorecards. This course is aligned with the ASQ Body of Knowledge and designed to assist Green Belt candidates toward their certification and to help them become productive members of their Six Sigma project teams.
Design for Six Sigma and FMEA	Design for Six Sigma (DFSS) is an innovative approach for the design or redesign of a process, product, or service from the ground up. It follows a 'pay me now or pay me later' adage by spending effort and time on creating a Six Sigma level process or product design up front, avoiding efforts to fix them later. Tools such as Failure Modes and Effects Analysis (FMEA) are extensively used to achieve DFSS goals. FMEA helps identify possible failures and their potential impact on a design, manufacturing assembly process, or product or service and prioritize actions to address them. This course will examine how Six Sigma combines DFSS and tools such as FMEA to reach its organizational goals. It introduces DFSS and FMEA methodologies and concepts, distinguishes DFSS methodologies from Six Sigma DMAIC, and explains how to prioritize process and design risks using FMEA. This course is aligned to the ASQ Body of Knowledge and designed to assist Green Belt candidates toward their certifications and becoming productive members of their Six Sigma project teams.
Six Sigma Project Identification	Six Sigma deployments demand major investments of time, effort, and money on behalf of an organization. Six Sigma teams responsible for these deployments need to exercise due diligence to identify and select the right project opportunities and appropriate Six Sigma methodology for the chosen project. Having done that, Six Sigma teams need to define various elements of the process of interest and other important aspects related to it such as process stakeholders and input and output variables. This course covers key considerations around the selection of projects and the methodology to apply to the selected project. It covers process elements, project benchmarking and the process inputs and outputs as well as the roles of various project stakeholders on the selected projects. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates in achieving their certification and becoming productive members of their Six Sigma project teams.
Voice of the Customer in Six Sigma	A high quality process that follows Six Sigma standards will create and deliver goods and services that meet and exceed customer requirements and expectations, This requires you to collect the Voice of the Customer (VOC) and translate that to product features, performance measures, or opportunities for improvement. You need a seamless process of identifying customers, collecting customer data, identifying customer requirements, and finally translating requirements into measures that are easy to understand and follow for employees who are responsible for processes, products, and services in the organization. In this course, you will learn the differences between internal and external customers and examine concepts and tools for collecting and analyzing customer information and feedback and eliminating data biases. The course also explains how customer requirements are translated into deliverable goals using tools such as the Quality Function Deployment (QFD) and the House of Quality matrix. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Basics of Six Sigma Project Management	Effective management of a Six Sigma project is critical to delivering expected organizational results. It requires a disciplined approach to managing schedules, costs, and deliverables. This course will examine the basic project management tools used in a successful Six Sigma project. You will learn how to create a project charter, how project scope and metrics are developed, and gain insight into the tools used to plan and implement a Six Sigma improvement initiative. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Six Sigma Management and Planning Tools	In the early stages of a Six Sigma project, a set of management and planning tools are used to analyze and understand the quality and improvement issues at hand. Once this is done, the team measures current processes, analyzes them, and finds improvement solutions. In this course, you will learn about several management and planning tools that are used on Six Sigma projects. You will also be presented with some real-life examples of situations where these tools are best suited. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certification and becoming productive members of their Six Sigma project teams.
Performance Metrics for Six Sigma	In the Define phase of Six Sigma DMAIC, teams identify improvement projects that have the maximum potential for return on time, money, and resource investments. For an accurate assessment of these opportunities, you need to have correct performance metrics and knowledge of where and how to use them. Later, during the Control phase, performance is assessed again using the same metrics to ensure improvements have been achieved. This course explores some of these metrics, such as defects per unit, defects per million opportunities, rolled throughput yield, process capability indices, and sigma level. It also explains using cost of poor quality to assess the potential gains to the company if the quality of products and processes is improved. This course is aligned with the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certification and becoming productive members of their Six Sigma project teams.
Six Sigma Project Team Dynamics and Performance	Six Sigma needs both effective leadership and management to deliver its promised results to an organization. Understanding team building processes, tools, and role structures helps Six Sigma team members produce desired results and resolve negative team dynamics. This course will examine Six Sigma team roles and responsibilities, tools for effective team management, and strategies for overcoming challenges. This course is aligned to the ASQ Body of Knowledge and designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Adobe ColdFusion 10 Fundamentals	Adobe ColdFusion is a web application platform designed to facilitate quick and easy creation of database-driven web sites and web applications. This course shows you how to get started with Adobe ColdFusion, and how to work with variables. The course goes on to show how to create a data source and queries for that source, and how to work with the output. Finally, the course shows how to work with forms and include files.
JavaScript Sencha: Ext JS	Sencha Ext JS is a pure JavaScript application development framework for developing interactive applications for the web. This course takes you through developing a simple app using the model View Controller architecture, and covers features of Ext JS, such as custom classes, data stores, and UI features such as containers, layouts and components.
JavaScript Sencha: Sencha Touch	Sencha Touch is an HTML5 mobile web application development framework for cross platform development. This course covers developing a simple app in Sencha Touch, and deploying and testing it through the android mobile SDK.
Mentoring 300-115 Implementing Cisco IP Switched Networks (SWITCH)	
TestPrep 300-101 Implementing Cisco IP Routing (ROUTE)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.

Course	Description
Mentoring 300-101 Implementing Cisco IP Routing (ROUTE)	
Creating and Consuming WCF Web Services	This course covers Microsoft's principal framework for building remote services, Windows Communication Foundation, and is one of a series that prepares students for Microsoft exam 70-487.
Multi-vari Studies, Correlation, and Linear Regression in Six Sigma	In the Analyze stage of the Six Sigma DMAIC process, project teams carefully analyze process output and input variables. The goal of this analysis is to narrow down the many possible inputs identified during the Measure stage. The analysis is carried out using tools that help identify a few probable root causes that are impacting process performance. This course introduces some key tools used for exploratory data analysis in Six Sigma, such as multi-vari studies, correlation analysis, and regression models. It also explains the correlation coefficient and its statistical significance. In addition, the course helps you interpret the linear regression equation, understand the steps in hypothesis testing for regression statistics and explore the use of a regression model for prediction and estimation of outcomes. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Introduction to Hypothesis Testing and Tests for Means in Six Sigma	During the Analyze phase of a Six Sigma improvement project, the team conducts a number of statistical analyses to determine the nature of variables and their interrelationships in the process under study. Team members typically collect samples of the population data to be analyzed, and based on that sample data, they make hypotheses about the entire population. Because there is a lot at stake in forming the correct conclusions about the larger population, Six Sigma teams validate their inferences using hypothesis tests. This course introduces basic hypothesis testing concepts, terminologies, and some of the most commonly used hypothesis tests â€" one- and two-sample tests for means. The course also discusses the importance of sample size and power in hypothesis testing, as well as exploring issues relating to point estimators and confidence intervals in hypothesis testing. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and to become productive members on their Six Sigma project teams.
Hypothesis Tests for Variances and Proportions in Six Sigma	As a Six Sigma project moves into the Analyze phase, team members identify possible sources of variation, underlying root causes, and areas for improvement. It is here where assumptions or hypotheses about a process, product, or service are made and validated using tests based on sample data. This course will familiarize you with some of the advanced hypothesis tests used in Six Sigma, such as test for proportions, variances, and analysis of variance (ANOVA). You will learn how to use Paired-comparison t-test and chi-square tests for validating hypotheses. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Measurement System Analysis in Six Sigma	The adequacy and accuracy of measurement systems is vital to the success of any data collection and analysis, and therefore critical to the overall success of any Six Sigma initiatives in an organization. Measurement systems encompass devices, procedures, and the human element of measurement, which together must produce correct measurements and comply with appropriate standards. This course examines how to analyze a measurement system to help it produce correct measurements and minimize its proportion of variability in the overall process variability. It introduces key elements of measurement system capability using gauge repeatability and reproducibility (GR&R) studies, measurement correlation, bias, linearity, percent agreement, and precision to tolerance (P/T) ratio. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and become productive members on their Six Sigma project teams.
Process and Performance Capability Measurement in Six Sigma	Organizations should regularly evaluate existing processes to make sure they meet targets and specifications set by their customer and business requirements. Measuring and analyzing process capability and performance enables an organization to report its sigma level and improvement teams to targets their efforts effectively. This course explores the key concepts related to process capability and performance, and the methods of measuring and interpreting common performance indices. It also discusses how to verify the stability and normality of a given process and identify key considerations for measuring process capability, such as short-term and long-term capability and sigma shift.This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and become productive members on their Six Sigma project teams.
Design of Experiments in Six Sigma	In the Improve stage of Six Sigma DMAIC, Six Sigma teams design and conduct experiments to investigate the relationships between input variables and response variables. By controlling and changing the input variables and observing the effects on the response variables, a Six Sigma team gains a deep understanding of their relationships. After determining what and how much needs to be changed to gain the desired improvement, teams generate solution ideas. This course surveys the concepts that are fundamental to the Design of Experiments methodology, including the basic elements of experiments: variables, factors and levels, responses, treatments, errors, repetition, blocks, randomization, effects, and replication. It also introduces and analyzes main effects, interaction effects, and their plots. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and become productive members on their Six Sigma project teams.
Root Cause Analysis and Waste Elimination in Six Sigma	Getting to the source of why something has gone wrong in a system or process is critical to identifying the changes necessary for resolving the problem. During the Improve phase of a Six Sigma project, team members use a variety of nonstatistical methods and Lean tools to analyze systems and processes, looking for ways to reduce costs and eliminate waste. This course explores how to use various tools for conducting root cause analysis and reducing waste, such as fishbone diagrams, relational matrices, the 5 Whys, fault tree analysis, the 5Ss, standard work, and kanban-pull. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certification and becoming productive members of their Six Sigma project teams.
Cycle Time Reduction and Kaizen in Six Sigma	During the Improve stage of a project, the Six Sigma team uses tools to address the causes of problems in the process. Cycle time reduction and continuous improvement tools are popular choices to address many of these problems. Reducing cycle time brings products to the market faster and improves delivery time and overall customer satisfaction. A timely and productive application of kaizen - or continuous improvement - allows an organization to eliminate waste, streamline processes, reduce costs, and create a Lean culture in the organization. This course looks at some of the common lean tools for cycle time reduction and continuous improvement, including continuous flow, setup reduction, kaizen, and kaizen blitz. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and to become productive members on their Six Sigma project teams.
Process Documentation and Analysis in Six Sigma	During the Define stage of a Six Sigma project, the Six Sigma team identifies process areas that require analysis and improvement. During the Measure stage, the team maps the processes and procedures that were identified. As this mapping takes place, the team begins to uncover likely causes of the problems and analyze them fully. This course will examine key tools and techniques used to model and analyze existing processes. From a process modeling perspective, the course looks at techniques such as process mapping, written procedures, and work instructions. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Basic Probability and Statistical Distributions in Six Sigma	To make accurate inferences about populations from sample data, you need to be able to determine the probability that an event or a combination of events will occur. You also need to be familiar with the characteristics of various statistical distributions, and their suitability for different types of data. In this course, you'll be introduced to the concept of probability. You'll learn how to calculate probability involving independent events, mutually exclusive events, multiplication rules, permutations, and combinations. You'll also look at different types of distributions, such as normal, Poisson, binomial, Chi-square, Student's t, and F-distributions. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Data Classification, Sampling, and Collection in Six Sigma	Before a Six Sigma team can begin to improve an organization's processes, it must measure key performance indicators. In doing so, the team identifies, collects, and analyzes data related to the processes. This course introduces basic types of data, such as continuous and discrete data, as well as various measurement scales. You will learn how to plan data collection and how to use data sampling techniques and data collection tools, such as check sheets. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certification and becoming productive members of their Six Sigma project teams.
Statistics and Graphical Presentation in Six Sigma	Basic graphs and tables can be used to summarize and assess performance-related data in a meaningful way. Six Sigma practitioners use descriptive statistics to tabulate and graphically represent sample data through a number of informative charts and diagrams. Using analytical statistics, inferences are made about the larger population based on their sample data. These tools allow the organization to view its performance graphically and draw valid conclusions about its processes and products. This course provides basic statistical tools for describing, presenting, and analyzing data. It explores the process of preparing and presenting sample data using graphical methods and then making valid inferences about the population represented by the sample. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and to become productive members on their Six Sigma project teams.
Software Testing with Visual Studio: Manage Test Cases	Software testing with Visual Studio streamlines the development and testing process and supports the needs of software developers and testers. In this course, you'll explore creating test cases and test steps. You'll also learn how to parameterize in order to manage your test cases, shared steps, and requirements. This course is one of a series in the Skillsoft learning path that covers the objectives for the 70-497: Software Testing with Visual Studio certification exam.
Microsoft PowerShell and Exchange Server: Managing Mailboxes	PowerShell can be used for all day-to-day mailbox management tasks in Exchange Server. This course looks at many facets of mailbox management, from reporting to archiving, setting quotas and effecting mailbox repairs.
Microsoft PowerShell and Exchange Server: Distribution Groups and Databases	A large part of day-to-day Exchange Server management involves the creation and management of distribution groups. This course covers distribution group management with PowerShell. It goes on to cover address lists and mailbox data, and managing client access to Exchange.
Lead Awareness in Construction	This course covers information mandated by OSHA 29 CFR 1926.62. It provides general knowledge of the hazards associated with lead exposure and requirements to reduce or eliminate exposure in the construction industry. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify sources of lead exposure, identify adverse health effects associated with lead exposure, specify the purpose and elements of the medical surveillance program and the medical removal protection program, and specify controls and work practices to reduce lead exposures. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Mentoring 300-135 Troubleshooting and Maintaining Cisco IP Networks (TSHOOT)	
Using Eclipse	Eclipse is an open-source integrated development environment (IDE) that can be used to develop applications with a number of different programming languages, including Java, C and C++, and PHP. This course provides an overview of Eclipse features, including some of its advanced features, and it provides an introduction to programming languages, working with code in Eclipse, and expanding Eclipse.
Introduction to Eclipse	Eclipse is an open-source integrated development environment (IDE) that can be used to develop applications with a number of different programming languages including Java, C and C++, and PHP. In this course, you'll be introduced to Eclipse installation, different Eclipse development platforms, the Eclipse interface, Eclipse development, and the basics of different programming languages.
Statistical Process Control and Control Plans in Six Sigma	Ensuring a process is in control and it's behaving in the manner it was intended to is critical to any Six Sigma improvement initiative. In the Control phase of a Six Sigma DMAIC project, teams need to control the improved processes in order to sustain continuous gains. Process control involves applying tools to monitor and maintain each improved process, and to prevent it from reverting to its previous state. By applying statistical process control, you can identify out of control processes, reasons for noncompliance, and take actions to address the situation. This course introduces basic concepts in the statistical process control methodology, including the selection of variables and rational subgrouping. It looks at the key elements of a control plan and explores the steps for developing an effective plan. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and to become productive members of their Six Sigma project teams.
Creating and Using Control Charts in Six Sigma	Having analyzed and improved your processes to the desired level in a Six Sigma DMAIC project, you need to monitor and control them over an extended period of time. SPC tools such as control charts are used to determine if the process is stable. This course teaches methods for identifying, selecting, creating, and interpreting control charts for variables and attributes data. The course also explains how you can recognize when a process has become unstable and is out of control. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward achieving their certification and becoming productive members of their Six Sigma project teams.
TestPrep 300-115 Implementing Cisco IP Switched Networks (SWITCH)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Lean Tools for Process Control in Six Sigma	In the final stages of a Six Sigma project, teams need to control the improved process in order to sustain the improvements. Process control involves applying tools to continuously monitor and maintain each improved process, and to prevent it from reverting to its previous state. Two tools from the Lean toolset specifically help here. Total Productive Maintenance (TPM) is a proactive equipment maintenance program that seeks to engage employees at all levels and functions in an organization to maximize the overall effectiveness of existing processes and equipment. The Visual Workplace is a Lean tool that uses visuals such as signs, labels, and color-coded markings to prevent workers from wasting time and effort searching for materials. This course explores how TPM can be used to control the improved process and maintain process gains. It also presents the elements of a visual factory and describes how the visual factory provides at-a-glance information about process status, targets, and performance. This course is aligned to the ASQ Body of Knowledge and is designed to assist Green Belt candidates toward their certification and to become productive members on their Six Sigma project teams.
TestPrep 70-246 Monitoring and Operating a Private Cloud, System Center 2012	
Mentoring Six Sigma Green Belt (SSGB)	
TestPrep Six Sigma Green Belt (SSGB)	
Mentoring N10-006 CompTIA Network+	
JavaScript SPA: Managing Application Data	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and to display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to add, save, delete, and handle changes made to application data in a JavaScript SPA in Visual Studio 2013.
JavaScript SPA: Working With Validation	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and to display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to implement custom data validation rules on the client and server, how to use Breeze validation, how to gather Breeze entity errors, how to parse Breeze entity error messages on the client, and how to display validation errors to the user in a JavaScript SPA in Visual Studio 2013.
CompTIA Cloud+	CompTIA Cloud+

Test Prep CompTIA Cloud+	Test Prep CompTIA Cloud+
CompTIA Cloud+ CV0-001: Cloud Fundamentals	Cloud computing and service providers use a range of terms and concepts to characterize their offering. It is important to understand key benefits, concepts, and terminology used to describe the various services. In this course, you'll learn about the different types of cloud services and service models available, as well as the unique characteristics of cloud services and object storage. This course is one in a series of Skillsoft courses in the learning path that covers the objectives for the CompTIA Cloud+ CV0-001 certification exam.
CompTIA Cloud+ CV0-001: Virtualization	Without the concept of virtualization, large-scale and dynamic cloud computing data centers would not exist to the extent that they do. The ability to have a software layer that pools together underlying physical resources is provided by hypervisors. In this course, you'll explore the concept of hosts and the types of hypervisors they may use. You'll learn about the virtual machine (VM), various virtual resources, and common management tasks required to deploy VMs. You'll also learn about the key benefits of using virtualization. This course is one in a series of Skillsoft courses in the learning path that covers the objectives for the CompTIA Cloud+ CV0-001 certification exam.
CompTIA Cloud+ CV0-001: Data Center Infrastructure	Identifying the different storage options available and how to configure and provision them is important to ensure the correct option is chosen for the environment needs. This is also true of the different networking features offered. This course provides an introduction to the storage and network infrastructure of the data center and outlines configuration and provisioning of its components, including the different networking protocols available and how to troubleshoot and optimize the networks. This course is one in a series of Skillsoft courses in the learning path that covers the objectives for the CompTIA Cloud+ CV0-001 certification exam.
CompTIA Cloud+ CV0-001: Cloud Management	Part of administering a cloud implementation is ensuring that correct resources are available and that users can access them in a timely manner. In this course, you'll focus on managing the cloud provider data center, including the allocation and monitoring of physical and virtual resources, the implementation of a disaster recovery and high availability strategy, and the tools provided for remote access of hosts and virtual machines. This course is one in a series of Skillsoft courses in the learning path that covers the objectives for the CompTIA Cloud+ CV0-001 certification exam.
CompTIA Cloud+ CV0-001: Cloud Security	It is important to understand the different security mechanisms that can be implemented to ensure unwanted users cannot access the cloud infrastructure. This course will describe network security concepts and how to secure information using encryption, access control, and system hardening. This course is one in a series of Skillsoft courses in the learning path that covers the objectives for the CompTIA Cloud+ CV0-001 certification exam.
CompTIA Cloud+ CV0-001: Managing Cloud Systems	An important part of managing a cloud is ensure it is performing optimally. To do this, the network and storage need to be planned out and documented correctly and the VM host needs to be monitored for any performance issues. In this course you'll learn how to plan and document cloud policies and procedures, as well as how to monitor the VM host for performance issues and perform testing in the cloud. This course is one in a series of Skillsoft courses in the learning path that covers the objectives for the CompTIA Cloud+ CV0-001 certification exam.
Microsoft Team Foundation Server 2013: Installation and Configuration	Microsoft Team Foundation Server is an enterprise system that covers all aspects of Application Lifecycle Management. Its primarily used for source code management but can also be used for project management, requirements management, lab management, testing, reporting, automated builds, and release management needs. This course guides students through the planning, installation, and initial configuration of Microsoft Visual Studio Team Foundation Server 2013 in an enterprise software development environment.
Microsoft Team Foundation Server 2013: Customization for Team Use	Microsoft Team Foundation Server is an enterprise system that covers all aspects of Application Lifecycle Management. Its primarily used for source code management but can also be used for project management, requirements management, lab management, testing, reporting, automated builds, and release management needs. This course guides students through the customized configuration of a Microsoft Visual Studio Team Foundation Server 2013 deployment for development teams in an enterprise environment.
Microsoft Team Foundation Server 2013: Managing an Implementation	Microsoft Team Foundation Server is an enterprise system that covers all aspects of Application Lifecycle Management. Its primarily used for source code management but can also be used for project management, requirements management, lab management, testing, reporting, automated builds, and release management needs. This course guides students through the management of a Microsoft Visual Studio Team Foundation Server 2013 deployment in an enterprise software development environment.
Microsoft Team Foundation Server 2013: Clients, Workspaces, and Version Control	Microsoft Team Foundation Server is an enterprise system that covers all aspects of Application Lifecycle Management. Its primarily used for source code management but can also be used for project management, requirements management, lab management, testing, reporting, automated builds, and release management needs. This course guides students through connecting clients, and managing workspaces in Microsoft Visual Studio Team Foundation Server 2013. It also covers how to configure and manage version control in an enterprise software development environment.
Microsoft Azure: Introduction	Virtual machines and storage are the primary building blocks of the Azure cloud offering. This course covers an overview of Azure features, VM creation and how to build them into clouds, the different cloud service models supported on Azure, and an overview of structured and unstructured data storage.
Microsoft Azure: Networks and Storage	Azure has sophisticated capabilities for segmenting clouds into virtual networks. These networks can be accessed securely by using VPNs for encryption and authentication. This course covers virtual network creation, VPN access to Azure networks, using PowerShell on remote machines, and more on storage, both structured and unstructured.
Microsoft Azure: Publishing and Caching	One of the primary purposes of cloud services is for content publishing. The availability aspect of public cloud computing makes it ideally suited to the task. Caching is implemented in Microsoft Azure to improve performance, which is sometimes seen as the weakness of public cloud offerings. This course covers caching and web publishing; it also covers Microsoft Azure Traffic Manager and hosted Active Directory. Finally it covers alerts for monitoring cloud systems, and backup.
Working With Local Data Access Technologies	This course covers the foundations of data access in the Microsoft .NET Framework and how to choose between data access technologies, and is one of a series that prepares students for Microsoft exam 70-487.
Querying and Manipulating Data with the Entity Framework	This course covers the Microsoft Entity Framework and its use as a data access technology in .NET applications, and is one of a series that prepares students for Microsoft exam 70-487.
Preparing and Packaging Applications For Deployment	This course covers the key aspects of and approaches to packaging .NET applications for deployment and is one of a series that prepares students for Microsoft exam 70-487.
Web Application and Services Deployment	This course covers the deployment of on-premises, hosted, and Azure-based .NET applications and is one of a series that prepares students for Microsoft exam 70-487.
WCF Instancing and Concurrency and WCF Data Services	This course covers some advanced topics of Windows Communication Foundation together with a newer, alternative approach to building services based on WCF, and is one of a series that prepares students for Microsoft exam 70-487.
Creating and Consuming Web API Services	This course covers Microsoft's latest technology for building distributed, MVC-style services and is one of a series that prepares students for Microsoft exam 70-487.
Data Access and Services with Microsoft	This course covers the various data storage and messaging technologies available in Microsoft's Azure cloud services, and is one of a series that prepares students for Microsoft exam 70-487.
Software Testing with Visual Studio: Create and Configure Test Plans	Software testing with Visual Studio streamlines the development and testing process and supports the needs of software developers and testers. In this course, you'll explore how to create a new test plan including how to manage, configure, and define the configurations of your test plan and settings. You'll also learn how to create, clone, manage, and configure test suites. This course is one of a series in the Skillsoft learning path that covers the objectives for the 70-497: Software Testing with Visual Studio certification exam.
Software Testing with Visual Studio: Manage Test Execution Part 1	Effective software testing is integral to mitigating harm caused by software failures and providing confidence in software systems. Knowing how to leverage the tools built into Visual Studio is vital in any software testing environment. In this course, you'll learn how to run tests and perform exploratory testing including fast forwarding test cases, setting test run states, updating multiple test cases at once, performing inline editing of tests during execution, as well as generating a test case from test and performing requirement-based exploratory testing of a work item. You'll also learn how to manage, analyze, track, and verify bug metrics, analyze reports, and manage bug flow. This course is one of a series in the Skillsoft learning path that covers the objectives for the 70-497: Software Testing with Visual Studio certification exam.
Software Testing with Visual Studio: Manage Test Execution Part 2	Software systems are increasingly ubiquitous in all aspects of our lives. Failures in these systems can be costly in terms of money, time, and business reputation. In this course, you'll learn how to create new environments within the Lab Center including how to execute test cases in a lab environment. You'll also learn how to analyze recommended test and work items and how to perform an analysis of your reports, work with out-of-the box reports, and customize out-of-the-box reports. This course also addresses how to manage your work item relationships and requirements including how to create work item queries and perform bulk updates in Microsoft Excel. This course is one of a series in the Skillsoft learning path that covers the objectives for the 70-497: Software Testing with Visual Studio certification exam.
Microsoft SQL Server Data Warehousing and Business Intelligence Overview	As capabilities and capacities of modern computers continue to proliferate, data warehousing, and business intelligence more broadly, have become fundamental to maintaining business competitiveness. This course describes the concepts and methodologies involved in creating data warehouses and using them to extract business intelligence.
Getting Started with Java Hibernate	Java Hibernate allows you to create, save, and update data objects in a supported database. You can update or read back these objects into a Java program. In this course, you'll learn about the basics of reading and writing objects to your RDBMS. You will also explore transactions and batches, caching, and basic data mapping.
Customized Mapping and Basic Querying in Java Hibernate	Java Hibernate enables you to map Java objects to database tables using annotations or XML files. In this course, you'll learn about identity generation, annotations, and how to customize mappings. You'll also learn basic querying using HQL – a SQL-like query language designed for Hibernate.
Advanced Querying in Java Hibernate	The Hibernate Query Language enables advanced querying of Hibernate data objects, including detailed searches across multiple tables, classes, joins, and selects. In this course, you'll explore advanced HQL querying, manipulation of SQL databases and data structures, and debugging and improving performance in Java Hibernate.
Microsoft PowerShell and Exchange Server: Getting Started	The Exchange Management Shell PowerShell environment is installed with Exchange Server and is viewed as a primary method of configuration and management. This course covers installation of Exchange with PowerShell, Permissions and AD integration, exporting reports and logging, and managing message distribution and delivery.
Microsoft PowerShell and SQL Server: Database Management	PowerShell can be used to manage the full range of SQL Server management tasks, and through scripting can assist with automation of frequent tasks. This course covers policies and jobs, working with PowerShell's powerful scripting features, and working with individual databases.
Microsoft PowerShell and SharePoint: Getting Started	PowerShell can be used for all day-to-day management tasks in SharePoint. This course covers backup and recovery of SharePoint, working with PowerShell command line, configuring sites and services, and site administration.
Microsoft PowerShell and SharePoint: Managing Sites	Day-to-day SharePoint management entails a lot of site management and server remediation. This course covers general SharePoint administration, server diagnostics, security and search, and managing and maintaining sites all using the PowerShell scriptable command line interface.
Advanced Windows Store Apps with C# in Visual Studio 2013: The UI, Printing, WNS	Presentation and ease of use are crucial aspects for users of Windows Store apps. In this course, you will learn how to use animations and custom controls to enhance your apps. You will also learn how to use globalization and localization features to make your apps accessible to a wide audience. Additionally, you will learn how to enable printing options within your app and how to use Windows Notification Service to push notifications to your apps'tiles. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-485: Advanced Windows Store App Development Using C#. This exam is a requirement for the Microsoft Certified Solutions Developer (MCSD): Windows Store Apps certification.
Microsoft PowerShell and SQL Server: Introduction	The PowerShell environment is installed with SQL Server and is viewed as a primary method of configuration and management. This course covers the first steps required to manage SQL Server with PowerShell, SQL Management Objects, working with Windows Management Instrumentation, and handling errors.
Advanced Windows Store Apps with C# in Visual Studio 2013: Media and Devices	Many Windows Store apps are developed to capture and manage media files. In this course, you will learn how to use APIs to capture video, audio and photos, and how to configure Play To to stream media. You will also learn how to configure your app to interact with sensors such as accelerometers and location services and work with devices such as USBs. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-485: Advanced Windows Store App Development Using C#. This exam is a requirement for the Microsoft Certified Solutions Developer (MCSD): Windows Store Apps certification.
Advanced Windows Store Apps with C# in Visual Studio 2013: Security & Optimizing	Security is an important aspect of any app that handles sensitive data. In this course, you'll learn how to implement encryption functionality in your Windows Store apps. You can also increase the efficiency and functionality of your Windows Store app with features such as background tasks. You'll also learn how to implement background tasks, asynchronous features, and WinMD components to optimize and extend your apps. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-485: Advanced Windows Store App Development Using C#. This exam is a requirement for the Microsoft Certified Solutions Developer (MCSD): Windows Store Apps certification.
Getting Started with Backbone.js	Backbone.js provides a rich API for working with collections, models, and views. In this course, you'll learn about setting up Backbone.js and downloading all the required components, creating basic models and views, working with collections, and working with Handlebars.js – a templating language for JavaScript applications.
Complex Application Development with Backbone.js	Node.js is a server-side JavaScript engine built on Google's V8 runtime. Backbone.Marionette is a set of design templates for Backbone.js created to simplify the process of creating large scale applications. In this course, you'll learn about complex JavaScript application development using Backbone.js, server-side databases, node.js and Marionette.
JavaScript Essentials: Getting Started	JavaScript is a multi-paradigm language, supporting imperative, functional, and object-oriented programming styles. This course covers the basics of JavaScript – from setting up the development environment to writing your first code. It also covers basic structures, such as loops and arrays, and functions and objects.
JavaScript Essentials: Working with Page Elements	One of the strengths of JavaScript is its ability to manipulate HTML elements on a web page. This course covers backgrounds and buttons, working with DIV containers in HTML documents, generating and finding various HTML elements on a page, and manipulation of pages programmatically.
JavaScript Essentials: Language Features	JavaScript has rich language features for representing data and controlling the flow of programs. This course covers the primary data types you will encounter in JavaScript and flow control statements. It goes on to cover the basics of using XML and other files in your JavaScript programs, and handling events and errors.
JavaScript Essentials: JavaScript In Depth	JavaScript and XML are closely linked, and JavaScript includes support for XSLT style sheets and XPath. This course covers object manipulation with JavaScript, formatting XML for output with XSLT, and manipulating XML with XPath. It also covers basic string manipulations and how to work with storage, documents, and printing.
JavaScript Essentials: Dynamic JavaScript Code	JavaScript enables dynamic web experiences through interaction with the browser and client OS. This course covers how to add drag and drop functionality with JavaScript, dynamically changing JavaScript code at execution time, working with browsers and pop-ups, and debugging JavaScript code.
JavaScript Essentials: Dynamic Content and HTML5	HTML5 is a big change to the way that HTML and JavaScript interact in the browser. HTML5 enables rich and high performing client interfaces with relatively trivial code. This course covers dynamically creating and manipulating content with JavaScript, and drawing and animating with the HTML5 Canvas.
JavaScript Essentials: Basic Browser Interaction	The primary method for running JavaScript on the client side is through the web browser. This course covers browser features, such as CSS, working with browser windows, getting information about users, and other browser manipulations.

Course	Description
JavaScript Essentials: Input and the Mouse	As a client side UI focused language, efficiently handling user input in JavaScript is very important. This course covers submission and validation of forms and input boxes, checkboxes and dialogs, tracking mouse and keyboard interactions, and changing mouse cursors.
Services in AngularJS	Services are objects in AngularJS used to organize and share code in applications. This course covers a large number of built-in services available ranging from use cases from HTTP server interactions to exception handling and location services.
JavaScript Essentials: Date and Math Functions	JavaScript has a comprehensive library of functions and objects for working with dates and times, and for mathematical manipulations. This course covers the date and time objects and methods, and how to use them, arithmetic and logic operators, and the methods and properties of the Math object.
JavaScript Essentials: Working with Strings	Working with strings is a fundamental skill of the JavaScript programmer. This course covers working with fonts, the various methods of searching strings, string conversions, Unicode, and various other string manipulation operations.
Working with Documents in Microsoft Office 365	Microsoft Office 365 provides access to a range of online Office applications for business users, including Microsoft Word, Excel, PowerPoint, OneNote, Outlook, Lync, and others. In this course, you'll learn how to share, collaborate on, print, and manage documents and e-mail using the Office 365 applications. This course is one of a series in the SkillSoft learning path that covers Microsoft Office Online and Office 365.
Introducing Microsoft Office Online for Personal Use	Microsoft Office Online, previously known as Office Web Apps, includes free online versions of Microsoft Office Word, PowerPoint, Excel, and OneNote, as well as the Outlook.com, People, Calendar, and OneDrive applications. In this course, you'll be introduced to each of the online applications and their uses, and learn some ways of working with content in Office Online. This course is one of a series in the SkillSoft learning path that covers Microsoft Office Online and Office 365.
Using the Microsoft Office Online Applications	Microsoft Office Online, previously known as Office Web Apps, includes free online versions of Microsoft Office Word, PowerPoint, Excel, and OneNote, as well as the Outlook.com, People, Calendar, and OneDrive applications. In this course, you'll learn how to work with content in each of the Office Online applications. You'll also learn about the keyboard shortcuts you can use in each of the online applications. This course is one of a series in the SkillSoft learning path that covers Microsoft Office Online and Office 365.
Introducing Microsoft Office 365 Applications	Microsoft Office 365 provides access to a range of online Office applications for business users, including Microsoft Word, Excel, PowerPoint, OneNote, Outlook, Lync, and others. In this course, you'll be introduced to the online applications and their uses. This course is one of a series in the SkillSoft learning path that covers Microsoft Office Online and Office 365.
CompTIA Network+ N10-006: Network Architecture Part 1	Networks are the basic interconnections for all computers from home computer systems, to multinational businesses, to the Internet. In order to understand how networks function, you need to start at the beginning and learn the fundamental building blocks of networks and how data travels from one point to another. This course introduces the concepts involved with network architecture including network devices, network services, network models, network cabling, network topologies and the different WAN technologies available. You'll also learn about the basics of configuring network services such as DHCP and DNS. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA Network+ N10-006: Network Architecture Part 2	With all the things that need to function correctly and together in networks, there are an equal number of things that can go wrong. In this course, you'll learn about more advanced network architecture concepts including network infrastructure implementation, addressing schemas, routing, unified communications, and cloud computing and virtualization. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA Network+ N10-006: Network Operations Part 1	Managing and monitoring are routine tasks performed on every network, regardless of its size. Proper management and monitoring of a network can forestall many problems that commonly occur in a network environment, as well as make troubleshooting problems that do arise that much easier. In this course, you'll learn about the methods and tools used in the operations of your network, including tools used in network monitoring, monitoring data analysis, configuration management, and network segmentation. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA Network+ N10-006: Network Operations Part 2	Networks are the basic structure behind modern communication design. From a small business connecting three user computers with a domain controller for central management, to the Internet itself, the architecture and operation of a network governs how devices are able to talk to each other. Networks provide a way to centrally manage devices and to apply much needed security. In this course, you'll learn elements involved with the operation of your network including patching and updating network devices and computer systems, switch configuration, as well as how to install and configure Wireless LANs. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA Network+ N10-006: Network Security	A network's security is only as strong as the security of its individual systems. Before connecting individual computers to the network, you need to ensure that the computers are secured using proper security mechanisms. Identifying the appropriate steps and measures you can implement to protect your systems and keeping your resources and revenue safe from potential attacks is a key aspect of securing systems on your network. This course explores the different security concepts and common threats, and vulnerabilities of a network. It also covers network hardening, physical security, firewalls, Network Access Control models, and forensics. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA Network+ N10-006: Troubleshooting Part 1	Troubleshooting skills are required by everyone who has responsibility for a network. The complexities of modern enterprise networks means that there is a vast array of devices, software, and infrastructure components that have the potential for failure - thereby causing a loss of connectivity on the network. In this course, you'll learn how to identify network problems while troubleshooting,. You'll also learn about all the different network troubleshooting tools available. Finally, you'll explore wireless troubleshooting and troubleshooting cable issues. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
The Big Data Technology Wave	A number of tools are available for working with Big Data. Many of the tools are open source and Linux distribution based. This course covers the fundamentals of Big Data, including positioning it in a historical IT context, the tools available for working with Big Data, the Big Data stack, and finally, an in-depth look at Apache Hadoop.
Big Data Opportunities and Challenges	Big Data requires a holistic approach and a change to regular working practices. This course covers the ways teams work in Big Data organizations, some projects and use cases for Big Data, and challenges and opportunities that Big Data presents.
CompTIA Network+ N10-006: Troubleshooting Part 2	Troubleshooting by managing and resolving network issues is a routine task performed on every network, regardless of its size. Proper management and monitoring of a network can forestall many problems that commonly occur in a network environment as well as make troubleshooting problems that much easier. In this course, you'll learn how to resolve common network, WAN, and security issues. You'll also learn about the different types of fiber cabling issues that can arise. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA Network+ N10-006: Industry Standards, Practices, and Network Theory	Networks provide a way to centrally manage devices and to apply much needed security. It's vital that one adheres and recognizes all of the industry standards, practices, and network theory before implementing a network. In this course, you'll learn basic network theory. You'll also learn the standards involved with wired and wireless networks, including the different network policies and procedures, and best safety practices. This course also addresses how to structure equipment and cabling and the change management process. This course is one of a series in the SkillSoft learning path that covers the objectives for certification exam CompTIA Network+ N10-006.
CompTIA CASP CAS-002: Cryptography and Enterprise Storage Concerns	Cryptography has been used for thousands of years to secure messages and hide information from those who would seek to steal it. In this course, you'll learn about cryptographic concepts and techniques along with examining the security implications associated with enterprise storage. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Advanced Network Design, Management, and Controls	Network design plays a significant role in the security of an organization, as do the management strategies and the control mechanisms that are put in place. In this course, you'll learn about advanced network design concepts such as VPNs, RDP, VNC and IPv6. This course will also examine security devices, application aware technologies, and security controls. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Security Controls for Hosts	Host security plays a tremendously important role in network security. Even if all your network links are secured, improperly secured hosts can leave your organization open to attack. In this course, you'll learn about end point security solutions, security controls and host hardening techniques, boot protection mechanisms, and finally you will learn about securing virtualized and cloud environments. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Application Vulnerabilities and Security Controls	Vulnerabilities within applications, either through improper coding or new attack vectors, can leave an organization open to attack. In this course, you'll learn about various application vulnerabilities and attacks, along with the controls and security mechanisms that can be used to aid in stopping those attacks. Finally you will look at various browser extension issues that you may face while securing your network environment. This course is one of a series in the SkillSoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Industry Influences, Risk Planning, Strategy, and Control	The strategic plan that an organization uses is often driven from industry standards and information classification procedures. In this course, you'll interpret business and industry influences and explain associated security risks. You will also look at risk mitigation planning, strategies, and controls. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Privacy Policies & Procedures and Incident Recovery	Creating strong privacy polices and procedures will aid in securing organizational assets. If an event does occur, it is important to have proper procedures in place to make sure that recovery occurs as quickly and as efficiently as possible. In this course, you'll learn about the policies, procedures, and business documents that are used when creating a secure network environment. You will also examine the incident response and recovery procedures that are used when security breaches occur. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Research, Analysis and Assessment	Research and testing are the backbone of introducing new technologies and devices into your network. It is important to make sure none of the new changes will compromise network security. In this course, you'll learn about research methods to determine industry trends and their impact to the enterprise.You will also explore methods of securing an enterprise environment, and you will select methods or tools appropriate to conduct an assessment and analyze the results. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Integration of Computing, Communications, and Disciplines	Ensuring that departments work in a collaborative fashion is extremely important and will actually increase network security when done properly. In this course, you'll learn about facilitating collaboration across diverse business units to achieve security goals. You will also look at selecting the appropriate control to secure communications and collaboration solutions. Finally, you will examine security activities across the technology life cycle. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
CompTIA CASP CAS-002: Technical Integration of Enterprise Components	Tying all the security mechanisms in your organization together is extremely important, as it will bring the overall security into effect. In this course, you'll learn about integrating hosts, storage, networks and applications into a secure enterprise architecture. You will also examine ways to integrate advanced authentication and authorization technologies to support enterprise objectives. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Advanced Security Practitioner (CAS-002) certification exam.
Microsoft Lync 2013	Microsoft Lync 2013 is a combined messaging and collaboration tool from Microsoft that is part of the Microsoft Office suite. In this course, you'll learn about using Lync and navigating the interface, managing contacts, setting your profile and status, using instant messenger, organizing meetings, and sharing content.
Getting Started with LINQ	LINQ is a set of features added to C# and VB to enable querying of collections, databases, and XML documents. LINQ provides a powerful and simple set of tools for incorporating databases into your .NET applications. This course covers creating a simple query in LINQ, creating relationships with a query, updating database rows and tables with a query, and finally some advanced query techniques.
TestPrep 300-206 Implementing Cisco Edge Network Security Solutions (SENSS)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
JavaScript SPA: Working with Rich Application Data	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to manage, and distribute data for client views in a JavaScript SPA in Visual Studio 2013.
AngularJS Controllers and Directives	Angular JS controllers are constructor functions that set the initial state and add behaviours to objects. This course covers directive isolate scopes and working with controllers and directives. It also covers directive in respect to the document object model, or DOM.
Final Exam: Essentials of Interviewing and	Generally taken near the end of a program, Final Exam: Essentials of Interviewing and Hiring enables the learner to test their knowledge in a testing environment.
TestPrep N10-006 CompTIA Network+	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 300-135 Troubleshooting and Maintaining Cisco IP Networks (TSHOOT)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 300-208 Implementing Cisco Secure Access Solutions (SISAS)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Mentoring 70-486 Developing ASP.NET MVC Web Applications	Mentoring 70-486 Developing ASP.NET MVC Web Applications
Final Exam: Business Law Essentials	Generally taken near the end of a program, Final Exam: Business Law Essentials enables the learner to test their knowledge in a testing environment.
Mentoring CAS-002 CompTIA Advanced Security Practitioner	Mentoring CAS-002 CompTIA Advanced Security Practitioner
Final Exam: Business Planning Essentials	Generally taken near the end of a program, Final Exam: Business Planning Essentials enables the learner to test their knowledge in a testing environment.

TestPrep CAS-002 CompTIA Advanced Security Practitioner	TestPrep CAS-002 CompTIA Advanced Security Practitioner
Windows 8.1 Update 1: Navigating the UI	Microsoft Windows 8.1 is the latest version of the Microsoft Windows PC desktop operating system. It includes a tablet-style user interface, as well as the more conventional Windows desktop interface. Following the initial release of Microsoft Windows 8.1, Microsoft released an update (Update 1) that included a number of new and revised features.This course will introduce learners to key features of the latest version of Windows 8.1 and demonstrate how to interact with the new UI using either mouse and keyboard or a touch screen device. The course demonstrates how to move around apps, the Start screen, and the desktop.It also covers basic customization of the Start screen and use of the Power, Shutdown and Restart options.
Windows 8.1 Update 1:Working with Files and Apps	Microsoft Windows 8.1 is the latest version of the Microsoft Windows PC desktop operating system. It includes a tablet-style user interface, as well as the more conventional Windows desktop interface. Following the initial release of Microsoft Windows 8.1, Microsoft released an update (Update 1) that included a number of new and revised features. Within Windows 8.1, Windows 8.1 File Explorer provides several options for organizing and navigating to your files.The Search charm can also be used to find files, as well as launch apps and search the Internet. This course demonstrates how you can manage your files and make them easier to access. It shows how to search for items from File Explorer and from the Search charm. And it covers how to work with Windows Store and desktop apps and how to work with the Internet Explorer app.
Windows 8.1 Update 1: Windows Management and Customization Features	Microsoft Windows 8.1 is the latest version of the Microsoft Windows PC desktop operating system. It includes a tablet-style user interface, as well as the more conventional Windows desktop interface. Following the initial release of Microsoft Windows 8.1, Microsoft released an update (Update 1) that included a number of new and revised features. Windows 8.1 has now a number of login and account options including logging in directly to the desktop. There are also a range of customization features that you can use to personalize Windows. This course covers working with login, account, and personalization options in Windows 8.1 Update. You'll also learn how to access OneDrive from Windows 8.1 and use its features.
Mentoring PRINCE2: Practitioner	Mentoring PRINCE2: Practitioner
TestPrep 300-209 Implementing Cisco Secure Mobility Solutions (SIMOS)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Administrating XenDesktop 7.5 and Hypervisor Management	Citrix XenDesktop uses virtualized desktops and applications to provide services to end-users. In this course, you'll learn about configuring and managing the Hypervisor components needed for your app and desktop delivery solutions. It focuses on Citrix licensing, how to perform and delegate administration, and the purpose of roles and scopes. The course also provides an overview of working with virtual machines, and moves on to teach about the use and management of policies and profiles in your XenDesktop environment. This course is one of a series in the Skillsoft learning path that covers objectives for the 1Y0-200 certification exam Managing Citrix XenDesktop 7 Solutions.
Managing XenDesktop 7.5 Desktops and Applications	Citrix delivers apps and desktop environments to mobile end-users. In this course, you'll learn about XenDesktop components and tools used to deliver and control virtualized apps and desktops. This includes the role of machine catalogs, Machine Creation Services, Delivery groups, vDisks, and the use of Director and StoreFront for session and store management. Also covered are the Virtual Delivery Agents, master images, vDisks, receivers, controllers, and performing common troubleshooting tasks. This course is one of a series in the Skillsoft learning path that covers objectives for the 1Y0-200 certification exam Managing Citrix XenDesktop 7 Solutions.
TestPrep 70-487 Developing Microsoft Azure and Web Services	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Implementing OpenStack	OpenStack is a collaboration between cloud technology experts and developers, resulting in a highly scalable open standard cloud operating system. OpenStack cloud environments can be used for both private and public clouds and depend on a set of core components. This course introduces the OpenStack Cloud offering, cloud service features, and provides some background on the OpenStack Project and Release Cycle. The course presents the logical architecture and provides an introduction to the various project components that work together as part of the OpenStack cloud. This course also looks at the planning and deployment of OpenStack, including components such as OpenStack Block Storage, images, instances, OpenStack Compute, installation packages, Controller Services, database services, and orchestration services.
Configuring OpenStack	OpenStack uses core software components such as OpenStack Compute, OpenStack Image Service, and OpenStack Object Storage to provide an operating system and logical architecture for private and public clouds. This course covers configuration tasks for OpenStack Compute deployments and configuring reliable storage sources using Object Storage. The course looks at the installation and configuration of the OpenStack Dashboard, and how to use it in managing your cloud resources. It also describes the setup and configuration of network services including configuring the network node, using VLAN Manager, and managing tenant networks.
CompTIA Linux+ 2014 Powered By LPI: LX0-103: System Architecture	Linux finds a home in every device we would think of as a computer, from Smartphones to PCs and data center servers. In this course, you will learn about the system architecture of Linux including how it interacts with peripherals and the boot sequence, and how to change the system RunLevels and Boot Targets. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-103.
TestPrep LX0-103 CompTIA Linux+ Powered by LPI Exam 1	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
CompTIA Linux+ 2014 Powered By LPI: LX0-103: Installation and Package Management	Linux installation and configuration is a multi-step process allowing customization based on requirements at almost every stage. In this course, you will learn about some of that customization and some basic patterns of how to do an initial install. You will learn about hard drive partitioning, boot managers, software repositories and the tools necessary to maintain, update, and install software on different Linux distributions. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-103.
CompTIA Linux+ 2014 Powered By LPI: LX0-103: GNU and Unix Commands	A Linux distribution is made up of a number of utilities and programs. One key utility is the command line shell. In this course, you will learn how to use a shell to perform file and directory manipulation and edit file contents. In particular, you will learn about the Bourne-again Shell (bash) and the VI text editor. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-103.
CompTIA Linux+ 2014 Powered By LPI: LX0-103: Advanced GNU and Unix Commands	Linux consists of many tools to manipulate files, streams, and processes from the command line that an administrator really needs to know in order to get the most from their system. This course will describe and show the basic usage of some of the Linux tools that can be used to manipulate files, stream data, and manage processes. You will also learn how to prioritize processes and how to use basic Regular Expressions to do advanced searches and matches against files and file contents. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-103.
CompTIA Linux+ 2014 Powered By LPI: LX0-103: Devices and Filesystems	Disk and file management is critical to installing, securing, and maintaining any server, and a Linux administrator must understand the limits and capabilities of these resources to be effective in planning and building out Linux infrastructure. In this course, you will learn how to configure and manage partition tables, manage filesystems, configure disk quotas, use links, and manage file and directory permissions. You will also be introduced to the Filesystem Hierarchy Standard, or FHS. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-101 and LX0-102.
CompTIA Linux+ 2014 Powered By LPI: LX0-104 Scripting and Administrative Tasks	The shell, and shell scripting, provides an incredible interface to running, automating, and maintaining a Linux system. The ability to manipulate the shell is a very powerful tool for any administrator of a Linux system. In this course, you will learn how to use and configure the shell environment, create shell scripts for automating tasks, manage users and groups, use Cron, AT, and Anacron to automate tasks, and learn how to configure the localization and timezone properties of a Linux system. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-104.
TestPrep LX0-104 CompTIA Linux+ Powered by LPI Exam 2	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
CompTIA Linux+ 2014 Powered By LPI: LX0-104 Essential System Services	A Linux system administrator needs to know how to configure the time, e-mail, printing, and logging features of a Linux system. In this course, you will learn about four of the essential services almost all Linux servers and clients will have configured: NTP time synchronization for accurate time, Mail Transfer Agents for e-mail, CUPS for printing, and the system logger to manage log messages. This course also covers configuring GUI interfaces using X server. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-104.
CompTIA Linux+ 2014 Powered By LPI: LX0-104 Networking Fundamentals	Linux is used extensively on the internet, usually as servers, but also as clients, and a system administrator must know how to configure and use the network interfaces on a Linux system. In this course, you will learn how to configure, use, and troubleshoot networking issues on Linux. This course covers the fundamentals of Internet Protocols, Network Interfaces, DNS, and security as it applies to the networking configuration of a Linux system. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-104.
CompTIA Linux+ 2014 Powered By LPI: LX0-104 Security, Data, and Accessibility	Security, data management, and accessibility are huge fields; however, a system administrator should know enough to understand the roles and features available when configuring a Linux system. This course describes some basic best practices and functionality available to secure a server or provide accessibility for users. In this course, you will learn how to perform basic security administration tasks; learn how to write Structured Query Langauge, or SQL, statements; learn how to secure data using encryption; and learn about the Assistive Technologies available to help with Accessibility requirements. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA Linux+ exams LX0-104.
CompTIA Mobility+ MB0-001: Over The Air Technologies	Mobile devices rely on different forms of wireless communication for connectivity and functionality. From cellular technologies for Internet connectivity anywhere in the world, to WiFi networks in the home or office, or personal networks of peripherals using Bluetooth, all these technologies are underpinned by the same set of fundamental principles of radio frequency signaling. This course covers wireless technology from the radio wave up, encompassing all types of wireless connectivity that wireless devices rely on. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
TestPrep MB0-001 CompTIA Mobility+	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
CompTIA Mobility+ MB0-001: Network Infrastructure	Networking is a core capability of a modern mobile device. Network considerations are different to traditional desktop PCs, as connectivity is not just to a traditional LAN, but must be accommodated from anywhere and over multiple network types. Additionally, wireless access to the LAN must be accommodated, along with attendant security considerations. This course covers networking from a mobile device perspective. It includes topologies and infrastructures, security, and integrating wired, and wireless networks. It also covers disaster recovery, and backup, and the use of high availability, and replicated network sites for disaster recovery. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
CompTIA Mobility+ MB0-001: Mobile Device Management 1	Mobile devices have proliferated in the workplace. Management of these devices has become a significant challenge due to many factors including device ownership, extreme mobility and heterogeneous platforms. This course aims to bridge the management gap by covering device capabilities, enterprise requirements and policy, and services and solutions for device management. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
CompTIA Mobility+ MB0-001: Mobile Device Management 2	Mobile devices have unique on-boarding and off-boarding strategies, due to their diverse nature and BYOD issues. This course covers issues of policy relating to mobile device on-boarding, management and off-boarding, and looks ahead to new mobile technologies emerging, and the opportunities and risks they pose. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
CompTIA Mobility+ MB0-001: Security	The chief concern for organizations entering the world of BYOD and mobile device is security. With greater flexibility, the mobile nature of devices, and the ownership issues of BYOD, the potential for security issues has never been greater. This course covers security concepts and risks, and strategies for mitigating those risks in a connected, mobile world. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
CompTIA Mobility+ MB0-001: Troubleshooting 1	Troubleshooting methodology for mobile devices follows well understood best practices and a logical flow, with some amendments to take into account the unique nature of mobile devices. Having a good understanding of troubleshooting principles will make any problem of configuration or operation surmountable. This course covers basic troubleshooting methodology, and how to apply it to mobile devices and applications. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
CompTIA Mobility+ MB0-001: Troubleshooting 2	Two areas that make mobile devices unique are their connectivity capabilities and requirements, and the unique security challenges they pose. This course takes systematic troubleshooting methods and applies them to these two areas of mobile computing to attempt to solve OTA connectivity and security issues. This course is one of a series of courses that cover the objectives for CompTIA Mobility+ (MB0-001).
CompTIA Server+ SK0-004: Server Architecture	Being a good server administrator means that you understand your systems from the ground up â€" both the software and the hardware. Today's server hardware is sophisticated and specialized to support multiple users, applications and processors, as well as provide fault tolerant, highly available services. This course begins looking at the purpose and function of certain server form factors, starting with factors of rack mounts, towers, and blade technologies. The course also describes the various server components such as CPU, RAM, bus types, bus channels and expansion slots as well as NICs, and hard drives. This course will also compare and contrast the different power and cooling components of a server. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 1.1 Explain the purpose and function of server form factors; 1.2 Given a scenario, install, configure and maintain server components; and 1.3 Compare and contrast power and cooling components.
TestPrep SK0-004 CompTIA Server+	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.

Course	Description
CompTIA Server+ SK0-004: Server Administration I	A network may have many servers on it, each playing a unique role. In order for a server to do its job properly, it must have the proper hardware and software installed. A server may be performing a network service, such as DNS or DHCP, serving applications such as e-mail, or providing network security as in the case of a firewall or authentication server. The administrator must be familiar with each of the potential roles and how they will impact each other and the users they serve. This course introduces the various server roles and requirements. The course also explores the different components that can be installed and configured on a server operating system. In addition, you'll explore how to use certain access and control methods to administer a server, and discuss some of the proper server maintenance techniques. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 2.1 Install and configure server operating systems, 2.2 Compare and contrast server roles and requirements for each, and 2.4 Given a scenario, perform proper server maintenance techniques.
CompTIA Server+ SK0-004: Server Administration II	A well managed network relies on accurate documentation, well designed policies, and efficient procedures. Understanding how to create good documentation, policies, and procedures can help ensure that a network is well run and that it can withstand the occasional crisis. Implementing these concepts at the server level is an excellent place to begin The course starts off by exploring more server maintenance techniques. This course also covers the different components and techniques involved with asset management and documentation. In addition, you'll explore the purpose and operation of different virtualization components. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 2.4 Given a scenario, perform proper server maintenance techniques, 2.5 Explain the importance of asset management and documentation, and 2.6 Explain the purpose and operation of virtualization components.
CompTIA Server+ SK0-004: Storage	Because so much work is done electronically, businesses and governments generate vast amounts of information, most of which needs to be kept available and safe. Storage technologies have improved with the growth of data requirements. This course introduces the technologies involved in storing and protecting this data and the different types of storage media, such as optical media, and describes the increased reliance on hard disks for permanent, secure data storage. As well, you'll learn about the technology behind RAID arrays and the various types of storage architectures. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 3.1 Given a scenario, install and deploy primary storage devices based on given specifications and interfaces, 3.2 Given a scenario, configure RAID using best practices, 3.3 Summarize hardware and features of various storage technologies, and 3.4 Given a scenario, calculate appropriate storage capacity and plan for future growth.
CompTIA Server+ SK0-004: Security	Because so much work is done electronically, businesses and governments generate vast amounts of information, most of which needs to be safe. Security technologies have improved with the growth of data requirements. This course introduces the methods and concepts involved in physically protecting this data. As well, you'll learn about the different server hardening techniques, the different types of network security systems and protocols, as well as logical access control methods. This course also covers how to securely dispose storage and how to implement proper environmental controls in your server room. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 4.1 Compare and contrast physical security methods and concepts, 4.2 Given a scenario, apply server hardening techniques, 4.3 Explain basic network security systems and protocols, 4.4 Implement logical access control methods based on company policy, 4.5 Implement data security methods and secure storage disposal techniques, and 4.6 Given a scenario, implement proper environmental controls and techniques.
CompTIA Server+ SK0-004: Networking and Disaster Recovery	Almost everywhere you go, from large businesses to people's homes, networks are in place to facilitate the movement of data between computers and other devices, such as printers or the Internet. The network infrastructure services, ports, protocols, and cabling involved in networking can be complicated, which can make troubleshooting issues that arise complicated as well. It is important that server administrators are very familiar with server networking concepts. Also, without a well-thought-out plan in place, all the best equipment and well trained personnel in the world will be useless in the event of a disaster. Disasters can be man-made or natural, and both types can cause short delays or major business disruptions.In this course, you will learn about IP addressing and network infrastructure services. This course also compares various ports and protocols, and covers how to install and implement proper cable management procedures. In addition, you will learn about backup strategies and procedures for restoring data. You'll also explore various types of backup, such as full, incremental, and differential, along with the common media used for backup such as hard disks and optical media. Finally, you'll explore disaster planning and the implementation of an optical disaster recovery plan. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 5.1 Given a scenario, configure servers to use IP addressing and network infrastructure services, 5.2 Compare and contrast various ports and protocols, 5.3 Given a scenario, install cables and implement proper cable management procedures, 6.1 Explain the importance of disaster recovery principles, and 6.2 Given a scenario, implement appropriate backup techniques.
CompTIA Server+ SK0-004: Troubleshooting I	Troubleshooting skills are something that everyone, from the server or network administrator to the everyday user, should possess. Administrators, though, need to be able to thoroughly troubleshoot not only desktop computers, their hardware and operating systems, but also more complex and intricate issues that occur on sophisticated server hardware and network infrastructures. This course introduces hardware troubleshooting. You'll learn about some of the common issues that can occur, along with their fixes and some of the useful tools that can be employed in the troubleshooting process. This course also describes troubleshooting theory and recommended procedures. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 7.1 Explain troubleshooting theory and methodologies, and 7.2 Given a scenario, effectively troubleshoot hardware problems, selecting the appropriate tools and methods.
CompTIA Server+ SK0-004: Troubleshooting II	Troubleshooting skills are something that everyone from the server or network administrator to the everyday user should possess. Administrators, though, need to be able to thoroughly troubleshoot not only desktop computers, their hardware and operating systems, but also more complex and intricate issues that occur on sophisticated server hardware and network infrastructures. This course introduces software, storage, network, and security troubleshooting. You'll learn about some of the common issues that can occur along with their fixes and some of the useful tools that can be employed in the troubleshooting process. This course is one of a series in the SkillSoft learning path that maps to CompTIA's Server+ exam, SK0-004, and covers the following exam objectives: 7.3 Given a scenario, effectively troubleshoot software problems, selecting the appropriate tools and methods, 7.4 Given a scenario, effectively diagnose network problems, selecting the appropriate tools and methods, 7.5 Given a scenario, effectively troubleshoot storage problems, selecting the appropriate tools and methods, and 7.6 Given a scenario, effectively diagnose security issues, selecting the appropriate tools and methods.
Apache Hadoop	Apache Hadoop is a set of algorithms for distributed storage and distributed processing of very large data sets on computer clusters built from commodity hardware. This course will introduce the basic concepts of cloud computing using Apache Hadoop, cloud computing, Big Data, and the development tools applied.
MapReduce Essentials	MapReduce programming is a framework for processing parallelizable problems across huge datasets. This course will define MapReduce programming and explain the basics of programming in MapReduce and Hive.
Programming and Deploying Apache Spark Applications	Apache Spark is a cluster computing framework for fast processing of Hadoop data. Spark applications can be written in Scala, Java, or Python. In this course, you will learn how to develop Spark applications using Scala, Java, or Python. You will also learn how to test and deploy applications to a cluster, monitor clusters and applications, and schedule resources for clusters and individual applications.
Fundamental Methods for Data Science in R	R is a free software environment for statistical computing and graphics and has become an important tool in modern data science. In this course, you will learn the fundamental R methods that data scientists use in their everyday work.
Machine Learning Examples for Data Science in R	R is a free software environment for statistical computing and graphics and has become an important tool in modern data science. In this course, you will learn the essential R machine learning methods that data scientists use in their everyday work.
MongoDB: Concepts, Installation, and Querying	MongoDB is an open-source documentation database that is easy to scale and develop. MongoDB can be installed on various operating systems with minimum requirements and provides CRUD operations to read and write documents within collections. This course will discuss the concepts of MongoDB and demonstrate how to install it on Linux and Windows. It will also demonstrate how to create and manage documents as well as how to query them using the find() method and aggregation.
MongoDB: Indexing, Replication, and Security	Administrating a MongoDB database requires ensuring queries are responding fast enough for users to obtain the correct data from the database. It also requires ensuring the data is available to the users by implementing replication and making sure it is correct. In this course, you'll learn how to create indexes and perform query optimization. You'll also learn how to configure replication and security.
MySQL: General Syntax, Advanced Queries, and Stored Programs	As a MySQL Database Developer, you need to understand the overall general syntax in order to obtain the correct information and provide information in the code, such as comments. Creating programs that can be stored on the server and executed multiple times is also essential. In this course, you'll learn about the general syntax of MySQL, including comments, identifiers, and data types. The course also covers how to handle advanced queries and data management, as well as how to create and use stored programs.
MySQL: Advanced Routines, Optimization, and DCL	Writing advanced routines can be a big part of being a database developer as well as optimizing the database to ensure queries are running efficiently for end users. In this course, you'll learn how to create and use advanced procedures, functions, and triggers and how to optimize queries and performance of a MySQL database. This course also covers how to grant, revoke, and deny user permissions for the underlying database objects.
MySQL: Storage Engines, Advanced Indexing, and Maintenance	A well designed and high performance database depends on its storage engine and index structure. In this course, you'll take an in-depth look at storage engines and how they affect the performance of your MySQL databases. The course also covers index structures and types, indexing for performance, and index maintenance.
MySQL: Administration, Transactions, Optimization, Scaling, Backup, and Recovery	As an organization grows, so will its database requirements. In this course, you'll explore the core administrative tasks of managing and maintaining your MySQL databases as they grow and as performance demands increase. The course also covers the transactions in MySQL, storage engines and server optimization, and scaling and high availability. You'll also learn about partitioning, replication, import and export, and backup and recovery.
MySQL: Performance Monitoring, Database Health and Integrity, and Security	The performance, integrity, and security of your MySQL servers is key to maintaining stable, consistent, and secure databases. In this course, you'll learn about monitoring and maintaining your servers while planning for growth, and about security measures to keep your data safe. The course also covers monitoring systems, measuring performance, securing databases, reviewing database metadata, and ensuring data integrity.
NoSQL Concepts and Background	NoSQL databases are increasingly used in real-time web applications and big data. They provide a mechanism for retrieval and storage of data other than relational databases. They are attractive to developers due to their horizontal scaling, simplicity of design, and finer control over availability. In this course, you'll learn about the fundamentals of NoSQL data stores, the importance of queries and updates, and why a NoSQL implementation may be a better choice than a traditional relational database model.
NoSQL Models and Applications	NoSQL databases provide a mechanism for retrieval and storage of data other than RDBMS. They are increasingly used in real-time web applications and with big data. In this course, you'll learn about the different NoSQL data models, including Cassandra, MongoDB, and Riak. This course also covers concepts such as polyglot persistence and sharding.
Programming with NoSQL	NoSQL databases are attractive to developers due to their simplicity of design and finer control over availability. They are increasingly used in real-time web applications and big data. In this course, you'll learn about how to install CouchDB and concepts such as MapReduce and RESTful. This course also covers some basic programming using Java and JavaScript.
In Depth with NoSQL	NoSQL databases provide a mechanism for retrieval and storage of data other than RDBMS. They are attractive to developers due to their simplicity of design and finer control over availability. In this course, you'll learn about security issues and how to address them. The course also covers the considerations that must be identified when dealing with HL7, HIPPA, and PCI.
RavenDB Overview	RavenDB is the most popular NoSQL database for the .Net world. It is open source, extremely fast, and very intuitive. RavenDB is a document-oriented database designed for storing, retrieving, and managing semi-structured data. In this course, you will learn about the Management Studio and in code. You will also learn how to set up and connect to a RavenDB instance, and how to work with documents and indexes.
RavenDB Integration	RavenDB has combined the best of relational databases with that of document databases. It is scalable, extensible, and extremely powerful. RavenDB is a document-oriented database for .Net. In this course, you will learn how to work with transformers, how to accomplish scaling, how to set up for an MVC application, and how to manage your system.
Google Apps: Google Drive	Google Apps uses Google Drive for central, cloud-based, accessible anywhere storage. This course covers the use of Google Drive as a central hub for Google Apps, and how to use it for synchronizing offline files.
Google Apps: Gmail and Calendar	Google Apps includes a comprehensive suite of business communication tools, including Gmail for e-mail that can work with any domain, and Calendar for organizing and synchronizing. This course covers using Gmail and Calendar to maximize productivity.
Google Apps: Docs and Sheets	The core productivity apps in the Google Apps suite are the word processing app Docs and the spreadsheet app Sheets. Both are fully featured and include the functionality of desktop equivalents. This course covers creating and disseminating documents using Docs and Sheets.
Introducing iOS 8 for iPad	The Apple iPad straddles the line between an entertainment device and a business organizer tool, and if used properly can revolutionize the way you organize and plan your personal and business life. This course teaches those skills, and covers using iOS 8 on the iPad, from managing your day with the calendar and reminders, to browsing the web or reading a newspaper and taking advantage of the new features that iOS 8 brings.
Introducing iOS 8 for iPhone	The Apple iPhone is an all-in-one communications and organizer device. This course covers the basics on using your iOS 8 on your iPhone, from making phone calls and video calls, to managing your day with the calendar and reminders, to browsing the web and taking advantage of the new features that iOS 8 brings.
Introducing Mac OS X Yosemite	The integration of messaging systems is a big focus of Mac OS X Yosemite. By taking this course, you will gain proficiency with new features of the Mac OS X Yosemite interface, and an understanding of the integration of messaging systems, such as e-mail and messaging, into Mac OS X Yosemite. This course provides an overview on how to navigate the user interface, work with the Safari browser, files, folders, and widgets, and use the various messaging systems that are now supported.
Working with Mac OS X Yosemite	Mac OS X Yosemite is made for productivity. It's designed for seamless integration with the cloud, as well as IOS devices. In this course, you will gain insight into the enhanced functionality of Mac OS X Yosemite, how to modify system settings, and how to extend OS X functionality using Launchpad, extensions, and the Mac OS X App Store.
Networking Fundamentals: Configuring Wired and Wireless Networks and Firewalls	Networking provides a way for devices and users within a network to be able to communicate and share data. In order to understand how networks function, you need to start at the beginning and learn the fundamental building blocks of networks and how data travels from one point to another. In this course, you'll learn about the fundamental protocols, IP addressing, and network settings for devices to communicate. You'll also learn how to configure and setup network cards, routers and firewalls, as well as how to configure a wireless network.
Networking Fundamentals: Remote Connections, Shares, and Mac OSX Networking	The sharing of files and folders over wired and wireless networks is a big part of how users access information throughout different types of networks. Ensuring these networks are running properly will allow the information to be accessed quickly. In this course, you'll learn how to configure different Windows networks and how to create and manage network shares. You'll also learn how to monitor the network connections and remotely access computers. You'll also explore how to configure networking on a Mac OSX 10.8.

Course	Description
NFPA 70Â Electrical Safety in the Workplace 2015 Edition	This course provides a comprehensive overview of the basic criteria for electrical safety-related work practices stipulated in the National Fire Protection Agency (NFPA) 70E Standard for Electrical Safety in the Workplace. It presents detailed information on the practices, programs, techniques, and processes related to electrical work, in accordance with the NFPA Standard. This course was developed with subject matter support provided by EnSafe Inc., a global professional services company focusing on engineering, environment, health and safety, and information technology.
Microsoft Dynamics CRM 2013: Forms, Marketing, Contacts, and Processes	In Microsoft Dynamics CRM 2013, you can use marketing campaigns to introduce new products or services, or to simply create some buzz to get people talking about your products or services. In this course, you'll learn how to use these features in Microsoft Dynamics CRM 2013 and enable your business to improve sales, marketing, and service for customers. Youâ€™ll begin by learning how to modify and publish forms, how to work with the business process workflow's, how to manage data using contacts, and how to implement marketing campaigns. You will also learn how to run reports using the Reporting Wizard.
Microsoft Dynamics CRM 2013 - Customization and Configuration:	Microsoft Dynamics CRM 2013 integrates with SharePoint for enhanced collaboration and management facilities. This course introduces customization and configuration options in Microsoft Dynamics CRM, and helps you get the most out of SharePoint integration.
Microsoft Dynamics CRM 2013 - Customization and Configuration: Entities	Entities are a powerful feature of Dynamics CRM used to model business data. This course helps you to define and manage entities, and helps you to customize visualization of that data. This course also shows you how to model business rules and process flows, and use Dynamics CRM for form creation.
Microsoft Dynamics CRM 2013 - Customization and Configuration:	At the heart of Dynamics CRM is relationships. Relationships enable you to model complex dynamics simply and easily. This course covers the types of relationships supported by Dynamics CRM, and how to create and work with them. It also covers customizing data fields and working with various data types, and charts and dashboards â€" powerful ways of visualizing aggregated business data.
Application Skills in Microsoft Dynamics CRM 2013	Microsoft Dynamics CRM 2013 is a Customer Relationship Management application with an in-built platform designed to facilitate it being customized and extended to meet a broad range of requirements. In this course, you will get an introduction to the system navigation and basic features. The course also teaches you how to work with the Microsoft Dynamics CRM 2013 Outlook Client, various ways to automate business processes, integrating your e-mails with CRM 2013, and creating your own custom queries using advanced find.
Sales Automation in Microsoft Dynamics CRM 2013	Microsoft Dynamics CRM 2013 is a Customer Relationship Management application that makes it possible to automate much of the sales process. In this course, you will learn how to configure and use the sales module including sales pipeline management, sales order processing, managing the product catalog, measuring performance through metrics and goals, and various ways to create reports.
Marketing Automation in Microsoft Dynamics CRM 2013	Microsoft Dynamics CRM 2013 Marketing Module is a Customer Relationship Management application that enables you to automate the marketing process. In this course, you will learn how to configure and use the marketing module including detailed campaign management, importing data, and managing data quality.
Customer Service Automation in Microsoft Dynamics CRM 2013	Microsoft Dynamics CRM 2013 is a Customer Relationship Management application that you can use to automate and improve your organization's customer service. In this course, you will learn how to configure and use the customer service module including creating and managing service cases, implementing a knowledge base, complex service scheduling, and management of contracts and service level agreements.
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Upgrading	What's new in SharePoint 2013 installation? In this course, you'll learn about what's new, and what's changed, with a SharePoint Server 2013 installation and upgrade. After completing this course, you will be able to plan a SharePoint Server 2013 upgrade for including the planning tasks, supported upgrade paths, and best practices involved. You will also learn how to perform, verify, and troubleshoot a SharePoint Server 2013 upgrade, and you will also be able to perform required post-upgrade tasks. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Continuity	High availability inside SharePoint is all about ensuring that there's a certain amount of uptime. If you're maintaining a 99.999% uptime, you are looking at 5 minutes of downtime per year. What can you do to ensure that you can provide that uptime? This course describes how you can plan for business continuity in SharePoint Server 2013. You will learn database continuity strategies such as high availability, storage redundancy, and live migration. You will also learn how to implement upper tier availability by planning service distribution and configuration as well as how to plan for redundancy and load balancing. Finally, you will learn the SharePoint backup and disaster recovery planning and strategies available. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Search Services	Social networking has become increasingly integrated and rolled out throughout network enterprises. In SharePoint Server 2013, user profiles are used in various social networking features. In this course, you will learn how to plan social networking components such as communities, user profiles, social permissions, activity feeds, and connections. You will also learn how to optimize search services which involves the planning and configuration of index freshness, result sources, the end-user experience, search schemas, and you will also be able to analyze search analytics reports. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Content Support	SharePoint 2013 has improvements as well as new features for implementing and supporting web and enterprise content management and the integration of your SharePoint Server 2013 with other Microsoft Office products such as Office Web Apps and Exchange Server 2013 improves communication and collaboration capabilities, as well as increased productivity for the end user. In this course, you will learn how to configure channels, product catalog and topic pages, and design manager, as well as display templates and variations. This course will also cover how to support enterprise content by configuring e-discovery, document routing, co-authoring, and record retention. You will also learn how to plan large document repositories and configure software boundaries. To complete this course you will learn about SharePoint Server 2013 integration with Office Web Apps 2013, Exchange Server 2013, and Project Server 2013. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Applications	SharePoint Server 2013 allows for the creation, configuration, and management of service applications that can be shared across farms or hosted web applications. In this course, you will learn how to deploy service applications by exploring the service application components, understanding the service application model, and knowing how to plan the service application architecture in SharePoint Server 2013. You will also learn how to federate service applications across farms. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Support Service	Designing Advanced Solutions in SharePoint 2013 involves being able to plan for Business Intelligence operations and integration. In this course, you will obtain an understanding of what is new when it comes to planning for Business Intelligence. You will learn how the business connectivity service is supported and how plan and configure the Business Intelligence (BI) infrastructure. You'll also learn how to support the Secure Store application by generating a master key and creating and managing target applications. Lastly, you will understand how Business Intelligence is supported by planning and configuring items such as Performance Point, Reporting Services, Excel Services, and BI security. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft SharePoint Server 2013 - Designing Advanced Solutions: Solutions	Understanding SharePoint solution architecture involves being able to plan, deploy, and maintain farm solutions as well as sandbox solutions. You can also use Apps to add functionality to SharePoint 2013 sites, and it is important to have the skills required to effectively manage those applications. In this course you'll explore the planning, deployment and management of solutions in SharePoint Server 2013. You'll also be able to explain the SharePoint App architecture, learn how to create an App Catalog, and how to use and manage SharePoint Apps. This course is one of a series in the Skillsoft learning path that covers the objectives for the Advanced Solutions of Microsoft SharePoint Server 2013 certification exam (70-332).
Microsoft Exchange Server 2013 - Advanced Solutions: Availability	Exchange Server 2013 offers some new enhancements when it comes to high availability, storage, and site resiliency. This course describes these enhancements. You will also learn how to plan, configure, and manage site-resilient database availability groups and networking including planning a cross-site DAG configuration, recommending quorum options given customer requirements, and implementing Datacenter Activation Coordination (DAC). This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server (70-342) 2013 exam.
Microsoft Exchange Server 2013 - Advanced Solutions: Site-resilience Solutions	Exchange Server 2013 offers a variety of improvements and some new features for planning and implementing site resiliency solutions. In this course, you'll learn how to design, deploy, and manage a site-resilient Client Access Server (CAS) solution which includes planning namespaces and URLs, performing steps for a site rollover, and plan certificate requirements for site failovers. You will also learn to design, deploy, and manage site resilience for transport, which includes learning how to configure MX records for failover scenarios, send/receive connectors for site resilience, manage resubmission and reroute queues, as well as transport failover. This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server 2013 (70-342) exam.
Microsoft Exchange Server 2013 - Advanced Solutions: Advanced Security	It is important to protect your Exchange Server 2013 messaging infrastructure devices and end-points against unauthorized access to controlled or confidential information, and enterprise networks require an effective network access control embedded within the network infrastructure. In this course, you'll learn how to secure Exchange 2013 messaging and select an appropriate security strategy by evaluating a variety of security features such as role-based access control (RBAC), BitLocker, and smart cards. This course will also describe how to implement IRM with Active Directory Rights Management Services (AD RMS) as well as how to configure and interpret mailbox and administrative audit logging. This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server (70-342) 2013 exam.
Microsoft Exchange Server 2013 - Advanced Solutions: Compliance and Discovery	There are many new features in Exchange 2013 when it comes to compliance, archiving, and discovery. These features can help you implement compliance solutions and prevent data loss when it comes to managing e-mail and messaging policies. This course describes how to configure and manage an archiving solution and plan the storage for an archiving solution. You will learn how to design and configure data loss prevention (DLP) solutions by creating and applying retention policies. You will also be able to implement and administer Message Records Management (MRM) by configuring pre-built rules and custom policies and rules. After completing the course, you will also be able to design and configure eDiscovery, and you'll learn how to implement a compliance solution by configuring transport rules. This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server (70-342) 2013 exam.
Microsoft Exchange Server 2013 - Advanced Solutions: Migration and Federation	Federation with AD FS and Exchange Server enables the sharing of Exchange information, such as calendars and availability information, between organizations. In this course, you will learn about hybrid and federated Exchange deployment, managing federation and cross-forest trusts, and migrating legacy Exchange servers and clients to 2013. This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server (70-342) 2013 exam.
Microsoft Exchange Server 2013 - Advanced Solutions: Troubleshooting	Exchange Server 2013 has a number of complex features which all interrelate, and so troubleshooting can be difficult when something goes wrong. In this course, you'll learn a methodical approach to troubleshooting issues with security, UM, site resilience, federation, and many other Exchange features. This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server (70-342) 2013 exam.
Microsoft Exchange Server 2013 - Advanced Solutions: Unified Messaging	Unified Messaging in Exchange Server is a highly desirable feature that enables integration between voice communication and e-mail for improved communication. In this course, you'll learn about all aspects of Unified Messaging in Exchange Server 2013, from deployment and configuration through migration and coexistence with older versions. This course is one of a series in the SkillSoft learning path that covers the objectives for the Advanced Solutions of Microsoft Exchange Server (70-342) 2013 exam.
Microsoft Lync Server 2013: Administration and Data Resiliency Overview	Microsoft Lync Server 2013 offers instant messaging, conferencing, and telephony solutions that can support enterprise-level collaboration requirements. Lync Server 2013 offers many features to enhance collaboration and communication in your organization. In this course, you will learn about the different administration features as well as some of the data resiliency.
Microsoft Lync Server 2013: Configuration and Maintenance	Microsoft Lync Server offers enterprise-level collaboration requirements. Lync Server 2013 offers many features to enhance collaboration and communication in your organization. In this course, you will learn how to deploy and configure Lync Server, as well as how to manage operations.
Java SE 8 Fundamentals: Introduction to Java	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course describes key features of Java and object-oriented programming, Java technology and the development environment, and the product life cycle. It covers defining a class, identifying class components, using a main method, and testing and executing a simple Java program, In addition, this course covers identifying the uses of variables and defining a variable's syntax, and how to work with mathematical operators, basic decision constructs and basic arrays. This course can be used to as part of preparation for the Oracle exam 1Z0-808, Java SE 8 Programmer I, to obtain the Oracle Associate level certification.
Java SE 8 Fundamentals: Classes and Objects	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers working with classes and objects including array objects, and introduces the NetBeans IDE. It also covers manipulating and formatting data in a Java program with classes such as String and StringBuilder and covers type casting and promotion. This course can be used to as part of preparation for the Oracle exam 1Z0-808, Java SE 8 Programmer, to obtain the Oracle Certified Associate level certification.
Java SE 8 Fundamentals: Methods, Encapsulation, and Conditionals	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers working with methods, including method overloading. It also covers how to apply access control levels to classes and methods, how to implement encapsulation of fields, and how to overload constructors. Additionally, it covers relational and conditional operators, how to configure complex if/else constructs and use switch statements. This course can be used as part of preparation for the Oracle exam 1Z0-808, Java SE 8 Programmer, to obtain the Oracle Certified Associate level certification.
Java SE 8 Fundamentals: Data Manipulation and Inheritance	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers how to use the NetBeans debugger. It covers working with dates, and processing the args array and two-dimensional arrays as well as using the ArrayList class. It also covers inheritance in Java classes, including superclasses, subclasses and abstract classes. This course can be used as part of the preparation for the Oracle exam 1Z0-808, Java SE 8 Programmer, to obtain the Oracle Certified Associate level certification.
Java SE 8 Fundamentals: Interfaces, Exceptions, and Deployment	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers how to use interfaces including the List interface and how to use Lambda expressions. Additionally, it covers exception handling and deployment of a Java application and how to enhance an application. This course can be used as part of the preparation for the Oracle exam. 1Z0-808. Java SE 8 Programmer, to obtain the Oracle Certified Associate level certification.
Java SE 8 Programming: Encapsulation, Polymorphism, and Abstraction	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course begins by reviewing Java syntax and Java classes. It goes on to cover encapsulation and polymorphism in detail. It covers static classes, immutable classes, and the singleton design pattern. It also covers abstract classes, nested classes, and working with enumerations. This course can be used as part of preparation for the Oracle Certified Professional, Java SE 8 Programmer II exam.

Course	Description
Java SE 8 Programming: Interfaces, Lambda Expressions, Collections, and Generics	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers working with interfaces and lambda expressions. In addition, it explores creating a customer generic class, using the diamond operator to create an object, creating a collection by using an old style syntax and generics, using enumerated types, as well as implementing an ArrayList, a Set, a HashMap, and a Stack using a Deque. It also covers working with collections using the stream application program interface or API. This course can be used to as part of preparation for the Oracle Certified Professional, Java SE 8 Programmer II exam.
Java SE 8 Programming: Inheritance, Interfaces, Exceptions, and Deployment	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers how to use Lambda built-in functional interfaces. It covers primitive and binary version of base interfaces, as well as the unary operator functional interface. It also covers Lambda operations with the Stream application program interface or API, using map and peek, as well as search and data related methods of the Stream API. It goes on to define the purpose of Java exceptions, and explains how to use the try and throw statements and the catch, multi-catch, and finally clauses. It covers auto closing resources with a try-with-resources statement, common exception classes and categories, creating custom exceptions, and testing invariants by using assertions. This course can be used to as part of preparation for the Oracle Certified Professional, Java SE 8 Programmer II exam.
Java SE 8 Programming: Date/Time API, I/O and File I/O (NIO.2), and Concurrency	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers how to work with date and time values using the java.time API. The basics of input and output in Java, reading data from and writing data to the console, using streams to read and write files, and reading and writing objects by using serialization are also covered. Additionally, the course covers File I/O (NIO.2). Finally, it covers implementing concurrency in Java applications, including how to examine operating system task scheduling, define, create, and manage threads, synchronize threads for accessing shared data, identify potential threading problems, and use the java.util.concurrent library. This course can be used to as part of preparation for the Oracle Certified Professional, Java SE 8 Programmer II exam.
Java Spring: Spring Application Basics	The Spring Framework is one of the most popular application development frameworks for creating enterprise Java applications. The incorporated best practices and infrastructure support provided by the framework simplifies application buildup and breakdown, allowing developers to spend more time on business logic. In addition to the core framework, there are several active Spring Projects available to make developing specific types of applications, or implementing certain concerns in Java applications easier. In this course, you will learn the basics of the Spring Framework including setting up an environment for developing Spring applications, about Spring beans, about Spring xml configuration, and about dependency injection and autowiring using Spring.
Java Spring: Annotation Configuration and Java Configuration in Spring	The Spring Framework is an open source framework and an inversion of controller container for the Java platform. The Spring Framework is one of the most popular application development frameworks for creating enterprise Java applications. This course covers the basics of creating and configuring Spring applications using both Java-based and annotation configurations. In this course, you will learn about alternate ways of creating and configuring Spring applications, namely, annotation-based configuration and Java-based configuration. You will also learn about declaring Spring beans using a component scanner and about Spring Expression Language.
Java Spring: Creating Web Applications Using Spring MVC	The Spring Framework is an open source framework and inversion of controller container for the Java platform. The Spring Framework is one of the most popular application development frameworks for creating enterprise Java applications. This course covers creating web applications using the Spring Framework. In this course, you will learn about using Spring MVC to create functional web applications.
Java Spring: Working with Data in Spring	The Spring Framework is an open source framework and inversion of controller container for the Java platform. The Spring Framework is one of the most popular application development frameworks for creating enterprise Java applications. This course covers using databases in a Spring application. In this course, you will learn the basics of database access from within a Spring application, including how to create, retrieve, update, and delete database records, as well as how to deal with database exceptions.
Java Spring: Aspect-Oriented Programming Using Spring AOP	The Spring Framework is an open source framework and inversion of controller container for the Java platform. The Spring Framework is one of the most popular application development frameworks for creating enterprise Java applications. This course covers using aspect-oriented concepts in a Spring application. In this course, you will learn how to implement aspect-oriented programming, or AOP, in a Spring application by using Spring AOP.
Java Spring: Adding Security Using the Spring Security Project	The Spring Framework is an open source framework and inversion of controller container for the Java platform. The Spring Framework is one of the most popular application development frameworks for creating enterprise Java applications. This course covers the basics in adding security (authentication and authorization) to a Spring application. In this course, you will learn how to secure Spring applications using some of the various features of Spring Security.
Unix OS Fundamentals: An Introduction to Unix	Unix is one of the most widely used operating systems in the world. It has gained success in personal use markets, such as desktop PCs (with Unix-based operating systems like Linux and Mac OS X), and in smartphones with the Android operating system. Used by individuals, companies, and organizations for a variety of applications, commercial Unix systems include Oracle Solaris, IBM AIX, and HP-UX. This course is an overview that introduces the learner to the basics of Unix, including a brief history of Unix and the various brands of Unix and Linux; the various implementations of Unix, either in a network or single workstation environment; Unix's basic user interfaces, from command line to the X Window System; and some fundamental Unix commands, such as logging in or out of a Unix system and performing basic Unix file operations.
Unix OS Fundamentals: Managing Files and Directories	Unix has powerful file system features for working with files and directories. This course provides an introduction to the Unix file system, including file types and their functions, the creation and deletion of Unix files, wildcards and regular expression characters, searching Unix files using parameters, and managing Unix files and directories.
Unix OS Fundamentals: Security	One of the things that makes Unix so popular is its sophisticated security features. System administrators can exert precise controls over Unix systems, both locally (workstation) and remotely (network and Internet). This course demonstrates how Unix system security works, including file permissions and folder security, Unix kernel tuning, CRON security, the prevention of anonymous shutdown, and the Unix password system.
Unix OS Fundamentals: Network Administration	A standout feature of Unix is its sophisticated network administration. Administrators can exert precise controls over Unix systems, both locally (workstation) and remotely (network and Internet). This course is an overview of Unix network administration, including TCP/IP networking, implementing DHCP and DNS, using Unix with Apache server, and file sharing with Network File System, or NFS, and Samba.
Microsoft SQL Server 2014 - Designing BI Solutions: BI Infrastructure Design	Implementing a business intelligence solution is becoming a primary requirement in many companies, no matter the size. A BI solution provides a storage solution for data that's gathered for analysis and reporting on how to improve business performance. In this course, you will learn how to design and build a BI solution and what elements are involved. You will also learn how to design the data warehouse database for the project. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014 - Designing BI Solutions: Extract, Transform, and Load	Once the business requirements are determined during the design stage of building a business intelligence solution, the data warehouse needs to be designed and then populated with the data required for analysis and reporting from the source systems. SQL Server 2014 provides an Extract, Transform, and Load (ETL) process to perform this task. This course will discuss and demonstrate how to build an ETL solution to gather the data required, transform it to conform to the destination, and the load it to the data warehouse. You will also learn how to deploy and manage the ETL packages. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014 - Designing BI Solutions: Data Models	SQL Server Analysis Services enable the storage and analysis of data using data models that employ the Business Intelligence Semantic Model, BISM framework. Using a data model allows value to be added to the data being presented to the business users by using key performance indicators and aggregating the appropriate data. In this course, you will explore how to design multidimensional and tabular data models and how to create the different elements to make meaningful data for the business user reports. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014 - Designing BI Solutions: Reporting Services	The primary goal of a Business Intelligence solution is the delivery of meaningful data to the business users to make informed decisions required the business. During the planning of the BI solution, you need to include the design and creation of the Reporting Services to create and deliver the reports. In this course, you will explore how to design and create a reporting services solution to create reports for delivery. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014 - Designing BI Solutions: SharePoint Integration	The primary goal of a Business Intelligence solution is the delivery of meaningful data to the business users to make informed decisions required for the business. SharePoint and Reporting Services can provide a collaboration and report delivery system for the business users. SharePoint provides Excel services along with PowerPivot and Power View to create meaningful reports which can be delivered through various means. In this course, you will learn how to integrate SharePoint with Reporting Services, including PowerPivot and Power View. You will also explore the various methods for processing and delivering reports to business users. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014 - Designing BI Solutions: MDX Queries and Performance	Multidimensional expression, MDX, is an industry standard query language used to retrieve data as well as perform data definition and data manipulation operations for Analysis Services. MDX can be used in various tools to create ad hoc or reusable scripts to work with Analysis Services cubes. An important part of ensuring a BI solution is operating efficiently is monitoring the performance of the different SQL Server instances being used, including SQL Server Analysis Services, the data warehouse, and Reporting Services. In this course, you will learn how to create MDX calculations to obtain the desired result set. You will also learn how to monitor the performance of the SQL Server instances to get optimal performance. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014 - Designing BI Solutions: Availability and Recovery	In an enterprise, security, high availability, and recovery are all very important to ensure the operation of the company. BI administrators need to create strategies and implement them to ensure users can access the data they require, when they require it. In this course, you will explore how to design and implement these strategies in a BI Infrastructure. This course is one of a series in the Skillsoft learning path that helps individuals prepare for the Designing Business Intelligence Solutions with Microsoft SQL Server exam (70-467).
Microsoft SQL Server 2014: Design and Install Analysis Services and Tools	Using SQL Server Analysis Services (SSAS), you can build multidimensional and tabular models. These models can be used to analyze large amounts of data for business intelligence (BI) applications. This course will discuss the multidimensional and data mining model, tabular model, and BI with SharePoint, including PowerPivot. It will also demonstrate how to install SSAS and SQL Server Data Tools â€" Business Intelligence. This course is one in a series of SkillSoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Designing Multidimensional Models and Data Sources	SQL Server Analysis Services (SSAS) multidimensional models contain objects called cubes, dimensions, and measures, which determine the data and how it is aggregated for the users to analyze. A good understanding of the multidimensional model architecture is required in order to design and implement these objects properly. Data sources are required by the models to connect to and gain access to the data required for the model. This course will discuss the logical and cube architecture and how to create data sources. It will also discuss how to design the multimensional objects. This course is one in a series of Skillsoft courses to help leaners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server: Implement and Configure Cubes	A cube in a SQL Server Analysis Services or SSAS multidimensional model contains the information required to perform the analysis on the data. Cubes consist of dimensions which provide the data and measures which provide aggregated numerical values. This course demonstrates how to create cubes, measures, and measure groups along with other elements including perspectives, hierarchies, and relationships. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Design and Implement Dimensions	SQL Server Analysis Services or SSAS multidimensional models contain objects called Dimensions, which is a collection of related objects used to provide the fact data to one or more cubes. The data provided to the cube is used by users to analyze the fact data. Dimensions are required in a multidimensional model to provide the basic information, attributes, and hierarchies. This course will demonstrate how to create dimensions, including how to configure relationships, hierarchies, and attributes. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server: Implement Partitions and Custom Logic	In SQL Server Analysis Services or SSAS, multidimensional model partitions are used to provide the physical storage for the fact data that is in a measure group. Custom logic can also be implemented into a model to provide for more granular aggregation on the data and better results for the user. This course will demonstrate how to create partitions, including local and remote partitions, and how to implement custom logic into a multidimensional model using calculated members, time intelligence, and named sets. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: MDX Queries, Process Models, and Deploy Databases	Once data is provided to the multidimensional model through dimensions, cubes, and measures, users can query the data using Multidimensional Expressions or MDX. Once the multidimension models are created, they need to be processed and the databases deployed for users to access them. This course will discuss and show how to create MDX queries as well as how to process models and deploy SQL Server Analysis Services or SSAS databases. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Manage, Maintain, and Troubleshoot SSAS	After the SQL Server Analysis Services or SSAS multidimensional models and the SSAS databases have been processed and deployed, it is important to ensure they remain up and running. Administrators need to run backups and administer the Analysis Services server to ensure it runs smoothly. This course will demonstrate how to process data models and deploy and administer the SSAS databases. It will also discuss and show how to performance tune, troubleshoot, and manage the SSAS server. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Create and Manage Tabular Data Models	SQL Server Analysis Services or SSAS supports tabular modeling, which is a columnar database used to store data for analysis. Access to the data in a tabular model provides fast performance. It is easy for users to access and use because Data Analysis Expressions or DAX queries are used to gain access to the data, which is similar to Excel calculations in a spreadsheet. This course will discuss and show how to implement tabular models in SSAS, including how to create and manage the tables, create calculations to access the data stored, and how to manage the database. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Design Reports and Create Data Sources and Datasets	SQL Server Reporting Services or SSRS enables developers to create robust reports, which can be accessed from a variety of sources. To create reports, SQL Server Reporting Services needs to be installed in either Native mode or SharePoint mode. The topology that is chosen depends on if you need to integrate the reports with SharePoint. The first step in creating reports is deciding what data is required and from where and which tool you will use to create the reports. This course will discuss the Reporting Services topologies and how to install and configure them. It will then discuss and show how to create the data sources and datasets to connect to and retrieve the data for the report. This course is one in a series of Skillsoft courses to help prepare learners for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.

Course	Description
Microsoft SQL Server 2014: Report Formatting and Interactivity	SQL Server provides two tools — SQL Server Data Tools Report Designer and Report Builder — to create robust reports in Reporting Services. Using either of these tools, developers or administrators can create different types of reports and format them accordingly using different options. This course will demonstrate how to create different types of reports, including tablix and matrix. It will also demonstrate how to add different options to the reports, including images, charts, column and heading formatting, and how to add interactivity. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Manage Reporting Services	An important administration task for SQL Server Reporting Services is to ensure that users can only access reports and parts of the reports that they require. Security for Reporting Services can be implemented at various levels, from the server down to specific items in a report. Administrators also have to manage the Report Server for performance and availability. This course will demonstrate how to configure security for reports and manage the Report Server, including backing up and restoring, troubleshooting, and performance tuning. This course is one in a series of Skillsoft courses to help prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Microsoft SQL Server 2014: Process Report and Create Subscriptions and Schedules	An important administration task for SQL Server Reporting Services is to ensure users can only access reports and parts of the reports they require. Once users have access to the reports subscriptions can be created to ensure the reports being accessed have up-to-date data, as well as the creation of schedules to process the reports at specific intervals. This course will demonstrate how to process and view reports and how to create different subscriptions and schedules. This course is one in a series of Skillsoft courses to help learners prepare for the 70-466 Implementing Data Models and Reports with Microsoft SQL Server certification exam.
Mentoring 70-487 Developing Microsoft Azure and Web Services	
Mentoring 98-367 MTA Security	
Mentoring MB0-001 CompTIA Mobility+	
Mentoring SK0-004 CompTIA Server+	
Office 365 Services: Managing Clients and End-User Devices	Microsoft Office 365 provides users with a range of popular Microsoft Office applications and related services. In this course, you'll learn how to manage both user-driven and IT deployments of Office 365, how to set up telemetry and reporting, and how to plan and set up Office 365 clients.
Office 365 Services: SharePoint Online Site Collections	In Microsoft Office 365, SharePoint Online provides users with a range of content management and collaboration services. In this course, you'll learn how to configure SharePoint Online services, create and configure SharePoint Online site collections, and plan and set up collaboration solutions using SharePoint Online.
Office 365 Services: Planning for Exchange Online and Lync Online	In Microsoft Office 365, Exchange Online and Lync Online provide users with mail and messaging services. In this course, you'll learn how to plan and set up Exchange Online and Lync Online services to meet end users' specific needs.
Office 365 Services: Configuring Exchange Online and Lync Online	In Microsoft Office 365, Exchange Online and Lync Online provide users with mail and messaging services. In this course, you'll learn how to configure Exchange Online and Lync Online services, including how to configure users' e-mail addresses, external contacts, resources and groups, personal archive policies, and Lync communication settings.
The Microsoft OneNote 2013 Interface	Microsoft OneNote 2013 is note-taking software you can use to create, organize, search, and share notes, for personal and business purposes. This course introduces the OneNote 2013 interface, explaining its key features and what they enable you to do, as well as ways to customize the interface. This course is one of a series in the Skillsoft learning path that covers OneNote 2013.
Getting Started with Microsoft OneNote 2013	Microsoft OneNote 2013 is note-taking software you can use to create, organize, search, and share notes, for personal and business purposes. This course describes how to create a notebook, how to add pages and sections to it, and how to search, tag, and save notebook content. It also describes how to add notebook content, including text, pictures, links, screen clips, drawings, attachments, printouts of files, and audio and video recordings. This course is one of a series in the SkillSoft learning path that covers OneNote 2013.
Working With and Sharing Content in Microsoft OneNote 2013	Microsoft OneNote 2013 is note-taking software you can use to create, organize, search, and share notes, for personal and business purposes. This course covers ways of working with content in OneNote 2013, including using templates and tables, performing calculations, checking spelling, and conducting research. It also covers ways to share and collaborate on notebooks. This course is one of a series in the SkillSoft learning path that covers OneNote 2013.
OneNote 2013 Integration with Other Microsoft Applications	Microsoft OneNote 2013 is note-taking software you can use to create, organize, search, and share notes for personal and business purposes. This course covers ways that you can use Microsoft OneNote 2013 with other Microsoft applications, including Microsoft Outlook, Excel, Word, and PowerPoint. It also covers the touchscreen capabilities of OneNote 2013 and the features of the mobile version of OneNote 2013. This course is one of a series in the SkillSoft learning path that covers OneNote 2013.
Microsoft Windows - Deploying Windows Devices and Apps: Assessment Strategies	Before Windows devices and applications can start to be deployed throughout the network environment an assessment should be completed and then a deployment strategy identified. Administrators can use the Microsoft Assessment and Planning Toolkit, MAP, to assess the hardware and infrastructure readiness for Windows 8.1 and applications. This will help to determine if there are any issues that need to be addressed before the deployment. Administrators can then determine the best deployment strategy based on the organization requirements. This course will discuss and demonstrator how to access the network environment using MAP and SCCM. It will also discuss the different Deployment Phases and strategies. This course is one in a series of Skillsoft courses to help prepare for the 70-695 Deploying Windows Devices and Enterprise Apps certification exam.
TestPrep 70-695 Deploying Windows Devices and Enterprise Apps	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Microsoft Windows - Deploying Windows Devices and Enterprise Apps: Compatibility	Before applications can be deployed on Windows devices, the currently installed ones along with the network need to be assessed for any issues. Mitigation solution also needs to be identified to ensure applications function correctly once deployed. A strategy for how to migrate user state migration also needs to be identified to ensure users do not lose any data. This course will demonstrate how to assess application compatibility issues and identify mitigation solutions. It will also cover user state migration strategies and how to implement them using USMT. This course is one in a series of Skillsoft courses to help prepare for the 70-695 Deploying Windows Devices and Enterprise Apps certification exam.
Microsoft Windows - Deploying Windows Devices and Enterprise Apps: Images & PXE	To deploy Windows devices and applications images can be created. These images contain the operating system, applications and custom configurations and then deployed to specific devices using various deployment tools. The deployment can be automated using answer files. This course discusses and shows how to create and manage images using DISM and WDS, as well as how PXE and multicast OS deployments work. This course is one in a series of Skillsoft courses to help prepare for the 70-695 Deploying Windows Devices and Enterprise Apps certification exam.
Microsoft Windows - Deploying Windows Devices and Enterprise Apps: MDT and LTI	Microsoft provides many different deployment strategies for deploying Windows devices and applications. The Microsoft Deployment Toolkit provides faster deployment times using standardized desktop and server images to client machines within a network. MDT provides task sequences to capture, build, and deploy images throughout a network by performing lite-touch installations. LTI provides consistent settings across network computers, easier deployment by handling driver, application, and update installations, and streamlines maintenance tasks. This course demonstrates how to plan for and use MDT to perform LTI to deploy Windows 8.1 to client machines in a network. It also discusses other types of deployment strategies and how to integrate MDT with WDS for further customization of deployments. This course is one in a series of Skillsoft courses to help prepare for the 70-695 Deploying Windows Devices and Enterprise Apps certification exam.
Microsoft Windows - Deploying Windows Devices and Enterprise Apps: ZTI and SCCM	Microsoft offers different deployment tools to deploy Windows devices and applications across a network infrastructure. This includes using the Microsoft Deployment Toolkit in conjunction with System Center Configuration Manager to perform Zero-Touch Installations. Zero-Touch Installations enable deployment administrators to deploy Windows 8.1 over a network with no interaction once the task sequences are created that contain all the information required for the installation. This includes different packages that contain all the software required, including drivers, applications, user state, and operating system files. The course demonstrates performing ZTI using MDT and System Center Configuration Manager. This course is one in a series of Skillsoft courses to help prepare for the 70-695 Deploying Windows Devices and Enterprise Apps certification exam.
Microsoft Windows - Deploying Windows Devices and Enterprise Apps: Activation	Microsoft Windows 8.1 and Office applications need to be activated before they can be used by users within a network. Organizations are required to purchase volume licenses which can be deployed to devices automatically using various methods, including Key Management Service, Multiple Activation Keys, and Active Directory-based activation. Office 2013 and Office 365 are to applications that are commonly used throughout organizations. These can also have their deployments automated to make deployment to hundreds of computers an easier administrative task. This course will describe the various volume activation methods and how they are each used. It will also discuss and demonstrate how to deploy Office 2013 using MSI and deploy Office 365 using C2R. This course is one in a series of Skillsoft courses to help prepare for the 70-695 Deploying Windows Devices and Enterprise Apps certification exam.
Microsoft Windows - Managing Enterprise Devices and Apps: Desktops and Devices	Network managers face many challenges in managing internal and external systems. System Center 2012 R2 Configuration Manager and Windows Intune make managing large networks much simpler. In this course, you'll learn about the features of Windows Intune and System Center 2012 R2 Configuration Manager. You'll also learn about the architecture, and how to monitor System Center 2012 R2 Configuration Manager and run queries against the database. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft Windows - Managing Enterprise Devices and Apps: Preparing SCCM	Assigning clients to System Center 2012 Configuration Manager sites can be simplified hugely by using boundaries. System Center 2012 Configuration Manager can also be configured to automatically discover resources to manage. In this course, you'll learn about the configuration required to automate these time-consuming tasks. You'll also learn about the configuration of the Exchange connector for managing ActiveSync clients, and configuring role-based administration. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft Windows - Managing Enterprise Devices and Apps: Client Management	The System Center 2012 R2 Configuration Manager client is the main method for collecting data from PC clients. It has a number of deployment options and much of the configuration can be automated. In this course, you'll learn about client deployment and configuration, and the automation of that configuration. You'll also learn about content deployment and configuring System Center 2012 R2 Configuration Manager to manage large scale content distribution throughout the enterprise network. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft Windows - Managing Enterprise Devices and Apps: Inventory and Assets	A detailed hardware and software inventory is vital for infrastructure management. And yet, it can be one of the most challenging tasks to perform accurately and with a degree of confidence. System Center 2012 R2 Configuration Manager simplifies hardware and software inventory by automating collection from the client and from agentless devices. In this course, you'll learn about the process and configuration of hardware and software inventory collection with System Center 2012 R2 Configuration Manager. You'll also explore configuring software metering and asset intelligence. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft PowerShell for Windows: Getting Started with PowerShell	Windows PowerShell is a powerful task automation and configuration management framework, as well as being an administrator-friendly entry point to the .NET Framework. In this course, you will learn about the PowerShell environment and PowerShell Integrated Scripting Environment. You'll also learn how to get help, when needed, through the extensible help system built into Windows PowerShell.
Microsoft PowerShell for Windows: Aliases, Providers, and Objects	Every time you work in PowerShell in any one of its guises as a host application or ISE, you are working in the context of a provider. Aliases in Windows PowerShell are a kind of shorthand for a cmdlet. This course covers aliases and providers. And continues to cover the pipeline and working with objects and rounds off with formatting output.
Microsoft PowerShell for Windows: Remoting and Modules	The ability to remotely run commands on a group of remote system is one of the key advantages of Windows PowerShell. Extensibility through modules and snap-ins is another key advantage. This course covers one-to-one and one-to-many remoting, snap-ins, and modules.
First Encounters with Windows 10	Windows 10 integrates the modern Windows 8 app interface and the classic Windows Start Menu into one keyboard, mouse, and touch-friendly interface. In this course, you'll learn about new features of the Windows 10 interface, including the Start Menu and Virtual Desktops, and improvements made to existing tools, such as the Command Prompt and File Explorer.
Oracle Database 12c - Backup and Recovery: Configuring for Recoverability	Oracle Database 12c offers different features to enable a full recovery of the database in case of a failure. Depending on the Oracle system that is running, different solutions can be used. This course discusses the backup and recovery solutions available in Oracle Database 12c as well as the Oracle Database Server architecture. It will also explain and demonstrate how to configure Recovery Manager, RMAN, and how to create a recovery catalog for managing database backup, restore, and recovery processes. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063, Oracle Database 12c: Advanced Administration.
Oracle Database 12c - Backup and Recovery: Performing and Managing Backups	Oracle Database 12c allows backups to be performed and managed using Recovery Manager, RMAN. Multiple different backup strategies can be used that are a combination of different types of backups, including incremental, full, block media recovery, and encrypted backups. This course will discuss and demonstrate how to identify backup requirements and strategies as well as how to perform and manage backups. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063, Oracle Database 12c: Advanced Administration.
Oracle Database 12c - Backup and Recovery: Failure and Recovery Concepts	Numerous issues, such as media failures, user errors, and application errors, can cause an Oracle 12c database to become partially or fully inoperable. Because of this, data protection is the main purpose of a backup and recovery strategy. Oracle Database 12c offers RMAN data repair techniques that can be incorporated into backup and recovery strategies to respond to data loss. One of these is the Data Recovery Advisor, which can diagnose, advise, and repair some failures automatically. RMAN also offers block media recovery, point-in-time recovery as well as complete and incomplete recovery. This course will discuss how Data Recovery Advisor is used, how block corruption is handled, and the concepts regarding how various restores and recoveries are performed. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063, Oracle Database 12c: Advanced Administration.
Oracle Database 12c - Backup and Recovery: Perform Recovery and Secure Backup	When a failure occurs within an Oracle 12c database, a restore or recovery operation needs to take place. Using RMAN restore operations database, you can restore tablespaces, control files, redo log, and the server parameter file if they are corrupted or lost within the database. This course will discuss and show how to perform the different types of restore operations, including when the database is in ARCHIVELOG or NOARCHIVELOG mode. It will also show how to recover from the loss of control files and password files, redo log files, as well as how to restore a database to a new host and perform disaster recovery. This course will also describe what Oracle Secure Backup is and how it can be integrated with RMAN to perform backups and restores. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063, Oracle Database 12c: Advanced Administration.
Oracle Database 12c - Backup and Recovery: Using Flashback Technologies	Oracle Database 12c provides the Flashback technologies to enable databases, tables, and transactions to be flashed back. This allows users to view data from the past and apply that data to the database, if necessary. Oracle offers Flashback Database, Flashback Table, Flashback Query, and Flashback Transaction Query. Flashback Drop can be used to reinstate a dropped table from the recycle bin. This course describes and shows how to use these Flashback technologies. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063, Oracle Database 12c: Advanced Administration.

Oracle Database 12c - Backup and Recovery: Transporting Data and Performing PITR	Using Data Transport, a feature in Oracle Database 12c, tablespace can be transported to other databases on the same or different platforms. It also enables the transportation of full databases. Another feature of Oracle Database 12c is Point-in-Time Recovery. This enables the recovery of one or more objects, for example tablespaces, to an earlier time without affecting other objects within the database. Point-in-Time Recovery can be performed at three levels: Tablespace, Table, and Database. This course will discuss and demonstrate how to perform data transportation and Point-in-Time Recovery. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063. Oracle Database 12c: Advanced Administration.
Oracle Database 12c - Backup and Recovery: Duplicating Databases and Tuning RMAN	Oracle Database 12c allows for the duplication of a database. This can be useful for numerous reasons, including for implementing a testing environment or for doing recovery operations. To duplicate a database there are various steps you need to complete to first prepare the environment when the database will be duplicated to and then the RMAN DUPLICATE command can be used. As with any tool or feature that using resources RMAN can have performance issues. These issues need to be identified and then corrected based on performance issues that was detected. Oracle Database 12c provides tools and features to do this task. This course will discuss and show how to duplicate a database as well as how to troubleshoot and tune RMAN. This course is one of a series in the Skillsoft learning path that helps prepare the learner for the Backup and Recovery portion of the Oracle exam 1Z0-063. Oracle Database 12c: Advanced Administration.
TestPrep 1Z0-047 Oracle Database SQL Expert	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Six Sigma and Lean Foundations and Principles	Six Sigma is used by practitioners for improvement projects in their organizations where both the DMAIC methodology and tools that reduce variation and product defects are applied. Lean is a continuous improvement initiative that aims to reduce waste and increase performance by streamlining processes. Lean tools are specifically useful for the Improve and Control stages of the Six Sigma DMAIC methodology. This course examines the complementary nature of Lean and Six Sigma. In this course, you'll learn about Six Sigma and its methodology, and then explore Lean and some key tools and how they integrate with Six Sigma. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Six Sigma Team Basics, Roles, and Responsibilities	Six Sigma needs both effective leadership and teamwork to deliver promised results to an organization. It is important to understand the value that teamwork brings to a Six Sigma project and how team members can individually support the success of their projects. In this course, you will learn about Six Sigma team roles and responsibilities and aspects of communication, as well as tools used for effective communication and decision-making. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Six Sigma Quality Tools	Before a Six Sigma team can begin to improve an organization's processes, it must measure key performance indicators. By doing so, the team will be able to understand baseline performance and uncover problem areas. Key performance indicators are also useful in assessing the impact of changes and improvements on performance. Quality tools such as charts and diagrams enable the collection and visual presentation of information. In this course, you will learn how to create and use charts and diagrams that are commonly used by Six Sigma practitioners. The course covers Pareto charts, flowcharts, run charts, and cause and effect diagrams, check sheets, scatter diagrams, and histograms. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Six Sigma Metrics	For a Six Sigma team to start an improvement project, it must measure key performance indicators through various metrics. These performance metrics can be applied to any industry or process and provide a wealth of information regarding the current state of the process and identify areas for improvement. The key performance metrics are also a useful tool in analyzing whether changes and improvements made to a process are, in fact, adding the desired performance and leading to a better customer experience. In this course, you will learn how to calculate and use the most common performance metrics used in Six Sigma including the defects per unit, defects per million opportunities, the first time yield and rolled through yield, the cost of low quality, and the cycle and takt times. The course will also examine the importance of measuring variation, or sigma, in relation to some of these key metrics and the benefits that lie within achieving a six sigma level. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Identifying Six Sigma Projects	For a successful implementation of a Six Sigma improvement initiative the customer's preferences and business requirements must be captured. The Voice of the Customer is important for a project that aims to increase value and quality to the customers. The Voice of the Business is important when the project aims to improve internal efficiencies and productivity. The project selection process helps determine which projects are feasible and which provide the greatest benefit to the customer and the organization. It is important to identify who the project stakeholders are and what their interest in the project is in order to meet their expectations. In this course, you will learn how to capture information from the Voice of the Customer and the Voice of the Business and use a project selection process to decide which projects to pursue and what methodology to use. The course examines how to identify project stakeholders and the inputs and outputs of a process. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Six Sigma Project Management Basics	Effective project management basics are critical for a successful Six Sigma improvement initiative. This course examines several tools that are used for planning during the Define phase of a project, such as the project charter, communication plan, work breakdown structure, and Gantt chart. You will also learn how to use several tools for monitoring, reviewing, and managing the project, including activity network diagrams, affinity diagrams, matrix charts, relations charts, tree diagrams and tollgate reviews. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Basic Statistics for Six Sigma	During the Measure stage of a project using the DMAIC methodology, performance-related data is summarized in a meaningful way using various statistical measures. This course provides a look at basic statistical tools used for measuring performance. It describes descriptive and inferential statistics as well as the concepts of central tendency and dispersion of data. The course describes the process of determining and interpreting central tendency measures such as mean, median, and mode. It also describes how to calculate and interpret dispersion metrics such as standard deviation, range, and variance and how these can be used with central tendency measures to make valid conclusions about a process. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Data Types and Data Collection in Six Sigma	During the Measure stage of the DMAIC methodology, a Six Sigma project team uses tools and techniques to measure process performance and gather data. These metrics are used to better understand the process, identify issues, and create performance benchmarks. This course introduces basic types of data, such as qualitative and quantitative data, as well as measurement scales. You will learn the elements of a data collection plan and how to use data collection tools, such as surveys and checklists. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Introduction to R Programming	R is a programming language used to carry out statistical analysis on datasets. This course covers the basics to get started with programming in R. This course demonstrates R using basic statistic functions, data handling, and visual representation through charts, graphs, and plots.
Introduction to Algorithms and Data Structures	This course introduces the basics of algorithms and data structures with examples in C++. This course focuses on what the working programmer should know about algorithms and data structures without getting bogged down in mathematical formalism.
ANSI C Language Fundamentals	C is a general purpose language with standards specified by the American National Standards Institute (ANSI). This course covers the fundamentals of C including working with data types, variables, and operators. It also demonstrates how to implement program flow using conditional statements and branching.
Iterations, Functions and Pointers in ANSI C	C is a general purpose language with standards specified by the American National Standards Institute (ANSI). This course covers how to implement iterative programming with loops, and also how to work with built-in and user-defined functions and pointers.
Data Structures and File Management in ANSI C	C is a general purpose language with standards specified by the American National Standards Institute (ANSI). This course covers data structures such as arrays, strings, structures, and unions. It also covers file management using C.
Optimizing and Debugging ANSI C Programs	C is a general purpose language with standards specified by the American National Standards Institute (ANSI). This course demonstrates how to work with various built-in functions and use format specifiers. It covers storage classes, volatile variables, data modifiers and dynamic memory allocation (DMA). It also covers how to use the C preprocessor to optimize C programs.
Fundamentals of Apache Web Services	A Web service is a communication method between two devices over a network. Apache CXF is an open-source Web services framework. CXF helps build services using frontend APIs. These services use a variety of protocols such as SOAP, XML/HTTP, and RESTful HTTP. This course will cover an overview of the Apache CXF framework, using Apache Tomcat, and how to unit test RESTful services.
Apache Web Services Advanced	Apache CXF is an open source services framework. CXF helps develop services using front end programming APIs. These services use a variety of protocols such as SOAP, XML/HTTP and RESTful HTTP. This course will cover Web services security, developing custom interceptors, and using XSLT within CXF.
Web API Essentials	The application programming interface for both the web server and web browser is referred to as Web API. There are a lot of different technologies and practices that fall into this category. In this course, you will learn about RESTful Services, OData, and a variety of the tools that can be used to assist developers.
Web API Advanced	Web API is the application programming interface for both the web server (server side) and web browser (client side). There are a lot of different technologies and practices that fall into this category. In this course, you will learn about request binding, request validation, API security, and hosting.
Architecture N-Tier/REST: Designing and Building Applications	N-Tier and REST are both architectures used for developing applications. By using the N-tier architecture, model developers can create applications that are flexible and reusable. In this course you will explore how the N-tier architecture provides a means to separate an application into tiers to allow the developer to add or modify a specific layer instead of recreating the entire application. You will also learn about the Representational state transfer, or REST, architecture and how it utilizes HTTP requests to post, read, and delete data, and perform CRUD operations. Finally, you will learn how to design and build applications based on both the N-tier and REST architectures.
Introduction to CQRS	Command and Query Responsibility Segregation, or CQRS, was developed by Bertrand Meyer as a way to ensure that methods working with data only perform one of two tasks. Either a method retrieves information or it modifies it somehow, not both. In this course, you will explore domain and model driven design, learn what N-Tier architecture is, and identify the parts of CRUD and their purpose. You will also explore the use of CQRS as a design pattern, including comparing it with other methodologies as well as applying it in a C# solution.
Introduction to Debugging	In software development, debugging is a necessary part of the development process. It's difficult for developers to admit that their code is buggy, but the best software developers recognize that there's no such thing as perfect code. And while debugging is time-consuming and expensive, it must be included in the development cycle, just like any other component necessary to delivering a working piece of software. This course introduces the learner to basic concepts of software debugging, debugging tools, and debugging best practices.
Visual Studio 2013 Debugging	Visual Studio 2013 is a powerful development environment, and a large part of that power comes from its debugging capabilities. Software debugging is a fact of life, but Visual Studio and its various tools make the process a bit easier. In this course, you'll learn about software debugging in Visual Studio 2013, beginning with an introduction to Visual Studio, a discussion on its debugging capabilities, and various methods for debugging with Visual Studio. You will also learn about debugging environments of Visual Studio 2013, as well as how to generate and work with dumps.
Debugging Tools	Debugging is a necessary part of the development process, but there are numerous tools available to the developer. In this course, you'll explore various debugging tools, including Performance Monitor, PerfView, and DebugDiag. You'll also learn about Visual Studio Online, as well as some debugging tips.
Software Debugging in Windows	Microsoft Windows is a powerful graphical user interface, and most software developers will develop Windows applications at some point. Software development means debugging, and this course will cover software debugging in Windows, including Windows debugging tools, Windows memory manager issues, and resource issues. You will also learn about Windows 8 debugging tools and improving code quality.
Defensive Coding Fundamentals for C#	Defensive Programming is a methodology for writing code that is not prone to present or future errors potentially caused by unexpected user inputs/actions. In this course you will explore the fundamentals of defensive programming including inspections, testing, input validation, error handling, planning, methods, variables, assertions, and iterative design.
Defensive Coding for C#	Defensive Programming is a methodology for writing code that is not prone to present or future errors potentially caused by unexpected user inputs/actions. In this course you will explore common risks to C#, how to counter common risks, the best way to deal with user input, and finally how to secure WCF applications.
Microsoft Enterprise Library	Microsoft Enterprise Library is a collection of software components, or application blocks, aimed at aiding with common tasks in enterprise software development. These application blocks are provided in source code form, to be adapted and extended as needed. In this course, you'll learn about installation of the six application blocks, particularly the Data Access Application Block (DAB) and the Exception Handling Application Block (EHB).
Getting Started With Entity Framework	This course introduces Entity Framework and its modeling concepts and approaches, and demonstrates how to use it to read data from and write data to a database.
Advanced Entity Framework	This course explains and demonstrates how to integrate Entity Framework in a web project, how to improve and tune performance in various scenarios, how to configure Entity Framework, and how to work with other database types.
Beginner Git	Git has become the most popular open source version control system for software developers. Despite a historic reputation for difficulty of use and compatibility issues, recent years have seen many improvements, and most of these problems have been solved. In this course, you will learn the importance of version control, how it is used by software developer, and how to use Git effectively for this task.
Advanced Git	Git has become the most dominant version control system for the open source community. Being able to leverage the power of Git makes software developers a more valuable resource. In this course, you will learn about the different hosting options and the more advanced Git commands. You'll learn how to manage repositories as well as the three levels of the reset command and how they should each be used.
NHibernate Essentials	NHibernate is an open-source object relational mapper for the Microsoft .NET platform. It makes it easy to retrieve data from relational databases and store them in objects. In this course, you'll be introduced to NHibernate, find out how to set up a project to use NHibernate, and use NHibernate to create various types of mappings to retrieve data from a relational database.
NHibernate Advanced Techniques	NHibernate is an open-source object relational mapper for the Microsoft .NET platform. It's fairly easy to get up and running with NHibernate, but using it optimally in a large project requires more advanced techniques. In this course, you'll find out about different approaches you can use with NHibernate, as well as how to perform tasks such as logging activity, caching data, instantiating sessions with an IoC container, and unit testing.
Introduction to SOLID	There are a number of concepts and methodologies that encompass what is known as object-oriented design. In this course, you'll explore object-oriented design concepts such as Agile, the Single Responsibility Principle, the Open-Closed Principle, and the Liskov Substitution Principle, which help to form the design method methodology known as SOLID.

Course	Description
SOLID Fundamentals	There are a number of concepts and methodologies that encompass what is known as object-oriented design. In this course, you'll explore object-oriented design concepts such as Interface Segregation, Dependency Inversion, and Dependency Injection, which help form the design methodology known as SOLID. You'll also explore how to implement all the parts of SOLID in an application.
Beginning Object-Oriented Design	There are a number of concepts and methodologies that encompass what is known as object-oriented design. In this course, you'll explore object-oriented design concepts such as Single responsibility, Open/Closed, Liskov substitution, Interface segregation and Dependency inversion (SOLID), Unified Modeling Language (UML), class responsibility collaboration (CRC) cards, and General Responsibility Assignment Software Patterns (GRASP).
Advanced Scrum: Developing the Product and Sprint Backlogs	Successful Scrum implementation begins with effective backlog development. In this course, you'll learn about key activities required when developing the product and sprint backlogs, including release planning best practices and conducting the sprint planning meeting. You'll also learn about best practices for handling common challenges when developing the product and sprint backlogs.
Advanced Scrum: Addressing Sprint Execution Challenges	Executing a Scrum sprint can pose unique challenges, but there are ways to mitigate your risk. This course provides an overview of techniques for overcoming challenges you might face when executing sprint, including how to manage issues with daily standups, sprint reviews, and sprint retrospectives. This course also provides techniques for handling technical debt challenges and distributed scrum.
SOA Fundamentals	There are a number of concepts that encompass what is known as the Service-Oriented Architecture, or SOA. In this course, you'll explore the SOA concepts, such as XML, SOA architecture, services, layers, and the key technologies involved in SOA. You'll also explore Windows Communication Foundation, or WCF, as an example of SOA.
Software Practices (SCRUM): SCRUM Roles	Scrum is Agile development methodology, and so follows the Agile Manifesto. The Agile Manifesto sets out standards for software design practices that focus on completing and shipping code without some of the overhead and complication associated with traditional software development. In this course, you'll learn about the guiding principles of Scrum, an overview of the process, the makeup of a Scrum team, Scrum artifacts, and the INVEST guidelines.
Software Practices (SCRUM): SCRUM Meetings	A large part of the Scrum process revolves around the Scrum meetings. SCRUM meetings are highly structured and time efficient, and are part of the fantastic success of SCRUM methodologies. Another large piece of the Scrum process is managing user stories. User stories are short descriptions in non-technical language of how a system is expected to behave, and are one of the key and unique features of SCRUM development. This course covers the Scrum meeting and user stories in depth. It also covers key concepts, such as velocity and technical debt.
Creating Software Tests	Software testing is critical to the development of quality software applications. In this course, you'll learn about software testing methodologies and the steps involved in creating software tests. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Technology Associate (MTA) exam 98-379, Software Testing Fundamentals.
Managing, Troubleshooting, and Automating Software Tests	Software testing is critical to the development of quality software applications. In this course, you'll learn about the steps involved in managing, troubleshooting, and automating software tests. This course is one of a series in the SkillSoft learning path that covers the objectives for Microsoft Technology Associate (MTA) exam 98-379, Software Testing Fundamentals.
Swift Language Basics	Swift is a new programming language for building OS X and iOS applications. It is based on Objective-C, but uses features from a range of different languages. In this course, you'll learn how to use the features of the Swift language. You'll also learn how to use types and operators, implement program flow, work with functions, and define and work with enumerations, structures, and classes.
Using Swift Advanced Language Features	Swift is a new programming language for building OS X and iOS applications. It is based on Objective-C, but it uses features from a range of different languages. In this course, you'll learn how to work with more advanced features of the Swift language. You'll learn how to define properties and methods with enumerations, structures and classes, and use type checking and casting. The course will also cover extensions, protocols and generics, and you'll learn how to implement access control, memory management and use imported frameworks.
UX Design Foundations: Design Principles and Strategies	A positive and effective user experience is crucial to the success of an application. This course addresses the importance of identifying your users, using consistent and simple design patterns, implementing effective navigation and layout, incorporating media elements, using advertisements, and implementing user interface design strategies and tools such as Lean UX and wireframing. In this course, you'll learn principles such as Hick's Law, Pareto Principle, and Gestalt Principles in the context of UX design. In addition to design and behavior patterns, you'll learn how to use color and typography to optimize user experience. Finally you'll explore design approaches and frameworks such as agile and responsive design.
UX Design Foundations: Techniques and Tools	A positive and effective user experience is crucial to the success of an application. In this course, you'll learn about implementation of research, design, prototyping, and testing strategies and tools. The course will cover tools such as user journeys, customer experience maps and persona profiles. You'll also learn about the role of an information architecture designer and how to prototype with sketches and wireframes. Finally, you will explore heuristic evaluation, user, and accessibility testing as part of a UX design solution.
UX Design Foundations: Navigation, Layout, and Content	A positive and effective user experience is crucial to the success of an application. In this course, you'll learn about implementing effective navigation and layout, incorporating media elements, and using advertisements effectively for optimum user experience. You'll also explore different navigation models and solutions, as well as effective home page, category page, product page and shopping cart design. You'll also learn about the design of effective form solutions.
Windows Embedded 8.1 Industry	Windows Embedded 8.1 Industry combines the innovation, familiarity, and power of Windows 8.1 with specific features for enabling device applications on embedded systems. In this course, you will learn about the functionality of branding and lockdown capabilities. You will also explore the Management Console, and how to create and mount an image.
WPF Fundamentals with XAML and C#	Microsoft's Windows Presentation Foundation (WPF) is a framework within .NET for building next-generation standalone and browser-based client applications. This course introduces WPF to the C# programmer and shows how to create and deploy multimedia applications with WPF. You will learn about using windows and page-based navigation, implementing and formatting controls, working with events and data binding. You'll also learn about incorporation of multimedia elements including 3-D graphics, video and audio, and animations. Finally, you'll learn about using resources and deploying a WPF application.
The Waterfall Software Development Model	Waterfall is the traditional sequential software development model. Waterfall is the most widely used software development model, historically, and while Agile methods are gaining traction, these methods still use some elements of Waterfall. This course covers the Application Development Lifecycle (ADLC) approach, then goes on to the Software Development Lifecycle (SDLC) approach, and finally completes the sequence by contrasting traditional waterfall development with iterative approaches, such as Agile.
Xamarin Android and iOS Projects in Cross-Platform Solutions in Visual Studio	Xamarin software enables the development of cross-platform mobile applications using C#. This course covers creating separate Xamarin Android and iOS projects in Visual Studio that can share code within a single solution. It covers how to create a Xamarin.Android project, how to add controls and work with images and how to use the Android emulator. It also covers how to create a Xamarin.iOS application, use the iOS Designer to add controls, work with layouts and images, and connect to a Mac build host to use an iOS emulator.
Cross-Platform Shared Code and Xamarin.Forms in Visual Studio	Xamarin software enables the development of cross-platform mobile applications using C#. This course covers how to enable Android and iOS projects how to implement components and how to share code using code projects and class libraries. Xamarin software includes Xamarin.Forms, which allows you to create a single user interface solution that maps to native controls on different platforms. The course will cover how to create a Xamarin.Forms solution in Visual Studio, how to work with layouts and lists, and how to implement page navigations and data binding. It will also cover how to use format the UI, work with data, and support gestures and popups in Xamarin.Forms applications.
Working with Node.js and .NET	Node.js and the .NET Framework can work together to develop efficient, secure, and distributed applications. In this course, you will explore the fundamentals of Node.js, and how to install and work with the Node.js tools for Visual Studio. This course also explores the various types of templates that you can use to create Node.js applications in Visual Studio, and how to bridge the gap between the two programming frameworks.
Edge.js, Node.js, and ASP.NET MVC	Node.js and the .NET Framework can work together to develop efficient, secure, and distributed applications. In this course, you will learn about the key features of Edge.js. You will also learn how to use Node.js and C# code together, work with data marshalling, explore error handling and debugging, and use Node.js with Internet Information Services or IIS.
Azure, Node.js, and SQL Server	Node.js and the .NET Framework can work together to develop efficient, secure, and distributed applications. In this course, you'll learn how to use Node.js with SQL Server and Microsoft Azure. Specifically, you'll explore how to use Node.js with SQL Server to connect to and work with SQL Server data. You'll also explore the Azure Software Development Kit or SDK for Node.js and learn how to create and deploy Node.js applications to Azure. Lastly, you'll explore how to use the Azure Table Service with Node.js applications.
Bootstrap Introduction	Bootstrap is a framework developed to provide consistency, while still allowing for flexibility and customization. It is a collection of tools that can be easily customized to suit an organization's needs. In this course, you will explore the Grid system and how that applies to the layouts, how tables are used, and how to work with buttons and dropdowns. You will also learn how to use buttons and input groups.
Bootstrap Elements	Bootstrap is a front-end framework developed to provide consistency for internal resources. In this course, you will explore the navigation elements, how to apply breadcrumbs, and how to use the different plugins, including the alert plugin and the carousel plugin.
Working with Knockout	Knockout is a JavaScript library used to develop user interfaces based on the Model-View-View-Model (MVVM) pattern. Knockout has a range of features to support dynamic development of UIs. In this course you'll learn about working with features such as single-page applications, collections, templates, binding syntax, and custom bindings.
Node.js Fundamentals	Node.js is a server-side framework that uses an event driven asynchronous model and is built on the Google Chrome V8 JavaScript runtime engine. This course demonstrates how to install Node.js, work with Node.js modules, build a basic web server, and manage files and directories using Node.js applications.
Node.js: Files, Data Stores, Networked, and WebSocket Applications	Node.js is a server-side framework that uses an event driven asynchronous model and is built on the Google Chrome V8 JavaScript runtime engine. This course demonstrates how to work with files and directories, how to connect to different data stores, and how to create TCP and WebSocket servers.
Node.js: Express Applications and the MEAN Stack	Node.js is a server-side framework that uses an event driven asynchronous model and is built on the Google Chrome V8 JavaScript runtime engine. This course demonstrates how to create server side web applications using Express as well as how to create web applications using the MEAN Stack.
Optimizing and Securing Node.js Applications	Node.js is a server-side framework that uses an event driven asynchronous model and is built on the Google Chrome V8 JavaScript runtime engine. This course demonstrates how to work with events and processes to optimize Node.js applications. It also covers how to implement data security and authorization and authentication in Node.js applications.
Node.js: Debugging, Testing, Deploying, and Maintaining Node Applications	Node.js is a server-side framework that uses an event driven asynchronous model and is built on the Google Chrome V8 JavaScript runtime engine. This course demonstrates how to debug, test, deploy, and maintain Node.js applications.
JavaScript SPA: Connecting to and Managing Data	A JavaScript single page application, or SPA, uses a combination of JavaScript libraries and web development frameworks to communicate with the server, consume and manage data, and display application views on screen. A SPA serves up a single HTML page in which all of the application views are rendered on the client, and data that is retrieved from the server can be cached and efficiently managed on the client. In this course, you will learn how to connect to a data source, then retrieve and manage rich data using the Breeze JavaScript library in a JavaScript SPA in Visual Studio 2013.
jQuery: Basic Setup and Features	jQuery simplifies the process of using HTML for your websites. This course introduces you to the fundamentals of jQuery, including installing and implementing the environment, jQuery styles and themes, and using basic features like finding and filtering. You'll also learn about selecting options in jQuery such as selecting by class, ID, or attribute. Finally, this course introduces basic animation and color functions such as animating colors, style changes, and queues.
jQuery: Using Essential Features and Functions	jQuery has a wide variety of features and options to tailor your pages to your requirements. This course introduces learners to options available when working with elements, such as modifying elements, cloning elements, and wrapping elements. This course also covers options when working with events, such as capturing events, changing events, and submitting events. Finally, this course provides a how-to for using the datepicker and mouse options in jQuery.
jQuery: Advanced Features and Functions	jQuery provides endless opportunities to customize your page using unique functions and options. This course introduces charts in jQuery as well as UI features and functions and UI autocomplete. This course also covers working with slides, the slider options, AJAX, accordion, and working with classes.
CISSP: Security Principles, Governance, and Guidelines	The fundamental security principles of confidentiality, availability, and integrity guide all successful information security best practices. In this course, you'll learn about applying these security principles, as well as best practices for establishing security governance principles. You'll also explore how best to establish and implement comprehensive security guidelines across the organization. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Risk Management	Risk management is an integral part of overall information systems security. In this course, you'll learn about personnel security best practices, risk management concepts, and risk analysis techniques. You'll also be introduced to threat modeling best practices, countermeasure selection, and implementing risk controls. Finally, this course covers risk monitoring and reporting best practices. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Asset Security	The substantial increase in the amount of digitized data over the past few years requires an equal response in attention to the security of that data. In this course, you'll learn about asset security best practices including classification techniques and asset security ownership. This course also covers privacy protection considerations, including data remanence and collection limitations. Finally, you'll explore best practices for media, hardware and personnel retention, and techniques for determining the most appropriate data security controls like scoping, tailoring and cryptography. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Security Engineering Part 1	Integrating comprehensive security controls into information systems planning and design activities is vital for establishing IS architecture that has necessary functionality combined with the ability to fend off both internal and external threats. In this course, you'll learn best practices for implementing and managing secure engineering processes, including applying underlying security principles in IS architecture design. This course also introduces you to systems security evaluation models selecting appropriate controls and countermeasures. Finally, you'll learn about IS security capabilities and vulnerabilities and how to capitalize both for establishing security of the overall IS architecture. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Security Engineering Part 2	Even in an age of digitized data, securing the physical environment is still a critical part of security engineering. In this course, you'll learn about security threats, both natural and man-made, and techniques for preventing loss from these threats. You'll also learn about site and facility design considerations, restricted work area security, and best practices for crime prevention through secure design of the physical environment. This course is one of a series in the SkillSoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Communication & Network Security Design	Securing network communications is a key activity in managing the security of any IT system, and the network is a common and potent vector for attack. In this course, you'll learn about the design and components of network systems, how to implement secure systems, and how to mitigate common attacks. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Identity and Access Management	Identity and access management is at the heart of security management and is key to the CISSP examination. Compromising identity is the main aim of most attacks on data confidentiality. In this course, you'll learn about physical and logical access control, the proper management of identity and identification of the identity lifecycle, and attacks to access control and their mitigation. You'll also learn about the design and components of network systems, how to implement secure systems, and how to mitigate common attacks. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.

Course	Description
CISSP: Security Assessment and Testing	The time spent planning and establishing security controls isn't worth much if you don't spend time ensuring that those security designs work. In this course, you'll learn how to design and validate security control assessment and test strategies, and perform vulnerability assessments. This course also covers how to perform log reviews, code reviews and tests, and perform penetration testing to test security controls. Finally, you'll learn about best practices for collecting security test data, and analyzing test outputs so you can identify gaps and implement any further required security controls in the overall security design. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Security Operations Part 1	The day to day security activities in an organization are the heart of security operations. In this course, you'll learn techniques for performing general security operations activities such as security investigations, including best practices and requirements for the types of investigations that security professionals typically take part in. This course also introduces you to techniques for using logging and monitoring activities for security purposes, establishing secure resource provisioning, and applying general security concepts such as least privilege to all security operations activities. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Security Operations Part 2	One of the primary activities within security operations is detecting and responding to security-related incidents. In this course, you'll learn incident management techniques including incident detection, response, mitigation, reporting, and recovery best practices. This course also covers how to use preventative measures such as firewalls, whitelisting and blacklisting, sandboxing, and anti-malware. In addition, you'll be introduced to patch and vulnerability management activities such as patch testing, installation, and deployment. Finally, this course covers change management processes that security professionals regularly take part in as part of security operations, including versioning, baselining, and security impact analyses. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Security Operations Part 3	Security professionals are required to anticipate, plan for, respond to, and recover from security incidents quickly and appropriately as part of security operations for the overall organization. In this course, you'll learn how to develop and implement recovery strategies, including specific strategies for backup storage, recovery sites, multiple processing sites, and system resilience and fault tolerance requirements. This course also covers best practices for disaster recovery activities, including response, personnel, communications, assessment, restoration, and training and awareness considerations. Finally, you'll learn about organizational safety measures such as business continuity planning, managing physical security of the premises, and addressing personnel safety concerns like employee monitoring and privacy policies. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
CISSP: Software Development Security	While information systems security professionals are not generally involved in software development, they are responsible to assess and implement security controls on software being used within the organizational environment. In this course you'll learn about best practices for implementing and enforcing software security controls. This course also covers best practices for assessing software security effectiveness, such as using change logs and audits, software security risk analysis, and software security acceptance testing. Finally this course covers best practices for assessing security impacts of acquired or third-party software, and software assurance. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Information Systems Security Professional (CISSP) exam.
Changes to CISSP 2015	The (ISC)² Certified Information Systems Security Professional (CISSP) exam has been reorganized for 2015. No content has been removed, but there has been lots of reorganization, and the context of existing information is subtly different. This Skillsoft course will get you on the right track to begin your CISSP study.
Microsoft Security Fundamentals: Security Layers	One of the building blocks of successful IT security practices is a fundamental understanding of security layers. This course introduces learners to some of the main core concepts in IT security including confidentiality, integrity, and availability. This course also covers foundational information on physical, Internet, and wireless security, including keylogging, browser settings and zones, and service set identifier, or SSID, and media access control, or MAC, filters. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Security Fundamentals: MTA 98-367 exam.
Microsoft Security Fundamentals: Operating System Security	One of the building blocks of successful IT security practices is a fundamental understanding of operating system security. This course provides an introduction to the concept of user authentication, including multifactor and Remote Authentication Dial-In User Service (RADIUS) authentication. This course also covers key concepts of permissions, such as file, Active Directory, share, and group permissions. Finally, this course covers fundamental security policies including password and audit policies, as well as encryption and malware best practices. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Security Fundamentals: MTA 98-367 exam.
Microsoft Security Fundamentals: Network Security	One of the building blocks of successful IT security practices is a fundamental understanding of network security. This course introduces key concepts about dedicated firewalls and methods including packet filtering, circuit-level, application-level, and stateful multilevel firewalls. This course also covers types of inspection, and stateful v. stateless inspection. Finally, this course covers best practices for Network Access Protection, network isolation methods, and protocol security concepts including common network attack methods. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Security Fundamentals: MTA 98-367 exam.
Microsoft Security Fundamentals: Security Software	One of the building blocks of successful IT security practices is a fundamental understanding of security software. This course introduces learners to client protection practices, including methods for dealing with malware, antivirus for client protection, and using User Account Control, or UAC. This course also includes fundamental best practices for e-mail protection and server protection, including server hardening. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Security Fundamentals: MTA 98-367 exam.
CSSLP: Secure Software Concepts	A fundamental understanding of the potential risks, vulnerabilities and exposures throughout the software lifecycle is the basis for ensuring overall software security. In this course, you'll learn about the core concepts of confidentiality, integrity, authentication, and authorization. You'll also be introduced to security design principles such as least privilege, separation of duties, fail safe, and economy of mechanism. Finally, this course covers best practices for governance, risk, and compliance throughout the software lifecycle. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional (CSSLP) exam.
CSSLP: Secure Software Requirements	Integrating security into the software development process and identifying key security objectives is paramount to successful secure software development. In this course, you'll learn about internal and external security requirements and how to classify and categorize data. You'll also explore functional requirements such as role and user definitions, the role of the deployment environment on requirements, and sequencing and timing requirements. Finally, this course covers operational requirements such as deployment and management solutions. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional (CSSLP) exam.
VMware vSphere 6 Install, Configure, Manage - Part 2: vSphere 6 DRS	VMware vSphere 6 offers various features for enhanced resource management and utilization in a VMware virtualized environment. In this course, you will learn the important aspects of Distributed Resource Scheduler (DRS) functionality and automation. You will also learn how to monitor DRS to achieve optimal performance and resource utilization. Finally, you will learn how to cluster resource management benefits and resource utilization in a VMware vSphere 6 virtualized environment.
VMware vSphere 6 Install, Configure, Manage - Part 2: vSphere 6 Design	Effective resource management along with appropriate design methods help ensure a successful VMware vSphere 6 virtualized environment. In this course, you will learn how advanced resource management methods help optimize performance and efficiency of vSphere 6 components. You will also learn the basics of design principles which help lay the foundation of a successful VMware vSphere 6 virtualized environment.
VMware vSphere 6 Install, Configure, Manage - Part 1: vSphere 6 Overview	Virtualization using VMware vSphere 6 provides a host of benefits to a server environment including high availability, improved resource utilization, scalability, and ultimately cost benefits. This course covers the benefits of virtualization and the licensing level required to achieve the desired feature set in VMware vSphere 6.
VMware vSphere 6 Install, Configure, Manage - Part 1: vSphere Installation	VMware vSphere 6 ESXi is the hypervisor underlying the vSphere suite of products, which enables bare-metal installation of VMs directly on a hardware. vCenter Server is a centralized management platform that ties it all together. This course covers installation and basic configuration of VMware vSphere 6 ESXi and vCenter Server, and the options to connect to them for management purposes.
VMware vSphere 6 Install, Configure, Manage - Part 1: Virtual Networks	One of the main advantages in configuring cloud computing and virtualization is the use of virtual networks. Virtual networks offer the flexibility of any topology and aren't constrained by cable bandwidth limitations. This course covers the configuration of virtual networks in VMware vSphere 6 including VLANs and virtual switches.
VMware vSphere 6 Install, Configure, Manage - Part 1: Storage and VMs	Virtualized environments have unique requirements for storage and movement of data. The unit of virtualization is the VM, which essentially runs the instance of a computer on a software-defined hardware. This course covers storage management for a VMware vSphere 6 environment. It also covers virtual machine creation and management, and best practices for VMs in a vSphere 6 environment.
Installing and Configuring VMware Workstation 11	VMware Workstation provides award-winning desktop virtualization capabilities with an easy-to-use interface. In this course, you will learn about the features that make VMware Workstation such an invaluable tool and you will get to know the various console interface components. This course also covers the installation requirements and installation tasks for both Windows and Linux hosts.
Creating and Configuring Virtual Machines in VMware Workstation 11	VMware Workstation provides a user-friendly wizard to quickly and easily create new virtual machines. The wizard provides a typical installation path along with a custom installation option for the more advanced user. In this course, you'll see how to perform these two types of virtual machine installations and the difference between the individual options available. You will learn what's involved in installing a guest operating system and the importance of installing and updating VMware Tools. This course also covers configuration tasks you will want to master such as cloning, snapshots, and the configuration of a variety of virtual machine settings.
Advanced Windows Store Apps with C# in Visual Studio 2013: Data Management	Windows Store apps can be configured with UI features as well as programmatically to handle data. This course describes how to implement caching options, incorporate file pickers, and handle data access, files, and libraries programmatically. You'll also learn how to integrate OneDrive with your app. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-485: Advanced Windows Store App Development Using C#. This exam is a requirement for the Microsoft Certified Solutions Developer (MCSD): Windows Store Apps certification.
Advanced Windows Store Apps with C# in Visual Studio 2013: Testing & Deployment	You will need to ensure that your app has been validated and is error-free before submitting it to the Windows Store. In this course, you'll learn how to prevent errors from reaching users, how to select a business model for your app, and how to test and validate your app before packaging it and submitting to the Windows Store. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-485: Advanced Windows Store App Development Using C#. This exam is a requirement for the Microsoft Certified Solutions Developer (MCSD): Windows Store Apps certification.
Creating Styles with CSS3 and Styling Text	CSS3 has a range of styling options for text and list presentation. In this course, you will learn how to use rule sets to create styles, how to group and apply styles, and how to apply styles for effective content display.
Styling Page Elements using CSS3	CSS3 has a wide range of options for configuring web page elements. In this course, you will learn how to work with color, apply borders, and other styling features to elements. You will also learn how to configure tables with CSS3 for effective presentation of content such as spreadsheet and calendar data.
Navigation Elements and Animations with CSS3	Effective navigation is a key element of good site design. CSS3 contains many features that allow you to configure and style navigation elements. In this course, you will learn how to apply these features and you will also learn how to use CSS3 animations to create dynamic and attractive sites.
Forms, Positioning, and Layout with CSS3	Forms are key components for many web sites and CSS3 has a range of options for configuring form elements. CSS3 also includes positioning and layout options to optimize your site presentation. In this course you will learn how to apply CSS3 to forms, how to use positioning features of CSS3 and how to use CSS3 columns and the CSS3 box model for layout.
Advanced Options, Responsive Web Design, and Management with CSS3	CSS3 specifications include new and sophisticated options for layout and graphics. However, it is crucial to implement responsive web design which takes account of devices and browser support for CSS3 features. Additionally, you may want to harness scripting languages such as JavaScript to manage CSS3 styles as they become more complex. In this course, you will learn about the latest specifications for layout and graphics in CSS3, you will learn how to implement responsive web design, and you will learn how to manage CSS styles with scripts.
Extending CSS3 with Sass and Less	Despite its increasing flexibility and functionality, CSS does not include functionality such as nesting, functions, and the use of variables. Sass and Less pre-processors can be used to extend CSS, providing greater functionality and power and maintenance for your stylesheets.
Drupal 8 First Look	Drupal is a user-friendly Content Management System or CMS that automates or eases the most common web site development requirements. In this course, you will learn the basic installation process, how to add and manage content, and the roles and permissions for users.
Getting Started with ASP.NET MVC Web Applications in Visual Studio 2013	Development platforms like Visual Studio include a collection of ASP.NET MVC project templates that can be used to rapidly create and test web applications. In this course, you will learn how to create and add new pages in Web Forms, Web Pages, and ASP.NET MVC 4 web applications, how to create and apply layout/master pages for each type of application, how to work with MVC 4 controller route data, how to create and use ASP.NET MVC 4 controller action results, selectors and filters, and how to administer basic MVC 4 unit tests in Visual Studio 2013. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD 70-486.
TestPrep 70-486 Developing ASP.NET MVC Web Applications	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Designing the User Experience in ASP.NET MVC Web Applications	User experience is mainly influenced by the design of the application UI layout and behavior, thus sound design principles go a long way in developing quality apps. In this course, you will learn how to use Razor code blocks and HTML helper methods in MVC views, how to implement client and server-side data validation, and how to render application scripts. You will also learn how to develop a web application for multiple browsers and mobile devices, as well as how to work with display modes to implement adaptive user interfaces in Visual Studio 2013. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Working with ASP.NET MVC 4 Models	Models are the basic building block of any MVC application, as they represent how the application can manage and interact with data. In this course, you will learn how to add a model to an ASP.NET MVC 4 application, how to implement business logic in a model, how to create and add a SQL Azure database, and how to validate user input with data annotations. You will also learn how to create and use default and custom model binders, as well as how to create databases and administer access to model classes using Entity Framework. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
ASP.NET MVC Databases and the Entity Framework	Databases and the Entity Framework add a great deal of value to any MVC application, as they allow the application to manage and interact with data. In this course, you will learn how to create databases and administer access to model classes using Entity Framework. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Developing the User Experience in ASP.NET MVC	The ASP.NET Web API framework can be used in an MVC project to build RESTful APIs on top of the .NET framework, thus exposing HTTP data services and reasonably separating data service responsibilities from UI concerns. In this course, you will learn how to configure and implement MVC routes, how to register and configure ASP.NET Web API routes, how to implement ASP.NET Web API controller HTTP methods, and how to retrieve and display raw JSON and XML data in a browser. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Designing ASP.NET MVC Application Architecture	Proper application architecture design is key to ensuring that the web applications run in an efficient, secure manner when deployed. In this course you will learn how to implement state management, implement a web socket strategy, use and manage asynchronous tasks, and how to design a distributed application in Visual Studio 2013. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.

Implementing ASP.NET Authentication and Authorization	Understanding and implementing proper user authorization and authentication techniques is key to producing secure, trustworthy web applications. In this course, you will learn how to configure user authentication rules, configure and apply user authorization roles, and implement claims-based authentication in an ASP.NET MVC web application. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Debugging ASP.NET MVC Web Applications	Developers typically spend most of their development time in the debugging phase of a project, where they test the application for compile-time and runtime issues alike. In this course, you will learn how to prevent and troubleshoot runtime issues and cover techniques in designing an exception handling strategy. You will also learn how to collect diagnostics and debug Windows Azure applications.This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Configuring and Deploying an ASP.NET MVC Application	Developers have the option of configuring additional application settings before deploying a web application to the production environment. In this course, you will learn how to create resources for implementing globalization and localization, how to implement Windows Azure life cycle events, how to configure various web application settings, how to plan and design for search engine optimization, and how to deploy web applications to hosting providers, Azure websites, and to IIS for local environment testing prior to production deployment. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Optimizing and Protecting Application Data	In order to develop efficient, robust web applications, we must understand how to implement key web optimization techniques as well as key ASP.NET security features. In this course, you will learn how to use compression to reduce network bandwidth, how to implement custom encryption and decryption of application URLs, how to manage validation and prevent cross-site scripting and cross-site request forgery attacks, and how to implement a custom membership provider for ASP.NET MVC web applications. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft MCSD exam 70-486.
Responsive Web Design: Flexible Grids, Images, and Media Queries	With the rise of hand-held devices and mobile browsing, web applications have needed to become responsive to the accessing device. This course introduces responsive web design and demonstrates how to apply responsive design strategies. It covers the core components of responsive web design - flexible grids, flexible images, and media queries.
Responsive Web Design: Flexible Data and UIs, Devices, Process and Performance	With the rise of handheld devices and mobile browsing, web applications have needed to become responsive to the accessing device. This course demonstrates how to configure flexible data and user interfaces. It covers how to interact with devices, and apply process and performance procedures as part of a responsive web design solution.
WordPress Introduction and Basic Configuration	WordPress is a free and open source blogging tool and a content management system. There are many new features in the latest version, WordPress 4.1. The new default theme, Twenty Fifteen, is a responsive design that lets your writing take center stage. In this course, you will learn how to install and configure WordPress as well as how to work with content, themes, and plugins.
WordPress Networking and Security	WordPress is an open-source content management system used by more than 23% of the top 10 million web sites. WordPress 4.1 provides a new distraction-free writing mode â€" editing tools fade away when you are writing and come back when you need them. In this course, you will learn how to build and configure multisite networks and perform the critical security measures.
WordPress Advanced Themes and Administration	WordPress is one of the most powerful, versatile, and flexible content management systems, making it a great choice for every kind of Web project. It is also a free open-source blogging tool. In this course, you will learn how to create and manage themes, perform administration, and look into the options when considering to move your site.
Microsoft System Center 2012 R2 â€" Configure and Deploy: VMM Overview	Cloud computing can provide highly available and scalable infrastructure solutions to most organizations. Private clouds can be configured on premises, but it is important to design them according to the organization's needs. This course describes the private cloud and its Microsoft System Center 2012 R2 components. You'll also learn how to deploy the System Center 2012 R2 Virtual Machine Manager. This course is one in the series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 â€" Configuring and Deploying a Private Cloud.
TestPrep 70-247 Configuring and Deploying a Private Cloud, System Center 2012	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Microsoft System Center 2012 R2 â€" Configure and Deploy: Extending & Maintaining	The private cloud will continually evolve based on the organization's requirements. In this course, you'll learn about the best practices for extending the private cloud and keeping it up to date using Windows Deployment Services and Windows Software Update Services. This course is one of a series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Microsoft System Center 2012 R2 â€" Configure and Deploy: Application Delivery	The Microsoft Web Deployment Tool is a tool for automating deployment of web applications to Windows Servers running Internet Information Services (IIS). In this course, you'll learn how to use the Microsoft Web Deployment Tool and Server App-V to dynamically deploy applications in the private cloud. This course is one of a series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Microsoft System Center 2012 R2 â€" Configure and Deploy: Building Private	Virtual machines and services can be deployed efficiently in the private cloud. In this course, you'll learn how to create hardware and operating systems profiles and templates to create virtual resources. This course is one in the series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Microsoft System Center 2012 R2 â€" Configure and Deploy: Monitoring	System Center 2012 R2 Operation Manager is the data center and cloud monitoring component of the System Center 2012 R2 suite. In this course, you'll learn how to monitor and maintain your private cloud infrastructure using System Center 2012 R2- Operations Manager and Data Protection Manager. This course is one in the series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Microsoft System Center 2012 R2 â€" Configure and Deploy: Service Management	IT service management is a core responsibility for the IT department. Changes, incidents, problems, and service releases need to be tracked and controlled in order to provide a robust and seamless IT service. In this course, you'll learn how to implement structured service management using Service Manager in System Center 2012 R2. This course is one of a series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Microsoft System Center 2012 R2 â€" Configure and Deploy: DPM	Protecting the private cloud is vital in order for an organization to fulfill its objectives. In this course, you'll learn how System Center Data Protection Manager, or DPM, allows data center administrations to protect, backup, and restore their cloud infrastructure. This course is one of a series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Microsoft System Center 2012 R2 â€" Configure and Deploy: Automation	To reduce the total cost of ownership for your private cloud, you should strive to automate and standardize administrative tasks. System Center 2012 R2 â€" Orchestrator provides the functionality to achieve this. The private cloud can provide infrastructure as a service, and the Cloud Services Process Pack allows you to do this and to provide service level cloud management to the organization. In this course, you'll learn how to automate private cloud tasks and how to implement service-level access and management to cloud resources. This course is one of a series in the Skillsoft learning path that can be taken in preparation for the exam 70-247 - Configuring and Deploying a Private Cloud.
Installing and Configuring a Microsoft IIS Server Service	Microsoft IIS has been designed to allow for scalability, security, manageability, and above all reliability. This course describes how best to leverage these benefits with the use of applications and application pools, virtual directories, and the available Microsoft IIS extensions. This course also covers Microsoft IIS security features, with the use of certificates.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Private Cloud Overview	In recent years IT operations have transitioned from standalone servers, to data centers, and now to private clouds. In this course, you'll learn about the basics of private clouds, their requirements and how they are monitored for health, performance and compliance. This course also covers the System Center 2012 R2 suite of products and how they are used for holistic cloud management. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Deploying Cloud Services	Virtualization is one of the core technologies that distinguishes traditional IT provisioning from private cloud provisioning. In this course, you'll learn about System Center 2012 R2 Virtual Machine Manager, the virtualization management solution. You'll also learn about the creation of business clouds, profiles and templates, and Microsoft Web Deploy, for deploying multi-tier applications to the cloud. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Monitoring Cloud Services	One of the keys to achieving the cloud ideals of always-on and high-availability is proper monitoring. This course explores monitoring the private cloud infrastructure using System Center 2012 R2 Operations Manager. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Service Management	A key distinction between the traditional data center and the cloud data center is the concept of self-service. System Center 2012 R2 Service Manager has a dedicated self-service portal to service user requests. In this course, you'll learn about monitoring application performance in System Center 2012 R2 Operations Manager. You'll also learn about basic configuration of System Center 2012 R2 Service Manager and self-service portal. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Problem Management	Private clouds differentiate themselves from traditional IT by being more holistic to use and manage. This is achieved through integration, and the integration product of System Center 2012 R2 is Orchestrator. This course outlines System Center integration with System Center 2012 R2 Orchestrator. It also covers problem management in System Center 2012 R2 Service Manager and custom monitoring with System Center 2012 R2 Operations Manager. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Backup and Recovery	Provisioning is an area where clouds distinguish themselves from standard data center IT. Clouds are provisioned as a unit, and this holistic approach feeds into other areas of configuration and manageability. This course covers private cloud provisioning and configuration with System Center Cloud Services Process Pack. You'll also learn about configuring data backup and recovery with System Center 2012 R2 Data Protection Manager. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: Compliance	Clouds cover multiple geographies and jurisdictions in a way that traditional IT does not. Therefore, it becomes critical to measure, manage and maintain compliance. In this course, you'll learn about compliance management in System Center 2012 R2 including the use of the System Center Process Pack for IT GRC, and the use of baselines in System Center 2012 R2 Virtual Machine Manager. You'll also explore System Center Advisor as a tool for assessing a private cloud. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Microsoft System Center 2012 R2 â€" Monitor and Operate: SLAs Widgets & Dashboards	The structure of costing in the cloud data center is very different from traditional IT costing. Service levels are always important in the main costing approaches. This course covers the monitoring of service levels in the private cloud through the use of service level tracking mechanisms, and widgets and dashboards. This course is one of a series of courses that prepares the learner for Microsoft exam 70-246: Monitoring and Operating a Private Cloud. This exam is part of the MCSE: Private Cloud certification track.
Ajax: Requesting Data and Retrieving Responses	Rather than a singular technology, Ajax, or Asynchronous JavaScript and XML, is a collection of technologies that enables web pages to make server requests without having to reload the page. You can use Ajax to create asynchronous web applications that provide a faster, more user-friendly experience. In this course, you will learn how to use the XMLHTTPRequest object to send data requests and retrieve data from the server in the form of text, XML, and JSON responses.
Instituting a Quality Improvement Program	In this challenge you will be put to the test on a change scenario. It's high-stakes, many stakeholders are affected, clarity on what to change is poor, people may not see the need for change, and we have to make it happen fast. Roll up your sleeves and get ready to rumbleâ€¦ You are the change agent selected to lead this initiative!
Adobe Captivate 8: Getting Started	Adobe Captivate 8 is a tool for developing responsive interactive content. It can be used to develop courses from scratch as well as record on-screen software activities. In this course, you will learn basic tasks in Adobe Captivate 8 like creating a responsive project, applying themes, inserting different question types, and using question pools. You will also learn about working with recordings in Adobe Captivate 8, and how to perform tasks such as recording new narrations, simulations, and demos.
Adobe Captivate 8: Media and Interactivity	Adobe Captivate 8 is a tool for developing responsive interactive content. It can be used to develop courses from scratch as well as record on-screen software activities. In this course, you will learn how to enhance content with media such as animations, video, and audio. You'll also learn how to add interactive elements such as action buttons and how to publish a project to multiple devices.
Managing a Citrix XenDesktop 7.6 Environment	The dependability and efficiency of your XenDesktop environment relies on your ability to manage and maintain XenDesktop services and components. In this course, you'll install and use XenDesktop Director and you'll look at the benefit of configuring Remote Assistance for it. You also learn about Citrix Printing Services, the importance of backing up and restoring the XenDesktop database, and Citrix Disaster Recovery. This course also covers important maintenance tasks for user profile management, adding storage to target devices, and managing remote stores. This course is one of a series in the SkillSoft learning path that covers objectives for the 1Y0-200 certification exam Managing Citrix XenDesktop 7 Solutions.
Microsoft Azure - Implementing Infrastructure Solutions: Virtual Networks	Microsoft Azure can be managed from a web-based portal or from the PowerShell command line environment. One of the most powerful cloud features is the ability to virtualize an entire network environment and to connect virtual network constructs. In this course, you will learn about basic administration in Azure. You'll also explore virtual network creation and management, and connecting virtual networks together to form hybrid networks or VPNs. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.
Microsoft Azure - Implementing Infrastructure Solutions: Virtual Machines	Virtual machines and Infrastructure as a Service or IaaS are one of the main reasons for cloud deployment. Azure virtual machines enable you to extend your data center without limit, and can even provide data center scale resources to organizations that would not historically have had access. Through this course, you will learn about all facets of virtual machines in Microsoft Azure. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.
Microsoft Azure - Implementing Infrastructure Solutions: Implementing Websites	Azure websites enable you to host websites without the complexity of managing the underlying operating system or web server software. In this course, you will learn about the planning, creation, and monitoring of websites through Microsoft Azure. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.
Microsoft Azure - Implementing Infrastructure Solutions: Storage and PaaS Cloud	Azure storage makes data accessible in a number of ways. The core structures in Azure are tables, queues, and blob containers. Azure also provides Recovery Services for failover, backup, and recovery for data and sites. PaaS cloud is a model for hosting apps on Azure. It is modular and elastic and well suited to providing mobile services. In this course, you will learn about Azure storage, from blobs to backup, and PaaS implementation. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.

Microsoft Azure - Implementing Infrastructure Solutions: Data Services	Microsoft Azure SQL Database is a service that enables you to run SQL databases on the Azure cloud without having to manage the underlying OS or SQL Server software. In this course, you'll learn about the creation, maintenance, and security configuration tasks in Microsoft Azure SQL Database. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.
Microsoft Azure - Implementing Infrastructure Solutions: CDNs and Automation	Content delivery networks enable global-scale delivery of content for web pages or mobile apps. By caching globally local copies of large blob data, access times and user experience are greatly improved. In this course, you will learn about the configuration of CDNs and media services in Microsoft Azure. You'll also learn about automation - a key tool used by Azure administrators and built on the flexibility of PowerShell. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.
Microsoft Azure - Implementing Infrastructure Solutions: Active Directory	Azure Active Directory (AD) is the Azure cloud implementation of Microsoft's identity and access management solution. Azure AD provides secure access and single sign-on services to internal and web-based applications. AD can be extended from an on-premises solution to the Azure cloud and federated with other AD implementations. In this course, you'll learn about all aspects of Azure AD, from hybrid on-premises and on cloud solutions, to AD FS federation between AD implementations. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft exam 70-533: Implementing Microsoft Azure Infrastructure Solutions. This exam completes the requirement for Microsoft Specialist certification in Microsoft Azure.
Interpersonal Communication that Builds Trust	Communication works best when your intention is clear, your audience is engaged, and your verbal and nonverbal behavior are respectful. When you hit these notes, you'll build trust with the people you communicate with. To maintain that trust, you also have to be aware of and manage emotions â€" yours and those of others. In this course, you'll explore how a clear intention drives a communication, and how understanding your audience ensures that the message gets delivered. You'll also learn how verbal signals, nonverbal behavior, and emotional intelligence can help make or break your communications.
Communication Methods that Make Sense â€" and Make Your Point	Today people rely more and more on mobile devices and 'one-way' communication tools that they often use under the guise of being 'social.' Although it's possible to learn to communicate interpersonally using only technology, it's not always the best or most efficient way to achieve your intended communication outcomes, which are most typically to inform, give feedback, or influence. Interpersonal communication is just that â€" personal. So the further you stray from communication methods that are rich in personal attributes (you can hear someone, see someone, use body language, interact with others) versus light in personal attributes (impersonal, one-way, static), the more apt you are to have a one-way, 'telling' type of communication. In this course, you'll learn how to select the best communication methods to convey your intention and target your audience. By doing so, you improve the odds of getting your message across, making your point, and leaving your audience feeling informed, enlightened, and engaged.
Being a Receptive Communication Partner	Interpersonal communication is a two-way street. The 'giver' has the lion's share of responsibility in making sure the communication conveys the correct intent and message. But no one likes to talk to a wall, so in many ways, the response from the communication recipient is as important as the message that's given. When you're on the receiving end of a communication, regardless of whether or not it has been planned or delivered effectively, you must try to be receptive and understand what was intended. This requires two essential skills that most everyone finds challenging to keep sharpened: listening and questioning. In this course, you'll work on sharpening those skills â€" as well as on getting yourself in the right receptive mind-set for communicating.
Communication Challenges: Navigating Choppy Waters	Everyone has experienced miscommunication. Have you ever dealt with someone who seems unable to 'hear' the message you're sending? Or have you ever had to deliver a message that you knew would be hard for the other person to accept? Maybe you've even found yourself in a disagreement with someone that was so significant that it completely shut down your communication. Communication gets tough when the message is difficult. And because these challenges typically involve emotions such as hurt, anger, or confusion, it's not uncommon for people to shut down one another or shut down, preventing what could be a productive exchange at many levels. In this course, you'll examine some common communication challenges and how you can successfully navigate them. By showing patience, perseverance, and accountability, you can get communication back on track and reach mutual understanding and agreement.
Issue-focused Negotiation: Are You Ready?	People often see negotiation as a matter of sticking to your 'position' while playing tug-o-war. But taking 'positions' involves an emotional/ego component inevitably leading to a dead end in negotiation. Instead, focus on the issue at hand, and learn strategies to communicate effectively and avoid falling into 'positions.' It takes the right mindset, essential communication skills and a toolbox of strategies to deftly handle any tricks the other party tries to use on you. This course will teach you how to stop playing...and stop being played.
You and Your Negotiating Counterpart	We all have emotions, motivations, and unique personalities. You'll need to accept and integrate that into your negotiating strategy. Most people are so busy with their own interests that they do not fully realize the other person's issues. This course will help you build critical components of a good negotiating relationship, including mutual trust, a deeper understanding of where your negotiation counterpart is coming from, a set of techniques to use when faced with different personalities, and a plan for getting them to come along with you.
Reaching a Negotiated Agreement	At this point in the negotiation, you've done what you can to establish a trusting relationship, kept focused on the issues, and adapted your approach to optimize your influence with your counterpart. The finish line may be in sight, but it's not yet a guarantee. The object of negotiation is to come to and confirm an agreement. When you started the negotiation you asked questions. At this point you're focusing on the answers. In this course, you'll learn how to think creatively about solutions to maximize your chances of arriving at a mutually beneficial agreement with your negotiating counterpart. You'll also learn how to facilitate that agreement â€" even amid resistance from the other party.
Ecosystem for Hadoop	Hadoop's HDFS is a highly fault-tolerant distributed file system and, like Hadoop in general, designed to be deployed on low-cost hardware. It provides high throughput access to application data and is suitable for applications that have large data sets. This course examines the Hadoop ecosystem by demonstrating all of the commonly used open source software components. You'll explore a Big Data model to understand how these tools combine to create a supercomputing platform. You'll also learn how the principles of supercomputing apply to Hadoop and how this yields an affordable supercomputing environment.
Installation of Hadoop	Apache Hadoop is an open source framework for distributed storage and processing of large sets of data on commodity hardware. Hadoop enables businesses to quickly gain insight from massive amounts of structured and unstructured data. In this course, you'll learn step-by-step instructions for installing Hadoop in a pseudo-mode and troubleshoot installation errors. You'll learn where the log files are and more about the architecture.
Data Repository with HDFS and HBase	Hadoop is an open source Java framework for processing and querying vast amounts of data on large clusters of commodity hardware. It relies on an active community of contributors from all over the world for its success. In this course, you'll explore the server architecture for Hadoop and learn about the functions and configuration of the daemons making up the Hadoop Distributed File System. You'll also learn about the command line interface and common HDFS administration issues facing all end users. Finally, you'll explore the theory of HBase as another data repository built alongside or on top of HDFS, and basic HBase commands.
Data Repository with Flume	Hadoop is an open source software project that enables distributed processing of large data sets across clusters of commodity servers. It is designed to scale up from a single server to thousands of machines, with very high degree of fault tolerance. Rather than relying on high-end hardware, the resiliency of these clusters comes from the software's ability to detect and handle failures at the application layer. In this course, you'll learn about the theory of Flume as a tool for dealing with extraction and loading of unstructured data. You'll explore a detailed explanation of the Flume agents and a demonstration of the Flume agents in action.
Data Repository with Sqoop	Hadoop is an open-source software framework for storing and processing big data in a distributed fashion on large clusters of commodity hardware. Essentially, it accomplishes two tasks: massive data storage and faster processing. This course explains the theory of Sqoop as a tool for dealing with extraction and loading of structured data from a RDBMS. You'll explore an explanation of Hive SQL statements and a demonstration of Hive in action.
Data Refinery with YARN and MapReduce	The core of Hadoop consists of a storage part, HDFS, and a processing part, MapReduce. Hadoop splits files into large blocks and distributes the blocks amongst the nodes in the cluster. To process the data, Hadoop and MapReduce transfer code to nodes that have the required data, which the nodes then process in parallel. This approach takes advantage of data locality to allow the data to be processed faster and more efficiently via distributed processing than by using a more conventional supercomputer architecture that relies on a parallel file system where computation and data are connected via high-speed networking. In this course, you'll learn about the theory of YARN as a parallel processing framework for Hadoop. You'll also learn about the theory of MapReduce as the backbone of parallel processing jobs. Finally, this course demonstrates MapReduce in action by explaining the pertinent classes and then walk through a MapReduce program step by step.
Data Factory with Hive	Apache Hadoop is a set of algorithms for distributed storage and distributed processing of Big Data on computer clusters built from commodity hardware. All the modules in Hadoop are designed with a fundamental assumption that hardware failures are commonplace and thus should be automatically handled in software by the framework. In this course, you'll explore Hive as a SQL like tool for interfacing with Hadoop. The course demonstrates the installation and configuration of Hive, followed by demonstration of Hive in action. Finally, you'll learn about extracting and loading data between Hive and a RDBMS.
Data Factory with Pig	Hadoop is an open source software for affordable supercomputing. It provides the distributed file system and the parallel processing required to run a massive computing cluster. This course explains Pig as a data flow scripting tool for interfacing with Hadoop. You'll learn about the installation and configuration of Pig and explore a demonstration of Pig in action.
Data Factory with Oozie and Hue	The Hadoop software library is a framework that allows for the distributed processing of large data sets across clusters of computers using simple programming models. It is designed to scale up from single servers to thousands of machines, each offering local computation and storage. Rather than rely on hardware to deliver high-availability, the library itself is designed to detect and handle failures at the application layer, so delivering a highly-available service on top of a cluster of computers, each of which may be prone to failures. This course explains Oozie as a workflow tool used to manage multiple stage tasks in Hadoop. Additionally, you'll learn how to use Hue, a front end tool which is browser based.
Data Flow for the Hadoop Ecosystem	Hadoop is a framework written in Java for running applications on large clusters of commodity hardware and incorporates features similar to those of the GFS and of the MapReduce computing paradigm. You'll explore a demonstration of the use of Sqoop and Hive with Hadoop to flow and fuse data. The demonstration includes preprocessing data, partitioning data and joining data.
Apache Kafka Operations	Apache Kafka's unique architecture enables huge scalability, but it must be deployed and managed in a considered fashion. This course covers the basic concepts of Apache Kafka, and considerations for deploying Kafka and managing servers.
Apache Kafka Development	Apache Kafka comes with a set of APIs for consumers and producers for writing to and reading from logs. This course covers the producer and consumer APIs, and data serialization and deserialization techniques, and strategies for testing Kafka.
Spark Core	Spark Core provides basic I/O functionalities, distributed task dispatching, and scheduling. Resilient Distributed Datasets (RDDs) are logical collections of data partitioned across machines. RDDs can be created by referencing datasets in external storage systems, or by applying transformations on existing RDDs. In this course, you will learn how to improve Spark's performance and work with Data Frames and Spark SQL.
An Overview of Apache Cassandra	Apache Cassandra is designed to meet a scaling challenge that traditional database management systems are not capable of handling. This course provides you with an overview of the Cassandra architecture, where it fits in the NoSQL and Big Data ecosystem, and how to install, manage, and access data programmatically.
Data Visualization: Essentials	It is becoming more common to present data in a visual way to engage audiences with what the data is saying. To ensure the audiences understand what is being presented, effective data visualizations need to be created, and this all starts with knowing who your audience is and what your data is all about. In this course, you'll learn the essentials of creating great data visualizations and how to use different forms of data visualizations.
Tableau Visualization	Tableau is groundbreaking data visualization software that connects easily to nearly any data source. It allows for immediate insight by transforming data into visually appealing interactive visualizations called dashboards. This is achieved on the fly by way of an easy to use drag-and-drop interface. The goal of data visualization is to communicate information clearly and efficiently to users. In this course, you will learn your way around the Tableau interface, how to make data connections, and use parameters for filtering.
Tableau Charts, Maps, and Dashboards	Tableau allows for immediate data transformations by using a drag-and-drop easy to use interface that builds and customizes the dashboards in seconds. Effective visualization helps users in analyzing and reasoning about data and evidence. In this course, you will learn about the top chart types, custom calculations, and dashboards.
Google Apps: Slides, Sites, and Google+	Google+ is a cloud-oriented social network that ties in with the rest of the Google ecosystem. Hangouts enable real-time chat and video chat using the same infrastructure. Slides is a fully featured presentation app with features equivalent to desktop offerings. Sites is a website creation and management portal, which enables eye-catching, professional website creation using the same tools and interface as Google Apps. This course covers Google+ and how it ties in with Hangouts and the rest of Google Apps. Slides for creating presentations, and Sites for creating form-driven websites.
Using Internet Explorer 11: Exploring the Interface	Internet Explorer 11 has several enhancements over previous versions. This course provides an overview of the user interface layout and addresses how to work with tiles in the Start and the Desktop environment of the new platform, discover the updated functionality, and work with add-ons. It also covers the various methods of creating multitasking permanent and unlimited tab windows, as well as how to work with the favorites center. This course is one of a series in the SkillSoft learning path that covers Internet Explorer 11.
Using Internet Explorer 11: Efficient Browsing	Internet Explorer 11 includes several enhancements to improve the user browsing experience. This course introduces the Address Bar Combination enhancement for Internet Explorer 11 and how to set customizations to enhance browsing, as well as how to use the InPrivate Browsing option and configure basic general settings. In addition, the use of tabs and windows for multitasking, and a section on working with search engines, is covered. This course is one of a series in the SkillSoft learning path that covers Internet Explorer 11.
Using Internet Explorer 11: Working with Web Content, RSS Feeds, and Downloads	There are several default setting customizations in Internet Explorer 11 covered in this course. You will also learn about migration of content from previous browsers, as well as sharing of web content through read, print and share options. In addition, we look at managing downloads and subscribing to RSS feeds. This course is one of a series in the SkillSoft learning path that covers Internet Explorer 11.
Using Internet Explorer 11: Accessibility and User Preferences	This course covers advanced settings relating to accessibility for all users, including those with disabilities, as well as how to configure Internet Explorer in order to move about the interface easily, to display web pages clearly, and to access search criteria quickly. You will also learn how to use Caret Browsing and set user preference customizations. This course is one of a series in the SkillSoft learning path that covers Internet Explorer 11.
Using Internet Explorer 11: Securing the Environment	It is important to protect your PC and network from potentially harmful or malicious online content. This course covers the Security tab in Internet Explorer 11, the function of which is to set options to set up a secure browsing environment by customizing zone settings and enabling enhanced protected mode. In addition, the course covers the various privacy settings that affect the browsing experience. This course is one of a series in the SkillSoft learning path that covers Internet Explorer 11.
Using Internet Explorer 11: Security Considerations	It is vitally important for the user to know which settings allow a safer browsing experience. This course also covers ActiveX control filtering and pop-ups, as well as form completion on the Web and the impacts thereof. This course is one of a series in the SkillSoft learning path that covers Internet Explorer 11.

Course	Description
Installing Mac OS X Yosemite	Installing or upgrading to Mac OS X Yosemite has been made easier with the introduction of the latest Mac OS X platform. In this course, you will learn how to perform and troubleshoot installation and configuration of Mac OS X Yosemite. You'll also learn about creating and managing users, managing files and folders, configuring and troubleshooting printers, and using the advanced collaboration features that are available on the platform.
Managing and Configuring Mac OS X Yosemite	The latest Mac OS X platform provides users with all of the tools a user will need to accomplish their goals whether at work or at home. In this course, you will learn how to configure and safeguard a Mac OS X Yosemite environment specific to your requirements. You'll also learn how to configure backups to protect your work, connect to other computers over a network, and install and configure printers.
Enhancing the User Experience in Mac OS X Yosemite Applications	Mac OS X Yosemite has been designed around the user experience. It provides the user to the ability to personalize their computing environment and to communicate effectively with the outside world. In this course, you will learn how to tailor applications to suit your own specific needs and security requirements. You will also learn how to search effectively, maintain privacy while on the Internet, manage e-mail, and improve access to your files and documents.
Collaborating and Communicating Using Mac OS X Yosemite	Mac OS X Yosemite has been designed for productivity. Central to its design is the capability to seamlessly integrate each user with multiple devices and the cloud. In this course, you will gain insight into the enhanced functionality of Mac OS X Yosemite, such as setting up iCloud, configuring features such as screen sharing and family sharing, and using remote desktop management.
IT Security for End Users: IT Security Fundamentals	Companies that have the greatest chance of fending off IT security attacks are those that have employees who are armed with the knowledge of how to use a company's computers, network, and mobile devices with security in mind. In this course, you'll learn fundamental security concepts that apply to you as an end user, like the role you play in your company's overall IT security. This course also covers some of the most common IT security policies that apply to you as an end user, including policies for secure computer use, mobile device use, and general security policies if you work remotely.
IT Security for End Users: Using Corporate Devices Securely	Knowing how to use corporate computers and devices in a secure way helps ensure you don't jeopardize your work, your organization, or your personal security. In this course you'll learn about common threats to corporate computers, including malicious attacks, and best practices for using your computer in ways that prevent these attacks. This course also covers some of the security threats you might face when using corporate mobile devices, and techniques you can use to protect your device and yourself.
IT Security for End Users: Secure Corporate Communications and Networking	The advancement in corporate communications and social networking has opened countless opportunities and new ways for people to perform their jobs. But just as our IT communications options have advanced, so have the security threats posed by these advancements. In this course you'll learn about the common threats to corporate computers and devices that exploit vulnerabilities in our communications and networking methods such as e-mail, Internet, and social networking platforms. This course also covers best practices and techniques to mitigate security risks while conducting communications as part of your job. Finally this course covers what social engineering is, and how as an end user of corporate computers and devices you can protect yourself and your company from the intelligent ways hackers use social engineering.
Software Defined Networking Fundamentals	Software Defined Networking or SDN enables holistic network management, and intelligent use of network resources, both physical and virtual. In this course, you will explore a vendor neutral overview of SDN and how it works.
Global Safety Principles: Bloodborne Pathogen Awareness	This course will provide you with a basic understanding of bloodborne pathogens, common modes of transmission, methods of prevention, and what to do if an exposure occurs. Information presented will help minimize serious health risks to persons who may have personal exposure to blood and other potentially infectious materials in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The training requirements established under the Bloodborne Pathogen standard require an employer to allow for an opportunity for interactive questions and answers with the person conducting the training session.
Global Safety Principles: Fire Safety and Prevention	This course addresses how to prevent fires and recognise fire hazards. It will also discuss what actions to take in the event of a fire, including the proper use of portable fire extinguishers. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Global Safety Principles: Hazard Communication: An Employee's Right to Know	This course will acquaint you with the precautions that both you and your employer must take in order to safely use, handle, and dispose of hazardous chemicals in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify the routes of chemical entry into the body, define various categories of chemical hazards, interpret warning labels, interpret information commonly found in a Safety Data Sheet (SDS), and identify types of controls commonly used to reduce or eliminate contact with hazardous materials in the workplace.
Global Safety Principles: Hearing Conservation	This training course will provide information to help you prevent noise-induced hearing loss. It will also explain the purpose and components of a hearing conservation program including the proper fitting, use, and care of hearing protectors. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Global Safety Principles: Industrial Ergonomics	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and also provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to employees and employers in industrial work settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to define terms related to the study of ergonomics, recognize the general requirements of the ergonomics standard, recognize signs and symptoms of injury to the muscles and skeleton and the importance of early reporting, identify risk factors for injury to the muscles and skeleton, specify controls and work practices to reduce or eliminate risk factors for injury to the muscles and skeleton, and specify how to report MSD signs, symptoms, and hazards in your job and how the employer is required to address them.
Global Safety Principles: Lockout/Tagout	This course provides information about control of hazardous energy and work under the protection of a lockout/tagout permit. The intent of the course is to provide information on lockout/tagout practices and the significance of lockout/tagout devices. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Global Safety Principles: Office Ergonomics	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and also provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to employees and employers in office and administrative type settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Infectious Diseases	Have you ever come in to work sick? The notion of spreading germs may not have crossed your mind. But some infectious diseases can spread very rapidly in the workplace among coworkers, clients, or patients, and also beyond the workplace to the general public, including family members. Infectious diseases can have serious health consequences. This course is intended to help workers develop awareness about specific infectious diseases caused by viruses and bacteria to help prevent contracting and spreading them. Measles, norovirus, Ebola, and smallpox are the diseases caused by viruses that will be explored. The bacterial infections covered are meningococcal disease, Legionnaires' disease, methicillin-resistant Staphylococcus aureus, and anthrax. Company policy may also provide guidance on infectious diseases and should be consulted where it exists.
Confined Spaces in Construction	Confined Spaces in Construction is a comprehensive standard designed to provide protections to employees working in confined spaces in construction. Recognizing the unique challenges faced by the construction industry, the new standard includes a permit program designed to protect employees from exposure to many hazards associated with work in confined spaces, including atmospheric and physical hazards. It also incorporates provisions that address construction-specific hazard, accounts for advancements in technology, and improves enforceability of the requirements. OSHA expects full compliance with the Confined Spaces in Construction standard to reduce the average number of fatalities and injuries in confined spaces covered by this standard by 96 percent.
Workplace Hazardous Materials Information System (WHMIS) 2015 â€" Canada	The Workplace Hazardous Materials Information System, or WHMIS, is a comprehensive system for providing health and safety information on the safe use of hazardous products in Canadian workplaces. In 2015, the Government of Canada amended the Hazardous Products Regulations and the Hazardous Products Act to align WHMIS with the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). WHMIS 2015 sets forth the roles and responsibilities of suppliers, employers, and workers. It also includes new harmonized criteria for hazard classification, and updated requirements for hazard labels and safety data sheets.
Safety at Work: A Systematic Approach	Do you ever find yourself wishing you had more control over the way you do your job â€" especially tasks related to your personal safety and health? Many safety programs are designed and implemented by managers, with the expectation that employees will follow the practices they prescribe. While employee health and safety is paramount, safety programs designed by management may fail to recognize why employees take the risks they do â€" even though they may have been trained in proper, safe procedures. Systematic approaches to safety at work, such as behavior-based safety, can be used to enhance the safety programs organizations have in place â€" tackling safety issues by involving employees at all levels of the organization â€" where changes to improve safety are driven by employees on up through management. In this way the collective experience of employees, like you, drive the change for safer work practices and conditions. This course explores the concept of behavior-based safety, how a behavior-based safety program is used to enhance safe behavior and a safety culture, as well as the roles and responsibilities of employees and management.
PPE: Personal Protective Equipment â€" Canada	This course covers types, selection, maintenance, and care of personal protective equipment (PPE) in the workplace. The types of PPE covered include hard hat, respiratory protection, hearing protection, and body protection. The content of this course is designed to comply with the intent of the applicable regulatory requirements.
Ladder Safety â€" Canada	This course provides information about the safe use of portable and fixed ladders. The intent of the course is to provide the learner with information about the hazards involved with the use of ladders and control methods that will greatly reduce these hazards.
Ergonomics in the Workplace - Canada	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to both office and industrial settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice standards.
Hand and Power Tool Safety â€" Canada	A variety of handheld tools are used in the workplace. This course will provide an understanding of the potential hazards associated with the use of hand tools and power tools, as well as the safety precautions required to prevent those hazards from occurring. Power tool hazards are addressed in the course by relating them to the power source used in them: pneumatic, liquid fuel, hydraulic, or powder-actuated. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines. The learning objectives of the course are to identify general power tool safety precautions, define the purpose and correct usage of guards, specify which tools are equipped with safety switches, identify specific hazards and control measures related to the use of electric tools, recognize specific hazards and control measures related to the use of power grinders, understand specific hazards and control measures related to the use of pneumatic tools, identify specific hazards and control measures related to the use of powder-actuated tools, and identify specific hazards and control measures related to the use of hydraulic jacks.
Slips, Trips, and Falls â€" Canada	Slips, trips, and falls constitute the majority of general industry accidents. They cause 15% of all accidental deaths and are second only to motor vehicles as a cause of fatalities from accidents. This course is intended to provide employees with the ability to recognize and prevent slip, trip, and fall hazards, and to address the key components of ladder safety. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines. The learning objectives of the course are to list injuries that can result from slips, trips, and falls; identify fall hazards in the work area; describe the proper use of a ladder; specify how to set up a ladder; list tips to prevent injuries on stairs; describe how to minimize walkway hazards; and list contributing factors to slips, trips, and falls.
First Aid: Basic â€" Canada	First aid is the immediate care for victims of injuries or sudden illnesses, before professional medical treatment is available. It not only involves the victim's physical condition and emotional state, but the entire emergency situation. This training course will focus on how to use a systematic approach to evaluate an emergency situation and respond to basic first aid situations prior to the arrival of emergency medical services (EMS). Note: This training should not be used as the primary basis for any first aid certification. It is intended to provide you with knowledge-based training only. This training should be accompanied by a performance-based component provided by a certified first aid instructor. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines. Learner objectives are to describe how to appropriately respond to a medical emergency; state how to examine an accident victim for injuries; and recall basic first aid techniques used to treat injuries including severe bleeding, bleeding shock, fractures and dislocations of bones, and burns.
Forklift Safety Awareness â€" Canada	The purpose of this training is to help you during the initial stage of becoming a qualified forklift operator; one who has the skills and knowledge to operate a lift truck in a safe and proper manner. There should also be an element of practical, hands-on training to complement this course, prior to operating a forklift. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Job Hazard Analysis â€" Canada	This course is intended to provide information that will help improve the quality of work environments, reduce absenteeism, help maintain a healthier workforce, reduce injury and illness rates, and make workers feel good about their work. This course was specifically designed for supervisors and managers to help enhance existing techniques in job hazard analysis. The content of this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines. The learning objectives of this course are to define job hazard analysis, identify jobs to select for analysis, recognize questions that should be asked when conducting an analysis, and describe the steps involved in an analysis.
Office Ergonomics â€" Canada	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and also provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to employees and employers in office and administrative type settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines and standards.
Portable Fire Extinguishers â€" Canada	This course is designed to protect employees and help prevent serious property loss from workplace fires. It identifies the various classes of fires, types of portable fire extinguishers, and actions to take in the event of a fire. It describes when and how to use portable fire extinguishers to put out small fires.
Office Safety â€" Canada	This course is designed to raise awareness about hazards that may be encountered when working in office and administrative environments. The common hazards associated with work in offices are high noise levels, poor air quality, ergonomic hazards, and office accidents and injuries such as electrical shock and falls. The content of this course is designed to comply with the applicable regulatory requirements. The learning objectives of the course are to identify office noise abatement and air quality and ventilation strategies; identify the signs and symptoms of ergonomic hazards; and identify how to prevent potential office hazards and common office injuries, such as back strain, slips, trips, falls, eyestrain, and electrical shocks.
DOT: Cross-border Requirements (US and Canada)	The United States and Canada share the world's largest and most comprehensive trading relationship. Each year, billions of dollars worth of goods are shipped between the countries, most by road and rail. In 1988, Canada and the US enacted free trade - an economic agreement that supports the trade of goods between countries without tariffs or other trade barriers. Mexico became a partner in 1994 in the broader North American Free Trade Agreement (NAFTA). But although Canada and the US have aligned many trade regulations and standards, each country still has specific requirements for transporting goods across the border, particularly those goods deemed dangerous or hazardous.
TOGAF Fundamentals - Enterprise Architecture Basics	This course will introduce the TOGAF framework and Enterprise Architecture and then goes deeper into how to develop architectures using the framework.
TOGAF Fundamentals - Content Framework and Capability Basics	This course will go over the auxilliary areas of TOGAF related to tracking architectural outputs, reference models, and building an Enterprise Architecture practice.

Course	Description
HR Competencies: Leadership and Ethical Practice	Behavioral competencies, such as providing leadership and behaving ethically at all times, help people â€" specifically HR professionals â€" in performing their jobs effectively and applying HR principles and practices to the success of the organization. This course introduces and discusses Leadership and Navigation and Ethical Practice, the first two of the eight behavioral competencies critical for HR professionals. You will explore some situational judgment examples to highlight the way HR professionals apply these competencies in their workplace. The content in this course is based on the Body of Competency and Knowledge (BoCK) 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their career.
HR Competencies: Business Acumen and Relationship Management	Knowledge of HR systems, practices, and regulations is essential, but not sufficient, for the success of HR professionals. They must also have business acumen and a sound knowledge of their business and its environment. In addition, HR professionals need the ability to build strong and effective relationships with their business partners and other stakeholders within and outside the organization. Relationship management competency helps HR professionals in creating a positive work environment, ensuring more support, and contributing positively to both individual and organizational success. This course discusses these two key competencies, business acumen and relationship management. The course presents some situational examples to highlight the way HR professionals apply these competencies to their workplace. The content in this course is based on the Body of Competency and Knowledge (BoCK) 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their career.
HR Competencies: Consultation and Critical Evaluation	Consultation and critical evaluation are two essential competencies for HR professionals. As internal consultants, HR professionals provide advice, counsel, and guidance to their organizational business partners and all stakeholders. As trusted advisors, they help address challenges in areas such as staffing, employee engagement, CSR, business and HR strategy development, global workforce, and employee relations. HR practitioners are also involved in the problem-solving and decision-making processes. This requires a thorough analysis and critical evaluation of the issues at hand. Critical evaluation for HR professionals means not taking anything for granted and, where necessary, challenging propositions. In this course, you'll explore the underlying architecture of each of these competencies and learn about business situations that highlight application of these competencies. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their career.
HR Competencies: Global and Cultural Effectiveness and Communication	In a world where organizations operate with fewer national boundaries, HR professionals must have a global mindset and an appreciation of diversity. Having proficiency in global and cultural effectiveness means HR professionals value the perspectives and backgrounds of all the parties they interact with. Communication â€" the ability to effectively exchange information with stakeholders â€" is another crucial competency. Effective and timely communications with employees is needed to sustain their satisfaction and to address resistance to change. HR professionals need to be skilled communicators in order to interact and collaborate successfully with a variety of stakeholders in addressing business needs and challenges.
Management of People: Talent Acquisition and Retention	Building and maintaining a skilled workforce is HR's main responsibility. HR professionals are directly involved in planning, sourcing, recruiting, hiring, onboarding, orienting, and retaining the organization's employees. This course introduces workforce planning and global job market issues. You will learn how job analysis can be used to determine organizational hiring needs. Strategies for recruiting and selecting the most suitable candidates are outlined. Finally, you'll learn about key activities for successful onboarding and retention of new hires. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Management of People: Employee Engagement	Employee engagement is the personal and professional commitment that employees have to the organization and its goals. For HR professionals, it's a planned effort to link the shared interests of employees and the organization for their mutual benefit. More specifically, it's an employee relations strategy that enhances employees' personal investment, resulting in increased employee satisfaction and organizational productivity. In this course, you'll learn about key concepts and practices associated with employee engagement. You'll also learn how to assess engagement and look at measures to overcome behavioral and organizational issues to encourage employee engagement. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Management of People: Learning and Development	Continuous development of an organization's human resources is linked to several benefits. The learning and development (L&D) function of HR management comprises a systematic set of activities to help provide employees with key skills and competencies required on the job. The goals of the L&D function in organizations include aligning employees' skillsets with the organization's objectives, closing skill gaps, and enhancing overall capability of people and the organization. In this course, you'll explore theoretical and practical aspects of adult learning, training development and delivery, measurement of training effectiveness, and employee development programs in organizations. You will also learn about career development and career management. The content is based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Management of People: Total Rewards	Total rewards includes everything an employee perceives to be of value resulting from the employment relationship. It comprises all financial and non-financial incentives such as pay and allowances, leave, health and wellness benefits, employment insurance, retirement plans, and perquisites. Such rewards help to attract, motivate, and retain employees. HR professionals have organizational and fiduciary responsibilities in designing, administering, and maintaining total reward systems and programs aligned with organizational strategies and goals. This course presents the strategic framework for total rewards. You'll learn about compensation structure and systems, and employee benefits programs. You'll also learn about the statutory and global considerations for total rewards. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their career.
Organization and HR: Structure of the HR Function	Acquiring, developing, motivating, and retaining people are at the core of the HR function. HR policies and practices must be structured in a way that enables people to fully apply their skills to the achievement of organizational goals. Every element of the HR function - strategy, organizational design, policies, and programs - needs to align with HR and business strategy. This course discusses the key elements of the HR function and how they connect with organizational strategy. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their career.
Organization and HR: Organizational Effectiveness and Development	Organizational effectiveness and development (OE&D) is a systematic approach for enhancing the performance of an organization and its employees through planned interventions. Such interventions may focus on team performance, employee development, operational efficiency, organization structure, and productivity. OE&D efforts almost always involve some type of change in policies and practices, culture, and organization structure to align people and processes to organization goals. In this course, you'll learn about various issues relating to OE&D. The course also presents some examples of strategic and tactical interventions that HR professionals commonly apply. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Organization and HR: Workforce Management and Using Technology and Data	An organization's workforce translates its business objectives into reality. This is why the management of the workforce is so critical to an organization's success. Workforce management is a set of processes and systems that enable the organization to meet its talent needs and develop employees. HR professionals use IT and data analysis tools to manage the workforce effectively. Technological developments provide HR professionals with many opportunities to reduce the amount of time required to perform their administrative and managerial tasks. This course covers two key areas: workforce management and technology management. You'll learn about components of workforce management â€" requirement analysis, planning, and employee development. You'll also explore the role of the human resource information system (HRIS) in gathering, analyzing, and reporting of workforce information, as well as reviewing data analytics and technology for collaboration and communication. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Organization and HR: Employee Relations	Creating a positive work environment and maintaining positive employee relationships is important for many reasons. Organizations that have positive employee relations are more likely to have engaged and productive employees. Such organizations have employee-friendly policies that foster positive attitudes and cooperation. Weak employee relationships, on the other hand, can lead to complaints, disciplinary problems, and a dysfunctional work environment. This course deals with various aspects of employee relations. You'll learn about the rights and responsibilities of employers and employees, international and third-party stakeholders who affect employee relations, the role of regulations and unions, and the challenges in building and maintaining positive employee relations. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Workplace Management: Global HR, Diversity, and Inclusion	Recognizing and responding to global initiatives, current events, and trends can influence both domestic and global business practices. In this course, you'll learn about human resources in a global context. The course provides an overview of global HR trends and strategies, as well as legal systems and practices. HR's role in globalization is explored, along with approaches for enhancing diversity and inclusion. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Workplace Management: Risk Management	HR plays a critical role in all aspects of risk management, including developing, implementing, and overseeing the execution of programs, practices, and policies that mitigate risk to support organizational strategies. HR professionals are central in collecting and disseminating risk information to help the organization become adept at mitigating and handling risk. In this course, you'll learn about core HR functions: organizational risk management, workplace safety and security, and crisis management. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Workplace Management: Corporate Social Responsibility	The HR professional plays a critical role in the development of a corporate social responsibility (CSR) strategy, giving consideration to a number of contemporary challenges on a global scale. The HR professional is also involved in the development of strong corporate governance and a values-based code of conduct. In this course, you'll learn about the evolving definition of CSR and its components, corporate ethics and compliance, and best practices. The course contents are based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While this course helps learners prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to improve their effectiveness in the workplace and advance their careers.
Workplace Management: Employment Laws and Regulations	The HR practitioner must continuously maintain a working level of knowledge regarding laws and regulatory standards that impact the organization's relationship with its employees and that serve to protect the interests of both parties. Organizational noncompliance may lead to financial penalties and other indirect costs, such as reputational impacts. In this course, you'll learn about a number of federal laws and standards and their amendments, covering areas of compensation, employment, health and safety, employee relations, and employee protection. The course contents are based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to improve their effectiveness in the workplace and advance their careers.
Human Resource Strategy Management: Strategic Planning	Corporate strategy is critical in aligning culture, competencies, and efforts to meet organizational goals. HR can be involved at various levels in high-level strategy, as well as the functional HR unit strategy. Key to this is HR's role in ensuring that the functional unit strategy is driven by and adheres to the corporate-level strategic goals. This course will give you an overview of corporate strategy, the strategic planning process, and tools used in collecting strategic information. The course contents are based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While this course helps learners prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to improve their effectiveness in the workplace and advance their careers.
Human Resource Strategy Management: Business and HR Strategy	The cross-functional role of HR puts it in an ideal position to contribute effectively to the formation of organizational strategy. The inherent features of the HR function, in terms of communication and human resource placement, greatly benefit implementation of strategy. HR's role in evaluating strategic performance is key to moving an organization in the right direction. In this course, you'll get an overview of the final three stages in the strategic planning process: the development of organizational and HR strategy, implementation, and evaluation. The path contents are based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While the curriculum helps learners to prepare for the SHRM certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their careers.
Advanced HR Management: Competencies for Senior HR Professionals Part I	Senior HR professionals face a different set of challenges than other members of the HR Department. Knowledge of HR strategy, systems, practices, and regulation is important for senior HR but not adequate to perform in this role. Behavioral competencies, such as providing leadership and behaving ethically, are equally important, as are business acumen and the ability to build relationships with business partners and other stakeholders. This course discusses the advanced and more strategic aspects of four HR behavioral competencies: Leadership and Navigation, Ethical Practice, Business Acumen, and Relationship Management. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to develop capabilities for improving their effectiveness in the workplace and advancing their career.
Advanced HR Management: Competencies for Senior HR Professionals Part II	As internal consultants and trusted advisors, senior HR professionals provide advice, counsel, and guidance to business partners and other stakeholders. These HR practitioners are also involved in extensive problem solving and decision making, processes that require a thorough critical evaluation of the issues at hand. In a highly globalized world, senior HR professionals must have a global mind-set and an appreciation of cultural diversity. Communication â€" the ability to effectively exchange information with stakeholders â€" is another crucial competency for senior staff. In this course, you'll learn about four essential competencies for senior HR professionals: consultation, critical evaluation, global and cultural effectiveness, and communication. The course also presents examples of how skilled HR professionals apply these competencies in the workplace. The content is based on the Body of Competency and Knowledge (BoCK), 2015 for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to improve their effectiveness in the workplace and advance their careers.

Course	Description
Advanced Human Resources Management: People and Organization	Managing people, the organization, and the workplace environment is at the core of senior HR's organizational role. In this course, you'll learn about some of the strategic and global issues relevant to senior HR professionals. The spectrum of people and issues related to their relationship with the organization are discussed in depth. In addition, the course presents an overview of the structure and role of the HR function and how HR enhances organizational effectiveness. Resource issues such as management of workforce and use of technology in HR are covered. Finally, the course looks at ways to maintain positive relations between the organization and its employees and their representatives. The course contents are based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While this course helps learners prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to improve their effectiveness in the workplace and advance their careers.
Advanced Human Resources Management: Workplace and HR Strategy	Senior HR professionals face a number of challenges that call for advanced competency and domain knowledge in globalization, diversity and inclusion, managing organizational risks and corporate social responsibilities, and aligning strategy to organizational goals. In this course, you'll learn about HR in the global context, workplace diversity and inclusion, risk management, and HR and strategy-related issues relevant to senior HR professionals. The content in this course is based on the Body of Competency and Knowledge (BoCK), 2015 of the Society for Human Resource Management (SHRM). While the course helps learners to prepare for the SHRM-CP/SCP certification exams, it is equally useful for HR professionals who want to improve their effectiveness in the workplace and advance their careers.
Agile Principles, Methodologies, and Mindset	In this course, you will be introduced to Agile project management, including the core values and principles outlined by the Agile Manifesto. Agile projects are characterized by the use of short work iterations and incremental development of products, made possible by focusing on business priorities and customer value. The course provides an introduction to common Agile methodologies, and discusses the considerations for adopting an Agile approach. It also covers the creation of an Agile product roadmap and it discusses contracts and documentation in the context of an Agile project. This course is aligned with the Agile Certified Practitioner exam objectives developed by the Project Management InstituteÂ® and Certified ScrumMaster learning objectives.
Agile Planning	Agile projects are characterized by the use of short work iterations and incremental development of products, made possible by focusing on business priorities and customer value. The focus of this course is on release planning which is the first of three Agile planning levels. During release planning, this product vision is shared with the development team and discussed in detail to ensure the proper requirements, conditions of satisfaction, and priorities are established. The course then moves into the requirements gathering and analysis phase, with the use of high-level use case scenarios. It provides instruction and practice on developing user stories, which have become the choice method for many Agile teams for clearly defining customer-centric requirements or features. Preparing estimates is not an area of project planning that many people really enjoy. That is, until they learn to do it the Agile way. This course focuses on the heart of release planning: creating estimates and prioritizing requirements. You will learn common Agile methods for estimating the size of user stories, such as planning poker, and guidelines for splitting and combining user stories. Along with estimating, another key task during release planning is prioritizing user stories to create the project backlog. You will learn the MoSCoW technique for prioritizing user stories, as well as the more sophisticated prioritization tools: the priority matrix and the Kano model of customer satisfaction. You will also learn about a visual approach some Agile teams use to create a backlog story map. Finally, the course provides information on how initial team velocity may be determined and used to distribute the user stories among iterations as the final step in release planning. This course is aligned with the Agile Certified Practitioner exam objectives developed by the Project Management InstituteÂ® and Certified ScrumMaster learning objectives.
Planning and Monitoring Iterations in Agile Projects	Agile projects are characterized by the use of short work iterations and incremental development of products, made possible by focusing on business priorities and customer value. This course focuses on the activities performed during the planning and execution of a project iteration, or sprint. During release planning - the previous phase in the overall Agile planning process - the team creates an ordered list of project features in the form of the product backlog. Iteration planning is the process of creating an iteration (sprint) backlog that contains more specific detail regarding work items that have been assigned to the upcoming iteration. This course provides a look at the iteration planning process and the creation of the iteration backlog. It also explores how to create a schedule and use principles of buffering. The course goes on to cover key tools and methods used by Agile teams to monitor and report project progress, both at the iteration level and at the overall project or release level. It also covers Agile risk management, testing quality processes and continuous integration. This course is aligned with the Agile Certified Practitioner exam objectives developed by the Project Management InstituteÂ® and Certified ScrumMaster learning objectives.
Engaging Agile Stakeholders and Leading Agile Teams	Agile projects are characterized by the use of short work iterations and incremental development of products, made possible by focusing on business priorities and customer value. This course highlights the importance of stakeholder engagement, collaboration, and communication during agile planning and development projects. It discusses the role of stakeholders and how the Scrum Master or agile project leader must encourage active involvement to ensure the team has a clear understanding of the project requirements and stakeholder expectations. Having a good team and quality leadership is key for the success of any project, but in agile development it is crucial. This course also takes a close look at agile teams and team leadership, including the unique skills and roles of the agile project leader and the characteristics of the team as a whole. You will see how traditional project managers can adopt a new mindset that allows them to thrive in the agile environment, and to take on a coaching, leading, and facilitating role. This course is aligned with the Agile Certified Practitioner exam objectives developed by the Project Management InstituteÂ® and Certified ScrumMaster learning objectives.
Introduction to Business Analysis	Organizations often implement process changes and new system implementations without fully thinking them through or planning them carefully. This leads to loss of time, money, and other precious resources. A business analyst's aim is to ensure that the needs of the organization and its stakeholders are well understood and to design solutions that will meet those needs while creating value. This course provides an overview of business analysis and foundational terms and concepts used by business analysts who work in the field. It describes the six knowledge areas of business analysis as described in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) v3. This course will assist learners in preparing for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis Planning and Monitoring	Well-performing organizations generally recognize the value that a business analyst brings to a project in terms of delivering well designed solutions that meet stakeholder needs and fulfil project objectives. Business analysts meet these demands through proven methods for planning the business analysis approach and monitoring the approach through the life of the project. In this course, you'll explore an overview of the inputs, guidelines, and techniques that are used to plan and monitor a business analysis approach as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis Elicitation and Collaboration	The starting point of designing and implementing solutions is a thorough understanding of stakeholder needs and the tools required to achieve this task. The ability to recognize and define a problem or opportunity enables the creation of the right solution. The key to designing effective solutions is eliciting useful information from stakeholders by fostering good relationships, establishing strong collaboration, and monitoring stakeholder activities. In this course, you'll explore an overview of the inputs, guidelines, and techniques that are used in Elicitation and Collaboration as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis and Requirements Life Cycle Management	The requirements life cycle guides business analysts in managing requirements throughout their life span. The relationships between requirements and designs must be understood, traced, and approved to ensure solutions meet stakeholder needs. In this course, you'll learn about the tasks in the Requirements Life Cycle Management knowledge area. The course covers the components of each task, namely the inputs, elements, guidelines and tools, techniques, outputs, and stakeholders, as described in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) version 3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing learners for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis and Strategy Analysis	Before the solution to a business problem can be implemented, a business analyst must perform a strategy analysis. This involves assessing the organization's current state, as well as its desired future state, to determine what the change strategy will look like. In addition, the business analyst must assess the risks of making proposed changes and decide whether the benefits outweigh the costs. In this course, you'll learn about tasks under the Strategy Analysis knowledge area as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide), Version 3.0 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis and RADD: Requirements Definition	The development of requirements that represent value to stakeholders and align with business goals are the backbone of any change initiative. Business analysts work throughout a project to ensure requirements continue to meet these criteria. In this course, you'll learn about the first three tasks in the Requirements Analysis and Design Definition knowledge area as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis and RADD: Design Definition	Once requirements are specified, verified, and validated, it's time to define the requirements architecture to ensure requirements support each other in meeting objectives. After that, design options are developed and analyzed. The analysis and design tasks culminate in a recommended solution. In this course, you'll learn about the last three tasks in the Requirements Analysis and Design Definition knowledge area as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3.0 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis and Solution Evaluation	After a solution has been partially or wholly implemented, a business analyst measures its effectiveness and ability to deliver the expected value to stakeholders. This involves measuring performance and identifying limitations or constraints that are keeping the solution from reaching its full value potential. The business analyst then recommends actions for overcoming any limitations. In this course, you'll learn about the Solution Evaluation knowledge area, including the tasks involved and their components as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) version 3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Java SE 8 Programming: Concurrency, Parallelism, the JDBC API, and Localization	Java, an object-oriented programming language, is one of the most widely used development languages in the world today. It allows programmers to create objects that can interact with other objects to solve a problem. This course covers how to implement parallelism with the Fork-Join framework and it covers using parallel streams. It explores the layout of the Java database connectivity application program interface or JDBC API, as well as connecting to a database by using a JDBC driver, submitting queries and getting results from the database, specifying JDBC driver information externally, and using transactions with JDBC. The advantages of localizing an application, defining locales, building a resource bundle for each locale, calling a resource bundle from an application, changing the locale for a resource bundle, and formatting text for localization by using NumberFormat and DateFormat are also covered. This course can be used to as part of preparation for the Oracle Certified Professional, Java SE 8 Programmer II exam.
Global IT Security Basics	Lax security practices and poor security awareness on the part of employees can result in security breaches that have serious consequences for organizations. Hackers will take advantage of any vulnerability, and their reach is global. This course focuses on common pitfalls in IT security by end users, highlighting how seemingly harmless actions by employees can give opportunistic hackers access to sensitive organizational data and systems. The course also provides employees with common sense guidelines dealing with areas such as mobile security, online security, password security, and malicious e-mails.
Global Diversity	The modern workforce is as diverse as the world in which it exists, with employees representing an extraordinary variety of abilities, cultures, ethnicities, beliefs, and languages. But not all organizations have the strategic foresight to tap in to the wealth of human capital available to them. Even when there is commitment from leadership, inclusion and diversity goals don't always make it through to the workplace. To leverage the full potential of the workforce, it's important for organizations, managers, and employees to evaluate and improve the ways in which they support diversity and inclusion, and help ensure employees are being treated fairly.
Canadian Anti-Spam Act	On July 1, 2014 Canada's anti-spam legislation (CASL) came into effect. If your business or organization uses electronic channels to promote or market itself, its products or services, CASL may affect how you do business. Three government agencies are responsible for enforcing CASL, but the primary enforcement responsibility belongs to the Canadian Radio-television and Telecommunications Commission (CRTC). The CRTC investigates activities that may be in violation of CASL, and if violations are found the CRTC can set administrative monetary penalties for the violation. This course focuses on the provisions of CASL that apply to businesses and organizations and the employees who participate in the commercial activities CASL is designed to regulate.
Global Import Compliance	All businesses that import goods into the United States must comply with the laws and regulations governing imports. Without trying to address each regulation in detail, this course provides awareness-level training on compliance with some of the major provisions governing imports as found in the Tariff Act of 1930, the Customs Modernization Act, Title 19 of the Code of Federal Regulations (CFR), and the Harmonized Tariff System of the United States (HTSUS). It focuses on the all-important standard of 'reasonable care' and the use of the Reasonable Care checklist as formulated by US Customs and Border Protections (CBP), the agency responsible for administering customs and other laws affecting imports into the United States. The course will help users apply the checklist in practical ways to ensure or enhance compliance with import regulations in company-specific situations. Employees are given practical tools to support their company's compliance program and to help their company reduce exposure to costly import violations, including possible civil and criminal penalties, and the disruption of business operations. In the process of compliance with regulations governing imports, such as classification, valuation, country of origin, and others, the user will also gain knowledge that could result in more favorable treatment of and the potential for cost savings and duty refunds.
Global Fraud	Regulators worldwide are cracking down on failure of any kind in internal governance and checks and protocols, which requires companies to ensure that their employees are acting responsibly and transparently. In turn, companies have adopted zero-tolerance for fraud and employees have been made partners in the fight against fraud. Because the level and type of fraud varies from company to company, it's important that employees understand what fraud is and how it could arise in their organization. What this means for employees is that they are responsible for not only avoiding engaging in fraud themselves, but also preventing and reporting it. This course explores fraud and offers ways employees can prepare themselves to avoid, prevent, and report incidences of fraudulent activity where they suspect it has or may occur.
Global Business Ethics	In today's business environment, companies are under intense scrutiny in the media, by investors, and by customers over the way they operate. People prefer to do business with companies and individuals that share their values, and avoid business that they feel are unethical, secretive, or corrupt. Organizations and their employees who hold themselves to high ethical standards often reap the rewards of fair and honest business practices, both financially and in terms of public opinion. In this course, you will learn the traits and benefits of ethical conduct, as well as how to identify unethical behavior, and what to do when you have questions.

Course	Description
Introduction to Ubuntu	In this course, you will learn how to install, configure, and update your Ubuntu Desktop. This course includes some of the fundamental tools needed in managing the Ubuntu operating system.
Essential Tools for Ubuntu	In this course, you will learn some of the important tools and software available in Ubuntu. This course includes important command line utilities and gives an introduction to setting up a working web server.
Red Hat Certified System Administrator: The Environment	Gnome and the Bash shell are two of the most used interfaces in Red Hat Enterprise 7 for managing the system. Understanding these two interfaces is critical for administratoring a Red Hat Enterprise system. In this course you will learn the basic usage of Gnome and how to configure some of its properties. You will also get an introduction to the Bash shell command line environment. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: The Command Line	The command-line interface in Linux is a very powerful tool that is critical when administering a Linux system. In this course you will learn some of the more powerful features of the shell including how to use one command as input into another, how to edit files, run scripts, and use common commands that makes an administrators job easier. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Administration and Permissions	Two tasks that almost all administrators have to perform on Linux is User and Software administration. In this course you will learn how to install, update, and maintain software packages and how to manage users, groups, and file permissions for those users and groups. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Scripting and Scheduling	Scripting and scheduling are fundamental to advanced administration of a Linux system. In this course you'll learn about the building blocks of scripts, how to write and use scripts, and how to schedule jobs, including how to schedule your own scripts. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Processes, Networking, and Logging	All Linux Administrators must know how to manipulate and manage processes, be able to configure networking, and know how the logging system works. This course provides an introduction to Processes, Services, and Daemons and how to manage them in Linux. You will also learn about networking and how to configure basic networking on a Linux system. Then you will learn about the system logs and how to access and use them. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Advanced Networking	Linux networking can be very complex and being able to use the features and tools effectively is a fundamental requirement for any System Administrator. In this course you will learn how to configure many fairly common or standard Linux network services and be able to configure the built-in firewall to secure the system. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Remote Connections and Access	Being able to remotely administer and access a server is a very common Linux Administrator task. In this course you'll learn about the tools that are available to use or administer a remote Linux box and how to configure a system for allowing remote administration. You will also learn how to use and provide Network Filesystems. This course also covers how to use third party Directory Services for authenticating user access to a Linux system. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: File Systems and Device Management	As a System Administrator you need to know how to manipulate file systems, partitions, and volumes in order to effectively build and expand Linux systems. In this course you will learn about the different Linux filesystems and how to use them. You will also learn about the Physical and Logical disks and volumes and how they can be manipulated and used in multiple configurations within a Linux system. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Boot Process and Installation	A fundamental skill of all Linux System Administrators is the ability to install the operating system and deal with any Boot issues. In this course you will learn about the boot process and how to install RHEL. This course will also cover some common boot and installation issues and how to deal with, or troubleshoot, those problems. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: Introduction to Virtualization	Virtualization is an essential tool in every System Administrators toolbox, and Linux provides a wealth of tools and options to maximize the use of hardware resources. In this course, you will learn how to use Virtualization in Linux to Host Virtual Machines and to run RHEL as a Guest on a VM Host. You will also learn how to automate installs using the Kickstart tool. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Red Hat Certified System Administrator: SELinux and Troubleshooting	Security is of paramount concern to any System Administrator and must always be considered when deploying, altering, or maintaining any system, including Linux. This course will introduce you to SELinux and how to use it to secure a running Linux system. In this course you will also cover some common troubleshooting skills that every System Administrator should know in order to maintain a well working Linux system. This course is one of a series in the Skillsoft learning path that covers the objectives for the Red Hat Enterprise Linux 7 RHCSA exam (EX200).
Mentoring 1Z0-808 Java SE Programmer 8	Skillsoft Mentors are available to help students with their studies for exam 1Z0-808 Java SE Programmer 8. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Microsoft Windows 10 First Look: Interface and New Features	Microsoft Windows 10 includes several improvements to previous operating systems, as well as several new built-in features. This course will provide a brief introduction to the new interface and features of Windows 10, including the Universal Apps, Cortana, Edge, and the new command prompt. This course is one of a series that provides a first look at the new Windows 10 operating system.
Microsoft Windows 10 First Look: Configuration	In order to unlock the full potential of the new features of Microsoft Windows 10, you need to understand how to use the features as well as the configuration options available. This course provides information on how to access the features configuration menus, and how to set them up for use. This course is one of a series that provides a first look at the new Windows 10 operating system.
Microsoft Office 365: Applications	Microsoft Office 365 provides access to a range of online Office applications for business users, including Microsoft Word, Excel, PowerPoint, OneNote, Outlook, Lync, and others. In this course, you'll be introduced to the online applications and their uses. This course is one of a series in the SkillSoft learning path that covers Microsoft Office 365.
Microsoft Office 365: Document Management	Microsoft Office 365 provides access to a range of online Office applications for business users, including Microsoft Word, Excel, PowerPoint, OneNote, Outlook, Lync, and others. In this course, you'll learn how to share, collaborate on, print, and manage documents and e-mail using the Office 365 applications. This course is one of a series in the SkillSoft learning path that covers Microsoft Office 365.
Microsoft Office 2016: First Look Modern Productivity	Office 2016 offers a suite of applications that helps businesses and end users automate common tasks such as creating documents, spreadsheets, and e-mail messages; managing projects and diagrams; and collaborating with others. In this course you will learn about some of the new functionality and collaboration features available in Microsoft Office 2016 applications including Word, Excel, Outlook, PowerPoint, and Access.
Microsoft Office 2016: First Look Functionality and Collaboration	Office 2016 offers a suite of applications that helps businesses and end users automate common tasks such as creating documents, spreadsheets, and e-mail messages; managing projects and diagrams; and collaborating with others. In this course, you will learn about some of the new functionality and collaboration features available in Office 2016 applications such as Outlook, Project, Visio, and Skype for Business.
Microsoft Windows - Managing Enterprise Devices and Apps: Managing Applications	System Center 2012 Configuration Manager differs from previous SCCM versions in the way that applications are managed. Applications differ from packages and this gives increased flexibility in your choices for application deployment and management. In this course, you'll learn about all facets of application management in System Center 2012 R2 Configuration Manager, including application virtualization using App-V. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft Windows - Managing Enterprise Devices and Apps: Software Updates	Mobile devices are now common in the workplace, either company owned, or bring your own device or BYOD. You need a way to manage this proliferation. A key target for malicious software is unpatched and non-updated software running on network hosts. In this course, you'll learn about management of mobile devices using Windows Intune. You'll also learn about software updates using System Center 2012 R2 Configuration Manager. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft Windows - Managing Enterprise Devices and Apps: Compliance	System Center 2012 R2 Configuration Manager includes sophisticated endpoint protection to protect PCs from malware and other threats. One of the biggest advantages in centrally managed IT is the way you can manage compliance. In this course, you'll learn about the installation of endpoint protection, and configuring compliance settings and baselines in System Center 2012 R2 Configuration Manager. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Microsoft Windows - Managing Enterprise Devices and Apps: Site Management	System Center 2012 R2 Configuration Manager offers unparalleled insight into the status of any managed client machine. Clients are organized over sites and site management is an important task for administrators. In this course, you'll learn about the whole range of client health management, from determining status to remotely connecting to address issues. You'll also learn about suite management, from creating maintenance plans to backup and restore. This course is one of a series in the Skillsoft learning path that covers the objectives for Microsoft certification exam 70-696 Managing Enterprise Devices and Apps.
Windows PowerShell Desired State Configuration Fundamentals	PowerShell Desired State Configuration (DSC) can be used to significantly improve the way an organization defines, reports on and manages server and workstation configuration states. In this course, you will learn about what DSC is, how it works, different approaches to implementing it, and how to consistently configure and maintain individual workstation nodes as well as entire server farms, all the way from Development to Test to Production.
Oracle Database 12c - Introduction to SQL: Relational Database and SQL Developer	Since Oracle Database 12c is an object-relational database management system, an in-depth understanding of the theoretical and physical aspects of a relational database is a fundamental requirement for a skilled database administrator and developer. This course will teach you about data models, the Entity Relationship Model, the Oracle (HR) sample schema, and the features of SQL Developer â€" Oracle's free integration development environment. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1ZO-061). The exam is part of the Oracle Certified Associate certification.
Oracle Database 12c - Introduction to SQL: SQL*Plus and SELECT Statement	SQL*Plus is an interactive and batch query tool that is installed with every Oracle Server and client installation. This course will teach you the features and functionality of SQL*Plus. You will learn to retrieve data using the SQL select statement including arithmetic expressions, Null values, column aliases, literal strings. You will also learn how to deal with duplicate rows. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1ZO-061). The exam is part of the Oracle Certified Associate certification.
Oracle 12c Performance Tuning: Introduction	The Oracle RDBMS engine has been around for many years, and over the course of its existence, there have been many methodologies in how to go about troubleshooting performance problems. This course will provide a modern-day approach on how to confront these types of challenges, with particular attention to making use of features available in the 12c version of the database. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1ZO-064).
Oracle 12c Performance Tuning: Automatic Workload Repository	This course introduces the Automatic Workload Repository, which is the infrastructure that provides services to Oracle Database components to collect, maintain, and use statistics for problem detection and self-tuning purposes. The Automatic Database Diagnostic Monitor is also discussed, and we will see how Active Session History can assist in more granular problem solving situations. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1ZO-064).
Six Sigma and Measurement System Analysis	Measurement system analysis tools and techniques are used during the Measure stage of the DMAIC methodology to determine how much measurement system variance is contributing to overall variance. The factors affecting precision and accuracy must be well understood, evaluated, and mitigated. In this course, you'll explore the concepts and basic methods used in measurement system analysis, such as the assessment of bias, linearity, and stability, which are measures of accuracy. You'll also learn how to carry out a gauge repeatability and reproducibility (GR&R) study to assess the precision of a measurement system. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward achieving their certifications and becoming productive members of their Six Sigma project teams.
Lean Tools and FMEA in Six Sigma	Lean is a continuous improvement initiative that streamlines processes and improves overall performance by identifying and eliminating waste and non-value-added activities. This course shows you how to use Lean tools, such as 5S, the eight wastes, and value stream analysis to identify and eliminate waste in service and manufacturing processes. You will also learn how to conduct a Failure Mode and Effects analysis (FMEA), which is a technique used to identify potential failures in a process and assess the risk they pose. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Six Sigma Data Analysis and Root Cause Analysis	During the Analyze stage of a Six Sigma project, statistical data analysis is used to assess process performance and identify problem areas. The primary tool for presenting process data is the probability distribution graph, which is studied during data analysis. Another key type of analysis is root cause analysis, which uses tools such as 5 Whys, process mapping, relational matrix charts, and force-field analysis. In this course, you will learn about each area of analysis and the tools used. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Basics of Correlation, Regression, and Hypothesis Testing for Six Sigma	During the Analyze stage of a Six Sigma project, teams use statistical tools such as correlation analysis, regression analysis, and hypothesis testing. An improvement project can greatly benefit from these tools. They provide information regarding which key inputs are affecting outputs and how to tweak inputs until the desired results are achieved. Then new results can then be tested to ensure the changes are due to the changes that were implemented. The course examines correlation analysis, regression analysis, and hypothesis testing. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and also to become productive members on their Six Sigma project teams.
Six Sigma Improvement Techniques	During the Improve stage of a project, specific tools allow a Six Sigma team to implement solutions to address the causes of an identified process issue. For example, a timely and productive application of kaizen allows an organization to eliminate waste, streamline processes, reduce costs, and create a Lean culture in the organization. Cost-benefit analysis is another important tool used to determine whether an improvement initiative is worthwhile or to select the best solution. In this course, you'll learn about some of the common Lean tools used in continuous improvement, including kaizen and kaizen blitz, the plan-do-check-act cycle, and cost-benefit analysis. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and to become productive members on their Six Sigma project teams.
Control Tools and Documentation in Six Sigma	During the Control stage of a Six Sigma DMAIC project, teams monitor and control improved processes in order to sustain continuous gains. In this course, you'll be introduced to basic control tools and documentation. You'll also learn about control plans, control charts â€" how they're built and used to monitor process performance â€" and the importance of documentation as a tool for maintaining process control. This course is aligned to the ASQ Body of Knowledge and is designed to assist Yellow Belt candidates toward their certification and to become productive members on their Six Sigma project teams.
Working with Chef: Fundamentals	Chef is a configuration management tool that is used to streamline the task of configuring and maintaining company's servers. Chef uses recipes or cookbooks to describe how Chef manages server applications and utilities and how they are to be configured. In this course, you will learn how to create recipes and cookbooks and understand the Chef vocabulary. You will also learn about various Chef installations, Chef roles, and Chef tools.
DevOps Fundamentals: Tools, Technologies, and Infrastructures	DevOps is a software methodology where the operations and development staff participating together in the entire service lifecycle, from the design phase through to the development and production phases. In this course you will learn the fundamentals of the DevOps methodology, and the principals and processes of the DevOps workflow. You will also be introduced to various DevOps tools such as JIRA, Confluence, Bitbucket, GitHub, and HipChat and how they are used for processes such as collaboration and code sharing.

Course	Description
Using Puppet: Implementation and Benefits	Puppet is an open source configuration management tool. Puppet is closely coupled with the DevOps methodology and is implemented with its own declarative language (or Ruby). Mostly used by system administrators, Puppet automates the configuration, provisioning and management of physical and virtual servers. With automation, Puppet eliminates the errors that occur with manual tasks. In this course, you will learn the core concepts of Puppet, and how to configure Puppet for your organization.
Using Puppet: Configuration and Programming	Puppet is an open source configuration management tool. Puppet is closely coupled with the DevOps methodology and is implemented with its own declarative language (or Ruby). Mostly used by system administrators, Puppet automates the configuration, provisioning and management of physical and virtual servers. With automation, Puppet eliminates the errors that occur with manual tasks. In this course, you will learn how configure Puppet and manage its resources. Puppet programming, implementation, and troubleshooting techniques will be discussed and demonstrated.
Using Vagrant: Introduction	Vagrant is an open source virtualization tool and is closely coupled with the DevOps methodology. Mostly used by developers and system administrators, Vagrant automates the provisioning of virtual servers. With automation, Vagrant eliminates the errors that occur with manual tasks. Automation also allows an almost unlimited number of virtual servers to be created instantaneously. In this course, you will learn the core concepts of Vagrant, and how to use Vagrant in your organization.
Using Vagrant: Configuration	Vagrant is an important open source virtualization tool used by developers and system administrators to automate the provisioning of virtual servers in an organization. It is closely coupled with the DevOps methodology and is mostly used by developers and system administrators to automate virtualization. With automation, Vagrant eliminates the errors that occur with manual tasks. Automation also allows an almost unlimited number of virtual servers to be created instantaneously. In this course, you will learn the core concepts of Vagrant, how to configure and use Vagrant to provision virtual servers, and how to use Vagrant in your organization.
Time Management: Too Much to Do and Too Little Time	Do you sometimes feel you have too much to do and not enough time to do it in? You aren't alone. It can be frustrating when you're expending a lot of energy but not sure you're doing it in the right places for the right reasons. Having goals is a good start. But do your goals align with your organization's goals for you? When goals shift and change and you don't know which are most important and to what degree you're supposed to be attending to them, it can get confusing. You have to be clear on where you're headed and why, otherwise your work getting there will be scattered and you won't make the best use of your time. In this course, you'll learn how to get clarity around what's most important â€" your goals â€" by ensuring they're aligned with those of your organization, so you can prioritize your work based on those goals.
Time Management: Quit Making Excuses and Make Time Instead	As much as we wish we could, no one can really make time on the clock. You can't add a 25th hour to the day to get more stuff done â€" but you can make better use of the 24 hours that you do have. Everyone is capable of becoming a more effective time manager, of organizing their efforts to get more done. All it takes is deciding to seize control of your own time, and then taking small steps in the right direction. In this course, you'll consider how you're spending your time now and what you can do to spend it more wisely and productively. You'll also learn to block the time stealers that interfere with your productivity, use to-do lists and schedules to organize your time and tasks, and develop a regular habit of checking in with your plans to make sure you're getting them done.
Time Management: Ready, Setâ€¦FOCUS!	You may have a strong sense of your priorities, an organized desktop, and a well-planned routine, but none of that will get the job done. Now it's up to you to focus â€" and do it. Many challenges will arise that threaten your focus: distractions, messages, drop-in visitors, competing tasks; not to mention internal saboteurs like temptation, multi-tasking, and procrastination. Any of these can derail your attention and deplete your time, leaving you feeling ineffective and overwhelmed. How do you focus? In this course, you'll learn how to use both personal and interpersonal skills in very specific ways to keep yourself on track for accomplishing your goals. You'll find out how to manage your internal focus deficiencies, make your environment work for you, gracefully decline requests when you need to, and refocus when circumstances change. Get ready to get things done.
The Keys to Sustainable Change	Change is one of the few things that are almost assured in your working life, regardless of the nature of your business or your position. Times change, and organizations as well as work processes must change with them. Even though this is the case, change is challenging â€" and if it's not done right, it might not have the impact you envision. In this course, you will learn methods to use in gathering success factors from the sponsors and owners of the change initiative, build skills in developing initial statements of scope to support change initiatives, learn how to identify key stakeholders and stakeholder groups who must change and those who must be considered for inclusion to achieve desired change, and learn how to assess the Three Keys to Sustainable Change â€" discomfort, vision, and skills.
Planning for Change	Failing to plan is planning to fail. Change project managers need to understand the role of the guiding coalition, and the appropriate level of involvement it has based on the rigor of the change project at hand. They also must understand how to assign levels of influence, assess, and interpret stakeholder input. Additionally, you need to facilitate the creation of a code for change - outlining the behaviors that will support the change and, in some instances, how members of the organization will be held accountable. The correct application of a guiding coalition, stakeholder influence, and a code for change will help make your change effort succeed.
Implementing and Sustaining Change	Change is hard. As a change leader, you'll bump up against resistance, doubt, discouragement, and apathy that can quickly erode any initial success. Understanding why change is so difficult for people gives you an edge for answering resistance, overcoming skills and information gaps, and moving the organization into a new way of thinking and behaving.
Get Your Project off the Ground	To put it bluntly, if you don't know why you're doing a project and who's supporting it, you're heading for failure. At the start of any project, you and your team members should make sure that the project purpose is clear, that senior management will support the endeavor, and that stakeholders have been identified. Then you can establish project requirements and determine key activities and milestones â€" all the things that help define and clarify the project and guide it to its successful conclusion. In this course, you'll find out about the importance of clarifying the main project elements at the beginning of a project, as well as how to identify the key project stakeholders. You'll also learn about collecting project requirements, clarifying a project's scope, and setting key milestones.
Data Management and Device Security	Data security is a key component in managing Windows devices and cloud-based services. This course addresses security principles required for sharing data and how to authenticate securely. It is one in a series of courses that prepares learners for exam 98-368: Windows Devices and Mobility Fundamentals, which serves as a credit towards the Microsoft Technology Associate certification and allows students to attain a Microsoft certification, which may later upgrade to a MCSA or even MCSE certificate.
Cloud Services and Enterprise Mobility	Cloud-based systems provide businesses with increased flexibility, scalability, and productivity. This course addresses the different types of cloud-based services available from Microsoft, and explores the specifics of both Azure and Intune. It is one in a series of courses that prepares learners for exam 98-368: Windows Devices and Mobility Fundamentals, which serves as a credit towards the Microsoft Technology Associate certification and allows students to attain a Microsoft certification, which may later upgrade to a MCSA or even MCSE certificate.
Getting Started with Maven	Apache Maven is an open-source standards-based project management tool. Using a project object model (POM), it provides functionality for project build management, reporting and documentation. This course covers how to set up Maven and build and test projects. You'll learn how to navigate the project structure and the pom.xml, and you'll learn about repositories and dependency management. You'll learn about Maven project lifecycle phases, goals and associated plugins, and how to use archetypes to create projects. You'll also learn how to manage multi-module projects and use build profiles.
Cucumber Fundamentals	Cucumber is a tool that supports behavior-driven development. Stakeholder requirements can be specified using plain text within features and scenarios, which can then be used for automated testing during development and for documentation when the product has been developed. While scenario steps are generated using plain text with a structure provided by a syntax called Gherkin, the steps that make up the scenarios are matched with step definitions coded in the language of the underlying platform. Cucumber is implemented for a number of different platforms including Ruby, Ruby on Rails, Java, Clojure, and Python. This learning path will cover how to create features and scenarios and steps using Cucumber-Ruby. You will learn how to optimize and organize features and scenarios. You'll learn how to work with message queues, asynchronous behavior, and databases. You'll also learn how to test Representational State Transfer application program interfaces or REST APIs using Cucumber, and you'll learn how to troubleshoot Cucumber scenarios.
Defensive Coding Fundamentals for C/C++	Defensive programming is a methodology for writing code that is not prone to present or future errors potentially caused by unexpected user inputs or actions. In this course, you will explore the fundamentals of defensive programming including inspections, testing, input validation, error handling, planning, methods, variables, assertions, and iterative design.
Defensive Coding for C/C++	Defensive programming is a methodology for writing code that is not prone to present or future errors potentially caused by unexpected user inputs or actions. In this course, you will explore common risks to C/C++, how to defend against common attacks, the best way to deal with user input, and finally, you'll explore some best practices for creating defendable code.
Thinking Defensively about Functions, Methods, and Input	Defensive Programming in iOS has to do with using coding practices and techniques to create apps, that are reliable and resilient. In this course, you will learn about thinking defensively when creating functions and methods, and also when working with inputs to your programs.
Managing Network Interaction	Defensive Programming in iOS has to do with using coding practices and techniques to create apps that are reliable, predictable, and resilient. This course will teach you about methods and best practices for interacting safely and easily with the Internet from within an iOS app.
Errors, Exceptions, and Testing	Defensive Programming in iOS has to do with using coding practices and techniques to create apps, that are reliable, resilient, and easily testable. This course will teach you about thinking defensively in your approach to errors and exception handling, and also how to create automated tests for iOS apps.
Protecting Data in iOS Apps	Defensive Programming in iOS has to do with using coding practices and techniques to create apps that are reliable and resilient. This course will teach some methods and practices that can be used to help protect data inputted, stored, and retrieved by iOS apps
Defensive Coding Fundamentals for JavaScript and HTML5	Defensive programming is a methodology for writing code that is not prone to present or future errors potentially caused by unexpected user inputs or actions. In this course, you will explore the fundamentals of defensive programming for JavaScript and HTML5. This includes defensive techniques for HTML5 and JavaScript, as well as using inspections and testing, input validation, how to properly use variables and statements in JavaScript and HTML5. Lastly, you'll explore best practices for working with errors in HTML5 and JavaScript.
Defensive Coding for JavaScript and HTML5	Defensive Programming is a methodology for writing code that is not prone to present or future errors potentially caused by unexpected user inputs or actions. In this course, you will explore potential risks in web applications and use JavaScript defensive techniques to prevent everything from Document Object Model or DOM manipulation to ensuring proper encoding. You'll also learn about JavaScript Object Notation and how to secure it, as well as how to apply defensive coding to HTML5.
Leveraging the JIRA Platform for Development Projects	JIRA is a Java platform offering capabilities such as bug tracking, issue tracking, tasks, and project management. In this course, you'll learn about setting up a JIRA environment, adding issues, bugs, and general project management.
Device Configuration and Data Access	As an IT professional, you need to be familiar with configuring Windows devices as well as accessing data in cloud-based storage systems. This course addresses Microsoft Windows device configurations, and diverse storage types, which include device specific and cloud-based storage. It is one in a series of courses that prepares learners for exam 98-368: Windows Devices and Mobility Fundamentals, which serves as a credit towards the Microsoft Technology Associate certification and allows students to attain a Microsoft certification, which may later upgrade to a MCSA or even MCSE certificate.
Android Lollipop New Features For Developers	Android Lollipop is distinctly different from previous updates to the Android platform. Big architectural changes have taken place and a plethora of new application program interfaces or APIs are available to app developers. In this course, you will explore new features and APIs for Android Lollipop app development.
Advanced Scrum: Integrating and Customizing Scrum	Tailoring Scrum to your Agile environment may be challenging, but can be done successfully. This course focuses on how to customize Scrum for a variety of development management methods such as an empirical process, a defined process, and evidence-based management. This course also provides best practices on integrating Scrum with other Agile methods such as Lean, Kanban, and XP.
Securing .NET Programming	The Microsoft .NET Framework is widely used to produce a variety of application types. Developers employing this framework should be aware of how to secure .NET applications and protect them from potential risks. In this course, you will explore how to develop secure .NET applications and protect against common risks.
Working with Data in AngularJS	AngularJS is designed to facilitate the development of rich, robust, single-page web applications. This course will teach you about working with AngularJS application data in a client browser, by covering concepts such as offline detection and availability, caching, storing data in the client, and creating data models.
AngularJS Security Considerations	AngularJS is designed to facilitate the development of rich, robust, single-page web applications. Being a client-side framework, AngularJS applications are inherently public and reveal much more implementation detail to the end user than traditional web sites. Securing an AngularJS application is a combination of using best practices on the client side to reduce vulnerability, and knowing that the lion share of security comes from making sure our server is locked down. This course covers concepts involved in securing full stack web applications using AngularJS, from Authentication and Authorization strategies, to the built-in security features AngularJS ships with.
AngularJS and TypeScript	AngularJS is designed to facilitate the development of rich, robust, single-page web applications. This course will teach you how to get started building AngularJS applications with using TypeScript.
AngularUI Companion Frameworks	AngularJS is designed to facilitate the development of rich, robust, single-page web applications. This course will teach you about working with some of the categories of AngularUI, a companion framework to AngularJS, those being AngularUI Bootstrap, NG-Grid, UI-Alias, UI-Select, and routing with UI-Router.
AngularUI Utilities and Modules	AngularJS is designed to facilitate the development of rich, robust, and single-page web applications. This course will teach you about working with two categories of AngularUI, a companion framework to AngularJS, those being AngularUI Utilities and AngularUI Modules.
TestPrep Certified Information Systems Security Professional (CISSP)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Cryptography Fundamentals: Defining Cryptography	Cryptography, and understanding its limits and pitfalls, is essential to protecting data. In this course, you will learn about how cryptography can be used to protect and secure data, different methods that exist to protect or transmit data securely, and the components that need to be understood to ensure data can be protected properly.
Cryptography Fundamentals: Applying Cryptography	Using cryptography is far more than just selecting an algorithm and calling the encrypt or decrypt method. In this course, you will learn about the modes of operation for encryption algorithms as well as when particular algorithms are best suited to the data being protected. You will also learn how to manage cryptographic keys and how cryptanalysis can be used against weak cryptographic systems (even when using strong algorithms).
Android Architecture, Protection, and Development Best Practices	Given the relatively open nature of the Android development environment, developers ought to have a clear understanding of the OS structure, as well as how to securely protect application code. In this course, you will be introduced to the Android environment and overall architecture, and will also be presented with a basic understanding of key Android OS security features. You will also learn how to protect Android application code and will learn about best practices to employ when developing secure Android applications.
Android Security Vulnerabilities, Testing, and Enterprise Considerations	There are a variety of tools and methods available for testing Android applications so as to expose any potential vulnerabilities prior to deployment in either a public market or enterprise environment. In this course, you will learn about various vulnerabilities as they pertain specifically to Android applications, and you will also learn how to secure Android devices and applications for the enterprise environment. You will also learn how to plan and carry out penetration testing using a variety of tools and best practices, in addition to performing forensics and hacking techniques on Android applications so as to be able to better secure them prior to deployment on a public market.

Course	Description
iOS Security Architecture and Application Data Protection	In order to effectively develop secure iOS applications, it is key for developers to have a significant understanding of the overall iOS security architecture, as well as key techniques that can be used to protect application data and executable code. In this course, you will learn key principles about the iOS security architecture, as well as principles in administering data protection in the iOS environment. You will also learn how to install and use the iPhone Data Protection Tools forensics toolkit, how to implement access control and provisioning, and how to enforce application code signing.
Securing Against Threats, Securing for Enterprise, and Jailbreaking Devices	Each iOS application runs in a separate virtual machine, or sandbox, and applications may also be subjected to dynamic analysis, or fuzzing, whereby illegal input is intentionally applied to an application so as to test for security issues. Return oriented programming may also be used in attempts to reveal certain application vulnerabilities, and devices may be jailbroken so as to make them more open to developers who can then better evaluate system security. In this course, you will learn about sandboxes and how to initialize them, how to secure iOS applications and devices for enterprise, how to design and administer fuzz tests on iOS applications, how to defend applications against exploits, how to use return-oriented programming to reveal application vulnerabilities, and how to install and use jailbreaking tools on iOS devices.
TestPrep 98-367 Microsoft Security Fundamentals	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Introduction to OWASP and the Top 10	The Open Web Application Security (OWASP) Project is an initiative to track and report on the most prevalent and most dangerous web application exploits. This course introduces the OWASP project and its Top 10 list and then examines each one in action and shows how to identify each of these Top 10 threats. This course is one of a series in the SkillSoft learning path that covers the OWASP Top 10.
OWASP Mitigations for .NET	The Open Web Application Security (OWASP) Project is an initiative to track and report on the most prevalent and most dangerous web application exploits. This course follows a 'Defense-In-Depth' strategy of assessing each layer of your .NET web application and applying the OWASP Top 10 principles to mitigate against these threats. This course is one of a series in the SkillSoft learning path that covers the OWASP Top 10.
CSSLP: Secure Software Design	Security practices must be integrated in every aspect of software design. In this course, you'll explore secure software design processes such as attack surface evaluation, threat modeling, control identification, and prioritization. You'll also be introduced to specific design considerations to keep in mind like addressing core security concepts and interconnectivity. Finally, this course covers best practices for securing commonly used architecture and technologies like virtualization, database, and the programming language environment. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional (CSSLP) exam.
CSSLP: Secure Software Implementation and Coding	Building security controls within software implementation and coding is vital for end-product software security. In this course, you'll learn about declarative versus programmatic security, how to use Open Web Application Security Project or OWASP and Common Weakness Enumeration or CWE as great security sources, and some defense coding practices and controls such as configuration, error handling, and session management. This course also covers some essential secure coding techniques such as versioning, peer-based code reviews, code analysis, and anti-tampering techniques. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional (CSSLP) exam.
CSSLP: Secure Software Testing	It's not enough to integrate secure coding into your software designs; it's equally important to test that your controls function properly. In this course, you'll learn best practices for testing for security and quality assurance, including artifact testing, functional and nonfunctional testing, and bug tracking. This course also covers some of the essential testing types such as penetration testing, scanning, simulation testing, failure testing, and cryptographic validation. Finally, you'll explore options for dealing with test results, such as the importance of impact assessments and corrective actions you can take with less than perfect results. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional or CSSLP exam.
CSSLP: Software Acceptance, Deployment, Operations, Maintenance, and Disposal	Regardless of how encompassing your software designs are, there's always a possibility that vulnerabilities still exist in the software or new vulnerabilities will be discovered later in the software development lifecycle. In this course, you'll learn different pre- and post-release activities to address these such as the pre-release testing process, completion criteria, risk acceptance practices, post-release plans, and independent testing options. You'll also be introduced to installation and deployment controls that you can use to mitigate vulnerabilities such as bootstrapping, configuration management practices, and release management. Finally, this course will cover operations and maintenance best practices for managing vulnerabilities such as incident and problem management, change management, and software disposal planning and execution for end-of-phase iterations. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional or CSSLP exam.
CSSLP: Supply Chain and Software Acquisition	Software lifecycle activities regularly extend beyond the internal environment. Outsourced software development, acquisition, and procurement activities require specific attention to ensure security is integrated into the end software product or service. In this course, you'll learn about supplier risk assessment considerations, including intellectual property, code reuse, and legal compliance complexities. This course also introduces some considerations to make with supplier sourcing like contractual integrity controls, vendor technical integrity controls, and service-level agreements or SLAs. Finally, this course also introduces software delivery and maintenance best practices like publishing and dissemination controls, product deployment and sustainment controls, and supplier transitioning requirements. This course is one of a series in the Skillsoft learning path that covers the objectives for the Certified Secure Software Lifecycle Professional or CSSLP exam.
Securing User Accounts: Fundamental Security Concepts	Online user accounts, when not properly secured, are one of easiest entry points for savvy hackers. In this course, you'll learn about the fundamental security concepts of authenticity, integrity, and confidentiality, and what role they play in establishing effective user account policies. You'll also learn why and how most common user account breaches happen. Finally, this course covers some general security practices, such as privilege management, permissions, and account settings, to help protect against potential intrusions via user accounts.
Securing User Accounts: Authorization, Registration, and Passwords	Without the ability to gain entry to a network, hackers are powerless, so establishing effective authorization protocols is vital. In this course, you'll learn about key authentication concepts and best practices such as identification, user authentication components, the user logon process, and how to effectively manage user account credentials. This course also covers registration security, including how to use Completely Automated Public Turing test to tell Computers and Humans Apart or CAPTCHA, and enabling two-step verification. Finally, this course introduces password security best practices, including establishing password strength, complexity, and age criteria.
Securing User Accounts: Logon, Logoff, Account Changes, and Attack Mitigation	You can probably think of at least one major account security breach you've heard about. When a security breach happens, it puts your customers, assets, and entire reputation at risk, so knowing how to identify and respond to potential attacks can be the difference between an organization's continued success or complete failure. In this course, you'll learn about enhancing user account security by establishing logon, logoff, and advanced password management protocols. You'll also learn about safe and secure policies for advanced user account management such as account change and reset practices. Finally, this course covers effective best practices for handling user account security breaches, such as neutralizing attacks, and safely handling compromised systems to limit any further damage to your systems, network, and other user assets.
VMware vSphere 6 Install, Configure, Manage - Part 2: vSphere 6 Clustering	VMware vSphere 6 offers many features that provide the ability to protect and recover from various failures. This course covers important aspects of clustering basics and vMotion as well as fault tolerance requirements. You will also learn about high-availability roles and monitoring within a VMware vSphere 6 virtualized environment.
VMware vSphere 6 Install, Configure, Manage - Part 2: vSphere 6 Monitoring	VMware vSphere 6 offers various features for monitoring and reporting, as well as for profile management. In this course, you will learn how performance charts and various monitoring and reporting tools assist in identifying potential issues within a VMWare virtualized environment. You will also learn the benefits of host profiles, how to create them, and how to ensure host profile compliance.
VMware vSphere 6 Install, Configure, Manage - Part 2: vSphere 6 Updating	VMware vSphere 6 Update Manager, and its available configuration options, assist administrators in streamlining their virtualized environment patching process. In this course, you will learn how Update Manager automates patch management of vSphere hosts and virtual machines. You will also learn about the various administrative options that mitigate patching risk, and reduce VM downtime.
VMware vSphere 6 Install, Configure, Manage - Part 2: vSphere 6 Upgrading	Upgrading to VMware vSphere 6 requires attention to detail and a solid approach to achieve successful results. In this course, you will learn about the vSphere 6 upgrade requirements and how to approach the manual upgrade process. You will also learn about common upgrade recommendations and concerns with respect to vCenter and Update Manager upgrades.
Managing Virtual Machine Devices and Resources in VMware Workstation 11	Virtual machines created in VMware Workstation can be configured with a range of resources and virtual devices. In this course, you will learn about the files that make up your virtual machine and virtual machine hard disk. You will learn how to manage and maintain virtual disks, how to control access to them if necessary, as well as how to safely move files and folders to a new location. This course will also help you understand how to work with virtual devices and ports and how to attach some of the most common controllers and devices and make sure they are properly recognized by the guest operating system.
VMware Workstation 11 Networking and Remote Connectivity	VMware Workstation makes the networking component as straightforward as possible while providing Network Address Translation or NAT, bridged, and Host-only networks with very little configuration needed. In this course, you will look at these networking options along with the private network and the IP addressing, routing, and network settings that are required to configure each of the network types. This course also explores how you can use virtual machines remotely by sharing them with other virtual infrastructures, managing virtual machines that are running on a remote virtual server, or simply establishing a virtual desktop connection to interact with the guest operating system remotely.
Creating and Securing MVC 5 Applications	The ASP.NET MVC framework can be used to develop scalable web and mobile applications using a variety of established web standards and design patterns. The latest version of MVC that is integrated into the Visual Studio environment, MVC 5, includes a range of new features. These features include a new identity framework, attributed led routing, and the ability to override filters. In this course, you will be introduced to MVC 5 and you'll learn how to upgrade an app to MVC 5. You'll also learn how to customize presentation using Bootstrap, you'll find out about the enhancements to routing and filters, and you'll learn how to use the features of the Identity framework in MVC applications.
Using MVC 5 with EF6, Web API 2, SignalR, and Azure	The ASP.NET MVC framework can be used to develop scalable web and mobile applications using a variety of established web standards and design patterns. The latest version of Model-View-Controller or MVC that is integrated into the Visual Studio environment, MVC 5, includes a range of new features. These features include a new identity framework, attributed led routing, and the ability to override filters. In this course, you'll learn how to use Entity Framework 6 with MVC 5 applications. You'll also learn about the features of Web API 2, and how to create web applications that use all of the ASP.NET technologies. You'll learn how to support real-time communications with SignalR, how to test for browser support, and how to deploy MVC 5 applications to Azure.
JSON Essentials	JSON is a data format used mainly on the Web to transmit information between client and server applications. This course covers the JSON format in detail and demonstrates examples of real-world APIs from around the Web that use JSON as their medium for communication.
Adobe Acrobat DC Fundamentals	Adobe Acrobat DC is the standard for cross-platform document creation and distribution. This course introduces learners to the fundamentals of Adobe Acrobat DC, including how to create PDF files, how to insert and edit text and images, and saving in different file formats. This course also covers page options, including organizing and inserting pages, headers and footers, and page numbers.
Working with Adobe Acrobat DC	Adobe Acrobat DC is the standard for cross-platform document creation and distribution. This course explains advanced features of Adobe Acrobat DC, including transitions, cropping pages, and watermarks. This course also introduces learners to enhanced features and tools such as collaboration, fillable forms, and digital signatures.
Architecting on Amazon Web Services: IAM and Object Storage	Amazon Web Services was one of the first complete solution providers in the cloud computing space and continues to be the market leader. One of the main offerings is the object storage service Simple Storage Service, or S3. Another key component is the integrated Identity and Access Management, or IAM, which touches upon most other parts of the AWS cloud. This course gives you an overview of AWS including a potted history and a rundown of the services. It goes on to cover IAM and how it integrates with AWS components. It rounds out the discussion by diving into S3 and object storage, and how it can be used as the basis for content delivery networks. This course is one of a series that covers the objectives for Amazon certification exam AWS Certified Solutions Architect - Associate.
Architecting on Amazon Web Services: Elastic Compute Cloud (EC2) Overview	Elastic Compute Cloud, or EC2 is the virtual machine engine for Amazon Web Services. EC2 enables you to run instances of Linux or Windows VMs and spin them up or down with a few clicks. Elastic Block Store provides the raw block level storage for EC2 instances, or for IOPS intensive workloads, such as databases. This course covers an overview of EC2 including the marketplace, and common tasks, such as spinning VMs up or down. It goes on to cover EBS and the roles it can fulfil, and how to monitor an EC2 cloud using CloudWatch. This course is one of a series that cover the objectives for Amazon certification exam AWS Certified Solutions Architect - Associate.
Architecting on Amazon Web Services: Elastic Compute Cloud (EC2) Auto Scaling	Auto scaling on the Elastic Compute Cloud platform enables your cloud based applications to respond to changes in load by scaling up or down, preventing under-provisioning in busy times and over-provisioning in quiet times. This course covers configuring scalable EC2 clouds using Auto Scaling groups, including a primer in the AWS command line interface, scripts to run at boot time, and in-depth configuration of auto-scaling and placement groups. This course is one of a series that cover the objectives for Amazon certification exam AWS Certified Solutions Architect - Associate.
Architecting on Amazon Web Services: Databases and Application Services	Databases are an key part of any web application. Amazon web services supports most database types and lots of ancillary data services. AWS also has other services for deploying and managing web app logic and data components. This course covers all components of AWS database, data analytics, application services and application deployment and management tools. This course is one of a series that cover the objectives for Amazon certification exam AWS Certified Solutions Architect - Associate.
Architecting on Amazon Web Services: Networking and Best Practice	Once you have mastery of all aspects of Amazon Web Services you need to put it all together into a set of best working practices for implementing, managing and maintaining web applications. This course covers best practices for creating secure, scalable, and fault tolerant web applications. It also covers configuration of network services on Amazon Web Services, including Route 53 for DNS, and Virtual Private Cloud, for creating logically isolated and secure sections of AWS. This course is one of a series that cover the objectives for Amazon certification exam AWS Certified Solutions Architect - Associate.
Cloud Computing for the Business User: Concepts and Moving to the Cloud	Cloud computing is massively growing in importance in the IT sector as more and more companies are eschewing traditional IT and moving applications and business processes to the cloud. This course covers the concepts behind cloud computing and the key characteristics that make cloud services unique and very valuable to some business scenarios. You'll get a basic technology overview of the concepts and strategies emerging from the cloud and learn how cloud products and services can improve traditional business processes.
Cloud Computing Fundamentals: Overview	Cloud computing is massively growing in importance in the IT sector as more and more companies are eschewing traditional IT and moving applications and business processes to the cloud. This course provides IT professionals with a working definition of cloud computing, explores the technological precursors of today's cloud, as well as the current technologies the cloud is dependent on. Also covered are the benefits and drawbacks of cloud computing for the IT department and business as a whole. It then explores in more detail the different types of services that have become available in the cloud with examples of key pioneers in those areas.
Cloud Computing Fundamentals: Virtualization and Data Centers	While the cloud is not necessarily dependent on virtualization, it's widely accepted that any competitive cloud will utilize it. Infrastructural and network connectivity considerations of the modern data center are greatly influenced by the requirements of the cloud. Data center infrastructure and components must be designed to address security, scalability, disaster recovery, and redundant high-speed connectivity needed to provide a successful cloud service. This course takes a closer look at the main enabling technologies, including data centers and virtualization that allow clouds to function.
Cloud Computing Fundamentals: Storing and Managing Cloud Data	Cloud storage is of key interest to many consumers, as it has a number of advantages over traditional data storage. Cloud-stored data is available from any location that has Internet access. However, depending on the type of business and data, some organizations need to carefully evaluate if and what types of regulations and compliance standards may apply to their data. This course provides a closer look at enterprise resources in the cloud and the use of cloud storage services. It describes the importance of classifying your type of data, what type of security regulations or restrictions apply to it, and whether a cloud provider's offering aligns with those requirements. This course also takes a closer look at the protocols, standards, and mobile client access involved in accessing cloud resources. It explores the meaning of open source software and its role in provisioning and accessing cloud resources.

Course	Description
Cloud Computing Fundamentals: Migrating to the Cloud	Migrating services to the public cloud has a number of unique challenges. This course explores the steps you should take in determining if your infrastructure has components that are suitable for a cloud solution. It discusses the Service Oriented Architecture or SOA and grid computing, and highlights characteristics that make these infrastructures suitable or unsuitable for extension to the cloud. The course also explores the recommended steps of analyzing your current infrastructure to inventory data, services, and processes used, as well as identifying problem areas that may be addressed through a cloud solution. Upon completion of your analysis, it is time to determine cloud service candidates and match cloud services, as well as look at examples of how to leverage different services to your problem areas. Finally, you'll learn about the use of private clouds as an alternative to public clouds.
Cloud Computing Fundamentals: Identity, Presence, and Privacy	As we move toward more applications being delivered via the cloud and businesses using a cloud computing model, we also need to consider the implications for the management of identity. This course ensures you are familiar with identity and access management or IAM and the common industry protocols used to extend identity to the cloud. This course covers the concept of federation between different cryptographic services providers or CSPs and businesses, the need for proper identity and access control management, and it also explores the use of a Cloud Identity as a Service or IDaaS offering. The course also discusses the importance of understanding the presence and privacy factors when conducting business in the cloud and how it is crucial to understand the CSP's responsibility to not only provide security but also a proper level of privacy.
Cloud Computing Fundamentals: Cloud Security	IT security is a concern for most modern organizations and moving to the cloud heightens those concerns for most. The security implications are potentially magnified by large tranches of data existing outside the immediate control of the organization. Although some of the fears with regard to security in the cloud are exaggerated, there are specific areas to be aware of and cautious about. This course explores some of the key risk areas when it comes to security and cloud computing. It also introduces control assessment frameworks and models that can be used in assessing your risk in going to the cloud and evaluating the cloud provider's security offering. It goes on to outline basic guidelines that you should follow to ensure an adequate level of security in an XaaS environment, including key areas of the IT infrastructure and issues relating to data transfer and storage.
Cloud Data Security	In a computing environment where client data assets are remotely hosted, data asset security becomes an important factor when considering the potential transition to cloud services. This course describes and explores issues relating to the management and protection of data assets hosted on a cloud platform, and data in transit to and from a cloud platform. In this course, you will learn about all aspects of data management: protection, auditing, access, legislative impact, storage, deletion, security, ownership, data rights management, encryption, classification, known threats to data assets, and threat mitigation. The course covers the essential topics for the ICS2â€™s Certified Cloud Security Professional examination â€" Domain 2 requirements.
Cloud System Security - Platform and Infrastructure	The security of the cloud services platform and infrastructure is a fundamental driver in the uptake of cloud services and the transition away from Enterprise structures. This course describes issues relating to the security of the supporting components of the cloud infrastructure â€" both physical and virtual components. The course promotes/outlines a risk management approach in developing and employing security measures to protect cloud components; describes key risk management focus areas â€" identification, measurement, and control; and covers known threats and the key areas of cloud component vulnerability. In this course, you will learn about security management/measures and auditing, including authentication, authorization, Business Continuity (BC), Disaster Recovery (DR), and failover. The learner will be expected to display knowledge of Cloud Service Business Continuity and Disaster Recovery planning, to identify areas requiring specific security protection, and how to recover lost or damaged data and components hosted on a cloud platform. The course covers the essential topics for the ICS2's Certified Cloud Security Professional examination â€" Domain 3 requirements.
Cloud Application Security	In a developing landscape where end user applications are moving to a cloud-hosted infrastructure, the traditional application development design life cycle is redefined. The application design process must be security-aware and must protect cloud-hosted applications and data from an increasing attack vector density. This course covers various aspects of cloud computing relating to the security of cloud-based application software and supporting hardware and services. The course outlines various aspects of application security and access, including designing in security, peripheral security components, and securing access to services and hosted applications. The course covers the essential topics for the ICS2's Certified Cloud Security Professional examination â€" Domain 4 requirements.
Cloud Service â€" Operations Management	Fundamental to cloud service security are the construction and design of secure datacenters and their hosted hardware and systems. This course covers the best practice management approach to designing, deploying, and administrating a cloud datacenter and service. In addition, the course will cover the techniques that can be deployed to configure and protect hardware assets â€" physical and virtualized, manage and protect configuration settings, and keep network data moving in and out of, and hosted within the domain of the datacenter. Topics include regulation compliance, protection techniques, and controlled access to the various components of a cloud data center infrastructure. In this course, you will learn about the deployment of auditing and monitoring techniques, event logging and reporting, and other aspects of management techniques associated with cloud-hosted services. The course covers the essential topics for the ICS2's Certified Cloud Security Professional examination â€" Domain 5 requirements.
Microsoft Hyper-V 2016: First Look	Microsoft Hyper-V is included as a role in Windows Server, and also as a standalone server with no GUI. This course covers installation, configuration, and new features of Hyper-V in the Technical Preview. This course also covers the installation of both Hyper-V Server and the Windows Server role, and concludes with a comparison of Hyper-V Server and Client Hyper-V in Windows 10. This course is based on preview software from Microsoft. Any features, functions, and interfaces discussed and shown may change before the final product is released.
Overview & Prerequisite Setup for System Center Configuration Manager 2012 R2	This course will provide you with an understanding of the prerequisite software and configurations needed to install and manage Microsoft System Center Configuration Manager 2012 R2. You will learn to prepare the infrastructure for, then install SCCM. You will gather and install prerequisite software, look at Active Directory, and set access with permissions. Then itâ€™s on to the client-using Group Policy and modifying Firewall settings. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft exam, Administering and Deploying System Center 2012 Configuration (70-243). This exam counts toward the Microsoft Certified Technology Specialist certification.
Basic SCCM Maintenance and Managing Operating System Deployment	In this course, you will learn how to use the SCCM tools, perform basic maintenance in SCCM, create OS deployment images, and customize OS deployments using task sequences. You will learn how to back up and restore critical SCCM data; how to prepare SCCM for operating system deployment; how to build and capture OS images; and how to service those images as drivers and patches are released.
Virtualizing Enterprise Desktops and Apps: Plan App Virtualization and Use MAP	Before you can start to implement a VDI environment for desktops and applications the current environment needs to be assessed, as well as the client requirements. Microsoft offers the Microsoft Assessment and Planning toolkit to do this task. It can ensure applications run in different scenarios, such as having multiple versions of the same application. Once the applications are assessed, App-V can be used to deploy the applications virtually to the clients. This course will demonstrate how to use MAP and how to install the App-V server components. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-694: Virtualizing Enterprise Desktops and Apps certification exam with credit toward MCP, Microsoft Specialist credentials.
Virtualizing Enterprise Desktops and Apps: App-V Clients and App Sequencing	The App-V Desktop client needs to be installed on all computers that require access to virtualized applications that will be published using App-V. This client ensures the applications run properly and appear to the user as a traditional application on a local computer. To package the applications for deployment to the clients they need to be sequenced using the App-V Sequencer. This course will demonstrate how to deploy and configure the App-V client. It will demonstrate how to install the App-V Sequencer and how to sequence applications and deploy them. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-694: Virtualizing Enterprise Desktops and Apps certification exam with credit toward MCP, Microsoft Specialist credentials.
Virtualizing Enterprise Desktops and Apps: VM-based and Session-based RDS	Windows Server 2012 R2 contains the Remote Desktop Services server role which is used to provide session-based and virtual machine-based desktop deployments. This role provides a fault-tolerant and scalable RDS deployment. VM-based desktops allow clients to connect to a full Windows desktop as either a pooled or personal virtual desktop. Session-based desktop deployments allow clients to access applications from their desktops as if they were installed locally. This course will discuss the planning and implementing of VDI environments. It will also demonstrate how to deploy session-based and VM-based virtual desktop deployments. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-694: Virtualizing Enterprise Desktops and Apps certification exam with credit toward MCP, Microsoft Specialist credentials.
Virtualizing Enterprise Desktops and Apps: RemoteApps	Within Microsoft Windows Server 2012 R2, RemoteApp can be used within Remote Desktop Service deployments to publish programs to clients. The RemoteApp programs are installed on the RD Session Host servers and then published to the clients where the users access them like they are installed locally. This course will demonstrate how to create and configure remote applications and deploy and manage them. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-694: Virtualizing Enterprise Desktops and Apps certification exam with credit toward MCP, Microsoft Specialist credentials.
Virtualizing Enterprise Desktops and Apps: Plan for Resilient Virtualized Apps	During planning of a VDI environment you need to consider if it needs to be highly available; that is, always available for the users to access without downtime. This provides resilience and continuity of the virtualized environment, including the applications through either RemoteApp or App-V. Microsoft offers various solutions to provide high availability to the VDI environment. This course will discuss how to plan and implement a highly available VDI solution to ensure clients can always access their virtualized enterprise desktops and applications. This course is one of a series in the Skillsoft learning path that covers the objectives for the Microsoft Exam 70-694: Virtualizing Enterprise Desktops and Apps certification exam with credit toward MCP, Microsoft Specialist credentials.
VMware Desktop Virtualization Overview	Virtualization has become part of our everyday lives and companies from small start-ups to enterprise environments have turned to virtualization, not only for testing, but also for full production environments. This course takes a look at virtualization, the concepts behind virtualization, and how virtual machines and virtual infrastructures are used in today's evolving IT world. In this course, you will learn about the features of the VMware desktop product suite, which includes VMware Workstation, VMware Player, VMware Fusion, and VMware ThinApp. In associating with the Desktop virtualization technologies, you will also explore the latest solutions for Enterprise mobility end-users through VMware Horizon features and the Workspace Suite. This course aims to equip you with the knowledge needed to decide which products best meet your organization's need for virtualization.
VMware Data Center Virtualization Overview	Virtualization allows multiple, resource-intensive applications to be run on one physical system. VMware ESXi is a bare-metal hypervisor, which can install directly on top of a physical server, sharing their resources with the host, and with each other. VMware vCenter Server provides centralized management for virtual machines and ESXi hosts. In this course, you will explore VMware vSphere and VMware vCenter Server including the system requirements, features, key benefits, and supporting products of VMware vCenter Server.
VMware Business Mobility Solutions	We have moved into the post-PC era where computing is no longer limited to PCs and laptops. Some businesses have to adapt to the fact that a majority of Internet-capable devices can be used to perform work-related functions by their employees. This course takes a look at VMware solutions in business mobility starting with VMware Horizon and its components. VMware Horizon allows IT departments to manage this wide variety of devices and applications available in the workplace today. You will also learn about VMware AirWatch and some of the key features it provides to empower mobile computing.
VMware Cloud Services Solutions	VMware cloud services are based on the trusted vSphere architecture, building not just the private cloud but extending its capabilities out into the public domain to form a hybrid configuration. This course introduces the various components of the VMware vCloud Suite and the hybrid cloud concept. It also explores VMware's Infrastructure-as-a-Service offering that is available in the form of the vCloud Air platform.
Designing Hadoop Clusters	Hadoop is an Apache Software Foundation project and open source software platform for scalable, distributed computing. Hadoop can provide fast and reliable analysis of both structured data and unstructured data. In this course you will learn about the design principles, the cluster architecture, considerations for servers and operating systems, and how to plan for a deployment.
Hadoop in the Cloud	Amazon Web Services, also known as AWS, is a secure cloud-computing platform offered by Amazon.com. This course introduces AWS and it's most prominent tools such as IAM, S3, and EC2. Additionally we will cover how to install configure and use a Hadoop cluster on AWS.
Deploying Hadoop Clusters	There are important decisions you must make to ensure network, disks, and hosts are configured correctly when deploying a Hadoop Cluster. This course will walk you through all of the steps to install Hadoop in a pseudo-distributed mode and the set up of some of the common open source software used to create a Hadoop Ecosystem.
Hadoop Cluster Availability	When examining Hadoop availability it's important not to focus solely on the NameNode. There is a tendency since that is the single point of failure for HDFS, and many components in the ecosystem rely on HDFS, but Hadoop availability is a more general larger issue. In this course we are going to examine the availability and how to recover from failures for the NameNode, DataNode, HDFS, and YARN.
Business Intelligence with QlikView	QlikView helps business users be able to analyze their data quickly and easily using self-service BI visualization documents created and delivered by IT professionals and developers. QlikView offers many features to create engaging and graphical documents to provide answers to questions quickly and efficiently. This course will demonstrate how to install QlikView and customize it. It will also demonstrate how to create BI documents and add sheet objects, charts and tables, as well as how to manage the sheets within the document.
SQL Server Database Fundamentals: Design Principles and Data Manipulation	A database is used to store data in electronic format. Organizations use a Database Management System, also known as a DBMS, to control, store, organize, and retrieve that data for users. There are multiple types of databases, such as flat-file and hierarchical. The most widely used database is the relational database that stores data in relations, which are tables that store data in rows or tuples and columns or attributes. In this course, you will learn what databases, DBMS, and RDBMS are and be introduced to different database models. The course covers table design for relational databases including the data types and constraints supported by SQL Server. It also demonstrates how to use DML statements to query data and manipulate result sets. It also covers how to update and delete data from a SQL Server database and how to use transactions to ensure data and referential integrity. This course can be used as part of the preparation for Microsoft's exam 98-364, Database Fundamentals, which leads to a Microsoft Technical Associate (MTA) certification.
SQL Server Database Fundamentals: Creating, Optimizing, and Securing Databases	The Data Definition Language or DDL is used to create databases and their components. In this course, you will learn how to create databases, tables, views, and stored procedures using DDL. The learning path describes how databases can be normalized according to specific guidelines to increase storage capacity and scalability. You'll also learn how to use indexes to make your databases more responsive. Finally, you'll learn about the core security considerations for SQL Server databases, how to assign permissions to database objects, and how to back up and restore databases. This course can be used as part of the preparation for Microsoft's exam 98-364, Database Fundamentals, which leads to a Microsoft Technical Associate or MTA certification.
Apache HBase Fundamentals: Installation, Architecture, and Data Modeling	Apache HBase is a NoSQL column-oriented database that provides big data storage for semi-structured data. It runs on HDFS and ZooKeeper and can be integrated with MapReduce. In a column-oriented database, data in a column is stored together using column families rather than in a row. The physical architecture uses a Master-Slave relationship and distributes the data in a cluster-like format. This course will show how to install HBase and discuss the HBase architecture and data modeling designs.
Apache HBase Fundamentals: Access Data through the Shell and Client API	Apache HBase is written in Java and therefore there are multiple ways to access HBase using various clients. One client is the HBase shell, which is a command-line utility that provides client and administrative operations. HBase also provides access through the use of a Java client API to provide basic and advanced client and administrative operations. This course will discuss and demonstrate the various tasks you can accomplish using the shell and Java client API, including creating tables, reading and writing data, and updating and deleting.
Apache HBase Fundamentals: Advanced API, Administration, and MapReduce	The administration of Apache HBase is a fundamental component to understand. HBase can be managed using the Java client API and can also be integrated with MapReduce to perform additional tasks that will help obtain maximum performance. This course will discuss and show how to implement filters to limit the results returned from a scan operation. It will also demonstrate how to administer the HBase cluster and instance and perform backup and restore operations. Using MapReduce is also discussed.
Social Networking Fundamentals	A foundational understanding of social networking, its uses and how its benefits mesh with your business is becoming increasingly important. This course will focus on introducing and using social networking services in a business context. You'll learn the benefits of social networking, how to use these services in a professional manner, and what potential issues can arise from social networking usage in the workplace.

Course	Description
Social Networking Services, Strategy, and Management	Familiarity with features many common social networking services provide, and how they can be leveraged is paramount to a successful Internet business presence. In this course, you will learn about popular social networking services and what they have to offer from a business context. You'll also learn about defining a social networking strategy and managing a social networking presence.
Google Analytics Fundamentals and Data Collection	There are a variety of digital strategies, such as e-commerce and content publishing, which benefit from performance measurement. Using Google Analytics to measure performance data and convert that into actionable insights can help achieve organizational strategies and goals. This course introduces digital analysis, the process of creating and implementing measurement plans, and the types of data and metrics recorded using Google Analytics.
Google Analytics Reports	There are a variety of digital strategies, such as e-commerce and content publishing, which benefit from performance measurement. Using Google Analytics to measure performance data and convert that into actionable insights can help achieve organizational strategies and goals. This course demonstrates creating an Analytics account, creating and viewing numerous reports, and visualizing data important to your business.
Google Conversions and Tags	Google Analytics are applicable to both web sites as well as mobile applications. Using Google's Tag Manager allows you to efficiently manage tags across your online presence without consuming valuable IT department time. This course demonstrates using Google Tag Manager to update tags in your online assets. You will also learn how to implement Google Analytics in your mobile app.
Analytics APIs and Tools	Google is continually making changes and improvements to the Analytics platform; It's important to ensure that you are using the most recent version.Google makes a large portion of Analytics functionality available through an API for consuming with your own applications.This course demonstrates using the Analytics API to obtain analytics data and profile information.You will also learn how to upgrade the analytics version in use on your site.
Skype for Business: New Features, Profile, and Contacts	Skype for Business, formerly known as Lync 2013, is a messaging and collaboration tool that can allow users to communicate using instant messages, make and receive audio and video calls over the internet, transfer files, and initiate Web conferencing. In this course, you will learn about some of the new features in Skype for Business. This course also covers some of the existing features such as configuring and exploring the presence, location, and picture features and managing contacts.
Skype for Business: Calls, IMs, and Meeting features	Skype for Business formerly known as Lync 2013 is a messaging and collaboration tool that can allow users to communicate using instant messages, make and receive audio and video calls over the internet, transfer files, and initiate Web conferencing. In this course you will learn about configuring audio settings, placing a call, answering, transferring and forwarding calls. This course also covers using and managing the instant messages and meetings features.
Skype for Business: Sharing, Collaboration, and Video Calls	Skype for Business, formerly known as Lync 2013, is a messaging and collaboration tool that can allow users to communicate using instant messages, make and receive audio and video calls over the Internet, transfer files, and initiate Web conferencing. In this course, you will learn about sharing and collaboration features such as sharing notes, sharing whiteboards, sharing files and pictures, and using polls. This course also covers using the video features including configuring the video device, placing and answering calls, and using video controls.
Yammer for Business Users: Using Yammer	Yammer provides a centralized location for business users to interact with colleagues and teams to collaborate on projects. It allows for internal as well as external members to join into groups to share information, including messages, files, and notes. In this course, you will learn about the Yammer #Topics feature that allows you to follow specific content that is posted. You'll also explore the Yammer features used by business users, such as groups, posts, notes, files, #Topics to collaborate with colleagues.
Global Safety Principles: Back Safety and Injury Prevention	This course is designed to bring awareness into the work environment and help eliminate preventable back injuries. It will provide information regarding job-specific hazards, safe work practices, and ergonomics. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Global Safety Principles: Indoor Hoisting and Rigging	This course is designed to educate the worker on the significant safety issues to be considered while moving large, heavy loads associated with today's manufacturing and construction industries. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives for this course are to specify general safety issues of cranes, hoisting, and rigging; define the purpose of the crane safety program; describe general inspection practices; describe testing practices; describe basic load handling considerations; specify operator responsibilities; and recognize standard hand signals.
Global Safety Principles: PPE: Personal Protective Equipment	This course covers types, selection, maintenance, and care of personal protective equipment in the workplace. The types of personal protective equipment (PPE) covered in the course include: hard hat, respiratory protection, hearing protection, and body protection. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Global Safety Principles: Respiratory Protection	This course covers information relating to respiratory hazards, protection mechanisms, and safe work practices. It also includes information on how to use respiratory protection for protection from hazardous airborne contaminants in the work environment. This course does not include the types of respirators and other protective considerations required when working with ionizing radiation.
Rigging Equipment and Inspection â€“ Canada	Securing, lifting, and moving materials can be a hazardous occupation. It's important workers involved with hoisting and rigging activities are aware of the elements of safe rigging practice. In this course, you'll learn about using rigging in a safe and responsible manner. Learner objectives are to identify hazards, and the PPE used to protect against those hazards, and to recognize the proper selection, inspection, and storage of rigging equipment.
Welding, Cutting, and Brazing â€“ Canada	Welding, cutting, and brazing are hazardous activities that pose a unique combination of both safety and health risks to more than 500,000 workers in a wide variety of industries. The risk from fatal injuries alone is more than four deaths per thousand workers over a working lifetime. This course will inform learners of potential health and safety concerns unique to welding, cutting, and brazing. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Back Safety and Injury Prevention â€“ Canada	This course is designed to bring awareness into the work environment and help eliminate preventable back injuries. It will provide information regarding job-specific hazards, safe work practices, and ergonomics. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines.
Bloodborne Pathogen Awareness â€“ Canada	This course will provide you with a basic understanding of bloodborne pathogens, common modes of transmission, methods of prevention, and what to do if an exposure occurs. Information presented will help minimize serious health risks to persons who may have personal exposure to blood and other potentially infectious materials in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines. Learner objectives for this course are to identify bloodborne pathogens and symptoms of bloodborne diseases, identify modes of transition of bloodborne pathogens, recognize the proper use and handling of personal protective equipment, identify measures to be taken when the skin or eyes are exposed to infectious material, and specify the components of an Exposure Control Plan.
Industrial Ergonomics â€“ Canada	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and also provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to employees and employers in industrial work settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice standards. Learner objectives are to define terms related to the study of ergonomics, recognize the general requirements of the ergonomics standard, recognize signs and symptoms of injury to the muscles and skeleton and the importance of early reporting, identify risk factors for injury to the muscles and skeleton, specify controls and work practices to reduce or eliminate risk factors for injury to the muscles and skeleton, and specify how to report MSD signs, symptoms, and hazards in your job and how the employer is required to address them.
Creating Apps	Force.com is a platform as a server, or PaaS, that is integrated into the Salesforce.com infrastructure. In this course, you will learn about the Force.com interface and features available for creating a custom employee app. This course covers the force.com interface, how data is managed, layouts and view, and how to integrate basic workflows and business logic.
Reporting and User Management	Force.com is a PaaS that is integrated into the Salesforce.com infrastructure. In this course, you will learn about the Force.com Reports, Dashboard, Users, and Permissions.
TestPrep 1Z0-808 Java SE 8 Programmer I	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Mentoring 1Z0-809 Java SE 8 Programmer II	Skillsoft Mentors are available to help students with their studies for exam 1Z0-809 Java SE 8 Programmer II. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Mentoring 98-368 Mobility and Devices Fundamentals	Skillsoft Mentors are available to help students with their studies for exam 98-368 Mobility and Device Fundamentals. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Mentoring Six Sigma Yellow Belt (SSYB)	Skillsoft Mentors are available to help students with their studies for exam Six Sigma Yellow Belt (SSYB). You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Microsoft Windows 10 End User: Signing In and First View	Microsoft Windows 10 is a radical overhaul of Microsoft's Windows operating system with improvements and changes to nearly every facet and feature. This course guides you through different options to sign in to the operating system, and briefly introduces the new interface - including the Start menu, the Charm bar, the Task menu, and notifications. This course is one of a series that covers the features and capabilities of the new Windows 10 operating system.
Microsoft Windows 10 End User: Hardware, Software, and Security Settings	Securing your PC is a challenge everyone faces in today's interconnected computing environment. Microsoft Windows 10 has some unique answers to these challenges and we explore them in this course. Windows 10 also supports a richer ecosystem of hardware than ever before, and this course will cover adding hardware to Windows 10, Windows 10 backups, and finally look at some Windows 10 applications, including sourcing new apps from the Windows Store. This course is one of a series that covers the features and capabilities of the new Windows 10 operating system.
Microsoft Windows 10 End User: Customizing Windows 10	Personalization options in Windows 10 are unparalleled, and the configuration experience has changed dramatically since Windows 7. This course guides you through the configuration options available, from desktop visual settings through to the settings app, which replaces the old Control Panel interface. This course will explore the personalization options available and is one of a series that covers the features and capabilities of the new Windows 10 operating system.
Microsoft Windows 10 End User: New Features	Windows 10 has a number of built-in features to provide a better end-user experience. These features include multiple desktop views, applications, and improvements to the Command Prompt. This course will explore the new features and provide details on configuring them for use. It is one of a series that covers the features and capabilities of the new Windows 10 operating system.
Microsoft Windows 10 End User: Browsing with Edge	In Windows 10, Microsoft has introduced a new Internet browser called Microsoft Edge, which competes with the best in class for speed and simplicity. Historically, the default browser in Windows has always been Internet Explorer, but this has changed with Windows 10, and this is possibly one of the biggest changes in the history of Windows. This course introduces Microsoft Edge and tells you all you need to know about this core part of the Windows 10 experience and the future of the platform. This course is one of a series that covers the features and capabilities of the new Windows 10 operating system.
Microsoft Windows 10 End User: Cortana	Windows 10 is all about streamlining, and simplifying everyday tasks. In keeping with that philosophy, Windows 10 introduces an intelligent personal assistant called Cortana. Among Cortana's many functions, it can schedule appointments, search on your computer and the Internet, and even tell jokes. This course provides an overview of the tasks available when interacting with Cortana, as well as configuration options to customize Cortana to better assist you when using your Windows 10 system. This course is one of a series that covers the features and capabilities of the new Windows 10 operating system.
Oracle Database 12c - Introduction to SQL: Data Conversion and Aggregating Data	Frequently when retrieving data stored in the Oracle database it needs to be converted, manipulated, or aggregated. In this course you will learn about the Oracle conversion functions, conditional expressions, and how to report aggregated data using group functions. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1ZO-061). The exam is part of the Oracle Certified Associate certification.
Oracle Database 12c - Introduction to SQL: Working with Joins and Subqueries	Database normalization is good practice when building a relational database to minimize data redundancy. In this course, you will learn how to join tables together to view information across multiple tables, how to write subqueries, as well as the more advanced features of the SELECT statements used to obtain values based on an unknown conditional value. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1ZO-061). The exam is part of the Oracle Certified Associate certification.
Oracle Database 12c - Introduction to SQL: Data Manipulation Language	Once an Oracle 12c relational database has been created with objects, the data in these objects need to be managed. In this course you will learn how to insert, update, delete, and truncate rows. The course will teach the concepts of database transaction control using COMMIT, ROLLBACK, and SAVEPOINT. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1ZO-061). The exam is part of the Oracle Certified Associate certification.
Oracle 12c Performance Tuning: Metrics and Monitoring	Metrics are used for system health monitoring, problem detection, and self tuning in Oracle Database 12c. In this course, you will see how performance baselines can be established, so that it is simpler to deduce whether there has been any performance degradation. Finally, real-time database operation monitoring is introduced, which extends and generalizes real-time SQL monitoring. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1ZO-064).
Oracle 12c Performance Tuning: Application Monitoring and SQL Diagnostics	Oracle Database 12C includes services that organize work execution within the database, and make execution that much more manageable, measurable, tunable, and recoverable. This course covers these services as well as the basic phases of SQL processing, and ways to extract detailed information about the actual execution of a SQL statement. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1ZO-064).
Oracle Database 12c RAC Administration: Introduction to Oracle RAC	The Oracle Grid Infrastructure lays the foundation for highly available and scalable Oracle RAC systems, an important part of implementing and maintaining a stable, highly available RAC database is understanding the underlying architecture of all the components. This course introduces the Oracle Grid Infrastructure and RAC database architecture. The components that make up the Oracle Grid Infrastructure â€“ Oracle Clusterware, Automatic Storage Management, and Oracle Cloud File System â€“ are covered in detail and an in depth understanding is provided of all the components and requirements of Oracle RAC. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Six Sigma Measurement Systems and Metrology	Six Sigma measurement systems are vital to improving an organization's processes. Measurement systems encompass the conditions, devices, and the human element of measurement, which together must produce correct measurements and comply with appropriate standards. Measurement error, or measurement variability, is a problem whose components must be thoroughly understood and kept in check to maintain the effectiveness of any measurement system. Measurement variability contributes to the overall variability in the process and it is important to understand its sources and minimize it. Black Belts can calculate correlation, bias, linearity, stability, reproducibility, and repeatability to analyze and further improve measurement systems.
Probability and Probability Distributions in Six Sigma	Organizations need to make inferences about a population from sample data, and understanding how to calculate the probability that an event will occur is crucial to making those inferences. In a Six Sigma context, it is often important to calculate the likelihood that a combination of events or that an ordered combination of events will occur. Understanding probabilities can provide Black Belts with the tools to make predictions about events or event combinations. To make accurate inferences about a population from the sample data collected in the Measure stage, Black Belts must also be familiar with the characteristics of various probability distributions, and their suitability for different types of data. Understanding the behavior of probability distributions allows the Black Belts to find the probability that values will be found within a given range, and thus to provide information on the variation in the organization's processes and products.

Course	Description
Basics of Hypothesis Testing and Tests for Means in Six Sigma	In the Analyze phase of the DMAIC methodology, Six Sigma teams analyze the underlying causes of issues that need to be addressed for the successful completion of their improvement projects. To that end, teams conduct a number of statistical analyses to determine the nature of variables and their interrelationships in the process under study. It is rarely possible to study and analyze the full scope of population data pertaining to all processes, products, or services, so Six Sigma teams typically collect samples of the population data to be analyzed, and based on that sample data, they make hypotheses about the entire population. Because there is a lot at stake in forming the correct conclusions about the larger population, Six Sigma teams validate their inferences using hypothesis tests.
Tests for Variances and Proportions, ANOVA, and Goodness-of-fit in Six Sigma	As a Six Sigma team moves into the Analyze phase of a project, team members begin analyzing the information and data collected in the earlier phases. During the Analyze phase, Six Sigma teams identify possible sources of variation, underlying root causes, and areas for improvement. It is here where assumptions or hypotheses about a process, product, or service are made and validated using tests based on sample data.
FMEA and Other Nonstatistical Analysis Methods in Six Sigma	Getting to the source of why something has gone wrong in a system or process is critical to identifying the changes necessary for resolving the problem. During the Analyze phase of a Six Sigma project, a Black Belt practitioner utilizes a variety of statistical and nonstatistical tools and methods for analyzing systems and processes to identify variation and defects, reduce costs, eliminate waste, and reduce cycle time. While many of the tools used in the Analyze phase are statistical and quantitative in nature, there are many useful nonstatistical methods. Nonstatistical methods help in the analysis by including qualitative considerations in identifying potential problems, their root causes, and their impacts. They help prioritize these causes and generate initial ideas for resolving problems when a project enters the Improve phase.
Using Docker: Benefits and Installation	Docker is an open source platform that enables developers, administrators, and others to access and deploy the latest, updated images into their respective environments. It uses automated scripts and manual commands to perform tasks. It allows software application to get into production as quickly as possible by eliminating friction and dependencies that normally occur during shipment of code. In this course, you will learn the basic concepts of Docker and the Docker architecture. how to install Docker on Ubuntu and CentOS.
Using Docker: Dockerizing Applications	Applications can be packaged and deployed in multiple ways using Docker. Working with Docker containers, images, and client daemon help administrators, developers, and testers quickly access updated applications and make necessary changes before production. In this course, you will learn understand the concept of Dockerization, how to work with Docker containers, Docker images, link containers, and manage data in containers.
Using Docker: Customizing and Clustering	Docker containers can be customized and clustered to effectively manage Dockerization of applications. Custom metadata can be used for labeling and creating data structures. Docker clusters can be used to group a pool of Docker hosts into a single virtual host. In this course, you learn about custom meta data, Docker Compose, Docker Clustering and Swarm, Docker Swarm filters, and Docker Swarm strategies.
Microsoft Windows Nano Server: Nano Server First Look	Microsoft Nano Server is a new low-footprint, built for the cloud server OS from Microsoft. It breaks with decades of management practice to deliver a container solution for hosting Windows Server apps. This course covers setup and management of Nano Server. You'll learn how Nano Server works and what you need to know to implement it. This course is based on preview software from Microsoft. Any features, functions and interfaces discussed and shown may change before the final product is released.
Microsoft Windows Server 2016 (First Look): Active Directory and Networking	Microsoft Windows Server 2016 Technical Preview builds upon features found in previous versions of Windows Server, and also provides several new features. This course provides a first look at new features and functionality, such as the Nano Server installation option, as well as updates to Active Directory Domain Services and Federation Services. It also covers what's new and improved in networking functionality. This course will take a first look at Antimalware, Remote Desktop Services, and Web Application Proxy. It also covers what's new and improved in Hyper-V, File and Storage Services, and Failover Clustering functionality. New Windows PowerShell 5.0 cmdlets will also be covered.
TestPrep Project Management Professional PMBOK 5th Ed (Jan 2016 update)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Capturing, Analyzing, and Managing Lessons Learned	Every project comes with its own unique challenges. There is valuable learning that takes place as project team members solve problems and persevere through challenges to meet their objectives. Preserving and passing on all that new knowledge and wisdom is what the concept of 'lessons learned' is all about. Effective project managers take lessons from current projects forward into planning and executing future projects, thereby enabling continuous improvement. Collecting and using lessons learned results in fewer mistakes, lower costs, more accurate estimates, and many other efficiencies. In this course, you'll learn about the basic steps involved in collecting, analyzing, and passing on lessons learned so that organizations are able to grow and experience superior performance.
Agile Software Testing: Methodologies and Testing Approaches	Agile software lifecycles comprise short iterations, with working software released at the end of each iteration. Agile testing approaches will be shaped by the test-driven, iterative, and incremental approach in agile projects. In this course, you'll learn about the principles underpinning agile development and some of the principle agile methodologies. You'll also learn about testing in the agile context and the skill set that an agile tester should have. This course is one of a series intended to align with the Agile Tester Certified Tester Foundations Level Extension Syllabus. The authors, Rex Black, Anders Claesson, Gerry Coleman, Bertrand Cornanguer, Istvan Forgacs, Alon Linetzki, Tilo Linz, Leo van der Aalst, Marie Walsh, and Stephan Weber, and the International Software Testing Qualifications Board or ISTQB® are the source and copyright owners of the Syllabus. The course is intended to help learners prepare for the Agile Tester Foundation Extension certification (CTFL-AT) exam, which is provided by the Information Systems Examination Board or ISEB, a globally-recognized testing body providing software testing certification. Skillsoft makes no claim to any approval or endorsement of this course by any of the aforementioned parties or other third party.
Defensive Programming in Android: Input and Methods	Defensive Programming in Android aims to use coding practices and techniques to create apps that are reliable and resilient. In this course, you will learn about thinking defensively when creating methods, and also when working with inputs to your programs.
Defensive Programming in Android: Using Standards	Defensive Programming in Android uses coding practices and techniques to create apps that are reliable, predictable, and resilient. This course will teach you about enforcing standards in the Android apps you create in order to make source code more predictable and maintainable.
Defensive Programming in Android: Errors, Exceptions, and Testing	Defensive Programming in Android uses coding practices and techniques to create apps that are reliable, resilient, and easily testable. This course will teach you about thinking defensively in your approach to errors and exception handling, and also how to create automated tests for Android apps.
Defensive Programming in Android: Network Access and Java Defensive	Defensive Programming in Android uses coding practices and techniques to create apps that are reliable and resilient. This course will teach you some language-specific Java techniques that promote defensive programming when creating Android apps, as well as how to access the network in Android apps in a way that does not affect user experience.
Getting Started with F#	F# is a Microsoft .NET language that offers support for functional programming in addition to object-oriented and imperative programming. This course introduce F#, describes the templates for creating F# programs and files in Visual Studio, and describes how to implement functional and object-oriented programming with F#. You'll also learn how to use conditional expressions, work with loops, and handle exceptions with F#.
Programming in Go	Learning the fundamentals of a new programming language is vital to your success in utilizing the language to its fullest. In this course, you'll learn the skills required to use the Go programming language to write your own programs. This includes basic language syntax, working with variables, types, structs, slices, and maps. Additionally, flow control statements such as for, if, and switch are examined, and pointers, Goroutines, and channels are introduced.
Working with Jenkins: Fundamentals	Jenkins is a continuous integration tool that is used to streamline the task of performing application builds and deploys. Jenkins is open source and is Java based. It integrates with traditional Java build tools such as Apache Ant and Apache Maven. Jenkins is widely considered a DevOps tool. In this course, you will learn how to use Jenkins to build and continuously deploy applications. You will also learn about how Jenkins integrates with other DevOps tools.
TestPrep 98-368 Mobility and Device Fundamentals	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Scala Introduction	Scala mixes programming paradigms, and so presents a challenge to programmers coming from any other language. This course demystifies some of the techniques associated with Scala programming.
Ensuring Social Media and Application Quality	Social media has seen growth and continues to grow at a tremendous rate. With evolving technology in computers, mobile phones, tablets, and other media devices, access to social media has become easier. To ensure users have a seamless experience, it is important for developers, programmers, and testers to ensure social media integration and applications are tested for quality assurance. In this course, you will learn about social media usage trends, social media app risks and challenges, and social media app development trends. This course also covers social media and mobility testing criteria.
TestPrep Systems Security Certified Practitioner (SSCP)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Web Design Basics	Web design involves achieving a design that is both usable and pleasing. The site must deliver information and build brand. It has to be technically sound and visually coherent. In this course, you will learn the basic technologies and terminologies to get you started in designing stunning web sites. The course will cover web site planning and creation, explain all about responsive design, and introduce you to some testing tools.
Web Design Enhancements	Web design is strongly influenced by consumers who are increasingly using devices other than traditional computers to stay connected through social media, read news, receive e-mail, and make purchasing decisions. This course will cover how to embed different media, Cascading Style Sheets, and JavaScript in action.
Safety Principles Impact: Accident Factors	No organization wants to experience an accident. Regrettably, accidents are far too commonplace to ignore. To better insulate your organization and its employees from an accident, it's important to understand what an accident is and what the factors are that contribute to an incident. In this Safety Principles Impact, you'll learn to recognize accident factors that contribute to an accident and how your organization can reduce the risk of an accident occurring by assessing the risk and likelihood of each factor. In this Impact series installment, Jenny Fuller explores accident factors.
Safety Principles Impact: Safe Work Habits and Behaviors	Accident prevention isn't a concern for management alone. Organizations seeking to better insulate themselves from on-the-job incidents are wise to include employees in the prevention process. Developing safe work habits and behaviors is the first step. Employees must know what's expected of them, and how safe work habits and behaviors will benefit them and the organization at large. In this Impact series installment, Jenny Fuller explores safe work habits and behaviors.
Safety Principles Impact: Safety Awareness	Setting expectations for safe work habits and behaviors isn't enough to ensure employees buy in to an organization's accident prevention program. Employees must be made fully aware as to why they must follow procedure. They must be informed of the negative outcomes that could arise from an accident, and they must understand that failing to follow procedure could carry consequences for the entire organization. In this Impact series installment, Jenny Fuller explores Safety Awareness.
Safety Principles Impact: Reporting an Accident	Accident reporting is an essential component of safety. Reporting works to document incidents, enabling organizations to track potential issues in the workplace. And it works to comply with regulations and insurance requirements. Effective reporting procedures establish protocols for handling an incident as well as communication chains inside and out of the organization. In this Impact series installment, Jenny Fuller explores reporting an accident.
Safety Principles Impact: Accident Investigation	Accident investigation is a process for documenting incidents that can yield insight useful to accident prevention planning. By asking specific questions about the circumstances surrounding an incident, investigators can identify risks that may be reduced or eliminated altogether. But investigation cannot be delayed. It must happen immediately in order to capture the most accurate and timely data. In this Impact series installment, Jenny Fuller explores accident investigation.
Safety Principles Impact: Stop Work Authority	When a dangerous situation suddenly arises in the workplace, employees must know how to respond. Stop Work Authority programs provide a means for employees to protect themselves and others. In this Impact series installment, Jenny Fuller explores Stop Work Authority.
OSHA Recordkeeping Impact: Required	OSHA has very specific requirements when it comes to reporting severe injuries and fatalities in the workplace. In this Impact series installment, Jenny Fuller explores required reporting.
Tailoring Your Negotiating Approach	Negotiating successfully with someone means understanding their motivations, interests, and unique personalities, leveraging your insight into an approach that brings them on board with you. In this Challenge exercise, you'll take the role of a program manager negotiating a raise with your boss. It's high stakes for you, demanding that you focus on the issue and on your negotiating counterpart â€" not your own position.
Adobe Dreamweaver CC 2015 Browsers and HTML	Adobe Dreamweaver CC 2015 is a powerful web development application that can be used to develop single web pages or to create and manage entire web sites. In this course, you will learn about browsers and HTML tags in Adobe Dreamweaver CC 2015, including working with browsers, and using basic HTML tags.
Adobe Edge Animate CC: Exploring the Interface	Edge Animate is a powerful animation tool used to deliver interactivity and animation. This course provides an overview of the user interface layout of Adobe Edge Animate CC, the workspace, and associated elements. It also provides an introduction to creating animations and using artwork. This course is one of a series in the SkillSoft learning path that covers Adobe Edge Animate CC.
Adobe Illustrator CC 2015 Introduction and New Features	Adobe Illustrator sets the standard for design and illustration, and it's used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs such as logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. In this course, you will be introduced to performing basic tasks in Adobe Illustrator CC 2015 such as working with toolbars, tabs, palettes, and preferences. You will also learn about new features including Creative Cloud Charts, Illustrator Libraries, Stock Art, and linked assets.
Adobe Illustrator CC 2015 Fundamentals	Adobe Illustrator sets the standard for design and illustration, and it's used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs such as logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. In this course, you will be introduced to performing basic tasks in Adobe Illustrator CC 2015 such as creating new documents, working with files, using templates, navigating, and configuring workspaces.
Drawing in Adobe Illustrator CC 2015	Adobe Illustrator sets the standard for design and illustration, and it is used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs like logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. In this course, you will learn about essential Adobe Illustrator CC 2015 tools including the paintbrush, pencil, magic wand, and pen. You will also learn fundamental techniques such as drawing, selecting, setting fill and stroke, and using colors.

Course	Description
Adobe Illustrator CC 2015 Gradients and Bitmap Images	Adobe Illustrator sets the standard for design and illustration, and it's used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs like logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. This course introduces learners on how to work with Bitmap images and create unique effects such as drop shadows, gradients and blending objects.
Adobe InDesign CC 2015 Fundamentals	Adobe InDesign CC 2015 is a professional-grade desktop publishing application, used by graphics professionals and novices alike to create page layouts. Integrated with Adobe's other two flagship applications â€" Photoshop and Illustrator â€" InDesign can be used to create small documents such as brochures and newsletters, or very large publications such as books and manuals. In this course, you will be introduced to basic tools and features including new features, the toolbars and tabs, navigating and configuring workspaces, and applying color and stroke.
Adobe Photoshop CC 2015 Basics	This course introduces the navigational features of Adobe Photoshop CC 2015 including the toolbars and tabs, workspaces, and rulers and guides. You'll learn about using basic tools and some of the new features.
Adobe Photoshop CC 2015: File Types and Color Editing	This course introduces options for working with files, navigation, and color in Adobe Photoshop CC 2015. You'll learn essential actions for manipulating images such as gradients, duotones, color replacement, and the Mixer Brush tool.
Adobe Premiere Pro CC 2015 Fundamentals	Adobe Premiere Pro CC 2015 is a professional-grade video editing application that can be used to create studio-quality videos. From very short clips like commercials to long videos like feature-length movies, Premiere Pro is up to the task. In this course, you will learn about Adobe Premiere Pro CC 2015, including the interface and new features.
Adobe Premiere Pro CC 2015 Panels and Effects	Adobe Premiere Pro CC 2015 is a professional-grade video editing application that can be used to create studio-quality videos. From very short clips such as commercials to long videos like feature-length movies, Premiere Pro is up to the task. In this course, you will be introduced to the multiple panels and how to add effects.
Adobe Premiere Pro CC 2015 Movies and Application Extensibility	Adobe Premiere Pro CC 2015 is a professional-grade video editing application that can be used to create studio-quality videos. From very short clips such as commercials to long videos such as feature-length movies, Premiere Pro is up to the task. In this course, you will learn about the basics of movie creation and application extensibility.
Adobe Premiere Elements 13 Essentials	This course introduces you to the Organizer Interface in Adobe Premiere Elements 13, including navigating and adding files, and applying calendar elements. In this course, you will learn about the timeline, including how to add movies and edit clips. You'll also learn ways you can manipulate movie files, including adding text and applying effects.
TestPrep 210-060 Implementing Cisco Collaboration Devices (CICD)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 210-065 Implementing Cisco Video Network Devices (CICD)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Advanced Architecting on Amazon Web Services: Costing	One of the key advantages of cloud systems is cost and the economies of scale gained from using the world's largest cloud platform. The cloud cost model, however, is different from traditional IT, and a deep knowledge of costing is required to make the most fiscally efficient systems possible. This course covers the basics of Amazon pricing and billing, and goes on to extrapolate the relative economy of various cloud architectures. This course is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Advanced Architecting on Amazon Web Services: Deployment Management	Deployment in elastic, automated cloud systems is significantly different from the traditional methods of on-site IT. Automation is the key to cloud deployment and meeting the cloud promises of elasticity, scalability, and fault tolerance. This course looks at managing deployment cycles through the life cycle of an application, and various architectures to support the stages. It also looks at the extensive range of cloud deployment services available through Amazon Web Services. This course is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Advanced Architecting on Amazon Web Services: Data Storage Architecture	Data storage on Amazon Web Services can be managed at the object or block level, and selecting the right storage architecture is key to getting the underpinnings of your cloud services right. This course goes in-depth on EBS and S3 to show how they support various application architectures. This course is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Advanced Architecting on Amazon Web Services: Security Architecture	Security is paramount for connected applications, and this is never more true than in the cloud. Amazon provides comprehensive advice and information about their services and how to protect and harden them. And this course guides you through that information. Data at rest and in transit are secured systematically, service-by-service. This course is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Advanced Architecting on Amazon Web Services: Scalability and Elasticity	Scalability and elasticity are the two promises of cloud computing that elevate it above traditional IT and provide the potential for the global scale and cost-effective applications that you are used to. This course covers scaling and elasticity in multitier architectures and for different AWS Services. It is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Cloud System Architecture â€" Concepts and Design	Cloud services vary in size and complexity, and the deployed architecture impacts directly on service and data asset security. This course describes and explores aspects of cloud computing architectural design, and defines associated cloud systems and cloud components. In addition to Cloud Reference Architecture, the course outlines definitions and roles, computing characteristics, and cloud deployment models. In this course, you will learn about cloud security, cloud networks, virtualization within the cloud system, data encryption and aspects of cloud interoperability, trusted cloud services, cloud system management, and operational considerations. The course covers the essential topics for the ICS2's Certified Cloud Security Professional examination â€" Domain 1 requirements.
Cloud Service â€" Legal and Compliance	Alongside the development and uptake of cloud services, comes a developing regulatory framework that compels cloud service providers to protect data and to secure the privacy, integrity, and confidentiality of client data and data assets. This course covers various topics associated with legal and compliance issues with cloud services which are governed within a regulatory framework. The course addresses investigative measures and techniques associated with crime investigation, including eDiscovery and forensic data management. The course also touches on privacy, auditing, and reporting as it applies to cloud technology and services including SAS, SSAE, and ISAE. In this course, you will also learn about risk management, outsourcing, and vendor\provider assessment with particular attention to certifications, access provider audit data, and data ownership issues. The course covers the essential topics for the ICS2's Certified Cloud Security Professional examination â€" Domain 6 requirements.
Configuring Citrix XenDesktop 7.6 Components	In this course, you'll learn to configure your XenDesktop Environment including Citrix Receiver and NetScaler. You'll also take a detailed look at creating Citrix policies and Group Policies using different management tools. This course also covers various configuration tasks you'll need to be familiar with when working with the XenDesktop Catalog and when publishing applications. This course is one of a series in the SkillSoft learning path that covers objectives for the 1Y0-200 certification exam Managing Citrix XenDesktop 7 Solutions.
TestPrep 98-369 Cloud Fundamentals	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Deploying Applications and Software Updates	In this course, you will learn how to create and deploy application packages as well as how to keep devices. This course introduces you to tools to create, deploy, and monitor applications packages. It also shows you how to implement patch and security management using SCCM 2012 R2.
SCCM 2012 R2 Boundaries and Security Considerations	In this course, you will learn how to create and manage SCCM Boundary Groups for segmenting your network for management. You will also learn about security considerations for connecting clients to SCCM, overall data integrity, and administrative delegation. This course provides additional information on using boundary groups to organize devices on the network for SCCM management using Boundary groups. It also covers security considerations for communicating with clients and other endpoints in the SCCM infrastructure as well as role-based administrative delegation.
Managing Inventory and Reporting	In this course, you will learn how to manage mobile device clients leveraging Intune. This will include knowledge of inventory hardware as well as installed applications and leverage reporting features. In addition, this course will introduce you to complex query creation for use in User and Device Collections. This course demonstrates how to use data collected using Windows Intune and the SCCM client for mobile device management and to view valuable hardware and software inventory information. This information can be included in reports generated directly within SCCM. Finally, this course covers how to create complex queries to granularly target users and devices for Collections.
Operating Hadoop Clusters	Hadoop is a framework written in Java for running applications on large clusters of commodity hardware. In this course we will examine many of the HDFS administration and operational processes required to operate and maintain a Hadoop cluster. We will take a look at how to balance a Hadoop cluster, manage jobs, and perform backup and recovery for HDFS.
Capacity Management for Hadoop Clusters	Apache Hadoop is an open source software framework for storage and large scale processing of data-sets on clusters of commodity hardware. This course focuses on the capacity management of Hadoop clusters. You will be introduced to the concepts of resource management through scheduling. You will learn how to use the Fair Scheduler Tool, and how to plan for scaling.
Performance Tuning of Hadoop Clusters	The Apache Hadoop software library is a framework that allows for the distributed processing of large datasets across clusters of computers using a simple programming model. Hadoop can scale up from single servers to thousands of machines, each offering local computation and storage. This course will focus on performance tuning of the Hadoop cluster. We will examine best practices and recommendations for performance tuning of the operating system, memory, HDFS, YARN and MapReduce.
Spark Streaming	Spark Streaming leverages Spark's language-integrated API to perform streaming analytics. This design enables the same set of application code written for batch processing to join streams against historical data, or run ad-hoc queries on stream state. In this course, you will learn how to work with different input streams, perform transformations on streams, and tune up performance.
Big Data Engineering Perspectives	Big data is a term for data sets so large that traditional data processing applications can not be used to perform any sort of analysis. It is often semi structured or unstructured in form. There are a number of unique challenges that arise when companies begin to use big data. The least of which are the engineering concerns. This course will introduce some of those engineering challenges and describe how some companies have come up with solutions.
Splunk Fundamentals	Modern networks consist of multiple services, each generating independent streams of log data. Traditionally, log data resides in separate files and finding specific events can be difficult - detecting patterns is near impossible. Splunk provides a means to collect and store this log data in a collated and redundant data store, facilitating searching and visualization. In this course, you will learn how to install and configure Splunk on multiple platforms. You'll also learn various ways to get your data into Splunk.
Using Your Data with Splunk	After Splunk has collected data from numerous services, it is useful to have a means to search through it as well as create reports from it. Splunk provides services to allow searching log data and creating data models. Splunk can also generate reports, graphs, and dashboards to easily get an overview of your log data. In this course, you will learn how to search your data in Splunk. You'll also learn how to generate reports and create dashboards visualize your data.
Splunk Administration	Splunk is a complex system of multiple interoperating components, as such it offers a great deal of configuration options. Other Splunk administrative tasks include creating and managing alerts and planning server capacity. In this course, you will learn how to configure Splunk to meet your requirements. You'll also learn how to set up alerts, plan server capacity, and manage Splunk servers.
Splunk Visualizations and Dashboards	Viewing individual log items can be useful when troubleshooting specific issues, but less so to see overall trends. When monitoring performance, it is helpful to be able to view service performance at a glance. In this course, you will learn how to create and configure charts to visualize data and provide meaningful drilldown capabilities. You'll also learn how to build customized dashboards to facilitate at-a-glance performance monitoring.
Indexers, Clusters, and Advanced Search	In large server deployments, it may be desirable to achieve a higher level of logging throughput by utilizing multiple indexers in clusters. Depending on data retention requirements, backing up indexes and data may be of importance, Splunk provides services to facilitate this. In this course, you will learn how to scale a Splunk implementation using index clusters. You'll also learn how to back up and restore Splunk indexes and data as well as advanced search methods.
Internet of Things Applications	The Internet of Things integrates a large number of technologies both new and old. It promises to deliver unprecedented awareness of environments and processes. The Internet of Things will allow granular control and automation of tasks. In this course, you will learn about the features and abilities of the Internet of Things. You'll also learn about the software and operating systems available to implement it.
Internet of Things Hardware	The Internet of Things integrates a large number of technologies both new and old. It promises to deliver unprecedented awareness of environments and processes. The Internet of Things will allow granular control and automation of tasks. In this course, you will learn about some of the hardware available to develop for the IoT. You'll also learn the basics of programming this hardware.
Juniper Networks Junos Essentials: Networking Fundamentals	Configuring Junos OS devices requires a thorough understanding of networking fundamentals, and this course is a primer in that understanding. It covers the fundamentals of networking, including the OSI network model, the routing and switching functions, and data-link and IP addressing. This course is one of a series of Skillsoft courses that cover the objectives for Juniper Networks exam JN0-102. This exam completes the requirement for the certification Juniper Networks Certified Associate - Junos (JNCIA-Junos).
Juniper Networks Junos Essentials: Junos OS Fundamentals	Juniper Networks Junos OS differentiates itself from other network device operating systems by being fully modular and focusing on separation of control and data plane. These combine to give Junos OS its high-performance and reliability characteristics. This course covers the architecture of Junos OS and how to get started with configuration. This course is one of a series of Skillsoft courses that cover the objectives for Juniper Networks exam JN0-102. This exam completes the requirement for the certification Juniper Networks Certified Associate - Junos (JNCIA-Junos).
Juniper Networks Junos Essentials: Configuration Basics	Junos OS is a large and complex operating system, and configuration is nuanced. Proper configuration requires a holistic understanding of the OS and the devices on which it runs. This course is a primer in Junos OS device configuration, from initial power-on to managing multiple configurations. This course is one of a series of Skillsoft courses that cover the objectives for Juniper Networks exam JN0-102. This exam completes the requirement for the certification Juniper Networks Certified Associate - Junos (JNCIA-Junos).
Juniper Networks Junos Essentials: Monitoring and Maintenance	The key to a smooth-running network is good monitoring and maintenance tools and processes, and Junos OS comes with lots of functionality in that area. This course covers basic command line tools for getting the status of devices and networks, and troubleshooting specific problems. It also covers maintenance tasks at system startup and shutdown, and managing Junos OS versions. This course is one of a series of Skillsoft courses that cover the objectives for Juniper Networks exam JN0-102. This exam completes the requirement for the certification Juniper Networks Certified Associate - Junos (JNCIA-Junos).
Juniper Networks Junos Essentials: Routing Fundamentals	Packet forwarding and routing are the fundamental functions of layer 3 network devices, and Junos OS includes sophisticated routing functionality. This course covers layer 3 basics, routing and packet forwarding, routing methodologies, and how to configure basic routing in Junos OS. This course is one of a series of Skillsoft courses that cover the objectives for Juniper Networks exam JN0-102. This exam completes the requirement for the certification Juniper Networks Certified Associate - Junos (JNCIA-Junos).

Course	Description
Juniper Networks Junos Essentials: Routing Policy & Firewall Filters	A robust routing policy has a number of positive effects on your network, from lowering utilization and improving responsiveness, to assisting with security. Security is a primary issue for modern networks, and Junos OS routing devices come with sophisticated firewall filter functionality. This course covers Junos OS routing devices routing policy concepts and configuration, and firewall filter concepts and configuration to help you in configuring a robust, performant, and secure network. This course is one of a series of Skillsoft courses that cover the objectives for Juniper Networks exam JN0-102. This exam completes the requirement for the certification Juniper Networks Certified Associate - Junos (JNCIA-Junos).
Retail Safety	The retail sector is one of the largest employers in the world. In the US, the industry is so important that the Retail Sales Index is considered a lead indicator for the country's economy. From brick-and-mortar stores to online sales to large service centers, modern retailers occupy a wide range of business premises. With so many people working in the industry, in a wide variety of workplaces, health and safety in the workplace must be a priority for employers and employees.
Flammable Liquids	This course is intended for employees who work in environments where flammable liquids are used and stored. It covers the OSHA and NFPA standards for safe handling of flammable liquids, as well as best practices for storing and working safely around flammable liquids.
Electrical Safety â€" Canada	An awareness-level course that discusses how to work safely with electricity. It focuses on specific electrical hazards found in the workplace and methods to minimize or eliminate those hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice standards.
Machine Guarding â€" Canada	This course will provide definitions, general requirements, and requirements for different kinds of machinery concerning the Machine Guarding Program. It will provide general discussion of various guarding methods, as well as defining terms associated with machine guarding. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice standards.
Accident Investigation â€" Canada	This course will provide an overview of accident investigation and reporting procedures. The accident investigation and reporting process helps to provide a safe working environment by determining the causes of an accident, then reporting them so that accidents can be prevented in the future. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines.
Workplace Inspections â€" Canada	Employers have a responsibility to maintain safe working conditions for their employees and to comply with the government health and safety standards that are applicable to their establishments. They must also ensure that employees have and use personal protective equipment when required for safety and health as they do their jobs. When employees stay whole and healthy, businesses also benefit. They experience lower workers' compensation insurance costs, decreased payout for return-to-work programs, fewer faulty products, and increased productivity. One of the key ways that employers can maintain safe and compliant working conditions is to conduct regular and thorough workplace inspections.
Laboratory Safety â€" Canada	This overview course is designed for employees who work in an industrial, clinical, or academic laboratory setting. It will serve to educate the laboratory employee to diverse safety and health concerns related to their job. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines.
Hot Work Permits â€" Canada	Hot work can be defined as any operation such as brazing, cutting, welding, grinding, soldering, or torching that can cause sparks or flames. While such work is necessary, the hazards associated can be minimized through an effective hot work permit program. This 30-minute course provides an overview of a best practice hot work permit program, including the permit process, roles and responsibilities, and controls used to minimize the risk of fire. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice standards and guidelines. Learner objectives for this course are to identify key elements of a hot work permit program, describe the primary roles and responsibilities of key personnel involved in a hot work permit program, and recall controls used to minimize the risk of fire and injury during hot work operations.
Fire Safety and Prevention â€" Canada	This course addresses how to prevent fires and recognize fire hazards. It will also discuss what actions to take in the event of a fire, including the proper use of portable fire extinguishers. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines.
Hazardous Materials in the Workplace â€" Canada	This course discusses proper handling of chemicals in the workplace and actions that can be taken to protect the workers, the public, and the environment. It also covers the roles and responsibilities of those responding to events involving hazardous materials. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Emergency and Disaster Preparedness â€" Canada	This course was designed and developed to provide instruction on emergency response, safety, reporting, and evacuation of company facilities and work areas in the event of a natural disaster, fire, bomb threat, or other emergency. The procedures contained in this training should be followed unless otherwise directed by your employer, police, or fire department officials. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice standards. Learner objectives are to discuss the purpose and scope of an emergency response plan, describe the purpose and scope of an emergency evacuation plan, recall the actions to take in specific emergency situations, describe the purpose and scope of a workplace violence prevention plan, and identify specific actions to take in the event of a bomb threat.
Business Travel Safety and Security	This course will help business travelers reduce the risks to their person and property while traveling for work. It provides guidelines on how to take precautionary and evasive measures to avoid becoming a victim of crime in various environments frequented by travelers, including airports, hotels, and driving in a car, and when out and about in a new location. It also provides advice on what a business traveler should do in the aftermath of a crime.
Basic Programming in Force.com	Since Force.com is so popular, an in-depth knowledge of how to create Force.com applications is essential for any application developer. In this course, you will learn the fundamentals of Force.com programming. You will also learn the important components of Force.com applications and how Force.com handles user input and data.
Intermediate Programming in Force.com	Since Force.com is so popular, an in-depth knowledge of how to create Force.com applications is essential for any application developer. In this course, you will learn the techniques for designing and programming Force.com applications. You will also learn the architecture of Force.com and the basics of the Apex programming language.
Business Analysis Competencies: Personal Skills	Business analysts require a unique combination of competencies to successfully perform their work. In this course, you'll learn about underlying competencies, including analytical thinking and problem solving, interaction skills, and communication skills as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) v3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis Competencies: Professional Effectiveness	Business analysts require strong business knowledge and professional skills to be effective in their roles. In this course, you'll learn about competencies fundamental to business analysis, including behavioral characteristics, business knowledge, and understanding of tools and technology as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) v3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Business Analysis Perspectives	To be effective in any context, business analysts must be knowledgeable of the characteristics, required competencies, methodologies, and knowledge area implications when operating in a single or any combination of business analysis perspectives. In this course, you'll learn about the characteristics of business analysis perspectives â€" namely agile, business intelligence, information technology, business architecture, and business process management as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Analytical Techniques Used for Business Analysis	Business analysts must use analysis tools and models to assist with scoping and planning, supporting business analysis, and decision making. In this course, you'll learn about a number of business analysis tools, models, and activities as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3.0 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Activities and Tools Used for Business Analysis	Business analysts must analyze and synthesize vast amounts of information, so having the ability to use a broad range of tools and techniques is a key requirement. Group activities can enable knowledge sharing, while various other techniques support decision making and business analysis. In this course, you'll learn about a number of business analysis tools, models, and activities as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) â€" Version 3.0 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Documentation and Criteria Used for Business Analysis	Business analysts must develop a repository of common language to facilitate communication and strategically align activities and goals. In this course, you'll learn about a number of business analysis techniques included in the categories of documentation, business and user cases, and setting metrics and criteria as prescribed in A Guide to the Business Analysis Body of KnowledgeÂ® (BABOKÂ® Guide) v3 by the International Institute of Business Analysis (IIBAÂ®). This course will assist in preparing the learner for the IIBAÂ®'s Certified Business Analysis Professionalâ„¢ (CBAPÂ®) certification exam. IIBAÂ®, the IIBAÂ® logo, BABOKÂ®, and Business Analysis Body of KnowledgeÂ® are registered trademarks owned by International Institute of Business Analysis.
Programming Apps with Java SE 7	Practical application of programming concepts is crucial to developing skills in a particular programming language. This course demonstrates how to use the features of Java SE 7 to create business applications. It will cover using the basic building blocks of classes, objects, methods, and data types, as well as operators and flow control to create basic but useful applications. It will also cover how to use features such as inheritance, generics, and threading to enhance code and build robust apps. It will also cover how to use Java I/O and JDBC to build data-driven applications. Finally, you'll learn how to build and incorporate a user interface and work with Java applets. This course can be used as part of preparation for the Oracle exam 1Z0-803, Java SE 7 Programmer I, to obtain the Oracle Certified Associate Java SE 7 Programmer certification, and for the Oracle exam 1Z0-804, Java SE 7 Programmer II, to obtain the Oracle Certified Professional Java SE 7 Programmer certification.
Programming Apps with Java SE 6	Practical application of programming concepts is crucial to developing skills in a particular programming language. This course demonstrates how to use the features of Java SE 6 to create business applications. It will cover using the basic building blocks of classes, objects, methods, and data types, as well as operators and flow control to create basic but useful applications. This course will also cover how to use features such as inheritance, generics, and threading to enhance code and build robust apps. It will also cover how to use Java I/O and Java database connectivity or JDBC to build data-driven applications. Finally, you'll learn how to build and incorporate a user interface and work with Java applets. This course can be used as part of the preparation for the Oracle exam 1Z0-851, Java SE 6 Programmer Certified Professional, to obtain the Oracle Certified Professional Java SE 6 Programmer certification.
PCI Compliance	The Payment Card Industry (PCI) is booming, with people using credit and debit cards with increasing frequency for all sorts of transactions, every day. The prevalence of credit and debit card usage creates opportunities for fraud, theft, privacy violations, and counterfeiting.
Promoting a Substance-free Workplace	Substance abuse is a pervasive problem in society, so it's no surprise that it carries over into the workplace. According to statistics compiled by the National Institute on Drug Abuse, over 75% of all adult illicit drug users are employed, as are most binge and heavy alcohol users. Substance abusers are more likely to be late or absent from work, change jobs frequently, be less productive, and be involved in workplace accidents. They also tend to have other personal problems outside of work as a result of the substance abuse, which further impairs their ability to concentrate on their work. Successful substance-free workplace programs can result in decreased absenteeism, fewer accidents, less downtime, reduced turnover, and fewer incidents of theft, as well as improving morale and productivity for all employees. This course is designed to provide employees and supervisors with an understanding of the benefits of a substance-free work environment, to help them understand the impact substances have in the workplace and recognize signs of employee substance abuse.
Record Retention	Are you familiar with your company's record retention policy? Do you know what records you should keep, and for how long? And what about disposing of sensitive documents? Following your company's record retention policy supports the organization's internal documentation and accounting systems and addresses compliance requirements in state and federal law. This course will discuss how to use the policy to identify which records must be retained, the different formats in which records may be stored, and common techniques for record disposal.
Preventing Fraud and Abuse	Private investors and business entities lose millions of dollars every year to fraudulent schemes, such as embezzlement, false insurance claims, investment scams, and double billing. Through stepped-up government regulations and tough anti-fraud laws, the business world has come a long way in cracking down on fraud. However, there is still great need for employees at all levels of business to be vigilant in their efforts to detect, report, and prevent fraud and abuse of all kinds. This course provides an introduction to the concepts surrounding fraud and abuse in the business setting. You will learn what constitutes fraud and abuse, what the difference is between them, and your responsibilities as an employee to prevent fraud and abuse in your workplace.
Achieve Your Objectives through Effective Delegation	Have you ever heard one of these phrases: 'If you want to get on in an organization, never make yourself indispensable, make yourself redundant!', or maybe 'If you want something done give it to a busy team!' or perhaps 'Donâ€™t work hard, work smart!' What all these are really saying is the same thing -Â learn to delegate effectively.Â If you can give the right tasks in the right way to your team, you will motivate them, grow their ability to act alone, and free yourself and your time for challenging tasks and roles fulfilling everyoneâ€™s objectives. In this course, youâ€™ll first learn about the impact of different delegation styles. Youâ€™ll then be introduced to principles you can use to help you decide what to delegate and to whom.
The Delegation Process	Everyone has had the experience of asking someone to do something and then not getting back any results or getting back unexpected or poor quality deliveries. Â Usually the root cause of this is that the task giver failed to make clear what was needed, by whom, by when, and how, as well as allowing insufficient time. In this course, youâ€™ll be introduced to the factors you need to consider when planning a delegation so that you can convey these to the delegate. Youâ€™ll be given guidelines on what to communicate and how. Youâ€™ll also learn about the importance of being clear about the level of authority you are delegating and of making sure you inform others who need to know that the delegate is working on the task with your backing.
Successful Delegation: Supervise and Encourage	'We all get the results we deserve' is especially true when it comes to following up on tasks after delegation. Have you ever received a request to do something from someone and never heard another thing until they complain that you are overdue or that the results are not what they expected?Â Supervision at the right level â€" avoiding the equal temptations to either micromanage or to ignore the delegate's activities â€" is critical to assuring a good result. Giving the right coaching, encouragement and support to the delegate, plus seeking feedback and eliciting questions from the assignee are skills to develop for best results.Â And remember, you haveÂ responsibility for execution no matter what happens. In this course, you'll learn how to give supervision and feedback to ensure that your delegates actually deliver what you want and when you expect. You'll find out how to set checkpoints and make sure the delegate gets the support and coaching theyÂ need to be effective.Â Finally, you'll discover constructive ways to respond when things go wrong and how to handle failed deliveries without demotivating the delegate.
Use Delegation to Develop Your Team	Suppose your team is functioning well and delegation is working for you, so that you are getting the results you need.Â How do you take yourself and your team to the next level?Â How can you increase the level of responsibility without loss of quality?Â Can you free even more time for your own career development? In this course, youâ€™ll learn how to improve your delegation skills by taking account of the development needs of your team. Youâ€™ll learn to recognize the six different levels of authority and responsibility that can assigned in a delegation and how these can be used to further the development of the team through thoughtful delegation.

Course	Description
Mentoring 220-901 CompTIA A+	Skillsoft Mentors are available to help students with their studies for exam 220-901 CompTIA A+. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Mentoring 220-902 CompTIA A+	Skillsoft Mentors are available to help students with their studies for exam 220-902 CompTIA A+. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Introduction to Windows 10	Windows 10 is an operating system built for today's needs â€" addressing the current expectations of familiarity, communication, security, reliability, performance, and support of more devices. This course reveals the Windows 10 story and explores the Windows 10 interface â€" a blend of contemporary and classic features. The course also discusses the Windows 10 editions and Windows as a Service. o This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Deploy Windows 10 with New and Traditional Tools	Deployment is often expensive. Windows 10 offers new approaches through upgrading or provisioning with the potential of dramatically reducing costs while speeding up adoption. In this course, we explore installation and deployment scenarios for current and new devices; for example, in-place upgrades, wipe-and-load installs, configuring native VHD boot, or provisioning new devices using the WICD tool. You will also dive deep into the core deployment concepts and tools such as WIM files, DISM, ADK, MDT, and other essential utilities. And you will learn about the boot process and Windows To Go. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Configure Devices and Disks in Windows 10	Windows 10 supports a range of new and old hardware technologies including USB 3.1, Miracast, AllJoyn, DirectX12, and software defined storage. Learn how the Universal Driver model is changing how Windows supports hardware. Learn also about the new print driver model and Storage Spaces. In this course, we explore the supported hardware technologies of Windows 10, configuring drivers and disks, and managing Storage Spaces. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Configure Networking and Remote Connections in Windows 10	Configure devices for IPv4, IPv6, DHCP, and DNS for network communication. Support LAN, WAN, WiFi, and WWAN networks for on-site and remote connections. In this course, we explore networking fundamentals as they are integral to Windows 10 systems. You learn how to configure devices for network communication as well as support local and remote connections. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Maintain Windows 10 and Configure Virtualization Technologies in Windows 10	It's important to monitor Windows 10 systems so that you can optimize performance and security. And Windows 10 becomes more agile and economic with virtualization technologies. In this course, we cover how to maintain, optimize, and recover Windows 10 systems. We manage power settings and File History. And we configure Hyper-V and virtual environments. This Skillsoft learning path covers the objectives for the Microsoft exam, Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Configure Authentication and Secure Identities for Windows 10	Passwords are insufficient to protect systems today. Windows 10 adds new security features such as Windows Hello, virtual SmartCards, and Microsoft Passport that seek to overcome the limitations of traditional passwords. Windows 10 also introduces a new way to authenticate users with Azure-based accounts. In this course, we explore the details of how login works as well as key concepts behind authentication including domain accounts, Kerberos, and Azure AD. In addition, we explore the new security technologies in Windows 10 and learn how to implement Windows Hello and virtual SmartCards. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Data Protection in Windows 10	Understand the nuances of applying permissions in order to protect data. Use various methods to encrypt files and devices, keeping user data secure even if the device is lost or stolen. In this course, we explore data protection methods for local and enterprise systems. We examine in-depth the effects of layering NTFS permissions. We learn how to use EFS, BitLocker, and MBAM to encrypt files and devices. We will also be introduced to the new Enterprise Data Protection which provides secure containers for mobile devices and BYOD scenarios. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Install and Manage Windows 10 Applications and Universal Windows Apps	Windows 10 introduces a whole new type of application based on its Universal Windows Platform (UWP). Additionally, Windows 10 comes with changes to the Windows Store. And Microsoft Edge supports modern demands for Web access. This course examines the new universal application model and the new Windows Store. You will learn about new tools and approaches to managing Windows applications, and you will learn how to support traditional desktop applications (Win32) on Windows 10. This includes learning about the application technologies available to overcome compatibility and support costs such as App-V, Intune, Azure RemoteApp, ACT, and more. And we compare the Microsoft Edge web browser with Internet Explorer 11. This Skillsoft learning path covers the objectives for the Microsoft exam, Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Manage Windows 10 Devices	Whether through physical access, remote administration, or cloud-based tools like Intune, you need to be able to manage client devices â€" be they corporate-owned, BYOD, domain members, cloud-connected, Windows, non-Windows, etc. In this course, we explore various tools and methods to manage client devices, with a special focus on Windows 10. This includes multiple methods including Group Policy, MDOP, Intune, O365 MDM, PowerShell, RSAT, WSUS, and more. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Oracle Database 12c - Introduction to SQL: Working with SET Operators and DDL	A key component of a Relational Database is the objects that are created, modified and deleted within the database. This course covers two topics. In the first topic, the course will teach you how to use SET operators in a SQL statement. In the second topic, you will learn how to create a table and work with the various constraints associated with a table. This course is one of a series in the Skillsoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1Z0-061). The exam is part of the Oracle Certified Associate.
Oracle 12c Performance Tuning: Tuning Problem SQL Statements	SQL is at the heart of any relational database management system, and optimizing SQL typically provides the largest performance gains in real-world situations. This course will discuss the Cost-Based Optimizer, which is key in determining the execution path of a SQL statement. You will also learn how to optimize the retrieval of data. This course is one of a series in the SkillSoft learning path that covers the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1Z0-064).
Oracle Database 12c RAC Administration: Installing, Configuring, and Patching	Installing, upgrading, and patching are essential tasks for any DBA, ensuring outages due to software problems are kept to a minimum. This course provide the skills to implement and maintain Oracle RAC software in a production environment and also covers creating a RAC database and understanding all the options available when creating a RAC database. The course also covers converting a single-instance database to RAC and the administration of Oracle RAC One Node. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Stakeholder-driven Process Improvement	Figuring out what needs fixing is the easy part. When youâ€™re launching a major process improvement in your organization, the greatest challenges lie in getting buy-in, and actually sustaining the improvement. In this course, youâ€™ll learn universal evergreen methods that position your process improvement effort to succeed while building excitement and enthusiasm for the changes. Youâ€™ll discover simple - yet powerful - collaborative methods to define the problem, gather voice-of-stakeholder data, and pinpoint what to improve. Youâ€™ll also learn methods for measuring baselines and targeting specific improvements to achieve the future state you envision for the process.
Implementing and Sustaining Process Improvement	At the end of the day, we must be effective in carrying out our process improvement or there will be no return on the investment. In this course, you'll move into the implementation of process improvement, with time-proven methods for planning, implementing, and sustaining your efforts. You'll learn how to assess the pitfalls and barriers that can slow you down, mitigate the risks, and communicate strategically with different types of stakeholders. You'll learn how to keep the improvement on track using key principles of project management, and you'll discover tactics for embedding the improvement deep in the operations of your organization.
Designing, Conducting, and Analyzing Experiments in Six Sigma	Six Sigma teams design and conduct experiments to investigate the relationships between input variables and response variables. By controlling and changing the input variables and observing the effects on the response variables, a Six Sigma team gains a deep understanding of these relationships. After determining what and how much needs to be changed to meet the desired improvement, teams generate solution ideas based on the best combination of input variables' settings to optimize the response, and then the ideas are tested, implemented, and validated. Later in the Control stage, efforts are made to keep the improved processes, products, or services under statistical control and to retain the gains.
Statistical Process Control (SPC) and Control Charts in Six Sigma	Ensuring a process is in control is critical to any Six Sigma project, but how do you determine with certainty if a process is on track or requires improvement? Where do you find the 'proof' or solid facts that a process is out of control and requires intervention? By applying statistical process control (SPC) methods, a Six Sigma team can identify and control variation in a process.
Common DFSS Methodologies, Design for X, and Robust Designs	Design for Six Sigma (DFSS) is the methodology associated with the design of a process, product, or service, which results in Six Sigma output that satisfies both the external customer and internal business requirements. DFSS is an innovative strategy for the design or redesign of a process, product, or service from the ground up. This course examines several of the common methodologies utilized in Design for Six Sigma (DFSS), beginning with the two common counterparts to the DMAIC methodology: DMADV and DMADOV. Design for X is emerging as an important knowledge-based multifunctional approach to design that is aimed at particular prioritized process constraints, such as cost, manufacturability, testability, or maintainability. This course explores several constraints in more detail, offering strategies for achieving designs concentrated on the chosen criteria. Another recently developed approach, robust design, uses parameter and tolerance control to produce designs which will be reliable during manufacturing and while in use. This course will address the basic aims of parameter control, tolerance design, and statistical tolerancing. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.
Advanced PowerShell Desired State Configuration: Writing Custom Resources	Writing your own custom resources is one of the most important aspects of PowerShell Desired State Configuration. In this course you'll learn about different kinds of resources and about how to write, debug, deploy, and update your own custom Resources. This course is one of a series in the Skillsoft learning path that covers advanced PowerShell Desired State Configuration.
Strategic Alignment and Benefits Realization	As a project manager, your role is to ensure that each project starts out and remains in line with the company's strategic goals and delivers expected value. In this course, you'll learn how to analyze how your project will benefit the organization and bring value to stakeholders. You will learn how to develop the project charter with this goal in mind and to involve stakeholders in the process. Finally, you'll learn strategies for managing stakeholder expectations so that they remain in line with project goals and developments.
Quality Management for Continuous Improvement	Consistently providing high-quality products and services requires use of continuous process improvement initiatives and adherence to applicable industry standards. Using lessons learned in combination with continuous improvement initiatives creates a powerful feedback loop that support process improvement. Industry standards for quality and process improvement provide a benchmark for verifying the results. In this course, you'll learn about the tools and methodologies used for continuous quality improvement, such as Lean, Six Sigma, kanban, and value stream analysis. You'll also learn about international quality standards such as ISO, CMMIÂ®, BS, and IEEE. This course will assist in preparing the learner for the PMIÂ® certification exam and provide a foundational knowledge base reflecting the most up-to-date project management information so learners can effectively put principles to work at their own organizations.
Plan a Bulletproof Project	Once a project has been initiated â€" its purpose defined, a sponsor and stakeholders identified, deliverables described, requirements explained â€" it's time to get into more detailed planning. Drawing on all the information from the initiating phase, you must now define the work and resources required to meet objectives and complete the project. The plans you develop will help create the scope, cost, and schedule baselines to be used throughout the project.
Lead Your Project Like a Pro	There are three elements to a perfect project performance: a high performing team, high quality deliverables, and effective communication. To manage a successful project, you'll need a range of skills. You've got to communicate effectively, know how to measure performance in key areas, be able to build relationships with stakeholders to keep them engaged, and be skilled in managing conflicts that may arise.
Complete Your Project On-time and On-budget	As a project progresses, you must respond promptly to any changes, adjusting as necessary to meet new demands. Controlling a project means comparing actual performance with planned performance, analyzing variances, evaluating possible alternatives, and recommending appropriate corrective action as needed. In this course, you'll learn about some key aspects of controlling your project, including how to use compression techniques to control a schedule that's fallen behind, how to use some basic calculations to help in controlling costs, and how to respond appropriately to change requests that arise during a project. You'll also find out how to close your project effectively.
Agile Software Testing: Techniques and Tools	Agile approaches include the complementary techniques of test-driven development or TDD, acceptance test-driven development, and behavior-driven development. There are many agile techniques and artifacts, such as user stories, that are available to the agile tester. In this course, you'll learn about agile testing techniques and how techniques such as black box testing can be applied in agile projects. The course also covers management, tracking, communication, and configuration tools that are available to agile testers. This course is one of a series intended to align with the Agile Tester Certified Tester Foundations Level Extension Syllabus. The authors, Rex Black, Anders Claesson, Gerry Coleman, Bertrand Cornanguer, Istvan Forgacs, Alon Linetzki, Tilo Linz, Leo van der Aalst, Marie Walsh, and Stephan Weber, and the International Software Testing Qualifications Board (ISTQBÂ®) are the source and copyright owners of the syllabus. The course is intended to help learners prepare for the Agile Tester Foundation Extension certification (CTFL-AT) exam, which is provided by the Information Systems Examination Board or ISEB, a globally-recognized testing body providing software testing certification. Skillsoft makes no claim to any approval or endorsement of this course by any of the aforementioned parties or other third party.
Developing Basic Apple Watch Applications	Apple Watches allow the wearer to integrate rich applications into their everyday life. Since Apple Watches have become so popular, an in-depth knowledge of how to write Apple Watch applications is an in-demand skill for application developers. In this course, you will learn the fundamentals of writing an Apple Watch application. You will also learn the architecture of Apple Watch applications, a few navigation techniques, and how to design a user interface.
Developing Advanced Apple Watch Applications	Apple watches allow the wearer to integrate rich applications into their everyday life. Since Apple watches have become so popular, an in-depth knowledge of how to write Apple watch applications is an in-demand skill for application developers. In this course, you will learn to design and program applications for an Apple watch. You will also learn to use glances and notifications, and implement intermediate and advanced application features such as adding maps and pins.
Exploring the Basic Features of the Ionic Framework	The Ionic framework enables HTML and JavaScript developers to develop mobile apps and WebApp with mobile-friendly HTML, JS, and CSS components. In this course, you will learn the key features of the Ionic framework and the prerequisites for working with the Ionic framework. You will also learn layouting with Ionic CSS libraries and setting up the Ionic CLI.
Exploring the Advanced Features of the Ionic Framework	The Ionic framework enables HTML and JavaScript developers to develop mobile apps and WebApp with mobile-friendly HTML, JS, and CSS components. In this course, you will learn the Ionic JavaScript library basics, JavaScript layouting, and Ionic JavaScript navigation. You will also learn some advanced features of the Ionic JavaScript library and CLI.
PhoneGap: Exploring Basic Features	PhoneGap enables an HTML and JavaScript developer to develop and publish native apps for an array of mobile platforms. In this course, you will learn about the history, features, prerequisites, and installation of PhoneGap. You will also learn publishing an app through Phone Build and testing, debugging, and maintenance of the app published through PhoneGap.
PhoneGap: Exploring Advanced Features	PhoneGap enables an HTML and JavaScript developer to develop and publish native apps for an array of mobile platforms. In this course, you will learn to publish an app through command line interface; extend your app with hooks and plugins; and work with native API to access camera, accelerometer, geolocation, and host of other native features.

Course	Description
Software Testing Foundations: Testing throughout the Software Life Cycle	Software testing ensures that software is reliable and does the job it was designed to do. It's a crucial part of software development. In this course, you'll learn about testing and its objectives, and software testing principles and processes. The course also covers the psychology and ethics of testing, and testing throughout the software life cycle â€" test types for different software models, test levels, and test types. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the 'Syllabus'). The authors, Thomas Muller (chair) and Debra Friedenberg, and the International Software Testing Qualifications Board (ISTQBÂ®) are the source and copyright owners of the Syllabus. The course is intended to help learners prepare for the Foundation Certificate in Software Testing exam (BH0-010), which is provided by the Information Systems Examination Board (ISEB), a globally-recognized testing body providing software testing certification. SkillSoft makes no claim to any approval or endorsement of this course by any of the aforementioned parties or other third party.
Software Testing Foundations: Static, Dynamic, Black-box, and White-box Testing	There are many different software testing techniques, and it's important to choose the best approach for your project. In this course, you'll learn about static techniques, including reviews and static analysis by tools. You'll also learn about implementing dynamic testing techniques â€" identifying test conditions and designing and documenting test cases and procedures. This course also covers the various types of black-box and white-box software testing techniques. Finally, it covers experience-based techniques and the process of choosing a testing technique. This course is one of a series intended to align with the Certified Tester Foundations Level Syllabus (the 'Syllabus'). The authors, Thomas Muller (chair) and Debra Friedenberg, and the International Software Testing Qualifications Board (ISTQBÂ®) are the source and copyright owners of the Syllabus. The course is intended to help learners prepare for the Foundation Certificate in Software Testing exam (BH0-010), which is provided by the Information Systems Examination Board (ISEB), a globally-recognized testing body providing software testing certification. SkillSoft makes no claim to any approval or endorsement of this course by any of the aforementioned parties or other third party.
Genymotion: Testing Android Apps	Genymotion is an efficient Android emulator for testing Android applications. This course covers all main aspects from configuration, to deploying a test application to the Emulator.
Safety Principles Impact: Near Misses	Where an accident is an event that leads to an unwanted outcome, a near miss is an event that almost leads to an accident. As such, near misses provide valuable data for accident prevention. In this Impact series installment, Jenny Fuller explores near misses.
OSHA Recordkeeping Impact: Recordable Cases	Not every on-the-job incident must be reported to OSHA. However, knowing which injuries and illnesses are recordable is essential for every organization. In this Impact series installment, Jenny Fuller explores recordable cases.
OSHA Recordkeeping Impact: OSHA's Form 300	OSHA requires organizations to keep records of all incidents resulting in any injury or illness for which treatment is necessary beyond basic first aid. The OSHA Form 300 is a log of all work-related injuries or illnesses meeting this requirement. In this Impact series installment, Jenny Fuller explores OSHA's Form 300.
OSHA Recordkeeping Impact: OSHA's Form 300A	OSHA's Form 300A is a requirement for every organization covered by OSHA Part 1904 and must be completed yearly. In this Impact series installment, Jenny Fuller explores Form 300A and describes its use.
Asbestos â€" Cal/OSHA	This course will provide you with information about the serious health hazards associated with exposure to asbestos. It will also address where asbestos is commonly found, how it can potentially affect you, and what you need to do to protect yourself and others from exposure. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Office Safety â€" Cal/OSHA	This course is designed to raise awareness about hazards that may be encountered when working in office and administrative environments. The common hazards associated with work in offices are high noise levels, poor air quality, ergonomic hazards, and office accidents and injuries such as electric shock and falls. The content of this course is designed to comply with the applicable regulatory requirements. The learning objectives of the course are to identify office noise abatement and air quality and ventilation strategies; identify the signs and symptoms of ergonomic hazards; and identify how to prevent potential office hazards and common office injuries, such as back strain, slips, trips, falls, eyestrain, and electric shock.
Slips, Trips, and Falls â€" Cal/OSHA	Slips, trips, and falls constitute the majority of general industry accidents. This course is intended to provide employees with the ability to recognize and prevent slip, trip, and fall hazards, and to address the key components of ladder safety. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The learning objectives of the course are to list injuries that can result from slips, trips, and falls; identify fall hazards in the work area; describe the proper use of a ladder; specify how to set up a ladder; list tips to prevent injuries on stairs; describe how to minimize walkway hazards; and list contributing factors to slips, trips, and falls.
Indoor Hoisting and Rigging â€" Canada	This course is designed to educate the worker on the significant safety issues to be considered while moving large, heavy loads associated with today's manufacturing and construction industries. The content in this course is designed to comply with the intent of the applicable regulatory requirements and best practice guidelines. Learner objectives for this course are to specify general safety issues of cranes, hoisting, and rigging; define the purpose of the crane safety program; describe general inspection practices; describe testing practices; describe basic load handling considerations; specify operator responsibilities; and recognize standard hand signals.
Packaging Small Quantities	This activity-based course covers Department of Transportation (DOT) requirements for packaging and shipping small quantities of hazardous materials by highway within the United States. Before taking this course, you should have already completed SkillSoft's DOT hazardous material transportation Modules 1 to 4, or other similar training, and have relevant experience using the DOT Hazardous Materials Tables. This course builds on those concepts as they relate to packaging small quantities for shipment by putting you into situations where you'll identify materials in the DOT Hazardous Materials Table and determine whether an exception applies and how it affects the packaging, marking, labeling, and preparation of shipping papers for small quantities of different types of hazardous materials in specific situations. This course does not address the requirements for shipping small quantities of hazardous materials by aircraft, rail, or vessel.
Ergonomics Impact: Computer Ergonomics	Computer Ergonomics is a science which explains the apt neutral posture to be maintained while working on a computer workstation. Recognizing proper ergonomic setup for computer workstations ensures better comfort and productivity, and minimizes undue stress on different body parts. This Ergonomics Impact explores the need for neutral posture when using a computer workstation and helps to understand what a best neutral posture is. In this Impact series installment, Frank Rooney explains the concept of computer ergonomics.
Ergonomics Impact: Engineering Controls	In a work environment, workers are exposed to ergonomic injuries that occur due to reaching, bending, awkward postures, and applying pressure or force. Engineering controls help eliminate the risk of injuries and illness. In this Impact series installment, Frank Rooney explores engineering controls to prevent ergonomic issues.
Hazard Communication Impact: Physical Hazards	A physical hazard is a chemical that causes burns or an explosion. The Hazard Communication Program is critically important in a workplace to ensure employees' safety from physical hazards. The program should include the harmful effects and the preventive measures while handling chemicals. In this Hazard Communication Impact, you will learn about various types of physical hazards and the safety measures. In this Impact series installment, Frank Rooney explores various physical hazards.
Hazard Communication Impact: Safety Data Sheets	Safety data sheets or SDSs define the properties of chemicals and is very vital for Hazard Communication Program. SDSs need to be easily accessible to all employees who work with hazardous chemicals. In this Hazard Communication Impact, you will identify what information is contained in a chemical SDS, why SDS must be accessible in the workplace, and where they should be stored. You will also identify why SDSs and chemical labels should be consistent. In this Impact series installment, Frank Rooney talks about safety data sheets.
Hazard Communication Impact: Reducing and Eliminating Contact with Chemicals	In an organization that deals with hazardous chemicals, the employees are required to follow a hierarchy of controls to eliminate or control exposure to hazardous chemicals. In this Hazard Communication Impact, you'll learn about engineering controls, administrative controls, and use of protective equipment. In this Impact series installment, Frank Rooney explores different methods and controls to eliminate or reduce exposure to hazards in a workplace.
Hearing Conservation Impact: Engineering and Administrative Controls	Engineering controls are used as a means to control or manage noise from an equipment. Examples of engineering controls that can be used to reduce noise levels are soundproofing the equipment, using dampers or springs, maintaining the equipment, and buying low noise equipment. Administrative controls can be used to attenuate noise with the help of less exposure to the noisy equipment. Examples of administrative controls that can be used to reduce noise exposures are limiting the time of work near a noisy device or increasing the distance between the noisy device and the person. In this impact series installment, Frank Rooney discussed about examples of engineering and administrative controls to reduce noise levels.
Electrical Safety â€" Cal/OSHA	An awareness level course that discusses how to work safely with electricity. It focuses on specific electrical hazards found in the workplace and methods to minimize or eliminate those hazards. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Bloodborne Pathogens Awareness â€" Cal/OSHA	This course will provide you with a basic understanding of bloodborne pathogens, common modes of transmission, methods of prevention, and what to do if an exposure occurs. Information presented will help minimize serious health risks to persons who may have personal exposure to blood and other potentially infectious materials in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. The training requirements established under the Bloodborne Pathogen standard require an employer to allow for an opportunity for interactive questions and answers with the person conducting the training session. Employers may use a variety of methods to meet the intent of the standard. As an example, Cal/OSHA has previously stated that an employer can meet Cal/OSHA's requirement for trainees to have direct access to a qualified trainer by providing a telephone hotline.
Hazard Communication â€" Cal/OSHA	This course will acquaint you with the precautions that both you and your employer must take in order to safely use, handle, and dispose of hazardous chemicals in the workplace. The content in this course is designed to comply with the intent of the applicable regulatory requirements. Learner objectives are to identify the routes of chemical entry into the body, define various categories of chemical hazards, interpret warning labels, interpret information commonly found in a Safety Data Sheet (SDS), and identify types of controls commonly used to reduce or eliminate contact with hazardous materials in the workplace.
Heat Illness Prevention â€" Cal/OSHA	Each year more people in the United States die from extreme heat than from hurricanes, lightning, tornados, floods, and earthquakes combined. This course will discuss the effects of heat on your body, outline the risk factors for heat-related illnesses, and describe the associated treatments for each. This training will also explain several control measure techniques and safe work practices that you can use to prevent heat-related stresses. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Ergonomics â€" Cal/OSHA	This course is designed to provide the basic information needed to recognize and report musculoskeletal disorder (MSD) signs, symptoms, and risk factors. It addresses the key components of an ergonomics program and provides information to assist both employees and employers in minimizing the risk of developing work-related MSDs. This course applies to both office and industrial settings. The content in this course is designed to comply with the intent of the applicable regulatory requirements.
Injury and Illness Prevention Program â€" Cal/OSHA	Since July 1991 when Cal/OSHA mandated the Injury and Illness Prevention Program (IIPP) regulation, California employers have seen a significant drop in the number of workplace injuries and deaths.
Ergonomics Impact: Musculoskeletal Disorders	Musculoskeletal disorders or MSDs are minor physical disabilities that affect the muscles, bones, and joints. Understanding the causes and impacts of MSDs and diagnosing them early is important in preventing them. This Ergonomics Impact explores the various causes of MSDs and how it impacts the employees and employers alike. In this impact series installment, Frank Rooney explains the various MSDs and its leading factors.
Ergonomics Impact: Furniture and Equipment	Ergonomics is a process of designing jobs that are suitable to the worker that makes employees work comfortably and increase productivity. In this Ergonomics Impact, you will learn about using proper furniture and equipment in a workplace, recognize flooring and lighting concerns, and standards that guide employers in workstation design. In this Impact series installment, Frank Rooney talks about ergonomics in the workplace.
Ergonomics Impact: Administrative Controls	Administrative controls are workplace policies that minimize the exposure of workers to risk conditions. The administrative controls include conducting training, job rotation, job pace, and scheduling breaks to reduce stress and ergonomic injuries among workers. In this impact series installment, Frank Rooney explores various administrative controls and work practices to reduce ergonomic hazard.
Ergonomics Impact: Workplace Programs	Ergonomics essentially is the study of work. Understanding ergonomics, its goals, and the rules and regulations that govern ergonomic programs is essential to reduce the health and safety risk to employees. This Ergonomics Impact explores the key components of a workplace ergonomics program that keeps employees safe and comfortable, and how it makes them more productive. In this Impact series installment, Frank Rooney explains the use of ergonomics in workplace programs.
Hazard Communication Impact: Routes of Chemical Entry	Working with chemicals may expose an individual to severe health hazards. Chemicals may enter a human body in several ways. In this Impact series installment, Frank Rooney explores different routes of chemical exposure.
Hazard Communication Impact: Health Hazards	A Hazard Communication Program is an OSHA standard that stems from the idea of right to know. The HAZCOM standard states that employees have a right to know about the chemicals and the hazards that they encounter in the workplace. In this Hazard Communication Impact, you'll learn about health hazards associated with corrosive chemicals, carcinogens, mutagens, and sensitizers. In this impact series installment, Frank Rooney explores chemical toxicity and its types.
Hearing Conservation Impact: Monitoring, Testing, and Training	Health issues that arise at the workplace due to higher noise exposure is a major concern for any organization. So it is imperative that every such organization should have a hearing conservation program to prevent employees from noise-related health issues. This Hearing Conservation Impact explains the different ways of monitoring and testing employeeâ€™s hearing skills and exposure to noise at workplace. This impact also explains the training is required to reduce the noise exposure. In this impact series installment, Frank Rooney talks about the key components of hearing conservation program.
Hearing Conservation Impact: Selection, Use, and Care	Noise-related hearing loss is a prime occupational health concern. Exposure to high levels of noise can cause permanent hearing loss. So using the proper hearing protection aid is essential for employees who are exposed to excess noise at workplace. This Hearing Conservation Impact explores the means of selecting and using the hearing protection. This impact also deals with how one should take care of the hearing protection. In this impact series installment, Frank Rooney talks about the fundamentals of hearing conservation.
Hearing Conservation Impact: Types of Hearing Protection	Noise-related health issues are a major concern for any organization. So using the proper hearing protection aid is essential for employees who are exposed to excess noise at workplace. In this impact series installment, Frank Rooney talks about the types of hearing protection.
Hearing Conservation Impact: Precautions When Using Hearing Protection	Hearing conservation programs are essential as noise-related health issues are a major concern for any organization. Program organizers often provide hearing protection devices for employees who are exposed to excess noise at workplace. However, when using these devices, people have to take few important precautionary steps. In this impact series installment, Frank Rooney talks about the precautions to take when using various types of hearing protection devices.
Meeting the Challenge of Workplace Conflict	Conflict in the workplace is inevitable. But that's not always a bad thing. In fact, conflict is often a healthy stimulus to creativity, problem solving, decision making, and growth. However, 'bad' conflict â€" the kind that hurts people â€" is destructive and disruptive. Conflict resolution requires a whole set of skills to recognize it, prevent the 'bad' kind of conflict before it gets out of control, to work out and through a conflict situation and to adapt your own conflict style to the situation you're faced with. In this Challenge, you'll need all of those skills to work through a common conflict situation â€" upholding the mission of your team, while under pressure to give in to the demands of competing priorities.
Coaching to Shift Perceptions	When coaching is a new initiative and direction in a company, you can expect some resistance from the people you coach. You need to call on all your emotional intelligence resources, questioning techniques, and listening skills to get your coachee to accept feedback and move forward. In this Challenge, you play the role of coach to an IT Systems Engineer who isn't on board with the need for coaching. Your mission is to help him set goals, empower himself, and take action toward more productive working relationships.

Course	Description
Spearheading a Process Improvement	In this Challenge exercise you will be tasked with leading a sustainable process improvement initiative. The proposed initiative is to reduce the time and effort required to validate and create e-mail accounts for faculty and students of the university for which you work. As a professional in the program management office of the university's IT organization, you'll work closely with the IT director in proposing a sustainable process improvement strategy.
Decisions: Making the Right Move	You make decisions all day long; many are quick and simple. But when decisions have a far reaching impact, you need to take care to fully understand the issue, consider diverse viewpoints, and evaluate various options against the right criteria, avoiding traps of bias and hasty conclusions along the way. Once you've made the best decision, put it in action and verify the results. In this Challenge, you'll play the role of a Facilities Manager using a problem-solving approach to choose the right building and location for your company's next move.
Applying Your Best Thinking	Critical thinking is your best thinking. You use reason and logic to help you sort through data to remove bias, opinion, and emotion and come up with rational conclusions. It's a hugely valuable skillset, but it's not much use if it's just an academic or intellectual exercise. In this Challenge, you'll use critical thinking to evaluate different Employee Appreciation strategies in a telecommunications company scenario.
Adobe Dreamweaver CC 2015 Fundamentals	Adobe Dreamweaver CC 2015 is a powerful web development application that can be used to develop single web pages or to create and manage entire websites. In this course, you will learn about Adobe Dreamweaver CC 2015, including the interface, application extensibility, and creating documents.
Basic Coding with Adobe Dreamweaver CC 2015	Adobe Dreamweaver CC 2015 is a powerful web development application that can be used to develop single web pages or to create and manage entire websites. In this course, you will be introduced to basic coding in Adobe Dreamweaver CC 2015, including working with code and views.
The Adobe Dreamweaver CC 2015 Interface	Adobe Dreamweaver CC 2015 is a powerful web development application that can be used to develop single web pages or to create and manage entire websites. In this course, you will learn about Adobe Dreamweaver CC 2015, including the Dreamweaver interface, and the functionality of its various panels.
Adobe Dreamweaver CC 2015 Web Design	Adobe Dreamweaver CC 2015 is a powerful web development application that can be used to develop single web pages or to create and manage entire websites. In this course, you will learn about web design in Adobe Dreamweaver CC 2015, including basic responsive design features, editing features, and working with media and design.
Adobe Flash Professional CC 2015 Fundamentals	Adobe Flash is a powerful multimedia and software development platform that is used by animators, graphic designers, and developers. It can be used to create animated movies and applications for a variety of uses, including for the web or for mobile devices like smartphones and tablets. In this course, you will learn about Adobe Flash Professional CC 2015, including panels and tools, the stage, and how to create a new document in Flash Professional.
Drawing with Adobe Flash Professional CC 2015	Adobe Flash is a powerful multimedia and software development platform that is used by animators, graphic designers, and developers. It can be used to create animated movies and applications for a variety of uses, including for the web or for mobile devices like smartphones and tablets. In this course, you will learn about Adobe Flash Professional CC 2015, including the interface, basic tools, and basic drawing in Flash Professional.
Adobe Flash Professional CC 2015 Tools	Adobe Flash is a powerful multimedia and software development platform that's used by animators, graphic designers, and developers. It can be used to create animated movies and applications for a variety of uses, including for the web or for mobile devices such as smartphones and tablets. In this course, you will be introduced to drawing with Adobe Flash Professional CC 2015, including the use of advanced and transformation tools.
Adobe Flash Professional CC 2015 Animations	Adobe Flash is a powerful multimedia and software development platform that's used by animators, graphic designers, and developers. It can be used to create animated movies and applications for a variety of uses, including for the web or for mobile devices like smartphones and tablets. In this course, you will learn about drawing with Adobe Flash Professional CC 2015, including the use of Timeline and basic animation.
Adobe Flash Professional CC 2015 Programming	Adobe Flash is a powerful multimedia and software development platform that is used by animators, graphic designers, and developers. It can be used to create animated movies and applications for a variety of uses, including for the web or for mobile devices like smartphones and tablets. In this course, you will learn about programming in Adobe Flash Professional CC 2015, including an introduction to ActionScript, ActionScript syntax, and additional features.
Working with Text in Adobe Illustrator CC 2015	Adobe Illustrator sets the standard for design and illustration, and it's used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs like logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. This course introduces learners to essential Adobe Illustrator CC 2015 basic and advanced text features such as working with text, using simple and paragraph text, and placing text.
Adobe Illustrator CC 2015 Tools	Adobe Illustrator sets the standard for design and illustration, and it's used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs like logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. This course shows learners how to work with various tools in order to create shapes, erase, cut, slice, and select in Adobe Illustrator CC 2015.
Adobe Illustrator CC 2015 Working with the Pen Tools and Objects	Adobe Illustrator sets the standard for design and illustration, and it's used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs like logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. The course shows learners how to use the Pen tools, create compound paths, use free transform, edit curves, rotate and reflect, and create transparency. This course also shows how to scale, shear, and reshape objects.
Adobe Illustrator CC 2015 Advanced Tools and Effects	Adobe Illustrator sets the standard for design and illustration, and it is used by graphic designers to create stunning original artwork. Illustrator is very flexible and you can create designs that range from simple illustrations to complex designs like logos and web banners, and even brochures, ads, and posters. Adobe Illustrator CC 2015 represents the next generation in this long-standing application, preserving the finesse and ease of its predecessors while adding some powerful new features. This course introduces learners to using some advanced tools and effects in Adobe Illustrator CC 2015, including crytallizing and wrinkling, puckering, bloating, and scalloping; using artboards, the blob brush, line art, and symbols tools. This course also demonstrates how to use the touch type tool, mesh tool, and perspectives tools in Adobe Illustrator CC 2015.
Adobe InDesign CC 2015 Basic Navigation and Tools	Adobe InDesign CC 2015 is a professional-grade desktop publishing application, used by graphics professionals and novices alike to create page layouts. Integrated with Adobe's other two flagship applications â€" Photoshop and Illustrator â€" InDesign can be used to create small documents like brochures and newsletters, or very large publications like books and manuals. In this course, you will be introduced to tools and techniques including navigating and configuring workspaces, creating new documents, working with guides and rulers, and object tools such as the Pen and Pencil.
Working with Images and Exporting Files in Adobe InDesign CC 2015	Adobe InDesign CC 2015 is a professional-grade desktop publishing application, used by graphics professionals and novices alike to create page layouts. Integrated with Adobe's other two flagship applications â€" Photoshop and Illustrator â€" InDesign can be used to create small documents like brochures and newsletters, or very large publications like books and manuals. In this course, you will be introduced to working with images, advanced image editing techniques, and importing and exporting files.
Working with Objects and Editing Tools in Adobe InDesign CC 2015	Adobe InDesign CC 2015 is a professional-grade desktop publishing application, used by graphics professionals and novices alike to create page layouts. Integrated with Adobe's other two flagship applications â€" Photoshop and Illustrator â€" InDesign can be used to create small documents like brochures and newsletters, or very large publications like books and manuals. In this course, you will be introduced to editing tools and organizing techniques such as arranging, aligning, and grouping.
Working with Text in Adobe InDesign CC 2015	Adobe InDesign CC 2015 is a professional-grade desktop publishing application, used by graphics professionals and novices alike to create page layouts. Integrated with Adobe's other two flagship applications â€" Photoshop and Illustrator â€" InDesign can be used to create small documents like brochures and newsletters, or very large publications like books and manuals. In this course, you will learn about basic design in Adobe InDesign CC 2015, including the typesetting basics and how to add and edit text.
Working with Pages in Adobe InDesign CC 2015	Adobe InDesign CC 2015 is a professional-grade desktop publishing application, used by graphics professionals and novices alike to create page layouts. Integrated with Adobe's other two flagship applications â€" Photoshop and Illustrator â€" InDesign can be used to create small documents like brochures and newsletters, or very large publications like books and manuals. In this course, you will learn about the advanced features in Adobe InDesign CC 2015, including advanced page options and tools.
Adobe Photoshop CC 2015: Selection Tools and Techniques	This course introduces selection tools and techniques in Adobe Photoshop CC 2015. You'll learn about marquee options such as marquee and move tools and marquee selection techniques.
Adobe Photoshop CC 2015: Layers and Type	This course introduces layers and type in Adobe Photoshop CC 2015. You'll learn about adjustment layers, layer masks and styles, as well as how to rasterize type.
Adobe Photoshop CC 2015 Enhancement Tools and Techniques	This course introduces some of the editing options and features available in Adobe Photoshop CC 2015. You'll learn about tools and effects for object enhancement including transparency, drop shadows, glow effects, reflection effects, lens flares, circular insets, and pattern stamps.
Adobe Photoshop CC 2015 Cloning and	This course introduces some of the transformational features and effects available in Adobe Photoshop CC 2015, including cloning, History Brush tools, Lasso tools, refining, and slicing.
Adobe Photoshop CC 2015 Paths and Techniques	This course introduces how to work with paths and editing options in Adobe Photoshop CC 2015. You'll learn about feathering effects, healing tools, and how to turn a selection into a path. The course also covers Live Shapes and coloring techniques.
TestPrep 210-260 Implementing Cisco Network Security (IINS)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
TestPrep 200-355 Implementing Cisco Wireless Network Fundamentals (WIFUND)	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Advanced Architecting on Amazon Web Services: HA and Business Continuity	Disaster Recovery is a perfect fit for cloud technologies, and the scalable and redundant properties of cloud systems. Traditional DR required a sizable investment in a site, hardware, and personnel. This course contrasts traditional and cloud availability and DR and looks at highly available systems and cloud disaster recovery techniques. This course is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Advanced Architecting on Amazon Web Services: Cloud Migration and Architecture	Broad network connectivity is part of the definition of cloud computing, and network design is a key task in architecting a cloud solution. Amazon Web Services provides a wide range of virtual networking tools, from Elastic IPs at the machine level, to Direct Connect for connecting entire sites. This course covers the design theory for virtual networks running on AWS. It also covers using these networks for application migration and hybrid cloud creation. This course is one in a series of Skillsoft courses that cover the objectives for the Amazon certification AWS Certified Solutions Architect - Professional.
Administering System Center Configuration Manager 2012 R2	In this course, you will learn how to use SCCM 2012 R2 to logically group users and computers together for management tasks, and how to monitor and manage the health of the SCCM infrastructure and endpoints. You will also learn how to delegate control of administrative tasks. This course covers Collections which give administrators granular control of targeting users and devices for management tasks. It also covers how to view and monitor the health of the SCCM infrastructure, including reporting functionality.
SCCM 2012 R2 Performance and Health Monitoring	In this course, you will learn how to monitor site-to-site communication and ensure proper communications between endpoints, including how to configure alerts for notification. This course introduces you to built-in monitoring and alerting features in SCCM 2012 R2. You will learn about what to monitor, how to check the status of critical components, and the types of alerts and notifications that can be sent to administrators to notify them of changes or issues.
SCCM 2012 R2 Compliance Settings and Managing Clients	In this course, you will learn how to ensure the proper operating systems and applications are deployed and that they have the proper configuration leveraging data collected from the SCCM client. You will also receive an introduction to managing Mac and Linux clients. This course introduces you to Compliance settings, the manner in which SCCM addresses desired configuration management. You will also learn how to prepare the SCCM client for deployment and how SCCM can be used to manage non-Windows clients (Mac and Linux).
TestPrep 70-694 Virtualizing Enterprise Desktops and Apps	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
VMware NSX Network Virtualization: Technology and Architecture	The architecutre of VMware NSX enables it to overcome many challenges and bottlenecks of traditional physical networks. This course covers the benefits of NSX, its architecture, and different network and security technologies used. It goes on to contrast physical and logical network topologies, and finishes with a discussion on integration with third party products and services. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.
VMware NSX Network Virtualization: Physical Infrastructure Requirements	VMware NSX is flexible with regard to the underlying network fabric, but there are a number of significant advantages in different network environments. This course covers the benefits of running VMware NSX over physical network fabrics, and the requirements for doing so. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.
VMware NSX Network Virtualization: Configuring vSphere Networking	VMware vSphere has significant virtual networking capability built on vSphere Standard Switches and vSphere Distributed Switches. This course covers configuration and management of both vSphere switch types, including policy management. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.
VMware NSX Network Virtualization: Installing and Upgrading	VMware NSX installation can be an involved process, especially when considering upgrades from previous versions or upgrades from vCNS. This course covers preinstallation and installation of VMware NSX, upgrades to NSX 6.x, and expanding transport zones to accommodate new clusters. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.
VMware NSX Network Virtualization: Configuring NSX Virtual Networks	VMware NSX networks are comprised of virtual switches, bridges, routers, and VXLANs. VXLANs bring VLAN like overlay technology to virtual networks to overcome data center scaling issues. This course covers configuration of VMware virtual network devices and VXLANs, including router configuration using various routing protocols. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.

Course	Description
VMware NSX Network Virtualization: NSX Network Services	Network services in VMware NSX virtual network environments are broadly similar to regular network services, but with some key differences. This course covers network load balancing; VPNs; DNS, DHCP and NAT; and high availability services. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.
VMware NSX Network Virtualization: NSX Network Security	Virtual network security is as important as physical network security - perhaps even more so, given the nature and scale of the connectivity. In this course, you will learn about managing and configuring Service Composer, Logical Firewall Services, and Distributed Firewall Services, all key to ensuring high levels of network security in a VMware NSX environment. This course is one of a series of Skillsoft courses that cover the objectives for VMware certification exam VCA-NV: VMware Certified Professional â€" Network Virtualization.
Preventing Unhealthy Workplace Conflict	Conflict, when hurtful or unresolved, puts distance between people who need to work together, and often results in a loss of talent. 'Not getting along' shouldn't be the reason people fail to contribute or leave organizations. Dealing with conflict when it is in your face is one thing, but preventing it comes first. This means accepting that conflict may occur, understanding the sources of potential conflict, preventing unnecessary conflict by watching for signs, and making sure you and others know what is 'off limits.' In this course, you'll learn about the benefits of healthy conflict, as well as typical sources of conflict. You'll find out how to recognize the signs of unhealthy conflict and take steps to prevent it. In addition, you'll learn when it's appropriate to report a conflict.
Working Out and Through Conflict	When you are dealing with workplace conflict, emotions get stirred up, and many people want conflict to 'go away.' But in most cases it won't go away on its own, so you need to choose a course of action. Sometimes it just means making peace with yourself or a situation. Other times, you may need to make trade-offs. If your choice is to deal with it straight on, you need a process. In this course, you'll learn how to work through conflicts smoothly by using a structured conflict resolution process. You'll also learn about techniques for getting the process back on track if difficulties arise.
Adapting Your Conflict Style	Everyone has their own unique personality style. They also have a preferred style for dealing with conflict. Do you avoid conflict? Or do you take charge in a conflict situation? Perhaps you have a more cooperative approach? When working with others who have different styles, and when facing different conflict situations, we all have to adapt. In this course, you'll learn about the different conflict styles, including when and how to use them. You'll find out about the importance of adapting your style in response to others' styles and the particular situation you're in. Finally, you'll learn how to deal with a difficult individual in a conflict situation.
Emotional Intelligence: Owning Your Emotions	Emotions arise within ourselves â€" through our complex brain circuitry that we sometimes call 'wiring.' No one else is responsible for our emotions â€" we own them, and we must be aware of them in order to manage them, recognize them in others, and develop relationships. External stimuli may trigger our sensations, reactions, and responses but to be emotionally intelligent you must start 'in here' (inside yourself) and not 'out there.' When triggered, your brain gets fired up and you might feel afraid, anxious, angry, shocked, or sad. You may also feel happy, joyful, excited, and fulfilled. When you are intelligent about your emotions, you're aware that the hardest work is managing the emotions that get in the way of your best performance.
Emotional Intelligence: Building Self-Management Skills	Probably the most essential skill involved in Emotional Intelligence is self-management. It usually rides on the tail of self-awarenessâ€¦when you notice an emotion. What can happen is that an emotional response takes on a life of its own, gets hijacked, or snowballs into a reaction that is difficult to control. With self-management skills, you nip it in the bud and control the inward interpretations and outward behaviors associated with strong emotions. You not only self-manage in the moment but you begin to regulate how you typically respond to things that push your buttons. You build a proactive approach to emotional intelligence â€" first with your awareness and then a natural flow into self-management. Another reason why self-management is so important is that with it, the relational side of emotional intelligence tends to flow better. You gain appreciation for the challenge of controlling emotional impulses and become more empathetic and patient with others.
Emotional Intelligence: Being Aware of the Emotions of Others	You cannot achieve results by just focusing on yourself. Work is comprised of groups, teams, relationships, and networks. And organizational dynamics, interpersonal relationships, and the diversity of personality styles will continually challenge your emotional intelligence. Your ability to interact with and influence others, especially when emotions are running high, relies heavily on your personal self-awareness and self-management competence. The more you work on yourself, the better able you are to relate to others. When you are skilled in relationship awareness, your focus is on the other person or persons, while you also manage yourself.
Emotional Intelligence: Applying EI at Work	This course is about applying emotional intelligence in the workplace â€" playing the role of an emotionally intelligent leader whether you have the title or not. The application of emotional intelligence in the workplace is everyone's responsibility.
Be a Better Listener	How well do you listen? Listening is rarely a hot topic in workplace training, yet the most successful people are almost always trained, excellent listeners. They have mastered a number of discrete skills and are capable of deploying this skillset creatively and adaptively to unique situations to ensure workplace excellence. In this course, you'll review the core of that skillset. You'll come to understand why you should focus on improving your ability to listen and debunk misperceptions surrounding the skill. And finally, you'll begin to explore the skills to hone your listening, including how to give yourself a pop-quiz at the end of a conversation.
Roadblocks to Excellent Listening	Before the most advanced listening skills can be deployed, it's critical to remove the common roadblocks to effective listening. There are listening traps that we all fall victim to from time to time, which diminish our effectiveness. Distractions, both internal and external, may keep us from having the most productive conversation if they're not removed or mitigated. Our thoughts and feelings often become roadblocks to effective listening when our biases, our emotional reactions, or our focus on preparing to speak interferes with our effectiveness. Additionally, a listener's own speech can shut down the flow of information. Finally, a roadblock that everyone faces at some point is boredom. Listening to a boring speaker or topic can provide challenges for effectively receiving and retaining critical information. Fortunately, there is hope. We can all learn to listen better despite boredom. In this course, you'll review techniques for overcoming roadblocks to listening. These will include the tools to remove distractions, to keep thoughts and emotions in check, to avoid conversation killers, and of course, to escape boredom.
Active Listening Skills for Professionals	Active listening skills are time-tested tools used by professionals in a wide range of occupations to enhance their work. Psychologists, talk show hosts, or police negotiators may use active listening skills more than any other set of skills. Though you may not be counseling someone in distress, getting a celebrity to reveal their emotions, or bargaining for hostages, the principles of active listening are the same. Active listening means listening attentively to the speaker's words, meaning, intent, and emotions in an unbiased positive way. Active listening also involves creatively utilizing a blend of discrete skills that can be brought to bear in any conversation to draw out additional meaning, intent, and emotions. In this course, you'll review more advanced listening skills to help you operate more effectively in your workplace. These skills include how to prepare your mind to actively listen, how to actively demonstrate I'm listening.
Mastering Active Listening in the Workplace	Success in the most difficult professional conversations can depend on the creative deployment of active listening skills. There are critical moments in our professional lives where the active listening toolkit can make the difference between excellence and failure. Whether it be addressing the angry client, emotional subordinate, evasive witness, or hesitant buyer, effective listening can be the foundation of how you navigate and control the conversation, and achieve the results you desire. Excellent and persuasive communicators employ a creative blend of the skills tailored to each unique situation. In this course, you'll review the skills and techniques for mastering active listening. You'll learn to trust the process, engage evasive speakers, effectively steer emotionally charged conversations, and apply active listening within sales and negotiation scenarios.
Feedback and Its Vital Role in the Workplace	Everyone needs corrective and constructive feedback from time to time, but if you're like many people, the prospect of giving that feedback is chilling. Understanding what feedback is â€" and recognizing the difference between effective, constructive feedback and unhelpful criticism â€" is important at all levels of the workplace. In this course, youâ€™ll learn how that distinction applies in practice, how to approach giving feedback to peers and to supervisors, and how to manage the anxiety you may experience. This course helps to take the mystery and dread out of an invaluable skill.
Delivering Feedback	Giving feedback doesn't have to be terrifying, but you do need to prepare. Get your motives, your purpose, and your plan in place before you open your mouth - and know what you'll do if it doesn't go well. In this course, youâ€™ll learn how decide whether feedback is appropriate or not, where it's appropriate, and how to ensure it makes a positive contribution to the development of the individual, the team, and the organization as a whole. Youâ€™ll also get some tips on how to handle situations where someone reacts badly to your feedback.
Receiving Feedback	Even well-intended constructive feedback can be difficult to take. There are biological foundations for the feelings that result, and it's easy to see why people often respond negatively. But when you can effectively respond and engage with the feedback provider, you can begin to view feedback as a key piece of your professional growth. In this course, you'll learn how to manage your natural reactions, respond productively, and unleash the power of constructive feedback in your own development.
Making Feedback a Regular Occurrence	Feedback works best as an ongoing effort, not an occasional event. Workplaces that incorporate feedback into daily practice enjoy more communication and fewer unpleasant surprises. This course focuses on how you integrate feedback into your routine and what you can do to promote a 'feedback culture' â€" whatever your role in the organization. Instead of viewing feedback as an isolated event or as a response to some specific problem, learn to use it as proactive coaching.
TestPrep 220-902 CompTIA A+	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
CompTIA A+ Exam 220-901: Motherboards	The inside of a computer can be an intimidating sight. This course will give you an understanding of motherboards and their expansion slots. You will learn about the inner workings of a computer, along with details on the different kinds of motherboards and how you can expand their functionality. This course is one of a series in the Skillsoft learning path that covers the objectives for the CompTIA A+ Certification Exam (220-901). This exam counts toward the CompTIA A+ Certification.
TestPrep 220-901 CompTIA A+	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
CompTIA A+ Exam 220-901: BIOS and Startup	When your computer first starts up, it goes through a complex series of setup and initialization routines. This course will teach you what it's doing and why. The course covers all of the firmware functions in a computer and describes the BIOS setup and security utilities, the POST process, and all of the other built-in configuration options.
CompTIA A+ Exam 220-901: RAM	RAM is an important part of the computer, but can also be very confusing. There are a lot of different types of RAM, and you need to make sure you have the right one for your needs. This course will help you understand the differences between each one. It will introduce you to the function of RAM, and the wide array and different types of RAM that are available.
CompTIA A+ Exam 220-901: Storage Solutions	Every computer requires some sort of storage device. In this course, you will learn about the different storage options and how they work, and be introduced to the storage solutions for your computer. The course goes into detail regarding different types of hard drives and optical drives, as well as different options for how you can manage your storage.
CompTIA A+ Exam 220-901: CPUs	The main brain of the computer is the Central Processing Unit (CPU) and there are many different types of CPUs, and many different factors to take into account when choosing between them. This course will teach the basics of CPUs, how they work, and all of the different factors that you need to take into account to install and configure a CPU in your computer.
CompTIA A+ Exam 220-901: Connectors and Connections	There are dozens of different ways to connect peripherals into your computer. You need to know which ones can be used for what purposes, and when to use each type of connector, including the benefits and drawbacks of each one. This course introduces you to all of the different types of connectors and cables that can be used for your computer, to plug in all of your peripheral devices.
MLlib, GraphX, and R	MLlib is Spark's machine learning library. GraphX is Spark's API for graphs and graph-parallel computation. SparkR exposes the API and allows users to run jobs from the R shell on a cluster. In this course, you will learn how to work with each of these libraries.
Big Data Corporate Leadership Perspective	Big data leaders must have skill sets that differ from what leaders of the past had. They must be able to show how big data generates value; how investments in big data initiatives should be targeted; and how fast the organization should move to implement them. In this course, you will learn how to create a governance strategy, examine security concerns, and realize how this will impact human resources.
Big Data - The Legal Perspective	By proactively dealing with privacy issues, organizations can safely leverage Big Data while still retaining customers, and avoiding reputational harm, litigation, and regulatory scrutiny. In this course, you will examine privacy concerns, how data can be used ethically, and what to do about social media.
Big Data Marketing Perspective	Big data dramatically impacts all aspects of business culture. Companies need to evolve from their traditional methods and practices to be able to use big data to improve their organization. In this course we will examine the impacts of big data from the marketing perspective. we will look at how the mobile effect has changed marketing, how purchasing habits have changed and what impact datafying consumer behavior has done.
Big Data Strategic Planning	In order to adopt Big Data, senior leadership must be able to establish investment priorities, balance speed and cost, and ensure acceptance by the front line. But they must also build a plan based on data, analytic models, and tools. In this course, you will compare scaling up to scaling out, identify different analytical models, and learn how to secure funding for data initiatives.
Big Data Sales Perspective	Big Data allows salespeople to adopt data-driven methodologies to target high-value prospects rather than relying on relationships and other soft factors to target and close business deals. In this course, you will learn the difference between big data and data science. You will take a look at different algorithms and technology accelerators.
Mac OS X El Capitan First Look	Apple will be introducing a new operating system and it's called El Capitan. It may sound like a rock formation in Yosemite, but it's actually an operating system that will bring many performance enhancements and improvements to the already massive OS. Don't miss out in learning the very best that El Capitan has to offer including an upgraded Notes, a new mission control, and an improved desktop. In this course, you will be guided through the best enhancements yet to be released outside beta. Each will be introduced and explained so that you're ready for the public release.
Rightful Employment Termination	One of the most difficult things you will do as a manager is to terminate an employee. The employee who is being terminated â€" regardless of the reason for the termination â€" may feel angry, frustrated, or betrayed. He or she may be looking for someone or something else to blame, and if the termination is not handled properly, your company could find itself defending against allegations of wrongful termination. Further, even if the termination is handled properly, the employee may file a claim anyway, and your company must be prepared to successfully defend the termination through appropriate decision making and documentation.
Beginning Your Coaching Engagement	The coaching relationship is different from many other working relationships you may have encountered in your career. A coach has a special position that isn't as prescriptive as a manager or as instructive as mentor; a coach is focused on guiding the individual being coached through their own process of discovery and growth. There are five phases of coaching, and this course will cover the first three: enrollment, discovery, and developing the action plan. In these stages, the coaching relationship and its goals are created, setting the stage for the remainder of the coaching engagement.
Coaching Techniques that Drive Change	Coaching by definition is action-centered. This is the main thing that differentiates it from counseling. At this point in the coaching engagement, the coach and coachee will have agreed on and co-created the Strategic Action Plan, which defines the goals and activities that the coachee will be working on throughout the remainder of the experience.Techniques covered in this course will give the learner the tools needed to lead from behind as a coach. Leading from behind is providing guidance through skillful observation and communication techniques that help guide the coachee's discoveries, self-awareness, epiphanies, and 'aha' moments. Keeping the momentum of progress, staying the course, and creating detours characterize the coach's work in this phase. These are accomplished through coaching tactics that include questioning, listening, observing, and challenging.

Course	Description
Coaching to Drive Performance	The proven fact is that desired results are achieved more quickly with the guidance of a personal Coach. When a coach is working to drive performance, the coachee is being held accountable to do what they say they are going to do, and want to do. This phase of a coaching engagement is called the 'accountability phase' in coaching. It is also the phase when the 'shoulds and ought-tos' bubble to the surface - the things that a Coachee is unconsciously following, instead of their true aspirations. These 'shoulds and ought-tos come from outside the coachee, and it is in this phase that they must be dealt with, by either eliminating them or figuring out a way to deal with them. Towards the end of this phase, the coachee is clicking along and it's time to 'fire' their coach. The coach is no longer needed as the goals of the engagement are creating the coachee's desired outcome. The coach must be able to spot the pending conclusion of the engagement and set the coachee up for sustainability of performance using coaching tactics.
Digital Marketing: Getting to the Customer	Classical one-to-many marketing has made way for personalized, individual, and increasingly web-based marketing methods in the digital age. Any company in the world knows that there is no future without marketing your offerings and products on the web or on mobile devices. In this course, you will learn about the primary goals and methods of digital marketing so you can plan the best strategy and mix for your organization. The course surveys a variety of methods and tools for reaching customers at every stage of their decision-making process, with a focus on social media marketing.
Search Engine Marketing: Getting Discovered by the Customer	Search engine marketing (SEM) is the most powerful promotional tool available today, eclipsing many traditional forms of advertising and promotion. Consumers have needs, and an online search for products, services, and information is a first step to fulfilling those needs. Make sure these potential customers find you! This course will explore a variety of paid and organic search engine marketing tactics that can help bump your web site to the top of user search results, capturing the attention â€" and clicks â€" of customers searching for offerings like yours.
Managing Your Reputation Through Content Marketing and Online PR	Everything the customer discovers about your brand before entering your digital services is the focus of your organization's reputation management efforts online. During the phase known as customer evaluation, you need to make a personalized impact on customers, all the while managing the perception of your organization across a broad landscape of social media, blogs, microblogs, communities, and other media. This course offers guidance and insider tips for building, maintaining, and monitoring an integrated online PR strategy, including advice for weathering any social media storm that threatens your brand.
Digital Marketing Partnerships, Sales, and After-sales Processes	How can you get your customers â€" and even other organizations â€" to boost your impact and sales? This course explains how to forge mutually beneficial partnerships with affiliates who'll publish your interactive ads. It explores how to connect with customers and third-party sites who will serve up reviews and recommendations for future customers to view. Learn how crucial the checkout process is for success, and find out how to use voting, ratings, and reviews as powerful digital marketing tools.
Mentoring 70-697 Configuring Windows Devices	Skillsoft Mentors are available to help students with their studies for exam 70-697 Configuring Windows Devices. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Mentoring 98-369 Cloud Fundamentals	Skillsoft Mentors are available to help students with their studies for exam 98-369 Cloud Fundamentals. You can reach them by entering a Mentored Chat Room or by using the Email My Mentor service.
Microsoft Excel 2016 Essentials: Creating, Editing, and Saving Workbooks	Microsoft Excel 2016 makes it easy to create worksheets and workbooks, and to manage and manipulate data. In this course, you will learn how to cut, copy, and paste data; navigate between data cells and worksheets; and customize your Excel workspace. You will also learn about creating and opening workbooks, moving data around in Excel 2016, organizing worksheets, and saving and exporting data.
Microsoft Excel 2016 Essentials: Formatting Data	Making your data look good is easy with Microsoft Excel 2016. You can format numbers and text, and apply styles to make your data stand out. In this course, you will learn how to create custom formatting and styles, and copy formatting from cell to cell. In addition to formatting and styling data in Excel 2016, you will learn how to position the data in your spreadsheet.
Microsoft Excel 2016 Essentials: Data Presentation Strategies	Microsoft Excel 2016 gives you many options for improving the presentation of your data. In this course, you will learn about adding visual impact to your data using Sparklines, linking to different locations using hyperlinks, and creating custom formatting rules. You will learn about the many tools Excel 2016 provides for visually enhancing the appearance of your data.
Microsoft Excel 2016 Essentials: Formulas and Functions	Microsoft Excel 2016 allows you to perform complex calculations on your workbook data. Being able to use formulas to complete calculations not only simplifies your work but also helps to reduce the number of errors that can arise in such complex tasks. In this course, you will learn about the basic concepts and terminology associated with formulas and functions. You will learn about the various ways of referring to cells and cell ranges, and how to use basic functions including logical and IF-type functions.
Microsoft Excel 2016 Essentials: Charts, Tables, and Images	Using tables, charts, and images in Excel 2016, you can create attractive and well-organized representations of worksheet and workbook data. These elements can be easily inserted into your workbook and customized as necessary. In this course, you will learn how to effectively use and customize tables and charts in Excel 2016. You will also learn how to use headers and footers to add additional information to your work.
Getting to Know Outlook 2016	Outlook 2016 is the latest release of Microsoft's primary messaging client. It provides all of the tools necessary for managing e-mail, scheduling tasks, and communication. In this course, you will learn about the basic features and functionalities of Outlook 2016 including a look at how to navigate in Outlook 2016 and view, reply to, and forward e-mail messages. The course also addresses how to create and send new e-mail messages.
Managing Conversations and E-mail in Outlook 2016	Microsoft Outlook 2016 allows you to effectively manage and organize your e-mail messages. In this course, you will learn how to arrange and view messages by conversation; use the People Pane to access, sort and filter e-mail; apply color categories; apply flags; and delete and restore messages. The course also covers ways to personalize your Outlook 2016 such as changing message preview settings and adjusting the reading pane and people pane.
Managing Attachments, and Inserting Items and Signatures in Outlook 2016	Microsoft Outlook 2016 effectively enables you to work with attachments, attach items, and add signatures to messages. In this course, you will learn about working with attachments, creating and adding signatures, and inserting text options. This course also covers adding symbols to e-mail messages and printing messages in Outlook 2016.
Organizing Contacts in Outlook 2016	Microsoft Outlook 2016 allows you to work with contacts in a variety of different ways. In this course, you will learn that creating contacts and contact groups allows you to save time by eliminating the need to type out an entire e-mail address each time you create a new message, assign new tasks, or create meeting requests. This course covers the variety of ways you can create contacts and contract groups, access and view contacts, and manage and print contacts.
Using the Calendar to Schedule Appointments, Events, and Tasks in Outlook 2016	The Microsoft Outlook 2016 calendar enables you to create events, appointments, and tasks, and schedule meetings. The calendar is fully integrated with the other components of Outlook 2016 and allows you to easily incorporate your contacts and e-mail functionality with the calendar. In this course, you will learn about navigating and using the calendar and creating events, appointments, and tasks. This course also covers how to add additional calendars, change the appearance of the calendar, and print the calendar and tasks.
Configuring and Managing Meetings and Notes in Outlook 2016	The Microsoft Outlook 2016 calendar can also be used to schedule meetings in addition to creating events and appointments. In this course, you will learn how to schedule and edit meetings, accept or decline meeting requests, and manage meetings. This course also covers creating and managing notes in Outlook 2016.
Introduction to the PowerPoint 2016 Interface and Basic Tasks	Microsoft PowerPoint 2016 makes it easy to create professional presentations that make an impact. In this course, you'll learn about the new interface and key new features introduced in PowerPoint 2016. You'll also learn how to perform a range of basic tasks so you can get started with using PowerPoint 2016. These tasks include creating and saving presentations, setting up slides, choosing print settings, and viewing presentations in different ways. This course is one of a series in the SkillSoft learning path that covers Microsoft PowerPoint 2016 for beginners.
Modifying and Formatting Slides in PowerPoint 2016	In Microsoft PowerPoint 2016, you can easily add slides to a presentation, manipulate their order, and use predefined options to give the slides a particular look and feel. Then you can use a range of options to add content to slides and adjust its appearance. In this course, you'll learn how to set up a basic presentation, ordering a sequence of slides and applying a presentation theme and slide layout. You'll also learn how to add and work with slide text, including using creative text effects and converting text into SmartArt. This course is one of a series in the SkillSoft learning path that covers Microsoft PowerPoint 2016 for beginners.
Formatting Text Boxes and Working with Graphic Content in PowerPoint 2016	Microsoft PowerPoint 2016 provides a wide range of tools for adding text and graphic content to slides, and for arranging and altering this content to produce presentations that are professional, creative, and highly polished. In this course, you'll learn how to insert, position, resize, and format both text and graphics on PowerPoint slides. You'll also learn how to arrange and manipulate the objects on a slide, and how to apply a range of artistic effects and styles, to both text and graphic elements. This course is one of a series in the SkillSoft learning path that covers Microsoft PowerPoint 2016 for beginners.
Working with the Interface and Performing Basic Tasks in Word 2016	Available in Microsoft's newest office productivity suite, Microsoft Word 2016 makes it easy to create, manipulate, and work with documents. In this course, you'll learn how to get started with Word 2016. The course provides an overview of the Word 2016 interface and its new features, and demonstrates how to use Word 2016 to create, proofread, save, and print documents. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Formatting Text in Word 2016	Microsoft Word 2016 provides a range of options for formatting and styling text. In this course, you'll learn how to create professional-looking documents by controlling the font and size settings, style, alignment, and spacing of both characters and paragraphs. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Customizing Options and Using Document Views in Word 2016	Microsoft Word 2016 enables users to change a number of default settings to suit their preferences and to view documents in different ways. In this course, you'll learn how to access and change various program defaults, for example to control how Word 2016 saves and lists documents. You'll also learn how to zoom in or out of documents, change document views to suit different purposes, and navigate easily between documents in Word 2016. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Creating and Formatting Tables in Word 2016	Microsoft Word 2016 provides tools that make it easy to create, format, and manipulate tables. In this course, you'll learn different methods for creating and adjusting tables, applying table styles, and formatting the content in table cells. You'll also learn how to apply shading and borders to tables in Word 2016. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Headers, Footers, Page Numbering, and Layout in Word 2016	Headers and footers, as well as appropriate page layout, play an important role in making documents look professional. In this course, you'll learn about all the options for creating headers and footers, adding page numbering and the date and time, and creating custom page layouts for documents in Word 2016. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Using the Navigation Pane and Creating Lists in Word 2016	In Microsoft Word 2016, the Navigation pane makes it easy to find and navigate to specific content. In this course, you'll learn about the options it provides for finding and replacing specific items or attributes in a document. You'll also learn how to create professional-looking bulleted, numbered, and tabbed lists in Word 2016 documents. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Microsoft Excel 2016 Intermediate: Customizing Views, Styles, and Templates	Making the Microsoft Excel 2016 environment look exactly the way you want it to is easy. In this course, you will learn how to configure how you want a workbook and the work area itself to appear. You will also learn how to add and customize templates and styles to really make Excel 2016 work for you.
Microsoft Office 2016 Intermediate Excel: Creating Custom Visual Effects	A picture may paint a thousand words but Microsoft Excel 2016 makes adding both words and pictures to your workbooks very straightforward. In this course, you will learn how to insert and style text boxes, shapes, and SmartArt. You will also learn about applying and customizing themes and watermarks.
Microsoft Office 2016 Intermediate Excel: Working with Data	Microsoft Excel 2016 gives you a number of options for sorting and organizing data. In this course, you will learn about basic alphabetical and numerical sorts through color sorting and custom configured sorts. The course also covers grouping, filtering, searching, and ensuring valid data is entered.
Microsoft Office 2016 Intermediate Excel: Macros and Advanced Queries	Using macros in Excel 2016 lets you save time when performing repetitive tasks. This course covers the options available when you are running macros, and also how to create your own custom macros. You will also learn about advanced functions that allow you to perform calculations using date and time, how to look up data, and how to perform advanced conditional queries.
Formatting E-mail in Outlook 2016	Microsoft Outlook 2016 includes many options and features that help make messages more visually appealing. In this course, you will learn about using different message formats, as well as using and applying formatting options that can be applied to text and backgrounds of e-mail messages. This course also covers how to verify spelling and grammar in messages and use the Insights feature and language options.
Configuring Message Options in Outlook 2016	Basic features and options in Microsoft Outlook 2016 allow you to perform common messaging tasks such as composing, sending, and receiving messages. There are however, many options that allow you to configure how messages are sent. In this course, you will learn about the different types of items that can be added or inserted in a message. This course also covers e-mail tracking and message delivery options.
Customizing and Managing Outlook 2016	Microsoft Outlook 2016 includes a variety of management and customization features that allow you to change the way you view and control Outlook to search for items. This course discusses options that allow you to modify, customize, and personalize Outlook. In this course, you will learn how to locate messages and items using Instant Search and Advanced Find, create search folders, add e-mail accounts, and delegate access to an account.
Managing Automation, Storage, and Tidying Up in Outlook 2016	Outlook 2016 includes automated features that help users manage the large amounts of messages they receive on a regular basis. In this course, you will learn about working with automation, including creating, running, and creating Outlook rules, and configuring auto-reply rules and out-of-office replies. The course also covers managing conversations and storage, and using cleanup tools in Outlook 2016.
Managing Contacts, Tasks, and the Calendar in Outlook 2016	Microsoft Outlook 2016 includes collaboration and management features that allow users to manage their calendars, contacts, and tasks. In this course, you will learn about collaboration including sharing a calendar and using Skype meetings. The course also covers using and managing multiple calendars, sharing and managing contacts, and managing tasks in Outlook 2016.
Viewing and Configuring Outlook 2016 Backstage Options	Outlook 2016's Backstage view has a variety of options and features that allow users to customize, manage, and configure the way Outlook looks. In this course, you will learn about Outlook Backstage view options including Info, Open & Export, Save As, and Office Account. This course also covers the Info options available in the Backstage view of a new e-mail message in Outlook 2016.
Using Illustrations, Styles, and Themes in Word 2016	You can add several types of illustrations, such as pictures, screen clippings, shapes, charts, and WordArt, to documents in Microsoft Word 2016. You can also enhance documents by adding properly positioned text, along with attractive formatting and page backgrounds. In this course, you'll learn how to insert and work with different types of graphic and text content, how to use special paste options, and how to apply styles, themes, and backgrounds to Word 2016 documents. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for beginners.
Designing and Formatting Illustrations in Word 2016	Enhance Word 2016 documents with decorative, professional looking illustrations using the Format and Design ribbons dedicated to Shapes, Pictures, Charts, Textboxes, WordArt and SmartArt. In addition, focus on compressing illustrations This course addresses more complex formatting using Word 2016. Some of these skills, for instance, section breaks and pagination options, are beneficial when working with large documents which require complex formatting. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for intermediate-level users.
Advanced Table Customization in Word 2016	Microsoft Word 2016 makes it easy to integrate tables in documents and to modify them in various ways. In this course, you'll learn how to modify a table and perform both basic and advanced sort operations, manage a table that spans multiple pages of a document, use formulas in a table, convert text to a table and vice versa, and position tables within other page elements in Word 2016. This course is one of a series in the Skillsoft learning path that covers Microsoft Word 2016 for intermediate-level users.

Course Title	Description
Maintaining, Protecting, and Reviewing Documents in Word 2016	Microsoft Word 2016 makes it possible for multiple contributors to collaborate in reviewing documents, as well as providing features that help protect documents from unwanted changes. In this course, you'll learn how to use comments, check document revisions, track document changes, and combine or compare revisions in different document versions. You'll also learn how to protect a document from specific types of changes, manage draft versions, and alter document properties. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for intermediate-level users.
References, Proofing, Mail Merges, and Forms in Word 2016	Microsoft Word 2016 provides sophisticated options for adding references to documents, automatically correcting documents, performing mail merges, and constructing forms. In this course, you'll learn how to add references such as hyperlinks, citations, a table of contents, and a bibliography to a document. You'll also learn how to configure automatic text correction and formatting, how to perform a mail merge, and how to construct a basic form and add controls to it in Word 2016. This course is one of a series in the SkillSoft learning path that covers Microsoft Word 2016 for intermediate-level users.
Sharing and Collaborating on Documents in Word 2016	Microsoft Word 2016 includes several useful options for sharing and collaborating on documents, and for speeding up a range of routine tasks. In this course, you'll learn many different ways of sharing Word 2016 documents. You'll also learn how to create and use macros and reusable pieces of content called Quick Parts, about the internal search facility in Word 2016, and about downloading useful apps from the Microsoft Store Online. This course is one of a series in the Skillsoft learning path that covers Microsoft Word 2016 for intermediate-level users.
Microsoft Office 365 for Advanced Business Users: Portal Enhancements	The Microsoft Office 365 portal provides features to customize your user experience when logged in. In this course, you'll learn how to use these features to customize the look and feel of your portal, change the branding and themes of your portal, and use the Azure Office 365 Import service to upload PST files. This course is one of a series in the SkillSoft learning path that covers Microsoft Office 365 for Advanced Business Users.
Microsoft Office 365 for Advanced Business Users: Clutter and Compliance	Microsoft Office 365 introduces e-mail enhancements to make the use of e-mail more effective by removing clutter from the inbox. Office 365 also provides compliancy for e-mail retention, searches, retention settings, and data loss prevention. In this course, you'll learn how to enable the clutter feature and train it to differentiate business-critical mail from day-to-day, less important mail. You will also learn how to access, set up, and control the features available in the Compliance portal. This course is one of a series in the SkillSoft learning path that covers Microsoft Office 365 for Advanced Business Users.
Microsoft Office 365 for Advanced Business Users: IT Management Controls	Microsoft Office 365 provides tools for IT Management to control access and retrieve reports against actions performed. In this course, you will learn how to configure IT Management controls for OneDrive for Business, as well as how to pull and export reports, limit file synching to domain-joined machines, and set storage quotas in OneDrive for Business. This course is one of a series in the SkillSoft learning path that covers Microsoft Office 365 for Advanced Business Users.
Microsoft Office 365 for Advanced Business Users: New Presentation Features	Microsoft Office 365 provides new presentation features, including Delve, Sway, and Office 365 Video. In this course, you'll learn to use modern groups and access their content. You'll learn how to find content using Delve and learn how to upload, manage, and share videos in Office 365. This course is one of a series in the SkillSoft learning path that covers Microsoft Office 365 for Advanced Business Users.
Microsoft Windows 10: Supporting Operating System and Application	It's important to decide on an effective strategy for installing the Microsoft Windows 10 operating system and applications on PCs and other devices. This course covers installation and configuration procedures for the Windows 10 operating system as well as Desktop and cloud apps. This course is one in a series of courses for the Supporting Windows 10 learning path.
Microsoft Windows 10: Supporting Connectivity and Data Storage	To connect Microsoft Windows 10 devices in networked environment, it's important be familiar with networking and security protocols, as well as how to provide support for effective and secure remote access. This course provides information about network connectivity and remote access settings. It also discusses considerations relating to data storage. This course is one in a series of courses for the Supporting Windows 10 learning path.
Microsoft Windows 10: Supporting Authentication, Permissions, and Data Security	To control user access to Microsoft Windows 10 devices and the data they contain, it's essential to select the best authentication and data security mechanisms to meet the organization's requirements. This course explains how to configure authentication and permissions, as well as how to secure data on a Windows 10 device. This course is one in a series of courses for the Supporting Windows 10 learning path.
Microsoft Windows 10: Supporting Hardware, Performance, and Mobile Devices	As part of effectively managing the Windows 10 devices in an organization, it's important to be familiar with troubleshooting hardware issues and monitoring performance of the devices. As more and more users work off mobile devices, it's also important to manage their use through policies and have mechanisms in place for data synchronization between various devices. This course covers how to troubleshoot operating system and hardware issues, as well as optimize and monitor performance, and manage mobile devices and broadband connectivity. This course is one in a series of courses for the Supporting Windows 10 learning path.
Microsoft Windows 10: Supporting Client Compliance and Managing Clients	Compliance and security are important aspects of managing Windows 10 clients. This includes managing how updates are rolled out and configuring security options, including Group Policy settings, to protect devices and data. This course explains how to manage client compliance and security using Intune, as well as how to support Group Policy in a Window 10 environment. This course is one in a series of courses for the Supporting Windows 10 learning path.
TestPrep 70-697 Configuring Windows Devices	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Configure User Data in Windows 10	Today, more than ever, users need to be able to securely access relevant data anywhere, anytime. Windows 10 supports mobile users and safe data sharing leveraging both Active Directory technologies as well as cloud-based solutions such as OneDrive. In this course, we cover how to enable mobile and desktop data access for both on-premises devices and BYOD scenarios. We also explore the different user profile configurations and the different data protection tools such as File History and Backup. This Skillsoft learning path covers the objectives for the Microsoft exam, Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
Threat Resistance Technologies in Windows 10	Systems are vulnerable and threats are real. You need to be able to protect network and local access to resources, install safeguards, and implement countermeasures. In this course, we explore the built-in security features that come with Windows 10 and are designed to resist many known threats. This includes Group Policies, User Account Control, AppLocker, Device Guard, Windows Advanced Firewall, Windows Defender, and other Windows 10 internal protections. This Skillsoft learning path covers the objectives for the Microsoft exam, Building Configuring Windows Devices (beta for Windows 10) (70-697). This exam counts toward the Configuring Windows Devices Microsoft Specialist certification.
TestPrep 1Z0-061 Oracle Database 12c: SQL Fundamentals	To test your knowledge on the skills and competencies being measured by the vendor certification exam. TestPrep can be taken in either Study or Certification mode. Study mode is designed to maximize learning by not only testing your knowledge of the material, but also by providing additional information on the topics presented. Certification mode is designed to test your knowledge of the material within a structured testing environment, providing valuable feedback at the end of the test.
Oracle Database 12c - Introduction to SQL: Restrict, Sort, and Customize Output	Database tables hold a large number of rows, which are often not sorted, in any specific order. This course will teach you how to selectively return only a subset of rows, sorted and customized. This course is one a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: SQL Fundamentals exam (1Z0-061). The exam is part of the Oracle Certified Associate certification.
Oracle 12c Performance Tuning: Measuring and Maintaining SQL Performance	Once poorly performing SQL is identified, and changes proposed, those changes need to be validated to ensure that they will yield the desired effect. This course will show how tools such as the SQL Performance Analyzer and SQL Tuning Advisor can be used to achieve this goal. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1Z0-064).
Oracle 12c Performance Tuning: Tuning Instance Memory	The SGA a key component to the effective working of the Oracle database engine. This course covers the SGA as well as topics such as the buffer cache, which enhances database I/O, the shared pool, which is key to application scalability, and the PGA and its role in sort operations. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1Z0-064).
Oracle 12c Performance Tuning: Performance Tuning Summary	This course concludes the overview of the SGA, focusing on the Automatic Memory Management feature. In this course, we'll examine a series of commonly occurring real-world performance problems, and the typical solutions for those scenarios. This course is one of a series in the SkillSoft learning path that cover the objectives for the Oracle Database 12c: Performance Management and Tuning exam (1Z0-064)
Oracle Database 12c RAC Administration: Day-to-Day Administration	Enterprise Manager Cloud Control is a valuable tool in the day-to-day administration tasks of an Oracle RAC database. This course covers using Enterprise Manager and command-line utilities to manage an Oracle RAC database. Some of the topics covered in this course are understanding and modifying RAC specific initialization parameters, working with online redo log files and managing RAC instances. The course also covers converting a single instance database to RAC. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Oracle Database 12c RAC Administration: Backup and Recovery	Some of the most critical responsibilities of an Oracle DBA are ensuring that the database is backed up and that it can be restored in the event of a failure. This course covers using RMAN to back up and restore a RAC database, minimizing downtime after an outage, and maintaining archived redo log files in a RAC environment. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Oracle Database 12c RAC Administration: Global Resource Management	Understanding global enqueues, instance locks, and cache fusion in a RAC database is essential in diagnosing performance problems, preventing outages, and tuning the database for optimum performance. This course covers Global Enqueue Management, which consists of global enqueues and instance locks, and Global Cache Management also known as cache fusion. Collectively Global Enqueue Management and Global Cache Management are known as Global Resource Management, a critical component of RAC architecture. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Oracle Database 12c RAC Administration: Monitoring and Tuning	Ensuring that a database is performing at its optimum capacity is crucial for any database administrator. Resolving performance problems using views and diagnostic and tuning tools when a database is not meeting its performance requirements is just as important. This course provides key RAC monitoring and tuning techniques using Enterprise Manager Cloud Control and built-in database tools like AWR, ASH, and ADDM. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Oracle Database 12c RAC Administration: Client Connections and QoS	High availability is a critical requirement of Oracle RAC. Configuring client- and server-side connections to seamlessly handle outages helps in achieving this goal. Just as important as managing the connections to the database is ensuring that the most important business workloads get the highest priority in the database. This course covers the configuration of client and server components to ensure high availability in RAC database connections. Quality of Service Management â€" a component of Oracle RAC that ensures that the most critical business workloads are prioritized for database resources â€" is also covered. This course is one of a series in the SkillSoft learning path that cover a portion of the objectives for exam 1Z0-068 Oracle Database 12c: RAC and Grid Infrastructure.
Mapping and Measuring to Support Sustainable Process Improvement	Mapping and measuring processes in a visual way is a critical skill to master in the pursuit of process improvement efforts. Properly completed mapping is crucial to determining baseline measures, creating a business case, and winning buy-in for change. It creates a visualization of current and future states that allows for lasting improvements. This course will teach you how to map processes and generate improvement actions and measurable goals for process improvement success.
Fundamentals of Lean and Six Sigma and their Applications	Six Sigma is a data-driven improvement strategy that views all activities within an organization as processes. Process inputs can be controlled and adjusted to effect significant improvements in process outputs. Six Sigma uses a rigorous and systematic methodology known as DMAIC (define, measure, analyze, improve, and control) and a number of qualitative and quantitative tools. Its goal is to drive process, product, and service improvements for reducing variation and defects. Lean is also an improvement methodology, but with a different focus. It aims to enhance process flow, reduce cycle time, and eliminate waste.
Six Sigma Project Selection, Roles, and Responsibilities	Deployment of Six Sigma, Lean, or another continuous improvement methodology demands major investments of time, effort, and money on behalf of an organization. Organizations need to exercise due diligence to determine if Six Sigma or Lean is the appropriate methodology to employ, or perhaps a less demanding quality and process improvement approach is better suited to meet their needs. Having decided on the methodology, improvement teams need to determine screening criteria for the selection of most appropriate improvement projects. Success of these projects largely depends upon the contribution of a variety of Six Sigma stakeholders. As a key Six Sigma stakeholder, Black Belts often lead improvement teams and their skills and qualifications are critical to teams' ability to deliver the expected results.
Six Sigma Strategic Planning and Deployment	Strategic planning of Six Sigma projects and Lean initiatives plays a critical role in their success in an organization deploying them. A number of strategic analysis and planning tools, such as Hoshin Kanri, feasibility studies, SWOT and PEST analysis, can be used in support of strategic deployment of improvement projects and to enhance their value and effectiveness.
Impact on Stakeholders and Benchmarking for Six Sigma	The success of Six Sigma deployment in an organization largely depends on the success of individual Six Sigma projects. Organizational stakeholders, including customers, suppliers, and employees, have a strong influence on the implementation of Six Sigma projects. In turn, these projects impact the organizational stakeholders by throwing many opportunities and challenges before them and requiring them to adapt to changes caused by improvements. Benchmarking is used in Six Sigma projects to set improvement goals against world-class and competitive reference points. Benchmarking may also be used at later stages in Six Sigma DMAIC while evaluating existing operations and incorporating best practices to maximize the success of improvement efforts.
